TECHNICAL MANUAL

OPERATOR'S AND ORGANIZATIONAL MAINTENANCE MANUAL (INCLUDING REPAIR PARTS AND SPECIAL TOOLS LISTS)

RADIO SETS AN/PRC-74B (NSN 5820-00-935-0030) AND AN/PRC-74C (NSN 5820-00-177-1641); AND POWER SUPPLIES PP-4514/PRC-74 (NSN 5820-00-942-0821) AND PP-4514A/PRC-74 (NSN 5820-00-177-4581); AND BATTERY BOXES CY-6121/PRC-74 (NSN 5820-00-908-3127), AND CY-6314/PRC-74 AND CY-6314A/PRC-74 (NSN 5820-00-156-3934)

This copy is a reprint which includes current pages from Changes 1 through 7. Title was changed to read as shown above by C 6.

HEADQUARTERS, DEPARTMENT OF THE ARMY MARCH 1967

HEADQUARTERS DEPARTMENT OF THE ARMY Washington, DC, 15 February 1988

Operator's and Organizational Maintenance Manual (Including Repair Parts and Special Tools List)

RADIO SETS AN/PRC-74B (NSN 5820-00-935-0030) AND AN/PRC-74C (NSN 5820-00-177-1641) POWER SUPPLIES PP-4514/PRC-74 (NSN 5820-00-942-0821) AND PP-4514A/PRC-74 (NSN 5820-00-177-4581) BATTERY BOXES CY-6121/PRC-74 (NSN 5820-00-908-3127) CY-6314/PRC-74 (NSN 5820-00-935-0382) AND CY-6341A/PRC-74 (NSN 5820-00-156-3934)

TM 11-5820-590-12-1, 3 March 1967, is changed as follows:

Remove pages

1. Remove old pages and insert new pages as indicated below. New or changed material is indicated by a vertical bar in the margin of the page. Added or revised illustrations are indicated by a vertical bar adjacent to the identification number.

Insert pages

-4
1.2
1-4
nk)
4. 4-

2. File this change sheet in the front of the publication for reference purposes.

Distribution authorized to the Department of defense and DOD contractors only for official use or for administration or operational purposes. This determination was made on 3 November 1937. Other requests for this document will be referred to Commander, US Any Communications-Electronics Command and Fort Monmouth, ATTN: AMSEL-ME-P, Fort Monmouth, NJ 07703-5000.

DESTRUCTION NOTICE-Destroy By any method that will prevent disclosure of contents or reconstruction of the document.

CHANGE No. 8

CARL E. VUONO General, United States Army Chief of Staff

OFFICIAL:

R. L. DILWORTH Brigadier General, United States Army The Adjutant General

DISTRIBUTION:

To be distributed in accordance with DA Form 12-51 literature requirements for AN/PRC-74, A, B, C.

HEADQUARTERS DEPARTMENT OF THE ARMY WASHINGTON DC, 1 October 1981

Operator's and Organizational Maintenance Manual (Including Repair Parts and Special Tools Lists) RADIO SETS AN/PRC 74B (NSN 5280-00-935-0030) AND AN/PRC -74C (NSN 5820-00-177-1641): AND POWER SUPPLIES PP-4514/PRC-74 (NSN 5820-00-942-0821) AND PP 4514A/PRC 74 (NSN 5820-00-177-4581); AND BATTERY BOXES CY 6121/PRC 74 (NSN 5820-00-908-3127), AND CY 6314/PRC 74 AND CY 6314A/PRC 74 (NSN 5820-00-156-3934)

TM 11-5820-590-12-1, 3 March 1967, is changed as follows:

1. New or changed material is indicated by a vertical bar in the margin of the page.

2. Remove and insert pages as indicated in the page list below:

Remove

Insert

i and ii	A through H
	i through iii
1-1 and 1-2	
3-3 and 3-4	
4-1 and 4-2	
None	3 2028-2's w/Sample (back of Manual)

3. File this change sheet in the front of the manual for reference purposes.

By Order of the Secretary of the Army:

E. C. MEYER General, United States Army Chief of Staff

Official:

ROBERT M. JOYCE Brigadier General, United States Army The Adjutant General

DISTRIBUTION:

To be distributed in accordance with DA Form 12-51, Operator TM Literature requirements for AN/PRC-74.

CHANGE ·

WARNING AVOID R. F. BURNS

Do not touch the antenna when the radio set is being tuned or transmitting.

WARNING DANGEROUS VOLTAGES EXIST IN THIS EQUIPMENT

Be careful when working on universal power supply circuits or on ac line connections.

WARNING DANGEROUS CHEMICALS ARE USED IN NICKEL-CADMIUM BATTERIES

The electrolyte used in nickel-cadmium batteries contains potassium hydroxide (KOH), which is a caustic chemical agent. Serious and deep burns of body tissue will result if the electrolyte comes in contact with the eyes or any part of the body. Use rubber gloves, rubber apron, and protective goggles when handling the electrolyte. If accidental contact with the electrolyte is made, use ONLY clean water and immediately (seconds count) flush contaminated areas. Continue flushing with large quantities of clean water for at least 15 minutes. Seek medical attention without delay.

WARNING

EXPLOSIVE GASES ARE GENERATED BY NICKEL-CADMIUM BATTERIES

Hydrogen and oxygen gases are generated in explosive proportions while the nickel-cadmium battery is being charged. Charge the nickel-cadmium battery in a well-ventilated area to reduce concentrations of explosive gases. Turn off the battery charger before connecting or disconnecting the nickel-cadmium battery to prevent arcing. Do not use matches or an open flame in the charging area. Arcs, flumes, or sparks in the charging area will ignite the gases and cause an explosion. The battery box cover must be removed and the battery case vent plug (if used) must be open when charging.

WARNING

Remove all jewelry and wristwatches when working on batteries. Be extremely careful when using metal tools.

WARNING

Operator and maintenance personnel should be familiar with the requirements of TB SIG 291 before attempting installation or operation of equipment covered in this manual. Failure to follow requirements of TB SIG 291 could result in injury or DEATH.

CAUTION

Do not use the whip antenna at 3.5 MHz or below. Use the components of Antenna Kit MK-911A/PRC-74.

CAUTION

Do not operate the radio set with one BA-4386/U. Use two BA-4386/U's in parallel at all times.

CONDENSED OPERATING INSTRUCTIONS FOR RADIO SET AN/PRC-74B

Receive Mode

- a. Attach whip antenna mounting bracket to receiver-transmitter
- b. Install whip antenna and adjust to desired frequency range.
- c. Attach lead wire from whip antenna to front panel ANT terminal.
- d. Connect headset to either front panel AUDIO jack.
- e. The numbers (1) through (8) below are the same as the numbers on the diagram.
 - (1) Set front panel MC, 100 KC, 10 KC, and 1 KC selector knobs to the desired frequency.
 - (2) Turn OFF-ON-TUNE switch to ON position.
 - (3) Set RF GAIN control to maximum and adjust PEAK NOISE control for a definite, noticeable increase in noise heard in the headset.
 - (4) Adjust ANT LOAD and ANT TUNE controls for maximum noise heard in headset.
 - (5) Press in CLARIFY/PUSH TO CALIBRATE knob and adjust so that a zero beat condition is observed in the headset
 - (6) Release the CLARIFY/PUSH TO CALIBRATE knob and reset the pointer to midscale.
 - (7) Set RF GAIN control for desired volume of received signal.
 - (8) Adjust CLARIFY knob so that quality of received voice signals is natural.

Transmit Mode

- f. Perform steps outlined above, do not perform steps (7) and (8) if no received signal is present.
- g. Connect either microphone or key (depending on mode of operation desired) to the remaining audio jack.
- h. The numbers (9) through (11) below are the same as the numbers on the diagram.
 - (9) Turn OFF-ON-TUNE switch to the TUNE position and listen for tone in headset.
 - (10) Adjust ANT TUNE knob to mid position. Adjust ANT LOAD knob until a maximum reading is obtained on ANT IND meter. Adjust ANT TUNE knob until a maximum reading is obtained on ANT IND meter.
 - (11) Release OFF-ON-TUNE knob and allow to return to ON position. <u>Note</u>. Repeat-step h each time transmitting frequency is changed.
- i. Press microphone button and speak directly into the microphone.

TM5820-590-12-1-C1-1

CONDENSED OPERATING INSTRUCTIONS FOR RADIO SET AN/PRC-74C

Receive Mode

- a. Attach whip antenna mounting bracket to receiver-transmitter.
- b. Install whip antenna and adjust to desired frequency range.
- c. Attach lead wire from whip antenna to front panel ANT terminal.
- d. Connect headset to either front panel AUDIO jack.
- e. The numbers (1) through (8) below are the same as the numbers on the diagram.
 - (1) Set front panel MHz, 100 KHz, 10 KHz, and 1 KHz selector knobs to the desired frequency.
 - (2) Turn OFF-ON-TUNE switch to ON position.
 - (3) Set RF GAIN control to maximum and adjust PEAK NOISE control for a definite, noticeable increase in noise heard in the headset.
 - (4) Set ANT TUNE to mid range and ANT LOAD for maximum noise heard in headset.
 - (5) Press in CLARIFY/PUSH TO CALIBRATE knob and adjust so that a zero beat condition is observed in the headset.
 - (6) Release the CLARIFY/PUSH TO CALIBRATE knob and reset the pointer to midscale.
 - (7) Set RF GAIN control for desired volume of received signal.
 - (8) Adjust CLARIFY knob so that quality of received voice signals in natural.

Transmit Mode

- f. Perform steps outlined above, do not perform steps (7) and (8) if no received signal is present.
- g. Connect either microphone or key (depending on mode of operation desired) to the remaining audio jack.
- h. The numbers (9) through (11) below are the same as the numbers on the diagram.
 - (9) Turn OFF-ON-TUNE switch to the TUNE position and listen for tone in headset.
 - (10) Adjust ANT TUNE knob to mid position. Adjust ANT LOAD knob until a maximum reading is obtained on ANT IND meter. Adjust ANT TUNE knob until a maximum reading is obtained on ANT IND meter.
 - (11) Release OFF-ON-TUNE knob and allow to return to ON position.
 - Note. Repeat-step h each time transmitting frequency is changed.
- i. Press microphone button and speak directly into the microphone.

TM5820-590-12-1-C1-1

SAFETY STEPS TO FOLLOW IF SOMEONE IS THE VICTIM OF ELECTRICAL SHOCK

DO NOT TRY TO PULL OR GRAB THE INDIVIDUAL

IF POSSIBLE, TURN OFF THE ELECTRICAL POWER

IF YOU CANNOT TURN OFF THE ELECTRICAL POWER, PULL, PUSH, OR LIFT THE PERSON TO SAFETY USING A WOODEN POLE OR A ROPE OR SOME OTHER INSULATING MATERIAL

SEND FOR HELP AS SOON AS POSSIBLE

5

AFTER THE INJURED PERSON IS FREE OF CONTACT WITH THE SOURCE OF ELECTRICAL SHOCK, MOVE THE PERSON A SHORT DISTANCE AWAY AND IMMEDIATELY START ARTIFICIAL RESUSCITATION

Change 7 D

FIXED OPERATION WITH LONG RANGE ANTENNAS

WARNING

TELESCOPING ANTENNA MAST

EXTENDD RANGE ANTENNA

DOUBLET ANTEMMA

NEVER ERECT THESE LONG RANGE ANTENNAS DIRECTLY UNDER POWERLINES.

