Sylvania Type 6U4^{GT}

HALF WAVE RECTIFIER

PHYSICAL SPECIFICATIONS

Base	Intermediate Octal 6 Pin
Bulb	T-9
Maximum Overall Length	3 3/8"
Maximum Seated Height	2 13/16"
Mounting Position	Any

RATINGS

Heater Voltage AC or DC	6.3 Volts
Heater Current	1.2 Amperes
Maximum Peak Inverse Plate Voltage	
Television Damper Service*	3850 Volts
Conventional Rectifier Service	1375 Volts
Maximum Peak Plate Current	660 Ma.
Maximum DC Output Current	138 Ma.
Maximum Hot-Switching Transient Plate	
Current for Duration of 0.2 Second Maximum	3.85 Amperes
Maximum Peak Heater-Cathode Voltage (Conventional Rectifier)	
Heater Negative With Respect to Cathode	500 Volts
Heater Positive With Respect to Cathode	110 Volts
Maximum Peak Heater-Cathode Voltage (Television Damper)	
Heater Negative With Respect to Cathode*	3850 Volts
Heater Positive With Respect to Cathode	110 Volts
Tube Voltage Drop at 250 Ma. DC	21 Volts

*Duration of voltage pulse not to exceed 15% of one scanning cycle. In the 525 line, 30 frame television system 15% of one scanning cycle is 10 microseconds.

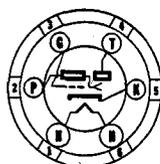

TYPICAL OPERATION

HALF WAVE RECTIFIER

Heater Voltage	6.3 Volts
AC Plate Voltage (RMS)	350 Volts
Filter-Input Capacitor	20 μ f.
Total Effective Plate-Supply Impedance	145 Ohms
DC Output Current	125 Ma.
DC Output Voltage	335 Volts

APPLICATION

Sylvania Type 6U4GT is a half wave rectifier featuring the unipotential cathode and a high peak heater-cathode rating, eliminating the necessity for a low-capacitance heater isolation transformer in television horizontal deflection circuits using a high-impedance yoke with direct coupling.

CHOKE INPUT TO FILTER

AC Voltage per Plate.....	450 Volts Max.
DC Output Current.....	70 Ma. Max.
Input Choke Value.....	10 Henrys Min.

Note: For rectifier curve data see next page.

APPLICATION

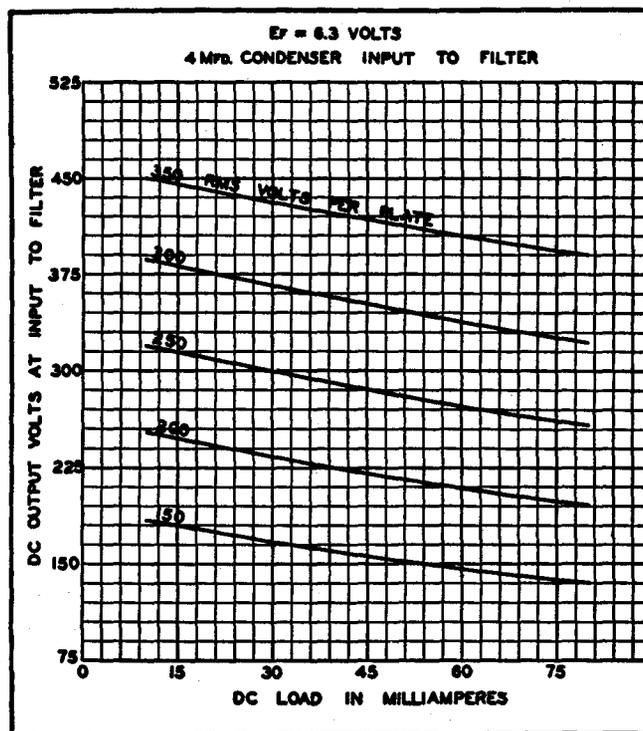

Sylvania Type 6X5 and 6X5GT are designed for use as rectifiers for auto-radio receivers or for a-c operated receivers where the demand for rectified current is low. They are similar to the Type 7Y4 except for heater current rating and therefore usable in similar applications.

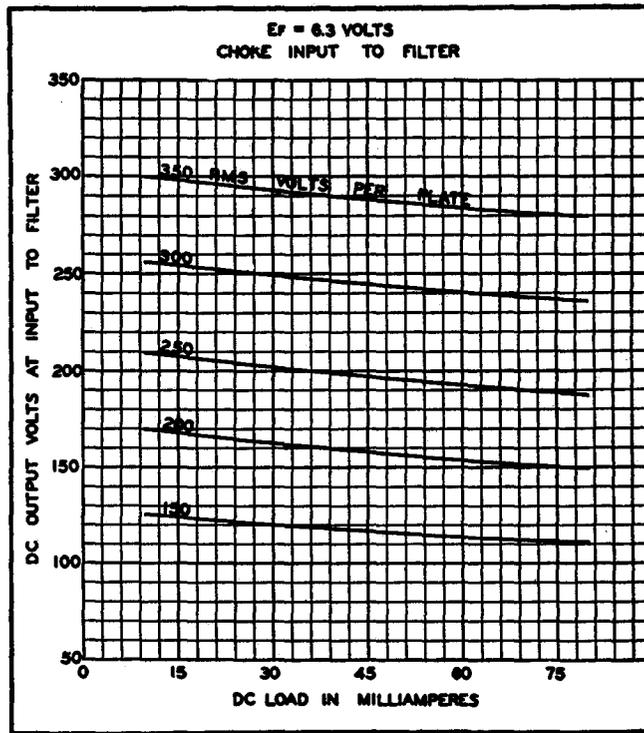

In order to obtain satisfactory output and regulation, careful consideration should be given to proper filtering. Filter circuits of the condenser-input or the choke-input type are applicable.

The d-c output will be considerably greater with a condenser-input filter than when the other type is used. Also, it will be true that higher peak plate currents will be encountered. The first condenser in the filter circuit, therefore, should not be too large in capacitance. It is not likely that the a-c input voltage will be a pure sine wave form so that the instantaneous peak values may be considerably greater than 1.4 times the r-m-s value. The voltage ratings of the condensers must be such as to handle the maximum peak values encountered.

