DX-70T EXTENDED RECEIVE MODIFICATION

- 1. Disconnect from the power supply.
- 2. Disconnect from the antenna.
- 3. Remove the control head, then disconnect from the control cable.
- 4. Remove two screws on the back of the control head.
- 5. Remove the rear panel of the control head.
- 6. Locate and remove the "M" jumper behind the control unit as shown below.
- 7. Reassemble the unit.
- 8. Reset the Microprocessor. (With the radio off, press and hold the "F" button and simultaneously turning the power on.)

Note: Damage done to the unit while performing the modification will void the warranty.

9. The lower edge of the HF band is now changed from 150KHz to 30KHz.