IF YOU MUST ERECT THESE LONG RANGE ANTENNAS NEAR POWERLINES, POWERLINE POLES OR TOWERS, OR BUILDINGS WITH OVERHEAD POWERLINE CONNECTIONS. NEVER PUT THE ANTENNA CLOSER THAN TWO TIMES THE ANTENNA HEIGHT FROM THE BASE OF THE POWERLINE, POLE, TOWER, OR BUILDINGS.

NEVER ATTEMPT TO ERECT ANY LONG RANGE ANTENNA WITHOUT A FULL TEAM. BEFORE ERECTING ANY LONG RANGE ANTENNA, INSPECT ALL THE PARTS MAKING UP THE ANTENNA KIT. DO NOT ERECT THE ANTENNA IF ANY PARTS ARE MISSING OR DAMAGED.

DO AS MUCH OF THE ASSEMBLY WORK AS POSSIBLE ON THE GROUND.

WHEN ERECTING THE ANTENNA, ALLOW ONLY TEAM PERSONNEL IN THE ERECTION AREA.

MAKE SURE THAT THE AREA FOR THE ANCHORS IS FIRM. IF THE GROUND IS MARSHY OR SANDY, GET SPECIFIC INSTRUCTIONS FROM YOUR CREW CHIEF OR SUPERVISOR ON HOW TO REINFORCE THE ANCHORS.

WHEN SELECTING LOCATIONS FOR ANCHORS, AVOID TRAVELED AREAS AND ROADS. IF YOU CAN NOT AVOID THESE AREAS, GET SPECIFIC INSTRUCTIONS FROM YOUR CREW CHIEF OR SUPERVISOR AS TO WHAT CLEARANCE YOUR GUY WIRES AND ROPES MUST HAVE OVER TRAVELED AREAS AND ROAD.

CLEARLY MARK ALL GUY WIRES AND ROPES WITH THE WARNING FLAGS SUPPLIED BY YOUR UNIT. IN AN EMERGENCY, USE STRIPS OF WHITE CLOTH AS WARNING STREAMERS.

IF YOU SUSPECT THAT POWERLINES HAVE MADE ACCIDENTAL CONTACT WITH YOUR ANTENNA, STOP OPERATING, ROPE OFF THE ANTENNA AREA, AND NOTIFY YOUR SUPERIORS.

IF THE WEATHER IN YOUR AREA CAN CAUSE ICE TO FORM ON YOUR LONG RANGE ANTENNA AND ITS GUY WIRES AND ROPES, ADD EXTRA GUYS TO SUPPORT THE SYSTEM. ROPE OFF THE AREA AND POST IT WITH WARNING SIGNS LIKE "BEWARE OF FALLING ICE".

DO NOT TRY TO ERECT ANY ANTENNA DURING AN ELECTRICAL STORM.

KEEP A SHARP EYE ON YOUR ANCHORS AND GUYS. CHECK THEM DAILY AND IMMEDIATELY BEFORE AND AFTER BAD WEATHER.

WARNING

SERIOUS INJURY OR EVEN DEATH CAN HAPPEN IF THE FOLLOWING ARE NOT CAREFULLY OBSERVED WHEN INSTALLING AND USING THE ANTENNAS USED WITH YOUR RADIO SETS

1. ARE THERE ANY POWERLINES IN YOUR AREA OF OPERATION ?

BEFORE ANY MISSION FIND OUT

2. HOW HIGH ARE THESE POWERLINES ?

3. HOW TALL ARE THE POLES OR TOWERS CARRYING POWERLINES ?

MOBILE OPERATION WITH WHIP ANTENNAS

DO NOT STOP YOUR VEHICLE UNDER POWERLINES.

- IF POSSIBLE, TRY TO MAINTAIN MOBILE COMMUNICATIONS WITH YOUR ANTENNA(S) TIED DOWN.
- MAKE SURE AN ANTENNA TIP CAP IS SECURELY TAPED ON THE END OF EACH WHIP ANTENNA.
- DO NOT LEAN ACROSS OR TOUCH A WHIP ANTENNA WHILE THE TRANSMITTER IS ON.
- DURING CROSS-COUNTRY OPERATION, DO NOT ALLOW ANYONE TO STICK AN ARM, LEG OR WEAPON OVER THE SIDES OF THE VEHICLE. IF YOUR ANTENNA ACCIDENTALLY TOUCHES A POWERLINE AND A LEG, ARM, OR WEAPON CONTACTS THE DAMP BUSH OR THE GROUND, A SERIOUS OR FATAL ACCIDENT CAN HAPPEN.
- IF YOU ARE NOT SURE THAT AN ANTENNA ON YOUR VEHICLE WILL CLEAR A POWERLINE, STOP BEFORE YOU GET CLOSE TO THE POWERLINE AND EITHER CAREFULLY TIE DOWN THE ANTENNA OR REMOVE ANTENNA SECTIONS TO MAKE SURE THAT YOU CAN SAFELY DRIVE UNDER THE POWERLINE.

WARNING

Remove the magnesium battery from Battery Box CY-6314()/PRC-74 when the RT-794/PRC is not being used. This is required to insure that hydrogen gas (a by-product of Magnesium Battery, BA-4386/U Discharge Action) does not accumulate. Personnel may be injured and equipment damaged if the gas explodes.

WARNING

You can tell the difference between Magnesium Battery, BA-4386, and Lithium Battery, BA-5598, by looking at their size. The Lithium Battery is half the size (smaller than) of the Magnesium Battery

WARNING P P-4514/PRC-74 GROUND THE INSTRUMENT

To minimize shock hazard, the instrument chassis and cabinet must be connected to an electrical ground. The instrument is equipped with a three conductor ac power cable. The power cable must either be plugged into an approved three contact electrical outlet or used with a three contact to two contact adapter with the ground wire (green) firmly connected to an electrical ground (safety ground) at the power outlet. The power jack and mating plug of the power cable must meet International Electrotechnical Commission (IEC) safety standards.

WARNING

DO not attempt internal service or adjustment unless another person, capable of rendering first aid and resuscitation, is present.

<u>WARNING</u> SAFETY PRECAUTION

A periodic review of safety precautions in TB-385-4, Safety Precautions for Maintenance of Electrical/Electronic Equipment, is recommended. When the equipment is operated with covers removed, DO NOT TOUCH exposed connections or components. MAKE CERTAIN you are not grounded when making connections or adjusting components inside the test instrument.

WARNING

A lithium-sulfur dioxide (Li-S02) battery used with the equipment contains pressurized sulfur dioxide (S02) gas. The gas is toxic, and the battery MUST NOT be abused in any way which may cause the battery to rupture.

WARNING

DO NOT heat, short circuit, crush, puncture, mutilate, or disassemble batteries.

WARNING

DO NOT USE any battery which shows signs of damage, such as bulging, swelling, disfigurement, brown liquid in the plastic wrap, a swollen plastic wrap, etc.

WARNING

DO NOT test Li-S02 batteries for capacity.

WARNING

DO NOT recharge Li-S02 batteries.

Change 8 G

WARNING

DO NOT use water to extinguish Li-SO2 battery fires if a shock hazard exists due to high voltage electrical equipment in the immediate vicinity (i.e., greater than 30 volts, alternating current (ac) or direct current (dc)).

WARNING

If the battery compartment becomes hot to the touch, if you hear a hissing sound (i.e., battery venting), or smell irritating sulfur dioxide gas, IMMEDIATELY Turn Off the equipment. Remove the equipment to a well ventilated area or leave the area.

WARNING

DO NOT use a Halon type fire extinguisher on a lithium battery fire.

WARNING

In the event of a fire, near a lithium battery(ies), rapid cooling of the battery(ies) is important. Use a carbon dioxide (C02) extinguisher. Control of the equipment fire, and cooling, may prevent the battery from venting and potentially exposing lithium metal. In the event that lithium metal becomes involved in fire, the use of a graphite based Class D fire extinguisher is recommended, such as Lith-X or MET-L-X.

WARNING

DO NOT store lithium batteries with other hazardous materials and keep them away from open flame or heat.

Section I. GENERAL

1-1. Scope

This manual describes Radio Set AN/PRC-74B, Radio Set AN/PRC-74C, Power Supply PP4514/PRC-74, Power Supply PP-4514-A/PRC, Battery Box CY-6121/PRC-74, Battery Box CY6314/PRC-74, and Battery Box CY-6314A/PRC-74 and covers their installation, operation, and maintenance. Unless otherwise indicated. references in this manual to Radio Set AN/PRC-74B also apply to Radio Set AN/PRC-74C, references to Power Supply PP-4514/PRC-74, and references to Battery Box CY-6314/PRC-74 also apply to Battery Box CY-6314A/PRC-74. Operator and organizational maintenance instructions are limited to those services listed in chapters 4 and 5 and in appendix C.

1-2. Consolidated Index of Army Publications and Blank Forms

Refer to the latest issue of DA Pam 25-30 to determine whether there are new editions, changes or additional publications pertaining to the equipment.

1-3. Maintenance Forms, Records, and Reports

a. Reports of Maintenance and Unsatisfactory Equipment. Department of the Army forms and procedures used for equipment maintenance will be those prescribed by DA Pam 738-750, as contained in Maintenance Management Update.

b. Report of Packaging and Handling Deficiencies. Fill out and forward SF 364 (Report of Discrepancy (ROD)) as prescribed in AR 735112/DLAR 4140.55/NAVMATINST 4355.73B/AFR 400-54/MCO 4430.3H.

c. Discrepancy in Shipment Report (DISREP) (SF 361). Fill out and forward Discrepancy in Shipment Report (DISREP) (SF 361) as prescribed in AR 55-38/NAVSUPINST 4610.33C/AFR 7518/MCO P4610. 19D/DLAR 4500.15.

1-3.1 Reporting Equipment Improvement Recommendations (EIRs)

If your equipment needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don't like about the design. Put it on an SF 368 (Quality Deficiency Report). Mail it to: Commander, US Army Communications Electronics Command and Fort Monmouth, ATTN: AMSEL-PA-MA-D, Fort Monmouth, New Jersey 07703-5000. We'll send you a reply.

1-3.2 Administrative Storage

Administrative storage of equipment issued to and used by Army activities will have preventive maintenance performed in accordance with the PMCS charts before storing. When removing the equipment from administrative storage, the PMCS should be performed to assure operational readiness. Disassembly and repacking of equipment for shipment or limited storage are covered in paragraphs 6-1 and 6-2.

1-3.3 Destruction of Army Electronic Materiel

Destruction of Army electronics materiel to prevent enemy use shall be in accordance with TM 750-2442.