When used with a vibrator and transformer combination as a source of a.c., considerable care must be taken in the transformer design, as well as the filter design, to avoid exceeding any of the maximum ratings.

APPLICATION

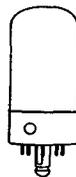

Sylvania Type 7A4 is a medium-mu triode designed for use as an oscillator, detector or amplifier. It is quite similar to types 6J5GT but gives improved performance especially at the higher frequencies, due to the lock-in type of construction. This construction results in shorter leads, lower capacitances, and lower base losses. This tube may be used successfully to about 225 mc. as an oscillator. For higher frequencies, types 7E5/1201 or 7F8 should be considered.

Tabulated data for resistance coupled operation will be found in the appendix.

Power Output	1.5	2.2 Watt
Total Harmonic Distortion	10	10 Per Cent

**Obtained by self-bias resistor. Fixed bias operation at maximum ratings is not recommended.

APPLICATION

Sylvania Type 7A5 is a Lock-In type beam power amplifier designed to operate at plate voltages of about 110 volts. Except for heater ratings, it is similar to type 35A5. The curve data given for type 35A5 is applicable for the 110 volt condition.

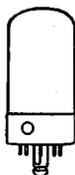

Grid circuit resistance should not exceed 0.1 megohm for fixed bias operation or 0.5 megohm for self-bias operation.

TYPICAL OPERATION

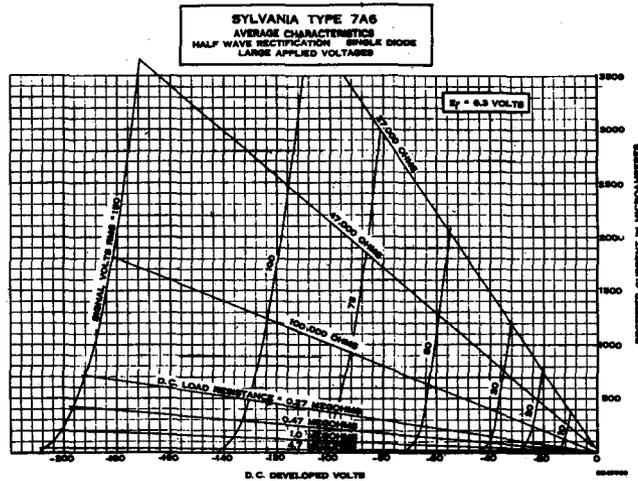

Heater Voltage.....	6.3 Volts
Heater Current.....	150 Ma.
AC Voltage per Plate (RMS).....	150 Volts
DC Output Current.....	8.0 Ma.

APPLICATION

Sylvania Type 7A6 is a Lock-In type duodiode. It has separate cathodes and is similar to Type 6H6GT. The shielding between diode units permits each section to be used independently of the other and the lock-in construction gives good high-frequency characteristics. Type 7C4, however, should be considered for extremely high-frequency applications.

Measurements taken with a plate voltage of 250 volts, anode grid voltage of 180 volts, screen voltage of 100 volts, with oscillator grid at 0.0 volt.

APPLICATION

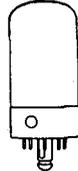

Sylvania Type 7A8 is a single-ended oscillator-mixer tube of lock-in design for service in AC, AC-DC and auto receivers. Compact size, short leads and good shielding are some of the features of this tube. Application and operation are similar to the older types of oscillator-mixer tubes. The addition of a suppressor grid in Type 7A8 serves to increase the plate resistance for improved performance, particularly when operated at low plate supply voltages.

Heater Voltage.....	6.3 Volts
Heater Current.....	0.600 Ampere
Plate Supply Voltage.....	300 Volts
Screen Voltage.....	125 Volts
Grid Voltage.....	-3.0 Volts
Self Bias Resistor.....	68 Ohms
Signal Voltage (Peak to Peak).....	4.0 Volts
Suppressor.....	Connected to cathode
Plate Current (Zero Signal).....	25.0 Ma.
Screen Current (Zero Signal).....	6.0 Ma.
Maximum Signal Voltage Output (Peak to Peak).....	135 Volts

APPLICATION

Sylvania Type 7AD7 is a high transconductance pentode amplifier designed for voltage amplification of a broad band of frequencies such as required for television service.

This is the first Lock-In tube having characteristics suitable for this purpose. It is, however, very similar to Type 6AG7 which, although having slightly higher theoretical gain, does not have the ruggedness, low capacitance, and high production advantages of the Lock-In construction.

*Bias voltage developed is approximately 2.0 volts. Fixed bias operation is not recommended.

APPLICATION

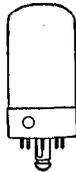

Sylvania Type 7AG7 is a high efficiency, sharp cut-off pentode designed for either AC or AC-DC service. The high screen voltage rating permits a design which has high input impedance. For this reason, higher gains may be obtained in the television and frequency modulation bands than with other tubes having somewhat higher mutual conductance.

Screen Current.....	21	0.45	43 Max. Ma.

APPLICATION

Sylvania Type 7AK7 is a sharp cut-off amplifier pentode of lock-in construction designed and rated for use with an additional control voltage on the suppressor. For use as a "gating" tube the watts dissipation rating of the screen may approximate 4.0 watts momentarily, providing the dissipation averaged over any one second interval does not exceed the rating.

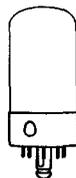

Since normal use of this tube will require fixed bias operation, the maximum grid circuit resistance should not exceed .1 megohm.

