

C-PS INTERNAL POWER SUPPLY UNIT (DC13.8V 20A SWITCHING REGULATOR)

INSTRUCTION MANUAL

This instruction manual gives descriptions and installation instructions for the optional power supply unit for ICOM's HF transceiver IC-745 and IC-751. It also provides information you need while using them. Please read all the instructions carefully before installation so you will get maximum performance and full value from the set.

SPECIFICATIONS

	Number of Semiconductors	Transistor	5	
		IC	2	
		Diode	4	
	Input Voltage	110/220V AC	AC (50/60Hz)	
	Allowable Voltage Fluctuation	±10% of input voltage (suitable line voltage)		
	Input Capacity	550VA (at 20	550VA (at 20A load)	
	Output Voltage	13.8V DC Negative ground		
	Max. Load Current	20A (10 mins ON/10 mins		
	Dimentions	194(W) x 50(H) x 186(D) Approx. 2.3kg		
	Weight			
	Kit Included	Main Unit		
		Insulation Spacer		
		Power Socket Unit		
		AC Power Cord		
		Spare Fuse		

ł s OFF) mm 1 1 1 1 2 6 Installation Screws 6 Insulation Washers

PREPARATION

Before performing any work on the set, make sure that the power cord is unplugged from the transceiver.

Remove the top and bottom covers by unscrewing the six screws each on the top and bottom, and the three screws on each side, while taking care not to damage the internal speaker, and unplug its connector.

ASSEMBLY PROCEDURE

- (1) Turn the transceiver upside attached to the rear panel screws will be used later.
- (2) Attach the main unit (powe supplied screws and insulatic insulation spacer between the

(3) Pass the DC power cable atta AC power socket plate as sh the bushing into the hole. Attach the AC power sock attached the PLATE (A) bef (1), so that the AC power sock

lown. Remove the "PLATE (A)" by unscrewing four screws. These

supply) to the bottom cover with n washers. At this time, insert the main unit and the bottom cover.

shed to P1 through the hole of the own in the illustration, then insert

t plate to the position which was re, by using the screws described in it is toward the bottom of the set.

Socket Unit

lolder

- (4) Pass the connector, P2', from the power socket unit to the inner chassis through the hole of the rear chassis. Then connect it with the connector, P2, from the main unit of the power supply.
- (5) Connect the internal speaker connector and replace the bottom and top covers of the set.

Plug P1 of the power supply unit to the DC Power Socket of the set.

OPERATION

- 1. Connect the DC output plug, P1, of this unit into the transceiver DC Power Socket securely. At this time, make sure that:
 - A. The power switch on the transceiver is OFF.
 - B. The T/R switch is in the RECEIVE position.
 - C. The PTT switch on the microphone is not depressed.
 - D. The VOX switch is in the OFF (out) position.
- Connect the supplied AC power cord into the AC power socket (newly installed) on the rear panel of the transceiver. Then connect the AC power plug into an AC power outlet.

3. By turning the transceiver power switch ON, this unit will be turned ON and supply a DC 13.8V to the transceiver.

CAUTION

- Ground the GROUND TERMINAL of the set with as short a wire as possible to prevent electrical shock, TVI, BCI and other problems.
- This unit stops the output voltage with a protection circuit, when output voltage is shorted or consumed load current exceeds 25A. When the output voltage is stopped, turn the power switch of the transceiver OFF and remove the cause of the problem.
- If the fuse blows, replace it with a 10A (at 117V) or 5A (at 240V) fuse after checking the cause of the problem. Use a Philips (+) screwdriver to open the holder. The outside ring of the holder cannot be rotated.

PS-35 PS-740 CONVERSION TO 230VAC

- 1. Remove the top cover from the PS-740.
- 2. Remove all screws which mount the PC board, transistors, and rectifier.
- 3. Move the jumper directly in front of L1 from the 110 to the 220 position.
- 4. Move the jumper which is located directly behind L2 from the 110 to the 220 position.
- 5. Remove the jumper which is strapped across the AC input leads of D1.
- 6. Install a 5 amp fuse in place of the 10A.
- 7. Replace the fan with a 220V version.