Section II. DESCRIPTION AND DATA

1-4. Purpose and Use

a. Radio Set AN/PRC-74B (referred to throughout this manual as the radio set) provides dependable two-way communications within the frequency range from 2 to 17.999 megacycles (mc). Receiver-Transmitter, Radio RT-794B/PRC-74 (fig. 1-1), part of the radio set, is a single sideband (ssb) transceiver which provides either voice or telegraph

continuous-wave (cw) mode of communications. Unless otherwise indicated, references in this manual to Receiver Transmitter, Radio RT-794B/PRC-74 also apply to Receiver-Transmitter, Radio RT-794CIPRC-74 (fig. 1-1.1). The radio set operates at the low end of the high-frequency (HF) spectrum; therefore, signals are propagated by both groundwave and portable stations. This is called net

Change 8 1-1

skywave. Groundwave propagation is normally used for communications at distances up to 25 miles For greater distances, skywave propagation is used and signals reach distant points by refraction from the ionosphere. The operating range of the radio set may be extended to several hundred miles by proper selection of frequency, antenna and time of day.

b. The radio set is primarily designed for use as, man pack set in areas where direct line-of-sight communication is not possible.

1-5. Technical Characteristics

a. Receiver-Transmitter Radio RT-794B/PRC-74

Frequency range	2.000 to 17.999 mc in 1.0 kc steps.
Frequency standard stability	± 1.5 parts/million from -30°C to +55°C (AN(PRC-74B).± 1.5 parts/million from -40°C to +65°C (AN/PRC-74C).
Intermediate frequency Transmitter performance:	1,750 kc.
Modulation modes	Upper-sideband suppressed carrier, voice or cw.
Carrier suppression	40 db below level of a 1,000- cycle modulation usb signal of rated output.
Power output	15 watts peak envelope power nominal.
Monitor sidetone	Voice or tone as determined by modulation mode.
Tuning indicator Receiver performance:	Meter (operated by vswr bridge).
Sensitivity	0.7 microvolt for 10 db, signal plus noise to noise.
Selectivity	.3-db points at +300 and + 2,700 cps, 45-db points at -350 and + 6,500 cps (referenced to carrier frequency).
Audio output	1 mw minimum into a 500-ohm headset.
Audio distortion	10 percent maximum at frequencies between 300 cps and 2,700 cps with an audio output level of 4 milliwatts.
Power source	Determined by fixed or portable requirements: An external power supply may be used as a power source during fixed operation. For portable use, wet or dry battery pack may be used.
Input power	+ 10.5 to + 17.0 volts.

b. Battery Box CY-6121/PRC-74 and Battery Box CY-6314/PRC-74.

NOTE

The common name for Battery Box CY-6121/PRC-74 is the wet battery pack and the CY-6314/PRC-74 is the dry battery pack.

Wet cell: Type Capacity Life	Rechargeable nickel-cadmium 14-ampere hours 24 hours with a 1-minute transmit/9-minute receive continuous duty cycle
Terminal voltage	1.2 volts per cell (wet battery pack terminal voltage is 12 volts).
Terminal voltage Dry cell	+ 12 volts
Туре	BA-4386/U
Quantity	2 batteries per pack
Terminal voltage	15 volts dc per cell (dry battery pack terminal voltage is + 15 volts).
Capacity	14-ampere hours.
Life	24 hours, 9 minutes receive, 1 minute transmit duty cycle.
Туре	BA-5598/U
Terminal voltage	12 volts dc.

c. Power Supply PP-4514/PRC-74.

NOTE

Unless otherwise indicated, references in this manual to Power Supply PP-4514/PRC-74 also apply to Power Supply PP-4514A/PRC-74.

This power supply is *used with* but *not part of* the AN/PRC-74B. It is used with the AN/PRC-74B to recharge the wet battery and to provide a 14-volt dc source during vehicular or semi-permanent operation (pare 2-3b and c). The power supply is issued with four power cables and one battery charger cable (fig.1-8).

Input.....

+ 28 volts, + 10 percent to -25 percent, 110 volts or 220 volts single phase, + 15 percent to -25 percent at line frequency from 47 to 400 cps.

Power supply module: Output voltage	+14 volts ±3 at load currents between 0 and 6.5 amperes
Ripple voltage at output	1.0 volt peak-to-peak maximum.
Battery charger module, charging rate to wet cell battery	Variable from 1 to 5 amperes.

1-6. List of Components

Note. Power Supply PP-4514()/PRC-74, Battery Box CY-6121/PRC-74, and Battery Box CY-6314 ()/PRC-74 are used with but not part of the radio set.

a. Radio Set AN/PRC-74B Only (fig. 1-3 through 1-7). The following list of components is for Radio Set AN/PRC-74B (FSN 5820-335-0030).

Quantity	ltem	FSN
1	Receiver Transmitter, Radio RT-794B/PRC-74	5820-935-0031
1	Bag, Accessory, CW-863/PRC-74	8105-921-6711
1	Mounting, MT-3613/PRC-74	5820-942-0818
1	Base, Antenna Support AB- 955/PRC-74	5820-942-0500
1	Antenna, AS-1887A/PRC-74	5820-935-0032
1	Kit, Wire Antenna MK- 911A/PRC-74	5820-832-8210
1	Key, Telegraph KY-562/U	5805-926-0221
1	Headset, Electrical H-140()/U	5965-892-1010
1	Microphone, Dynamic M-80/U	5965-875-1313
1	Cable, Assembly, Special	5995-930-7016
	Purpose CX-10239/PRC-74 (used with Keyer KY- 468/GRA-71) Running spares (para 1-6.1)	

b. Radio Set AN/PRC-74C Only. Except for Receiver Transmitter, Radio RT-794B/PRC-74 (rt unit) the components and running spares for Radio Set AN/PRC-74C (FSN 5820-177-1641) are the same as the AN/PRC-71B (a above). The rt unit for the AN/PRC-74C is Receiver Transmitter, Radio RT-794C/PRC-74 (FSN 5820-177-1640).

c. Power Supply PP-4514()/PRICE-74 (fig. 1-8). Power Supply PP-4514/PRC-74 (FSN 5820-9420821) and Power Supply PP-4514-A/PRC-74 (FSN 5820-177-4581) contain the following items:

Quantity	ltem			FSN
1	Power	Supply	PP-4514/PR-C-	5820-942-0821

	74	
1	110 Volt AC Power Cable W1	5995-945-1936
	CX-10296/U	
1	21-31 Volt DC Power Cable W2	5995-930-9083
	CX-10297/U	
1	220 Volt AC Power Cable W3	5995-945-1900
	CX-10298/U	
1	24 Volt DC Power Cable W4	5995-945-1882
	CX- 10299/U	
1	Battery Charger Cable W5 CX- 10300/U	5995-945-1881
	Running Spares(para 1-6.1)	

74

d. Battery Box CY-61211PRC-74 (fig. 1-2). Battery Box CY-6121/PRC-74 (wet battery pack) (FSN 5820-908-3127) is a self contained unit. The following items (1) through (3) below are used with but not part of the wet battery pack and must be requisitioned separately.

(1) Ten each; Battery, Storage BB-418/U (FSN 6140-855-7634).

(2) Ten each; intercell connectors (FSN 5940134-0724).

(3) One each; Power Supply PP-4514/PRC-74 (FSN 5820-942-0821) or Power Supply PP4514A/PRC-74 (FSN 5820-177-4581) for recharging purposes.

e. Battery Box CY-6314()/PRC-74 (fig. 4-1). Battery Box CY-6314/PRC-74 (FSN 5820-935-0382) and Battery Box CY-6314A/PRC-74 (FSN 6135-1563934) (both are called dry battery packs) are self contained units.

1-6.1. Running Spares

a. The following is a list of running spare fuses for the radio set:

In Use	Quantity	Item
1	5	5 Fuses 1AG, 7.5 amp.
1	5	5 Fuses 1AG, 2 amp.

B The following is a list of the running spare fuses and lamps for Power Supply PP-4514/PRC-74:

C 2, TM 11-5820-590-12-1

In use	Quantity	Item
1	3	Fuses F2A, 32 volts, 15 amp.
1	5	Fuses F2A, 250 volts, 2 amp.
2	5	Fuses F2A, 250 volts, 4 amp.
1	6	Fuses F3A, 250 volts, 6 amp.
2	3	Fuses F3A, 250 volts, 8 amp.
	2	Lamps, MS-25237-327.

1-7. Description of Major Components

a. The radio set is a low-powered, fully transistorized receiver-transmitter that can be used for either point-to-point or netting operation. The radio set operates on a single frequency for both transmit and receive functions. The transmitter is enabled by a push to-talk microphone button, a telegraph key, or automatic Keyer KY-468/GRA-71 Coder-Burst Transmission (part of Group AN/GRA71). Coder-burst Transmission Group AN/ GRA-71 is not supplied as part of the AN/PRC-74B. The receiver is operative only when the transmitter is not being used; therefore, communication is only on a one-way reversible basis.

b. The radio set may be operated from alternating current (ac) or direct current (dc) powerlines, or from a 24-volt vehicle battery when Power Supply PP-4514/PRC-74 is available. During normal operation, the radio set is mancarried and operated from either Battery Box CY-6314/PRC-74 (dry battery pack) or Battery Box CY-6121/PRC-74 (wet battery pack) (fig. 1-2). Latches on two sides of the receiver-transmitter (rt) permit attachment to either the dry or wet battery pack, or to Power Supply PP-4514/PRC-74 (external power supply and battery charger). Retractable legs are provided on the base of the wet battery pack to support Receiver-Transmitter Radio RT-794B/PRC-74 (rt unit) when it is used in an upright position.

c.The radio set can be operated with the use of either Whip Antenna AS-1887A/PRC— 74 (fig. 1-3) or various configurations of a wire antenna. The Whip antenna consists of Mounting MT-3613/PRC-74 (mounting bracket) which attaches to the radio set (fig. 1-3), a Base, Antenna Support AB-955/PRC-74 which attaches to the mounting bracket, and the whip antenna which attaches to the antenna support. Antenna Kit MK-911A/PRC-74 (shown in the top half of fig. 1-4) consists of two reels of antenna wire with the required antenna which plugs and weights, two reels of Dacron cord, and a dipole fixture. The components of the wire antenna kit can be arranged in any of the configurations described in paragraph 2-5.

d. Accessory equipment (fig. 1-5) includes Headset H-140/U, Key, Telegraph KY-562/U, and Microphone M-80/U. Bag, Accessories CW-863/PRC-74 (fig. 1-6) is provided to store the antennas and accessory equipment when they are not in use. Cable Assembly, Special Purpose, Electrical CX-10239/PRC-77 (fig. 1-7) permits the use of the radio set with automatic Keyer KY-468/GRA-71 (part of Coder-Burst Transmission Group AN/GRA-71).

e. Battery Box CY-6314A/PRC-74 (fig. 12) consists of two 15-volt battery blocks connected in parallel to provide an open circuit terminal voltage of + 15 volts. Battery capacity is 14-ampere hours with life expectancy of 24 hours (9-minutes receive, 1-minute transmit duty cycle). The radio set will operate on one battery block for a reduced time period A battery terminal voltage of less than 11 volts, measured during transmission, indicates low batteries which will result in a reduced radio frequency (RF) power output from the radio set.

f. The wet cell battery (fig. 1-2) consists of 10 nickel-cadmium cells, connected in series, to provide a nominal voltage of 12.0 volts. The open circuit voltage of a discharged battery is 12.5 volts or less, and that of a full' charged battery will be 13 volts or more. Unless otherwise indicated by a warning tag or the battery, the wet cell battery is always shipped in a discharged state

1-8. Description of Power Supply PP-451 4/PRC-74

(fig. 1-8)

This power supply is used with the AN/PRC-74B when the radio set is installed in a vehicle or is used in a semi-permanent location. This permits the radio set to be operated from 110 or 220 volts ac or 21 to 31 volts dc. Five power cables are provided with the power supply

and are used to connect power from the available voltage source to the power supply. The power supply consists of a battery charger subassembly and power supply subassembly The battery charger subassembly contains a control for adjusting the charging current from 0 to 5 amperes. The power supply subassembly provides controls and indicators to establish and monitor the charging rate of the battery charger, the actual charge stored in the wet cell battery, or the voltage supplied to the radio set from the external power source.