7B6 (Cont'd)

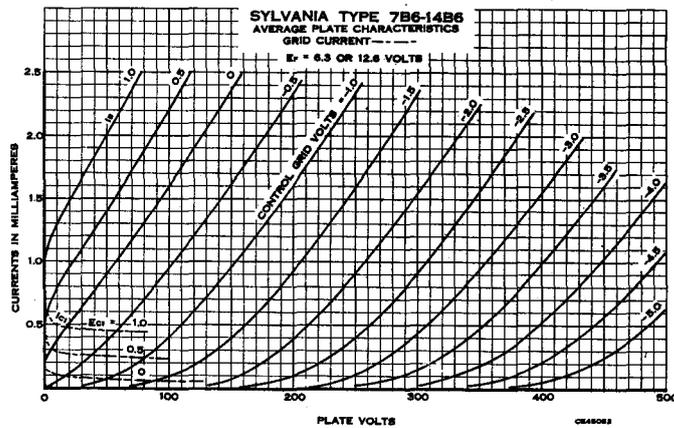

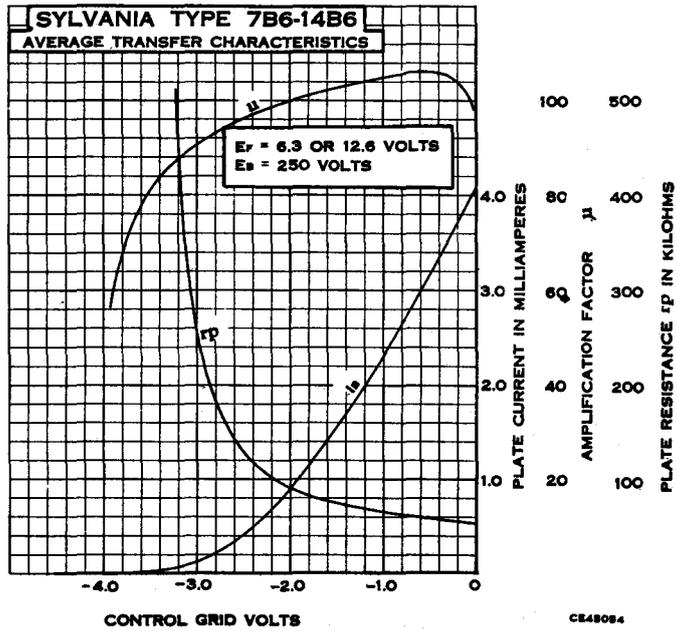

APPLICATION

Sylvania Type 7B6 is a duodiode high-mu triode suitable for detector audio amplifier service in AC or auto receivers. For AC-DC receivers, the Types 7C6 or 14B6, having lower heater current ratings, should prove more satisfactory.

The diodes are independent of each other and of the triode unit except that the cathode structure is common to all. Type 7K7 or 7X7 should be considered if it is necessary to have more complete separation between the various sections.

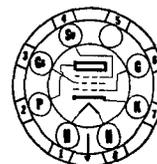

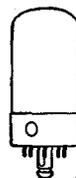

Resistance coupled amplifier data will be found in the table in the appendix.

APPLICATION

Sylvania Type 7B7 is a single-ended triple grid remote cut-off amplifier of lock-in design suitable for r-f or i-f service in a-c, ac-dc and auto receivers.

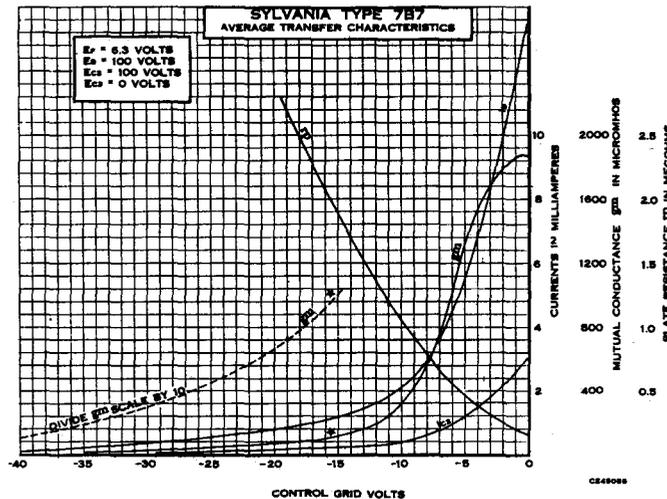

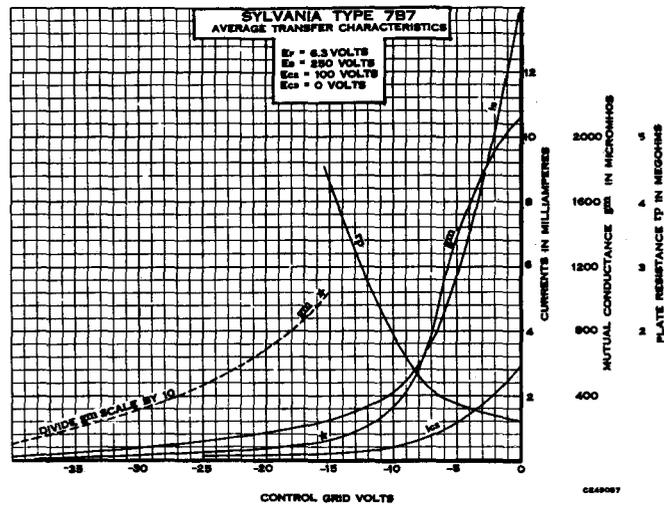

All of the grids terminate a base pins, thus providing an r-f amplifier tube without a top cap. An internal cage-like shield connected to pin Number 5 is used to obtain a small grid to plate capacity.

The electrical characteristics and applications of Type 7B7 are very similar to those for Type 7A7. Reference may be made to this type for application notes.

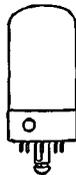

For a-c service the 7-volt heater rating corresponds to a 130-volt line condition.

For 6 μ hos Conversion Conductance.....		-35 Volts
For 3 μ hos Conversion Conductance.....	-20 Volts