Figure 1-2 Wet and dry battery carrier assemblies, covers removed.

Figure 1-3. Receiver - Transmitter Radio RT-794B/PRC-74 with whip antenna.

Figure 1-4. Whip antenna, antenna kit, and mounting hardware.

Figure 1-5. Headset, telegraph key, and microphone.

TM5820-590-12-1-5

Figure 1-6, Bag, Accessories CW-863/PRC-74.

Figure 1-7. Cable Assembly, Special Purpose, Electrical CX-10239/PRC-74 (adapter cable for automatic Keyer KY-468/GRA-71)

1-9. Differences in Models

Radio Set AN/PRC-74C differs from Radio Set AN/PRC-74B in the following details:

a. The front panel assembly is marked in Hertz (Hz) instead of cycles (C) and has molded handles (fig. 3-1, 3-1.1).

b. The receiver-transmitter case has ruggedized latches (fig. 1-1.1).

c. The frequency synthesizer relocates calibrate crystal Y47 secures switch assemblies A1 and A4 with brackets and changes value of several components .C 2, TM 11-5820-590-12-1.

d. The RF module has different chassis plates.

e. The IF audio module has added capacitor.

f. The power supply module relocates several components.

g. The frequency generator has added spring clips.

h. All modules have components subject to shifting, secured with sealant.

i. Battery Box CY-6314/PRC-74 differs from Battery Box CY-6314A/PRC-74 in the way in which batteries are mounted (para 4-7).

Figure 1-8. Power Supply PP-4514/PRC-74.

CHAPTER 2

INSTALLATION

Warning. During installation of this equipment, conform to all safety requirements in TB SIG 291. Injury or DEATH could result from failure to comply with safe practice.

2-1. Unpacking

a. When packed for shipment or extended storage, the receiver-transmitter radio, Power Supply PP-4514/PRC-74 and battery packs are packed separately as indicated in figures 2-1, 2-1.1, and 2-1.2. The receiver-transmitter radio and power supply are packed in double cartons with the

outer carton being weather resistant fiberboard. The battery packs are packed in an outer carton only. The outer carton joints are sealed with pressure sensitive waterproof tape. Following is a list showing inner dimensions of cartons used to package the receiver-transmitter radio, power supply and battery packs:

Equipment	Inner Carton	Outer Carton	Volume Cu. Ft.	Weight
	Dimension in inches	Dimension in inches		Lbs
Receiver-transmitter radio	17 ¾ X 10¼ X 11 ½	19 ¾ X 12¼ X 13 ¾	2.0	15.25
Power supply	20 ½ X 12 ½ X 11½	22 ¼ X 14 ¼ X 13 ½	2.5	46.00
Wet battery pack		8 ½ X 3 ¾ X 12 ¼	0.3	5.00
Dry battery pack		6 ½ X 4 ¼ X 11 ¾	0.2	4.00

b. Removing Contents. Perform the procedures below when unpacking the radio set.

(1) Transport the packing box as close as possible to the desired location before unpacking.

(2) Cut the taped seams of the outer carton with a sharp knife and open the barrier bag.

(3) Remove the four top corner pads.

(4) Cut the taped seams of the inner carton and remove the filler material that surrounds each piece of equipment.

(5) Remove the contents of the box.

2-2. Checking Unpacked Equipment

a. Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on DD Form 6 (para 1-3).

b. See that the equipment is complete as listed in paragraph 1-6. Report all discrepancies in accordance with TM 38-750. Shortage of a minor assembly or part that does not affect proper functioning of the equipment should not prevent use of the equipment.

c. If the equipment has been used or reconditioned, see whether it has been changed by a modification work order (MWO). If the equipment has been modified, the MWO number will appear on the front panel near the nomenclature plate. Check to see whether the MWO number (if any) and appropriate notations concerning the modification have been entered in the equipment manual.

2-3. Radio Set Installation

Installation procedures for the radio set depend on the type of operation desired; that is. man pack. vehicular or semi-permanent. Installation procedures for the three types of operation are given in *a*, *b*, and *c* below.

C 3, TM 11-5820-590-12-1

a. Man Pack Operation. The man pack method requires the use of either the dry or wet cell battery packs (figs. 1-1 and 1-2). To connect either battery pack to the rt unit proceed as follows: Note battery WARNINGS AND CAUTIONS on page i.

(1) Place the battery pack on a flat surface so that the connector on the battery pack is facing upward.

(2) Mate the connector (J301, fig. 1-8) on the bottom of the rt unit with the connector on the battery pack.

(3) Engage and lock the two latches located on both sides of the rt unit.

(4) Connect the rt unit to the antenna (para 2-5).

b. Vehicular Operation. The vehicular method requires the use of a vehicle with a 24- t28volt generating system. To connect the rt unit to the vehicle, remove the battery case from the rt unit by releasing the two snap fasteners that secure the battery case to the rt unit and proceed as follows:

(1) Place the rt unit in its mounting position (fig. 1-8) on Power Supply PP-4514/PRC-74 (external power supply and battery charger) slides and slide the rt unit forward until J301 on the back of the rt unit mates with J4 on the PP-4514/PRC-74 case. Secure the two side latches.

(2) Select two dc power cables (cables W4 and W1, fig. 1-8) and connect the two cables as shown in B. figure 3-4. (The location of J1 on the power supply is shown in fig. 1-8). Be sure to connect the positive terminal of cable W4 to the positive terminal of the vehicle battery and the negative terminal of the cable to the negative terminal of the vehicle battery.

(3) Connect the rt unit to the antenna (para 2-5).

c. Semi-permanent Operation. The semipermanent method requires a source of 220 volts at 50 to 400 cycles per second (cps), or 110 volts at 50 to 400 cps, or a 28-volt dc power supply. To connect the rt unit to the fixed source of power, remove the battery case from the rt unit by releasing the two snap fasteners that secure the battery case to the rt unit, and proceed as follows: (1) Place the rt unit in its mounting position (fig. 1-8) on the PP-4514/PRC-74 slides and slide the rt unit forward until J301 on the back of the rt unit mates with J4 on the PP-4514/PRC-74. Secure the two side latches.

(2) Refer to figure 1-8 and select the correct power cable for the available power source. *Note.* The selection of the correct power cable for the available power source automatically provides the correct input connections to J1 on the PP-4514/PRC-74. No other adjustments or connections are required when changing from one source of fixed power to another.

(3) Connect the selected cable between J1 on the PP-4514/PRC-74 and the power source as shown in A, fig. 3-4.

(4) Connect the rt unit to the antenna (para 2-5).

d. Operation With Coder-Burst Equipment. To operate the radio set with the AN/GRA-71 coder-burst equipment, connect one end of Cable Assembly, Special Purpose, Electrical CX-10239/PRC-74 (fig. 1-7) to J1 on Keyer KY-468 /GRA-71. Connect the other end of this cable to one of the AUDIO connectors on the front panel of the radio set. Operate the equipment as specified in paragraph 3-4. Refer to TM 11 -5835-224-1 2 for additional information on the AN/GRA-71.

2-4. Siting

The following should be considered when locating the antenna:

a. Radio signals are absorbed and sometimes reflected by nearby obstructions, such as hills, metal buildings and bridges, or telephone lines that extend above the height of the antenna. Transmitted signals have a greater range when the antenna is as high above ground as possible. Transmission and reception are best over water or level ground.

b. If transmission and reception in all directions are required, place the antenna on the highest hill within the designated area.

c. When in rear areas, avoid placing the radio set near sources of electrical interference, such as powerlines or telephone lines, radar sets, and field hospitals. *d*. Try several locations within the general area and select the one that provides the best signals from the desired stations.

e. Enemy jamming action against the receiver is always a possibility. The effects of enemy jamming may be reduced by locating the antenna so that nearby obstructions act as a screen in the direction of probable sites of enemy jamming transmitters. This screening action may also reduce the transmitted signal strength in a direction toward the enemy, thereby making it more difficult for the enemy to intercept the signals.

2-5. Antenna Assembly

Warning. During installation of this equipment, conform to all safety requirements in TB SIG 291. Injury or DEATH could result from failure to comply with safety practices.

WARNING. AVOID RF BURNS. Do not touch the antenna when the radio set is being tuned or transmitting.

Caution. Do not use the whip antenna at 3.5 MHz or below.

a. Whip Antenna. The whip antenna

(fig. 1-3) is the least effective of the three antennas supplied with the radio set; however, it may be erected quickly and requires no support. Connect the whip antenna as follows:

(1) Place the radio set in as high and clear a location as circumstances permit.

Note. The whip antenna is mounted on a swivel to permit the operator to place the radio set flat on the ground and swivel the antenna into the upright position. Under combat conditions, this permits the operator to use the radio set from a prone position.

(2) Attach the whip mounting bracket (Mounting MT-3613/PRC-74) to the side of the radio Act set Shown in (fig 1-3).

(3) Assemble the whip antenna.

Note. The antenna sections are connected internally by a wire cable that is under tension. When the antenna sections are set in line, the individual sections will automatically snap into place.

(4) Attach the whip antenna to the antenna support base and screw the antenna support base (fig. 1-3) into the whip mounting bracket.

(5) Connect the lead from the antenna base to the ANT (red) terminal (fig. 3-1) of the radio set.

(6) Set the frequency range selector switch (fig. 1-3), located at the bottom of the antenna loading coil, to correspond to the operating frequency.

(7) Tune the radio set as outlined in para 3-2 and 3-3.

Note. If time and conditions permit, a counterpoise be connected to the radio set ground terminal as indicated in (8) and (9) below.

(8) Attach one of the antenna reels to the GRD (black) terminal of the radio set.

(9) Unwind the antenna wire to approximately twice the length of the whip antenna and lay wire on the ground in a convenient direction away from the radio set. (This wire acts as the counterpoise.)

Note. If the radio set is operated near a large metal structure, a clip lead attached to a clean conducting point will permit the structure to be used as a counterpoise in place of the antenna wire.

(10) Check the frequency range selector switch whenever the operating frequency of the radio set is changed.

b. Slant Wire Antenna. A slant wire antenna is much more effective than the whip antenna. The slant wire antenna requires the use of dipole antenna wire (fig. 2-5) and an antenna support. It is used when greater range is necessary than the whip antenna can provide, and when time or conditions do not allow the erection of a dipole. The proper arrangement for a slant wire antenna is shown in (fig 2-2). Erect a slant wire antenna as follows:

(1) Decide on the direction that transmission is required and determine the alignment of the antenna.

2-3

C 2, TM 11-5820-590-12-1

Figure 2-1. Receiver-transmitter radio, typical packaging

(2) Unwind one of the dipole antenna reels to the length specified in the antenna length chart below.