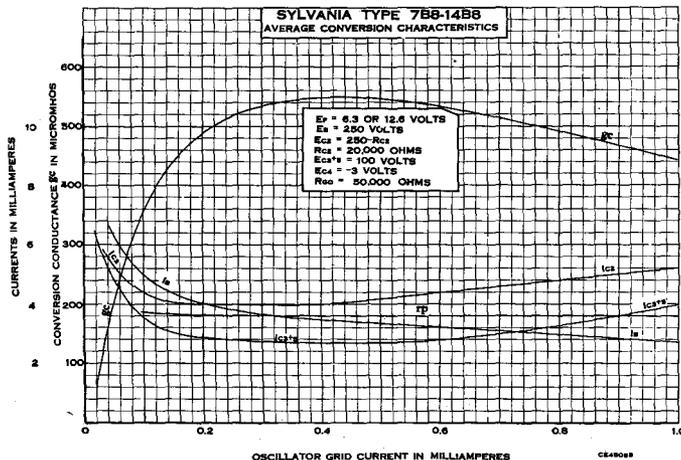

**Applied through 20,000 ohm dropping resistor.

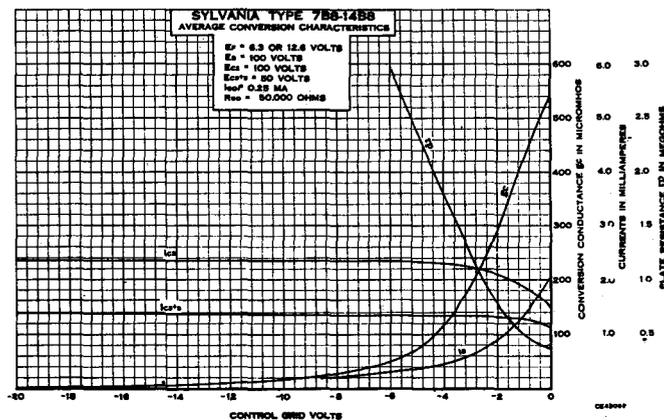

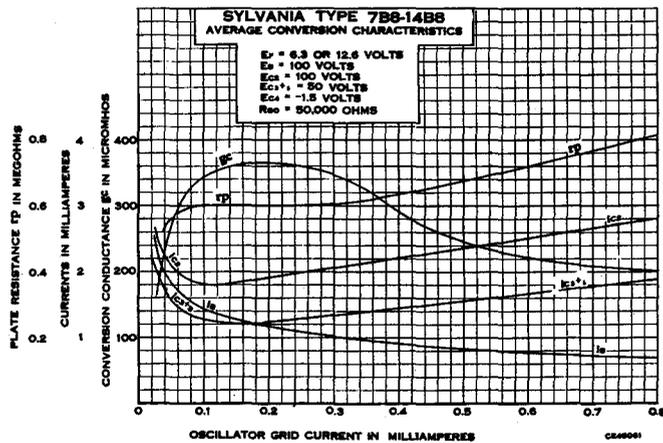

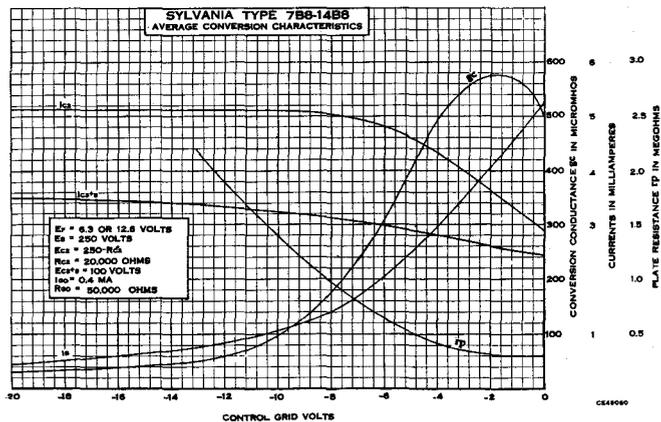

The oscillator section, not oscillating, has a Gm of 1150 μ hos, a μ of 75 at an anode grid current of 4.0 ma. when $E_p = 250$ Volts; $E_g = 100$ Volts; $E_{gs} = 55$ Volts; $E_g = 2.0$ Volts and $E_{go} = -1.0$ Volt.

APPLICATION

Sylvania Type 7B8 is a lock-in converter tube designed for use in AC or auto receivers. For AC-DC service, Type 14B8 with lower heater current rating will usually prove more satisfactory.

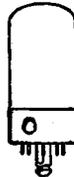

Electrically, Type 7B8 is similar to the older oscillator mixer tubes. Conventional circuits and design are readily adaptable for use with this compact rugged tube. As is usual with converter tubes, it is well to ascertain that the maximum cathode current does not exceed the rated limit under any encountered operating condition.

Total Harmonic Distortion.....	5	3.5 Per Cent

APPLICATION

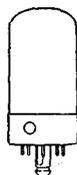

Sylvania Type 7C5 is a beam power amplifier which provides high power output, power sensitivity, and efficiency with a low percentage of third and higher order harmonics. The electrical characteristics and applications are identical with those for Types 6V6 and 6V6G. The Type 7C5 should prove very desirable in applications where heater and plate current drain must be maintained at a minimum.

The lock-in construction provides compactness, suitable shielding and the special lock-in feature. For a-c service the 7-volt heater rating corresponds to a 130-volt line condition.

When fixed bias is employed the resistance in the grid circuit should not be greater than 0.1 megohm. With cathode bias the grid circuit resistance must not exceed 0.5 megohm.

Amplification Factor*.....	85	100

*These are rating values only and not operating points with coupling resistor. Refer to tabulated data on page 49 for this information.

APPLICATION

Sylvania Type 7C6 is a single-ended duodiode high-mu triode having electrical characteristics quite similar to those for Type 75, except for the heater ratings.

The diodes are substantially the same as those employed in other Sylvania duodiode high-mu triode types and therefore are suitable for conventional circuit applications. Diode curves are given under Type 7B6.

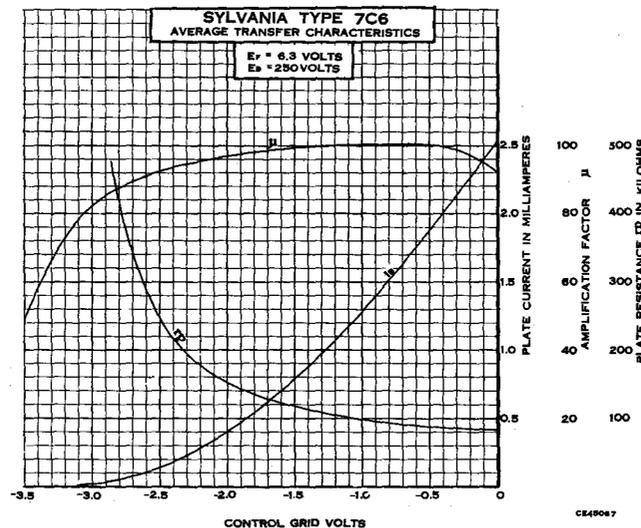

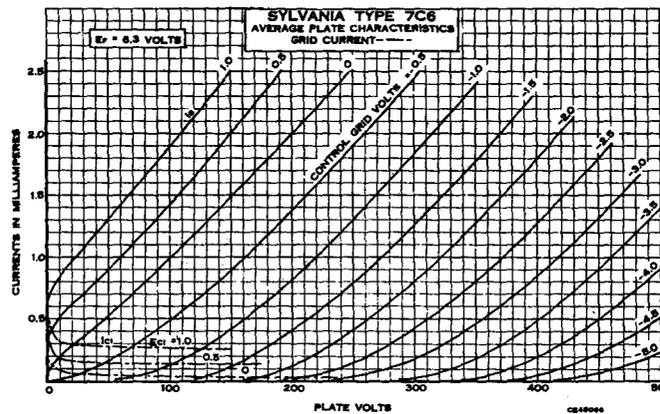

7C6 (Cont'd)