(3) Fasten the antenna wire to the notch on the reel and lay the reel about 20 feet from the antenna support. Position the radio set at the end of the antenna and insert the red plug of the antenna wire into the ANT (red) terminal of the radio set.

(4) Insert the black plug of the remaining antenna reel into the GND (black) terminal. Unwind this wire and lay it on the ground in line with the antenna and in the opposite direction of the antenna support. Unwind the reel until it is about 11/2 times the antenna length and place the reel on the ground. (When the antenna is completely erected, this wire provides a counterpoise.)

(5) Attach a lead weight (fig. 2-3) to one end of the Dacron cord. Throw the weight over any convenient antenna support (such as a tree limb), and then remove the lead weight and fasten the end of the cord to the antenna reel. Raise the antenna, and fasten the cord to hold the antenna in place.

(6) Tune the rt unit (para 3-2 and 3-3).

c. Dipole Antenna. The dipole antenna is the most effective antenna and, time and tactical circumstances permitting, should be used in

Frequency (MHz)	Length (Ft.)	Frequency (MHz)	Length (Ft.)	Frequency (MHz)	Length (Ft.)
2.00	117	5.00	47	13.00	18
2.20	106	5.50	43	14.00	17

preference to either the whip or slant wire antenna. A dipole antenna is usually erected between two supports as shown in figure 2-4. Antenna supports are not provided with this equipment and it is not always possible to find two supports that are properly oriented and spaced. If only one support is available, or if terrain prohibits, a one-support dipole (figs. 2-5 and 2-6) should be used. Note that for both the dipole and slant wire antennas, the most effective receiving and transmitting direction is broadside, or 90° to the line of the wire. Erect a dipole antenna as follows:

- (1) Attach each dipole antenna wire to the dipole fixture (fig. 2-7).
- (2) Determine the length of each leg of the dipole from the antenna length chart para b (2) above

- (3) Insert either lead of the feedline to the ANT (red) terminal and the other to the GRD (black) terminal on the rt unit front panel.
- (4) If two antenna supports are available, erect the antenna as illustrated in (fig 2-4). If only one support is available, use the method shown in (fig 2-5 or 2-6).
- (5) Tune the rt unit as described in para 3-2 and 3-3.

Figure 2-4 Two-support dipole antenna.

C 2, TM 11-5820-590-12-1

CHAPTER 3

OPERATING INSTRUCTIONS

Warning. Before operating this equipment, make certain that all requirements of TO SIG 291 are met. Injury or DEATH could result from improper or careless operation.

3-1. Controls and Indicators

a. Rt Unit (figs. 3-1, 3-1.1)

Control or indicator	Function
ANT TUNE	Adjusts antenna coupler capacitor.
ANT LOAD	Adjusts antenna coupler inductor.
OFF-ON-TUNE.	Selects required function.
R.F. GAIN	Adjusts receiver gain.
PEAK NOISE	Tunes RF circuits to operating frequency.
AUDIO (2 jacks).	Accepts microphone, key, headset, or Cable Assembly, Special Purpose Electrical CX- 10239/PRC74.
CLARIFY	Receiver frequency vernier tuning.
PUSH TO	Sets synthesizer to coincide with frequency
CALIBRATE.	standard (engages only when pushed in).
MC (MHZ)	Selects frequency in 1-mc steps
100 KC (KHZ)	Selects frequency in 100 kc steps.
10 KC (KHZ)	Selects frequency in 10 kc steps.
1 KC (KHZ)	Selects frequency in 1 kc steps.
ANT. IND. .(meter).	Indicates proper tuning for antenna coupler.
ANT (terminal)	Accepts antenna wire or one wire of dipole feedline.
GND (terminal)	Accepts antenna wire used for counterpoise or one wire of dipole feedline

b.	Power St	upply Subassembly Part of
DD/	1511/DDC-7	(4 (fig. 3-2))

PP4514/PRC-74 (fig. 3-2).

Control or	Function		
indicator			
POWER ON	Controls input pow	ver to power supply	
Switch.			
Power on	Illuminates when power is applied indicator from		
indicator.	an external source.		
	Four-position switch that selects meter function		
METER switch			
	Sw pos	Function	
	OFF	Shorts out meter.	

Control or	Function	
indicator		
	Sw pos	Function
	CHARGE AMPS	Charging rate in amp (1-to 5) of the battery charger.
	BATTERY VOLTS Charge available in t battery pack.	
	RADIO VOLTS	Voltage being supplied to the rt unit.
Fuses	15-ampere fuse dc input.	(15A) for 28-volt.
	2-ampere fuse ac input.	(2A) for 220-volt.
	4-ampere fuse ac input	(4A) for 110-volt.
	8-ampere fuse dc output.	(8A) for 14-volt.

c. Battery Charger Subassembly Part of PP-4514/PRC-74 (fig. 3-2).

Control or indicator	Function
CHARGER ON switch.	Applies input power to the battery charger.
Charger on indicator CHARGING CURRENT INCREASE control.	Illuminates when power is applied to the battery charger. Controls amount of charge current applied to external batteries.
Fuses	6-ampere fuse (6A) for input. 6-ampere fuse (6A) for output.

d. Whip Antenna (fig. 1-3).

Control or indicator	Function
Frequency range selector switch	Selects antenna loading coil frequency ranges comparable with the operating frequency of the radio set

C 3, TM 11-5820-590-12-1

3-2. Receiver Tuning

Connect the rt unit to a suitable power source (para 2-3) and use the following procedure to tune the radio set for receive mode:

a. Connect an antenna to the rt unit (para 2-5).

b. If a vehicular power supply or commercial power source is used (para 2-3), place the POWER ON switch on the PP-4515/PRC74 to ON. Set the METER switch to RADIO VOLTS and check to see that the meter reading is 14 volts +3. If the battery pack is used, omit this step.

c. Plug the headset into either of the AUDIO jacks on the rt unit.

d Set the four frequency selector knobs to the desired frequency.

e. When using the whip antenna, check the antenna load coil for proper frequency range setting.

f. Turn the OFF-ON-TUNE switch to ON.

g. Set the R.F. GAIN control to maximum and adjust it so that noise is heard in the headset.

h. Rotate the PEAK NOISE knob until a definite noticeable increase in noise is

heard in the headset; then adjust it carefully for maximum noise in the headset.

i If the radio set is to be used for receive mode only, set the ANT TUNE control to mid range and ANT LOAD control for maximum noise in the headset (otherwise these knobs are adjusted in the transmit tune procedure). *j.* Push in the PUSH TO CALIBRATE knob and adjust it for a zero beat condition in the headset. Release the knob; then reset the pointer to midscale.

k. Set the R.F. GAIN control to the desired audio volume of the received signal.

I. When receiving voice signals, it may be necessary to adjust the CLARIFY knob so that the quality is natural. Do not push the knob in when making this adjustment.

3-3. Transmitting Tuning

Use the following procedure to tune the radio set for transmit mode.

WARNING

AVOID RF BURNS. Do not touch the antenna when the radio set is being tuned or transmitting.

CAUTION

Do not attempt to tune the radio set without a suitable antenna connected. Remember that during tuning, the radio set transmits a signal and therefore breaks radio silence.

CAUTION

Do not use whip antenna at 3.5 MHz or below.

a. Perform the receiver tuning procedure (para 3-2). After the receiver tuning procedure has been completed, do not make further adjustments to the PEAK NOISE control.

TM5820-590-12-1-C1-16

Figure 3-1. Receiver-Transmitter Radio RT-794B/PRC-74, front panel

Figure 3-1.1. Receiver-Transmitter Radio RT-794C/PRC-74, front panel

b. Using the left hand as shown in (fig 3-3), turn and hold the OFF-ON-TUNE switch in the TUNE position. A tone should be heard in the headset.

c. With right hand, adjust the ANT TUNE knob midway between the stops. Adjust ANT LOAD knob until maximum reading is obtained on the ANT.IND. meter. Adjust ANT TUNE knob until a maximum reading is obtained on the ANT.IND, meter. Release the OFF-ON-TUNE knob. The knob should return to the ON position.

d. If voice operation is to be used, insert the microphone connector into either of the AUDIO jacks. To transmit, press microphone button and speak directly into the microphone. Hold the microphone one-fourth inch from the lips. When the radio set is transmitting voice, a voice sidetone should be heard in the headset. Releasing the microphone button returns the set to the receiver mode.

e. If telegraph operation is to be used, insert the telegraph key connector into one of the AUDIO jacks. To transmit, begin sending the message with the telegraph key. The radio set automatically goes into transmit mode as soon as the key is depressed, and stays in the transmit mode for 2 seconds after the key has been released. The keyed signal may be monitored by the keyed sidetone heard in the headset.

3-4. Coder-Burst Operation

Note. In the Coder-burst mode of operation, it is essential that the tape cartridges are encoded and ready for use before turning on the radio set. This will minimize the transmitter *on-air* time.

a. Encode Magazine, Recording Tape MA-9/ GRA-71 (CA-3B cartridge), using one of the coders supplied with the AN/GRA-71 (TM 115835-224-12).

b. Insert the CA-3B cartridge into Keyer KY-468/GRA-71 (KE-8B keyer).

c. Connect the KE-8B keyer to the AN/PRC74B through the special purpose cable as specified in para 2-3*d*.

d. Tune the AN/PRC-74B as specified in para 3-2 and 3-3.

e. On the KE-8B keyer, set the IDY switch to on. The length of time that the IDY switch is left on is pre-determined by local operating procedures. (Setting the IDY switch on causes the transmission of Morse code dots at a 300 words per-minute (wpm) rate.)

f. Turn the IDY switch off and set the OFF-ON switch on the KE-8B keyer to ON. The encoded message will be transmitted automatically.

Note. When the AN/GRA-71 is used with the AN/ PRC-74B, Adapter, Keyer MX-4498/GRA-71 is not used. The output of the KE-8B keyer is applied direct to the AN/PRC-74B through Cable Assembly, Special Purpose, Electrical CX-10239/PRC-74 (fig. 1-7).

3-5. Netting Procedure

In some operations, a primary or command station communicates with many secondary or *operation*,

PP-4514/PRC-74 ONLY

TM5820-590-12-C1-21

Figure 3-2. Power Supply PP-4514/PRC-74, front panel.

and the command station is called the *net control*. All the secondary stations should synchronize their frequencies with net control. This procedure is called *netting* and is accomplished as follows:

a. Set the radio set to the operating frequency and follow the receiver tuning procedure (para 3-2).

b. After calibration, if the net control station seems off frequency, push in the PUSH TO CALIBRATE control and adjust it slightly clockwise. Release the knob and set the CLARIFY pointer to midscale.

c. If the net station clarity is improved, repeat the adjustment given in *b* above; if the net station clarity is not improved, repeat the procedure *b* above; use counterclockwise rotation of the PUSH TO CALIBRATE control.

3-6. Battery Charger Operation

(fig. 3-4)

The battery charger portion of the PP-4514/PRC-74 (fig. 3-2) may be placed in operation at any time, because the battery charger circuits are isolated from the power supply portion of the PP-4514/PRC-

74. To use the battery charger during operation of the radio set, perform the following procedure:

WARNING

Always remove all the battery cell vent caps (fig. 5-3) and provide adequate ventilation for the room or shelter during charging operations. Failure to observe this warning may cause an explosion. Note battery warnings and cautions on page A.

a. Connect accessory cable W5 to jack J5 (A, fig. 3-4) of the external power supply and battery charger assembly housing.

b. Attach the negative and positive battery clips of the accessory cable to the negative and positive terminals of the wet battery.

c. Place the CHARGER ON switch to ON.

d. Place the METER switch to CHARGE AMPS.

e. Set the battery charging rate to the desired level (1 ampere minimum to 5 amperes maximum) by adjusting the CHARGING CURRENT INCREASE potentiometer

Change 7 3-4

TM5820-590-12-16

Figure 3-3. Transmitter tuning adjustment. located on the front panel of the battery charger. The charging rate is indicated on the panel meter of the external power supply. A completely discharged wet cell battery should receive 20 ampere-hours of charge. The suggested charge rate is 5 amperes for a 4-hour period. For complete maintenance instructions for the wet cell battery, refer to (para 5-12).

Caution. The battery electrolyte level should be checked only when the battery is fully charged. Add only enough distilled water to cover the plates. If distilled water is added to a discharged battery, the electrolyte will leak out of the vent during charging.

Warning. The battery electrolyte is extremely dangerous to the eyes. If electrolyte is splashed on person or clothing, quickly and thoroughly wash the exposed area with water for at least 15 minutes. Seek medical attention without delay.

f. To check the battery voltage under a No load condition, place the METER switch to BATTERY VOLTS and the CHARGER ON switch to OFF, and note the reading on the panel meter.

3-7. HF Communications in the 2-18 MHz Range

Effective HF communications in the 2—18 MHz range can be accomplished up to several miles with a ground wave propagation mode, and several hundred miles with the skywave propagation.

a. Antenna Selection. Regardless of the propagation mode used, the best possible antenna should always be erected, consistent with the particular time, space, and terrain operating environment. The Accessories Bag CW-63/ PRC-74 contains materials to permit the erection of any one of the following antennas, which are listed in order of decreasing efficiency:

(1) One-half wave dipole antenna (para 2-5c.).

(2) One-quarter wave slant wire antenna (para 2-5*b*.).

Caution. Do not use the whip antenna at 3.5 MHz or below.

(3) Ten-foot whip antenna (para 2-5a.).

b. Groundwave Propagation. The primary coverage area in the groundwave mode is small, due to high attenuation of the groundwave in the HF band. The attenuation decreases as the frequency used is decreased. At the minimum AN/PRC-74 frequency of 2 MHz, the effective groundwave range with a one half wave dipole antenna is 5 miles. The groundwave range will be less as the frequency used increases, when a less efficient antenna is used, or when the radio is used in dense foliage.

Skywave Propagation. Skywave C. propagation is the most useful communications mode. Since the transmitted signal is directly the reflected off ionosphere, effective communication requires selecting the optimum compatible with the ionosphere frequency The ionosphere varies depending on conditions. latitude, season, time of day, and solar activity.

d. Frequency Selection.

(1) An effective operating frequency is selected considering the ionospheric conditions

and the required distance of communication. The frequency range for effective skywave propagation is limited on the high end by signal penetration of the ionosphere, and on the low end by excessive ionospheric absorption of the signal.

The maximum usable frequency (MUF) (2) is the highest frequency which will be reflected off The lowest usable frequency the ionosphere. (LUF) is the lowest frequency at which the reflected strona enough for effective signal is communication. Since low frequencies under-go higher absorption than higher frequencies, an optimum traffic frequency (FOT) is selected just below the MUF. It is important to operate the AN/PRC-74, a low power transmitter, as close to the FOT as possible. During atmospheric disturbances, in general the higher the frequency, the better the communications will be.

(3) The use of propagation charts in selecting operating frequencies is essential. Propagation charts are issued monthly by the Communications Engineering Directorate, U.S. Army Strategic Communications Command, Fort Huachuca, Arizona.

3-8. Battery/Equipment Overheating

WARNING

DO NOT use water to extinguish Li-S02 battery fires if a shock hazard exists due to high voltage electrical equipment in the immediate vicinity (i.e., greater than 30 volts, alternating current (ac) or direct current (dc)).

WARNING

If the battery compartment becomes hot to the touch, if you hear a hissing sound (i.e., battery venting), or smell irritating sulfur dioxide gas IMMEDIATELY Turn Off the equipment. Remove the equipment to a well ventilated area or leave the area.

WARNING

DO NOT use a Halon type fire extinguisher on a lithium battery fire.

WARNING

In the event of a fire, near a lithium battery(ies), rapid cooling of the battery(ies) is important. Use a carbon dioxide (CO2) extinguisher. Control of the equipment fire, and cooling, may prevent the battery from venting and potentially exposing lithium metal. In the event that lithium metal becomes involved in fire, the use of a graphite based Class D fire extinguisher is recommended, such as Lith-X or MET-L-X.

a. Allow the equipment to cool at least 1 hour.

b. Remove and replace battery after the equipment has cooled to the touch.

c. If there is a safety incident, or if you believe a safety hazard exists, notify your local Safety Office/Officer, file a Quality Deficiency Report, SF Form 368, and notify the CECOM Safety Office, Ft. Monmouth, NJ at AUTOVON 995-3112, Commercial (201)544-3112.

A. FIXED OPERATION

Figure 3-4. Power Supply PP-4514/PRC-74, power cable connections.

CHAPTER 4 OPERATOR'S MAINTENANCE INSTRUCTIONS

4-1. Scope of Operator's Maintenance

The maintenance duties assigned to the operator of Radio Set AN/PRC-74B are listed below, together with a reference to paragraphs covering the specific maintenance functions. The duties assigned do not require tools or equipment.

a. Daily preventive maintenance checks and services (para 4-4).

b Weekly preventive maintenance checks and services (para 4-5).

c Cleaning (para 4-6).

5

d. Checking antenna and battery connections (para 4-5).

4-2. Operator's Preventive Maintenance Operator's preventive maintenance is the systematic care, servicing, and inspection of equipment to prevent the occurrence of trouble, to reduce downtime, and to assure that the equipment is serviceable.

a. Systematic Care. The procedures given in (para 4-3 through 4-7) cover routine systematic care and cleaning essential to proper upkeep and operation of the equipment.

b. Preventive Maintenance Checks and Services. The preventive maintenance checks and services charts (para 4-4 and 4-5) outline functions to be performed at specific intervals. These checks and services are to maintain Army electronic equipment in a combat-serviceable condition; that is, in good general (physical) condition and in good operating condition. To assist operators in maintaining combat serviceability, the charts indicate what to check, how to check, and the normal conditions; the *references* column lists the illustrations, paragraphs, or manuals that contain detailed repair or replacement procedures. If the defect cannot be remedied by the operator, higher maintenance or repair is required. Records and reports of the checks and services must be made in accordance with the requirements set forth in DA Pam 738-750.

4-3. Preventive Maintenance Checks and Services Periods

Preventive maintenance checks and services for Radio Set AN/PRC-74B are required daily or at least once each week if the equipment is kept in standby condition. (para 4-4). specifies the items to be checked and serviced. In addition to the routing daily checks and services, the equipment should be rechecked and serviced immediately before going on a mission and as soon after completion of the mission as possible. para 4-5 specifies additional checks and services that must be performed *once* each week.

4-4. Operator's Daily Preventive Maintenance Checks and Services Chart

Sequence	Item to be inspected	Procedure	Reference
No.			
1	Completeness	Check to see that equipment is complete	Para 1-6.
2	Exterior surfaces	Remove dust, dirt, and moisture from equipment surfaces	Para 4-6.
3	Controls	Check all controls for looseness and other damage	Para 3-1.
		During operational check (item 5 below), observe that the mechanical	
		action of each control is smooth, and free from external or internal	
		binding	
4	Meter movements	During operation (item 5 below), check for sticking meter movements or	
		bent needles on the rt unit and power supply (if	
-	-	used)	
5	Transmitter-receiver tuning	Check rt unit and antenna for proper operation	
			Para 3-2 and 3-3.

Antenna kit..... Check antennas for evidence of kinks, breaks, or strain. Refer to higher category of maintenance as required.

Batteries..... Check for evidence of condensation, metallic dust, or corrosion. Clean as Para 4-7. required.

Change 8 4-1

4-6. Cleaning

a. General. Inspect the exterior of the rt unit and power supply unit. The exterior surfaces should be free of dust, grease, and fungus.

(1) Remove dust and loose dirt with a clean, soft cloth.

WARNING

Adequate ventilation should be provided while TRICHLOROTRIFLUOROETHANE. usina Prolonged breathing of vapor should be avoided. The solvent should not be used near heat or open flame; the products of decomposition are toxic and irritating. Since TRICHLOROTRIFLUOROETHANE dissolves natural oils, prolonged contact with skin should be avoided. When necessary, use gloves which the solvent cannot penetrate. If the solvent is internally, consult taken а physician immediately.

(2) Remove grease, fungus, and groundin dirt from the cases; use a cloth dampened (not wet) with Cleaning Compound (6810-664-0273).

(3) Remove dust or dirt from plugs and jacks with a brush.

CAUTION

Do not press on the meter face (glass) when cleaning; the meter may become damaged.

(4) Clean the front panels, meters, and control knobs, use a soft, clean cloth. If dirt is difficult to remove, dampen the cloth with water; mild soap may be used for more effective cleaning.

b. Wet Batteries. Clean wet batteries as follows:

CAUTION

When cleaning wet batteries, observe the following:

1. Keep open flames and metal objects away from exposed parts of the battery.

2. Do not clean battery tops with solvents, acids, or chemical solutions.

3. Do not use wire brushes to clean batteries.

WARNING

Avoid contact with electrolyte. If electrolyte is splashed on any person or clothing, wash the exposed area quickly and thoroughly with water for at least 15 minutes. Seek medical attention without delay.

(1) Clean the tops of batteries with water and a brush.

(2) Drain excess water from the battery and allow the battery to dry. Compressed air may be used to aid in drying the battery.

4-7. Dry Battery Replacement

(fig. 4-1 and 4-1.1)

WARNING

A lithium-sulfur dioxide (Li-SO2) battery used with the equipment contains pressurized sulfur dioxide (S02) gas. The gas is toxic, and the battery MUST NOT be abused in any way which may cause the battery to rupture. See the WARNING page of this manual.

WARNING

DO NOT heat, short circuit, crush, puncture, mutilate, or disassemble batteries.

WARNING

DO NOT USE any battery which shows signs of damage such as bulging, swelling, disfigurement, brown liquid in the plastic wrap, a swollen plastic wrap, etc.

WARNING

DO NOT test Li-SO2 batteries for capacity.

DO NOT recharge LI-SO2 batteries.

CAUTION

DO NOT dispose of lithium batteries with ordinary trash/refuse. Turn-in batteries to your local serving Defense Reutilization and Marketing OFFICE.

CAUTION

ONLY use batteries which have been authorized for this equipment.

a. Release the latch on each side of the rt unit carrier assembly.

b. Lift the rt unit from the battery box.

c. Release the latch on each side of the battery box and remove the battery cover assembly.

CHANGE 8 4-2

d.. Replace batteries in Battery

Box CY-6314/PRC-74 as follows:

(1) Loosen the four wingnuts at the bottom of the four battery retaining rods.