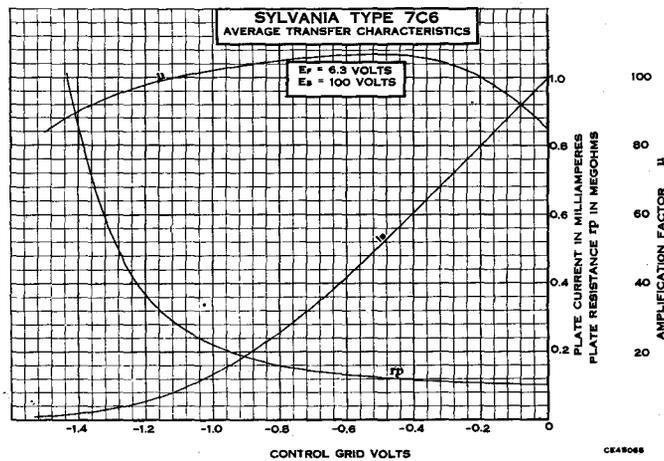

The triode section should not be employed with fixed bias. A high value of grid resistor is required and the triode operated essentially under zero bias conditions. With a plate supply voltage of 250 volts, the plate load resistor should be approximately 0.25 megohm. For special applications this value may be varied to suit the conditions.

Resistance coupled data is given in the appendix.

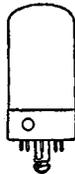

It will be noted from the base diagram that the cathode is connected to two contact pins, Numbers 4 and 7. Pin Number 4 is used as a mount support for the cathode, therefore, the potential of Pins 4 and 7 is the same.

The lock-in construction provides compactness, suitable shielding and the special lock-in feature. For a-c service the 7-volt heater rating corresponds to a 130-volt line condition.

*Quarter wave four-line oscillator in which the line shortening is approximately 30% of a quarter wave length.

‡Developed bias across 35,000 ohm grid leak of UHF triode mixer tuned to 324 megacycles.

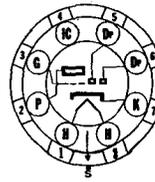

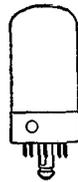

APPLICATION

Sylvania Type 7E5 is a cathode type triode of Lock-In construction designed for ultra-high frequency applications. This tube can be used as a signal source or local oscillator to frequencies of 750 megacycles when used in a double ended transmission line circuit. This type of operation is facilitated by a symmetrical arrangement of double grid and plate leads. These connections are brought out to the Lock-In single ended base from opposite ends of their respective element structures. Useful power output can be obtained at frequencies of 400 megacycles and lower, but below approximately 200 megacycles the use of other types, such as Sylvania Type 7A4, are recommended.

For use in resistance coupled circuits, see data in appendix.

APPLICATION

Sylvania Type 7H7 is a semi-remote cut-off pentode suitable for RF or television service. It is similar to Type 6AB7 except for lower heater current and slightly lower mutual conductance. The Lock-In construction provides ruggedness, suitable shielding and short leads so necessary in high-frequency circuits. The high mutual conductance helps to compensate for the low gain associated with high-frequency and wide-band amplifier designs.

**Characteristics for self excitation are similar to those given for separate excitation except the control grid (Grid G bias voltage is 0 volt).

Note: With Grid Gs connected to plate (100 volts) and signal applied to Grid Go (0 volt bias), the Mutual Conductance is 4500 μ mhos, plate current 27 Ma. amplification factor 13. Grid G is connected to ground during this test.

APPLICATION

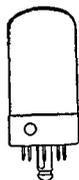

Sylvania Type 7Q7 is a pentagrid converter having electrical characteristics quite similar to those for Type 6SA7. The Lock-In construction embodied in this type provides compactness, suitable shielding and the lock-in feature. For a-c service the 7-volt heater rating corresponds to a 130-volt line condition. It is also the nominal voltage for automotive receiver service. Ratings marked Max. and Min. are design centers for a line voltage of 117 volts. For automotive service the design centers are 90% of the values indicated, using a battery terminal voltage of 6.6 volts.

Plate Current.....	3.4	5.5	3.5	6.2 Ma.
Screen Current.....	1.0	2.2	1.0	1.6 Ma.
Plate Resistance (Approx.).....	0.5	0.35	1.8	1.0 Megohm
Mutual Conductance.....	2100	3000	2200	3200 μ mhos
Grid Bias for 10 μ mhos.....	-20	-20	-20	-20 Volts

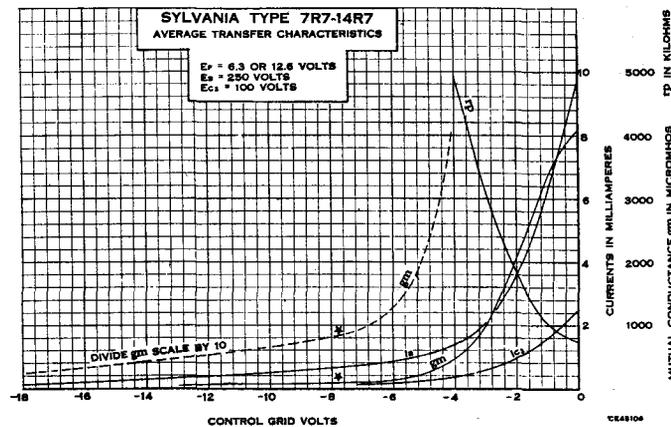

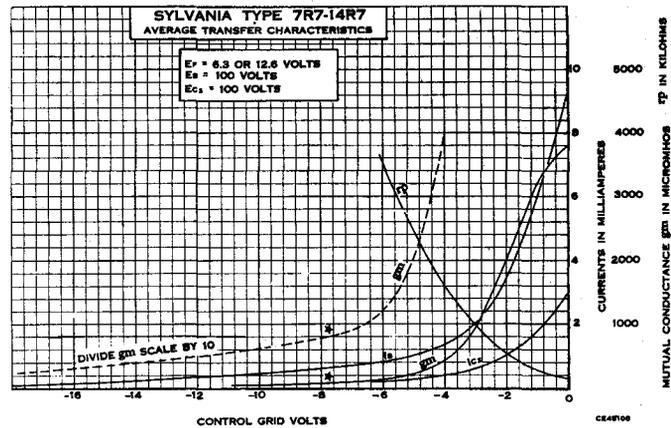

APPLICATION

Applications of this tube will be similar to those of other high gain pentodes. The lower capacitance together with shielding and high mutual conductance make this tube suitable for many RF and wide band amplifier services. For diode characteristics, refer to curves for Type 7B6.