CAUTION

Do not damage cable attached to each battery retainer and the battery case base assembly.

(2) Lift the lower battery retainer to unplug the lower battery.

(3) Slide the lower battery from the lower battery retainer.

(4) Disconnect the upper battery from the upper battery retainer.

(5) Replacement batteries are type BA-4386/U (Magnesium Battery) or BA-5598/U (Lithium Battery). Insert one new battery and connect to the upper battery retainer.

(6) Slide the lower battery between the upper battery and rods and the lower retainer and connect this battery to the lower retainer.

(7) Secure the batteries with the four wingnuts at the bottom of the four battery retaining rods.

e. Replace batteries in Battery Box CY-6314A/PRC-74 as follows: (1) Release the latch at the side of the battery housing assembly.

(2) Rotate the battery case base assembly up away from the batteries.

(3) Disconnect the upper battery from the battery divider.

(4) Rotate the battery divider upward and disconnect the lower battery.

(5) Replacement batteries are type BA-4386/U (Magnesium Battery) or BA-5598/U (Lithium Battery). Connect a new battery to the underside of the battery divider and rotate the battery divider down onto the battery housing assembly.

(6) Connect a new battery to the topside of the battery divider.

(7) Rotate the battery case base assembly down onto the upper battery and secure the latch at the side of the battery hosing assembly.

f. Replace the battery cover assembly and secure the latches.

g. Replace the rt unit carrier assembly to its mounting position top of the battery box base assembly and secure the side latches.

h. Disposition of unserviceable lithium batteries must be through the local servicing Defense Reutilization and Marketing Office ((DRMO)). Coordinate disposition with your local Installation Environmental Office and DRMO.

Figure 4-1. Dry battery replacement, Battery Box CY-6314/PRC-74.

Figure 4-1.1. Dry battery replacement, Battery Box CY-6314A/PRC-74

CHAPTER 5

ORGANIZATIONAL MAINTENANCE INSTRUCTIONS

Section I. ORGANIZATIONAL MAINTENANCE

5-1. Scope Organizational Maintenance

a. This chapter contains instructions covering organizational maintenance of the radio set. It includes instructions for performing preventive and periodic maintenance services and repair functions to be accomplished by the accomplished by the organizational repairman. The operating instructions are in paras 3-2 through 3-5.

b. Organizational maintenance of the radio set includes the following:

- (1) Replacement of defective fuses.
- (2) Preventive maintenance
- (para 5-3 through 5-8).(3) Troubleshooting (para 5-9 through
- 5-13). Sectionalization of trouble to a unit
- (4) Sectionalization of trouble to a unit or assembly (para 5-10).

5-2. Tools, Materials, and Test Equipment Required

The tools, materials and test equipment required for organizational maintenance are listed below.

a. Tools and Materials. The tools and materials required for organizational maintenance are contained in Tool Kit, Electronic Equipment TK-101/g.

b. Test Equipment. The only test equipment required is Multimeter AN/URM-105.

5-3. Organizational Preventive Maintenance

a. Organizational preventive maintenance is the systematic care, inspection, and servicing of equipment breakdowns, and assure maximum

operational capability. Preventive maintenance is the responsibility of all categories of maintenance concerned with the equipment, and includes the inspection, testing, and repair or replacement of parts, subassemblies, or units that inspection and tests indicate would probably fail before the next scheduled periodic service. Preventive maintenance checks and services at the organizational maintenance category are made at monthly and quarterly intervals unless otherwise directed by the commanding officer.

b. Maintenance forms and records to be used and maintained on this equipment are specified in TM 38-750.

5-4. Organizational Monthly Preventive Maintenance Checks and Services

Perform the maintenance functions indicated in the monthly preventive maintenance checks and services chart (para 5-5) once each month. A month is defined as approximately 30 calendar days of 8hour-per-day operation. If the equipment is operated 16 hours a day, the monthly preventive maintenance checks and services should be performed at 15-day intervals. Adjustment of the maintenance interval must be made to compensate for any unusual operating conditions. Equipment maintained in a standby (ready for immediate operation) condition must have monthly preventive maintenance checks and services performed on it. Equipment in limited storage (requiring service before operation) does not require monthly preventive maintenance.

5-5. Organizational Monthly, Preventive Maintenance Checks and Services Chart

Sequence No.	Item to be inspected	Procedure	References
1	Exterior	Check.all.equipment surfaces for evidence of fungus, rust, corrosion, and other foreign materials. Spot-paint bare spots,	Para 4-6 and 5-8
2	Knobs, dials, and switches.	Observe that the mechanical action of each knob, dial, and switch is smooth, and free of external internal binding. Replace lost or defective knobs as required.	
3	Fuses	Check for blown or damaged fuses. See that all operating fuses are of the proper values. Replace as required.	Para 5-11 and 5 13
4	Cables and connections	Check.all.cables.for.breaks, cracks, and damage to connectors. Clean all module connections and plugs, and check for damage to pins or connectors.	
5	Battery cases	Check.interiors.of.battery cases for evidence of water leakage, condensation, and corrosion. Clean as required	Para 4-6
6	Batteries	Test.batteries.under.load. Wet battery voltage is between 11 and 17 volts. Charge as required. Dry battry voltage should be at least 11 volts.	

5-6. Quarterly Maintenance

Quarterly preventive maintenance checks and services on the radio set are required. Periodic weekly and monthly services constitute a part of the quarterly preventive maintenance checks and services, and must be performed concurrently. All deficiencies or shortcomings will be recorder in accordance with the requirements of TM 38-750. Perform all the checks and services listed in the quarterly preventive maintenance checks and services chart (para 5-7) in the sequence listed.

5-7. Quarterly Preventive Maintenance Checks and Services Chart

		Power Supply PP-4514/PRC-74	
10	External power supply operational check.	Connect the rt unit to the external power supply as outlined in para 2-3v or c (depending on the source power available). Perform the procedures specified in para 3-2a and b.	Para 5-10.
11	Battery charger operational check.	Operate the battery charger as outlined in para 3-6	Para 5-10.

5-8. Touchup Painting Instructions

Remove rust and corrosion from metal surfaces by lightly sanding them with a fine sandpaper. Brush two thin coats of paint on the bare metal to protect it from further corrosion. Refer to the applicable cleaning and refinishing practices specified in TB SIG 364.

Section II. TROUBLESHOOTING

5-9. General

Troubleshooting of the radio set is based on the operational check contained in the quarterly preventive maintenance checks and services chart. To troubleshoot the equipment, perform the functions listed in steps 9, 10, and 11 of the quarterly preventive maintenance checks and services chart (para 5-7) and proceed through the items until an abnormal condition or result is observed. When an abnormal condition or result is observed, perform the checks and corrective measures indicated in the **5-10.** Troubleshooting Chart

troubleshooting chart (para 5-10). If the corrective measures indicated do not result in correction of the trouble, higher category of maintenance is required. Para 5-11, 5-12, and 5-13 contain additional information and step-by-step instructions for performing equipment tests and adjustments to be used during troubleshooting procedures.

CAUTION: Do not operate the radio set in a transmit condition unless it is connected to an antenna.

J-10. 11	oubleshooting chart		
Item No.	Trouble symptom	Probable trouble	Checks and corrective measures
1	Rt unit cannot be operated as described in para 3-2 and 3-3	 a. Defective fuse F1 or F2 (fig.5-2). b. Low source voltage 	 a. Check fuses; replace as necessary b. (para 5-11b). bIf. dry.cell.battery.pack.is.used,
2	External power cannot be operated as described in paragraph 2-3 <i>b</i> or <i>c</i> .	 a. Defective fuse in external power supply. b. Poor or defective power cable connections c. Defective power supply 	 a. Check external power supply front panel fused (para 5-13). b. Check power cables. c. Higher category of maintenance required.
3	Battery charger cannot be operated as described in para 3-6.	a. Defective fuse in battery charger.b. Defect in battery charger	 a. Check fuses on front panel of battery charger (para 5-13). b. Refer to para 5-13. If those procedures do not correct trouble, higher category of maintenance is required.

5-11. Supplementary Rt Unit Troubleshooting information

Troubleshooting of the rt unit at organizational maintenance category consists of a power supply voltage test and the replacement of fuses. If the power supply voltage is not as Specified or the replacement of fuses does not correct the trouble, the rt unit must be replaced and forwarded to higher category maintenance personnel.

a. Power Supply Voltage Test. When troubleshooting the rt unit is required, the rt unit case bust be removed to reach the test points (fig. 5-1). The wet or dry battery must be used as a power source during this test. Check the receiver transmitter power supply as follows:

(1) Release the latches that attach the rt unit to the power source. Remove the rt unit.

(2) Release the latches that attach the rt unit front panel to the case.

(3) Using the handles on each side of the rt unit front panel, remove the rt unit from the case.

CAUTION

When using the wet battery as the power source, perform this test with the battery and rt unit connected in the upright position (fig. 1-1). If the dry battery is used, the rt unit and the dry battery may be connected and placed flat with the test points facing upward. Avoid excess movement of the rt unit and the battery to prevent damage to the connectors.

(4) Set the OFF-ON-TUNE switch (fig. 3-1) in the TUNE position and use the AN/URN-105 to make the following dc measurements (fig. 5-1):

(a) TB201 pin 7:8.4 to +9.6 volts.

b) TB201 pin 5: +10.5 to 17.0 volts.

(c) TB201 pin 3: +39.0 to + 44.0 volts.

(5) If the readings in (4) above are normal and the radio set does not operate normally, higher category of maintenance is required. If any of the readings in (4) above are not normal, check F1 and F2 in the power supply module (b) below). If fuse replacement does not correct the trouble, higher category of maintenance is required.

(6) After the test has been completed, place the rt unit in the upright position and disconnect it from the battery pack.

(7) Insert the rt unit in the case and secure it with the latch located on each side of the case.

(8) Connect the rt unit to the power source and secure it with the latch located on each side of the case.

b. Fuse Replacement (fig. 5-2.) To replace the rt unit fuses, remove the rt unit from the case (a (1), and (3) above) and proceed as follows:

(1) Remove the three screws that secure the power supply module cover.

(2) Replace fuse F1 and/or F2 as required.

(3) Replace the power supply module cover and secure it with the three screws removed in (1) above.

(4) Replace the rt unit in its case (a (6), (7), and (8) above).

NOTE

If the replaced fuse blows, higher category of maintenance is required.

5-12. Wet Battery Replacement (fig. 5-3)

When a wet battery cell becomes contaminated or damaged, use the following procedure for removal and replacement.

WARNING

Remove all jewelry and wrist watches when working on batteries. Be extremely careful when using metal tools.

WARNING

The electrolyte used in nickel-cadmium batteries contains potassium hydroxide (KOH), which is a caustic chemical agent. Serious and deeps burns of body tissue will result if the electrolyte comes in contact with the eyes or any part of the body. Use rubber gloves, rubber apron, and protective goggles when handling the electrolyte. If accidental contact with the electrolyte is ONLY clean water and made. use immediatelv (seconds count) flush contaminated areas. Continue flushing with large quantities of clean water for at least 15 minutes. Seek medical attention without delay.

a. Release the latches that attach the wet battery to the rt unit.

b. Disconnect the rt unit from the wet battery carrier assembly.

c. Release the latch on each side of the battery case, and remove the case.

d. Disconnect the battery terminal connections.

e. Release the holddown clamp that secures the battery cells.

f. Remove the two sockethead capscrews and washers, and remove the intercell connector that is attached to the damaged cell (or cells). Remove the cell. Note the direction of the polarity symbols.

g. Replacement cells are type BB 418/U or equivalent. Insert the replacement cell with the polarity symbols in the proper direction, and

attach the intercell connector with the washers and sockethead capscrews.