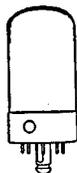

Data for use in resistance coupled circuits can be found in the appendix.

Heptode Screen Voltage	100	100 Volts
Oscillator Plate Voltage (Triode)	100	250† Volts
Heptode Control Grid Voltage	-2	-2 Volts
Self-Bias Resistor	240	195 Ohms
Oscillator Grid Resistor	50000	50000 Ohms
Heptode Plate Current	1.9	1.8 Ma.
Heptode Screen Current	3.0	3.0 Ma.
Oscillator Plate Current (Triode)	3.0	5.0 Ma.
Oscillator Grid Current (Triode)	0.3	0.4 Ma.
Heptode Plate Resistance	0.5	1.25 Megohms
Conversion Conductance	500	525 μ mhos
Conversion Conductance (Heptode Grid -21 Volts)	2	2 μ mhos
Total Cathode Current	8.2	10.2 Ma.

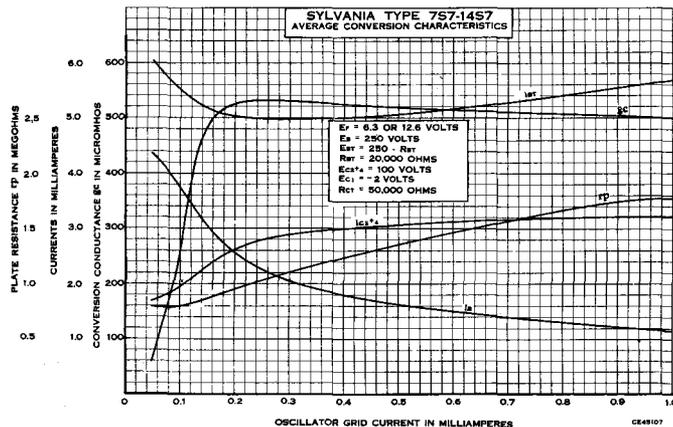

†Applied through a 20,000 ohm dropping resistor properly by-passed.

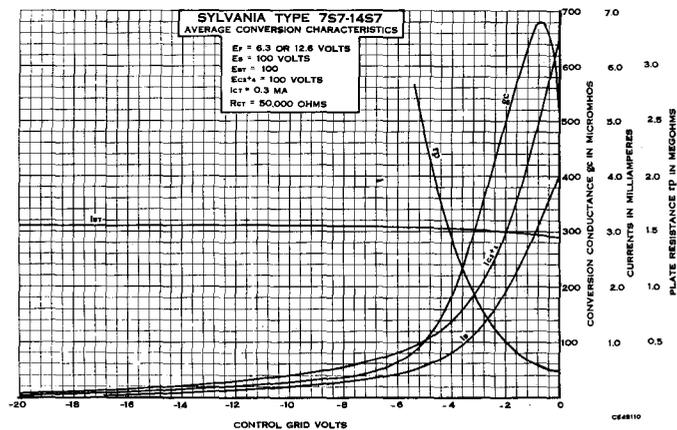

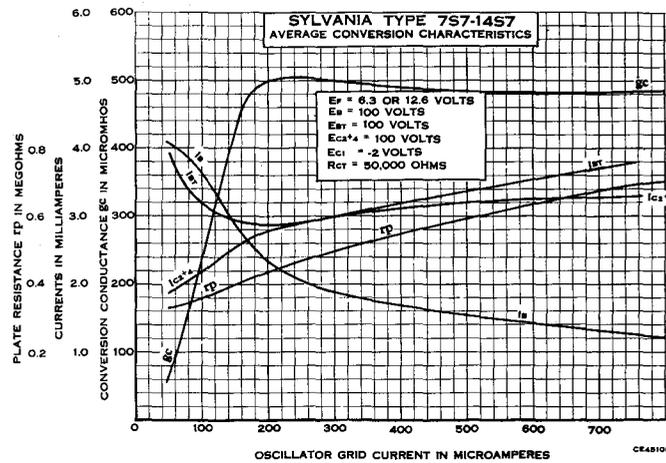

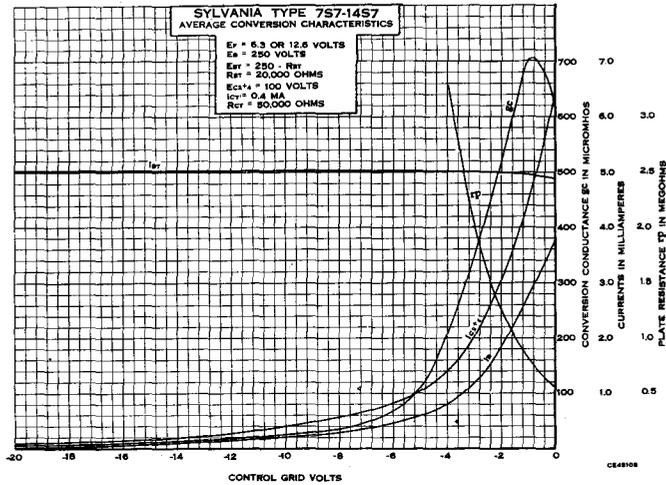

TRIODE CHARACTERISTICS

Heater Voltage	6.3 Volts
Plate Voltage	100 Volts
Grid Voltage	0 Volts
Plate Current	6.5 Ma.
Plate Resistance	11000 Ohms
Mutual Conductance	1850 μ mhos
Amplification Factor	18

APPLICATION

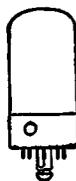

Sylvania Type 7S7 is a triode heptode tube designed for converter service. The triode section serves as the oscillator and is internally coupled to the heptode which serves as the mixer. This construction provides minimum frequency drift compared to other conversion methods. Type 7S7 is similar to Type 7J7 except for improved triode characteristics and higher conversion conductance.

Maximum Plate Dissipation.....	4.0 Watts
Maximum Screen Dissipation.....	0.8 Watt
Minimum Self-Bias Resistor.....	160 Ohms
Maximum Heater-Cathode Voltage.....	90 Volts

Direct Interelectrode Capacitances:*

Grid to Plate.....	0.002 μ f. Max.
Input.....	9.5 μ f.
Output.....	6.5 μ f.

*With 1 $\frac{1}{4}$ " diameter shield (RMA Std. 308) connected to cathode.

TYPICAL OPERATION

	§Condition 1	§Condition 2
Heater Voltage AC or DC.....	6.3	6.3 Volts
Heater Current.....	450	450 Ma.
Plate Voltage.....	300	300 Volts
Screen Supply Voltage.....	150	300 Volts
Screen Series Resistor.....		40000 Ohms
Suppressor (Grid 4) and Pin 5.....	0	0 Volt
Self-Bias Resistor.....	160	160 Ohms
Plate Current.....	10	10 Ma.
Screen Current.....	3.9	3.9 Ma.
Plate Resistance.....	0.3	0.3 Megohms
Mutual Conductance.....	5800	5800 μ mhos
Grid Voltage for 10 μ a. Plate Current.....	-8.0	-16 Volts

§Conditions 1 and 2 represent operation with fixed screen supply and with series resistor, respectively. Condition 2 gives an extended cut-off characteristic. When a screen supply in excess of 150 volts is used a series dropping resistor must be used to limit screen voltage to 150 volts when the plate current is at its rated value of 10 milliamperes.

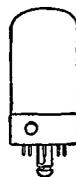

APPLICATION

Sylvania Type 7V7 is a cathode type pentode having low grid-plate capacity and high mutual conductance. It is identical to type 7W7 except for minor changes which make type 7V7 superior at high frequencies. The same curve data may be used for either type.

Due to the low bias requirement, self-bias should be used and grid circuit resistances should be limited to 0.25 megohm for fixed screen supply while series drop screen supplies permit a maximum grid circuit resistance of 0.5 megohm.

Heater Voltage AC or DC (Nominal)	7.0 Volts
Maximum Plate Voltage	300 Volts
Maximum Screen Voltage †	150 Volts
Maximum Plate Dissipation	4.0 Watts
Maximum Screen Dissipation	0.8 Watt
Maximum Heater-Cathode Voltage	90 Volts

Direct Interelectrode Capacitances:*

Grid to Plate	0.002 μ f. Max.
Input	9.5 μ f.
Output	7.0 μ f.

*With 1 $\frac{1}{8}$ " diameter shield (RMA Std. 308) connected to cathode.

TYPICAL OPERATION

	§Condition 1	§Condition 2
Heater Voltage AC or DC	6.3	6.3 Volts
Heater Current	450	450 Ma.
Plate Voltage	300	300 Volts
Screen Supply	150	300 Volts
Screen Series Resistor		40000 Ohms
Suppressor		Connected to Cathode
Self-Bias Resistor	160	160 Ohms
Plate Current	10.0	10.0 Ma.
Screen Current	3.9	3.9 Ma.
Plate Resistance	0.3	0.3 Megohm
Mutual Conductance	5800	5800 μ mhos
Grid Voltage for 10 μ a. Plate Current Approx.	-8.0	-16 Volts

§Conditions 1 and 2 represent operation with fixed screen supply and with series screen dropping resistor respectively. Note that condition 2 gives an extended cut-off characteristic giving better control of gain when bias gain control is used. When a screen supply voltage in excess of 150 volts is used, a series screen dropping resistor must be employed to limit screen voltage to 150 volts with plate current at rated value of 10 ma.

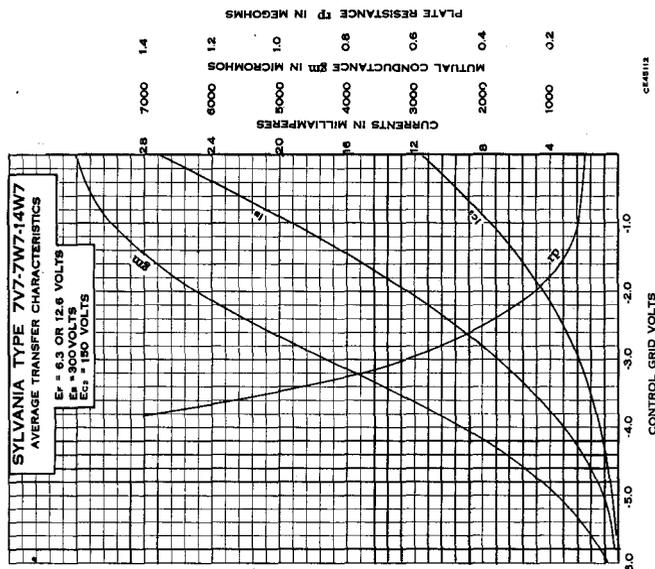

APPLICATION

Sylvania Type 7W7 is a cathode type RF pentode of Lock-In construction having high mutual conductance with exceptionally low grid-plate capacity. These characteristics make this tube especially well suited for use in broad-band amplifiers, and in high-frequency applications.

Degeneration due to common coupling in the cathode circuit can be reduced with this tube by proper use of the two cathode leads. It has been found that as an RF amplifier at 75 megacycles or higher, optimum input and output resistance can be obtained by returning input circuits to pin No. 4, and output circuits, including heater and screen, to pin No. 7.

7Y4 (Cont'd)

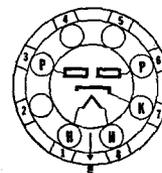

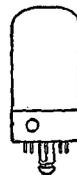

APPLICATION

Sylvania Type 7Y4 is a full-wave cathode heater type rectifier tube of Lock-In construction. It is designed for service in small auto and AC receivers. It is similar to the older 6X5GT and 84 but is smaller physically and is considerably more rugged due to the Lock-In construction. Conventional circuits such as used with the older types, are entirely suitable for use with this tube.

†When a filter condenser larger than 40 mfd. is used, additional plate supply impedance may be required.	

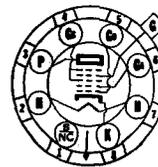

APPLICATION

Sylvania Type 7Z4 is a full-wave cathode type rectifier of Lock-In construction providing a rugged, compact tube. This tube is designed for rectifier service in AC or auto receivers which require a greater load current than can be supplied by type 7Y4. The increased tube drop gives an additional safety factor with power supplies of low impedance. Conventional circuits may be used.

APPLICATION

Sylvania Type 12AY7 is a medium- μ duotriode which is designed for use as an af amplifier. It is a low noise, low microphonic tube having a center tapped heater which permits operation from either 6.3 volt or 12.6 volt heater supply. It is recommended that the 12.6 volt connection be used to assure the low-hum operation for which Type 12AY7 was developed.

Sylvania Type **12BA6**

REMOTE CUT-OFF RF PENTODE

RATINGS AND OPERATION

Heater Voltage AC or DC..... 12.6 Volts
Heater Current..... 150 Ma.

For other rating, operation and application data, refer to corresponding Type 6BA6.

8CT-0-6 & 8

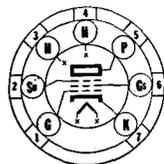

Sylvania Type **12BA7**

HEPTODE CONVERTER

RATINGS AND OPERATION

Heater Voltage AC or DC..... 12.6 Volts
Heater Current..... 150 Ma.

For other data, refer to corresponding Type 6BA7, which is identical except for heater ratings.

7BK-0-2

Sylvania Type **12BD6**

REMOTE CUT-OFF RF PENTODE

RATINGS AND OPERATION

Heater Voltage..... 12.6 Volts
Heater Current..... 150 Ma.

For other data, refer to corresponding Type 6BD6 which is identical except for heater ratings.

12BE6 Sylvania Type

HEPTODE CONVERTER

7CH-0-0

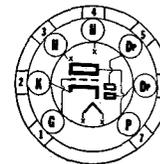

RATINGS AND OPERATION

Heater Voltage AC or DC..... 12.6 Volts
Heater Current..... 150 Ma.

For other rating, operation and application data, refer to corresponding Type 6BE6.

12BF6 Sylvania Type

DUO-DIODE TRIODE

7BT-0-0

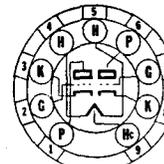

RATINGS AND OPERATION

Heater Voltage AC or DC..... 12.6 Volts
Heater Current..... 150 Ma.

For other data refer to corresponding Type 6BF6 which is identical except for heater ratings. Curves and resistance coupled amplifier data may be found by reference to Type 7E6.

12BH7 Sylvania Type

MEDIUM-MU DUOTRIODE

9A-0-0

PHYSICAL SPECIFICATIONS

Base..... Small Button 9 Pin
Bulb..... T-6 1/2
Maximum Overall Length..... 2 5/8"
Maximum Seated Height..... 2 3/8"
Mounting Position..... Any

RATINGS*

CLASS A₁ AMPLIFIER

Heater Voltage AC or DC..... 12.6 Volts
Series..... 6.3 Volts
Parallel..... 300 Volts
Maximum Plate Voltage..... 300 Volts
Maximum Plate Dissipation (Each Unit)..... 3.5 Watts
Maximum Cathode Current (Each Unit)..... 20 Ma.
Maximum Peak Heater-Cathode Voltage..... 180 Volts
Maximum Grid Circuit Resistance
For Self Bias..... 2.5 Megohms
For Fixed Bias..... 1.0 Megohm

VERTICAL DEFLECTION AMPLIFIER

Maximum DC Plate Voltage	500 Volts
Maximum Peak Positive Pulse Plate Voltage*	1500 Volts
Maximum DC Negative Grid Voltage	50 Volts
Maximum Peak Negative Pulse Grid Voltage*	220 Volts
Maximum Cathode Current (Each Unit)	20 Ma.
Maximum Plate Dissipation (Each Unit)*	5 Watts
Maximum Peak Heater-Cathode Voltage	180 Volts
Maximum Grid Circuit Resistance	
For Self Bias	2.5 Megohms
For Fixed Bias	1.0 Megohm

*Values given are for each section.

*Absolute maximum value not to be exceeded under any condition of operation

Direct Interelectrode Capacitances:

	Triode No. 1*		Triode No. 2*	
	†	††	†	††
Grid to Plate	2.4	2.4	2.4	2.4 $\mu\text{mf.}$
Input	3.0	3.0	3.0	3.0 $\mu\text{mf.}$
Output	2.0	0.8	2.6	0.8 $\mu\text{mf.}$

†With a $\frac{1}{8}$ " diameter shield (RMA Stdrs. 315) connected to cathode of unit under test.

††Without external shield.

*Triode No. 1 and Triode No. 2 have their plates connected to pins 6 and 1 respectively.

TYPICAL OPERATION**CLASS A₁ AMPLIFIER***

Heater Voltage	12.6	or	6.3 Volts
Heater Current	300	or	600 Ma.
Plate Voltage	85		250 Volts
Grid Voltage	0		10.5 Volts
Amplification Factor	21		17
Mutual Conductance (Each Unit)	6200		3100 μmhos
Plate Current (Each Unit)	20		11.5 Ma.

VERTICAL DEFLECTION AMPLIFIER

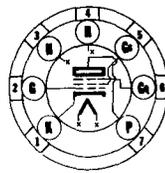

Heater Voltage	12.6	or	6.3 Volts
Plate Voltage			350 Volts
Cathode Bias Resistor (Variable)			560 Ohms
Signal Voltage			
Peak to Peak Sawtooth Component (approx.)			25 Volts
Negative Peaking Component			32 Volts
Plate Current			16 Ma.
Peak Positive-Pulse Output Voltage			670 Volts
Peak to Peak Sawtooth Output Voltage			230 Volts

*Values given are for each section.

APPLICATION

Sylvania Type 12BH7 is a duotriode designed for use as a vertical deflection amplifier in television receivers using picture tubes which require wide deflection angles.

The 12BH7 may also be used in Class A₁ amplifier applications.