Figure 5-1. Rt unit, location of test points.

h. Attach the holdown clamp that secures the battery in the battery carrier.

i. Connect the battery terminals.

j. Replace the battery case and secure it with the latch located on each side of the case.

Note. When the condition of the wet cell battery is not known, it should receive a full charge; the batter is not damaged by overcharging at the specified rate.

Caution: Check the level of the electrolyte AFTER recharging. If the level is below the top of the plates, add distilled water. When the level is below the top of the plates, add distilled water. When time permits, allow the battery to stand for 12 hours or more after adding water. If the battery must be used immediately, add just enough water to bring the level to one-eighth inch above the top of the plates.

k. Charge the battery (para 3-6).

Figure 5-2. Rt unit, rear view, module covers removed.

5-13. Power Supply PP-4514/PRC-74 Supplementary Troubleshooting Information

Troubleshooting the external power supply and battery charger at the organizational maintenance category consists of removal and replacement of the external supply and battery power charter subassemblies, replacement of fuses, and an output voltage check. If the output voltage is not as specified and replacement of fuses does not correct the trouble, the external power supply and battery must be forwarded to higher category maintenance personnel for further troubleshooting of the unit.

a. Subassembly Removal and Replacement. Use the following procedure for removal and replacement of the external power supply or battery charger subassembly:

(1) Remove the mounting screws located in the top and bottom on the subassembly front panel (fig. 3-2).

(2) Slide the subassembly from the case; use the handle located at the bottom of the subassembly front panel.

(3) To replace the subassembly, insert the subassembly into the case and secure it with the mounting screws.

b External Power Supply Subassembly Test. Perform the following test with the external power supply subassembly installed in the case:

- (1) Set the METER switch RADI VOLTS. Momentarily short-circuit pins 2 and 6 of J4 (fig. 1-8) of the module case.
- (2) Check to see that front panel meter of the external power supply drops to a 0-volt indication. If the panel meter indication remains unchanged, the external power supply sub assembly is defective. Refer to higher category maintenance personnel.
- *c.* Battery charger Subassembly Test. Perform the following test with the battery charger installed in the case:

(1) Connect battery charger cable W5 to J5 of the case.
(2) Set the METER switch to CHARGE AMPS and turn the CHARGING

CURRENT INCREASE control fully clockwise.

(3) Connect the power input cable to J1(A, fig. 3-4) and turn the CHARGER ON switch to ON.

- (4) Momentarily short the battery clips of the battery charger cable W5 together.
- (5) See that the front panel meter of the external power supply drops to 0 volt.
- (6) Check the 6A fuses on the front of the battery charger. If a fuse is found to be open, the battery charger subassembly is defective. Refer to higher category maintenance personnel.

d. Fuse Replacement. All fuses in the external power supply and battery charger are located on the front panel. Replacement fuses are stored in n fuseholder panel (fig. 1-8) on the case. Replace fuses ((1) and (2) below) as required:

(1) Battery charger subassembly. The two 6A fuses protect the input and output circuits of the battery charger.

- (2) Power supply subassembly.
 - (a) 15A fuse. Protects the equipment when a 28-volt dc source is used.
 - (b) 2A fuse. Protects the equipment when a 220-volt ac source is used.
 - (c) 4A fuse. Protects the equipment when a 110-volt ac source is used.
 - (d) BA fuse. Protects the power supply against external short circuits.

e. Pilot lamps. Two indicator lamps are located on the front panel of the PP-4514/PRC-74. Replace either lamp as follows:

- (1) Unscrew the front panel lens assembly.
 - (2) Remove the defective lamp and insert the replacement.
 - (3) Replace the front panel lens assembly.

Figure 5-3. Wet battery and vent cap removal

CHAPTER 6

SHIPMENT, LIMITED STORAGE, AND DEMOLITION TO PREVENT ENEMY USE

Section I. SHIPMENT AND LIMITED STORAGE

CAUTION

6-1. Disassembly of Equipment

a. Disassemble and remove the antenna and antenna mounting brackets, and place them in the accessory equipment bag.

b. Remove all accessory equipment (headset, microphone, etc) from the radio set, and place it in the accessory equipment bag.

c. Remove the radio set from the battery pack by releasing the latches at the bottom of the radio set, and remove the dry batteries from the battery pack. If a wet battery is used, it is not necessary to drain the wet battery for limited storage. If the radio set is being used in conjunction with Power Supply PP4514/PRC-74, remove the radio set from the PP4514/PRC-74 and disconnect all cables.

d. Coil the power cables and place them in the cable storage compartment of the PP-4514/PRC-74.

6-2. Repackaging for Shipment or Limited Storage

The exact procedure for repackaging defends on the material available and the conditions under which the equipment is to be shipped or stored. Adapt the procedures outlined below whenever circumstances permit. The information concerning the original packaging (para 2-I) will also be helpful.

a. Material Requirements. The following materials are required for packaging components of the radio set. For stock numbers of materials, consult SB 38-100.

Material	Quantity
Moisture-vaporproof barrier	36 sq. Ft. 18 ft.
Waterproof tape	18 ft.
Filler material	5 lb.
Fiberboard	40 sq ft.

b. Packaging.

Be sure the dry batteries are removed or the solution is drained from wet battery as applicable before packing the battery pack.

(1) Cushion the component to be packed with pads of filler material on all sides.

(2) (Applies to receiver-transmitter radio only.) Package each technical manual within a close-fitting waterproof bag; seal the bags with waterproof tape.

(3) Use fiberboard and waterproof tape to form a carton large enough to hold the packaged components. Place all packages in the carton and fill all voids with filler material.

(4) Seal the carton.

(5) Cover the carton with moistureproof and vaporproof aluminum foil.

6-3. Battery Storage

<u>WARNING</u>

DO NOT store lithium batteries with other hazardous materials and keep them away from open flame or heat.

CAUTION

DO NOT store batteries in unused equipment for more than 30 days

a. Contact your local Fire Department for selection and approval of lithium battery storage areas, and selection of appropriate fire extinguishing equipment.

b. Store lithium batteries in a cool (i.e., less than 130 degrees F), dry, well ventilated area. For bulk storage use a sprinkler protected area, and as second choice store in non-combustible area.

Section II. DEMOLITION TO PREVENT ENEMY USE

6-4. Authority for Demolition

The demolition procedures outlined in para 6-5 will be used to prevent the enemy from using or salvaging this equipment. Demolition of the equipment will be accomplished only upon the order of the commanding officer.

6-5. Methods of Destruction

Use any of the following methods to destroy the radio set:

a. Smash. Smash the controls, meters, and minor components; use sledges, axes, handaxes, pickaxes, hammers, or crowbars.

b. Cut. Cut all power cables; use axes, handaxes, or machetes.

WARNING

Be extremely careful with explosives and incendiary devices. Use these items only when the need is URGENT.

c. Burn. Burn the cords and technical manuals; use gasoline, kerosene, oil, flamethrowers, or incendiary grenades.

d. Bend. Bend the panel and cabinet.

e. Explode. If explosives are necessary, use firearms, grenades, or TNT.

f. Dispose. Bury or scatter the destroyed parts in slit trenches or foxholes, or throw them into nearby streams.

BASIC ISSUE ITEMS

This appendix is deleted. Refer to para 1-6 for a list of components.

APPENDIX C

MAINTENANCE ALLOCATION

Section I. INTRODUCTION

C-1. General

This appendix provides a summary of the maintenance operations covered in the equipment literature for Radio Sets AN/PRC-74B and AN/PRC-74C and Power Supplies PP-4514/PRC-74 and PP-4514/PRC-74 and Battery Boxes CY-6121/PRC-74, CY-6314/ PRC-74, and CY-6314A/PRC-74. It authorizes categories of maintenance for specific maintenance functions on repairable items and components and the tools and equipment required to perform each function. This appendix may be used as an aid in planning maintenance operations.

C-2. Maintenance Functions

Maintenance functions will be limited to and defined as follows:

a. INSPECT. To determine serviceability of an item by comparing its physical, mechanical, and electrical characteristics with established standards.

b. TEST. To verify serviceability and to de tect incipient electrical or mechanical failure by use of special equipment such as gages, meters, etc. This is accomplished with external test equipment and does not include operation of the equipment and operator type tests using internal meters or indicating devices.

c. SERVICE. To clean, to preserve, to charge, and to add fuel, lubricants, cooling agents, and air. If it is desired that elements, such as painting and lubricating, be defined separately, they may be so listed.

d. ADJUST. To rectify to the extent necessary to bring into proper operating range.

e. ALIGN. To adjust two or more components or assemblies of an electrical or mechanical system so that their functions are properly synchronized. This does not include setting the frequency control knob of radio receivers or transmitters to the desired frequency.

f. CALIBRATE. To determine the corrections to be made in the readings of instruments or test equipment used in precise measurement. Consists of the comparison of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared with the certified standard.

g. INSTALL. To set up for use in an operational environment such as an encampment, site, or vehicle.

h. REPLACE. To replace unserviceable items with serviceable like items.

i. REPAIR. To restore an item to serviceable condition through correction of a specific failure or unserviceable condition. This function includes, but is not limited to welding, grinding, riveting, straightening, and replacement of parts other than the trial and error replacement of running spare type items such as fuses, lamps, or electron tubes.

j. OVERHAUL. Normally, the highest degree of maintenance performed by the Army in order to minimize time work in process is consistent with quality and economy of operation. It consists of that maintenance necessary to restore an item to completely serviceable condition as prescribed by maintenance standards in technical publications for each item of equipment.

C 2, TM 11-5820-590-12-1

Overhaul normally does not return an item to like new, zero mileage, or zero hour condition.

k. REBUILD. The highest degree of materiel maintenance. It consists of restoring equipment as nearly as possible to new condition in accordance with original manufacturing standards. Rebuild is performed only when required by operational considerations or other paramount factors and then only at the depot maintenance category. Rebuild reduces to zero the hours or miles the equipment, or component thereof, has been in use.

I. SYMBOLS. The uppercase letter placed in the appropriate column indicates the lowest level at which that particular maintenance function is to be performed.

C-3. Explanation of Format

a. Column 1, group number. Not used.

b. Column 2, functional group. Column 2 lists the noun names of components, assemblies, subassemblies and modules on which maintenance is authorized.

c. Column 3 maintenance functions. Column 3 lists the maintenance category at which performance of the specific maintenance function is authorized. Authorization to perform a function at any category also includes authorization to perform that function at higher categories. The codes used represent the various maintenance categories as follows:

F	Direct Support Maintenance
Н	General Support Maintenance
D	Depot Maintenance

d. Column 4, tools and test equipment. Column 4 specifies, by code, those tools and test equipment required to perform the designated function. The numbers appearing in this column refer to specific tools and test equipment which are identified in table I.

e. Column 5, Remarks. Self-explanatory.

C-4. Explanation of Format of Table 1, Tool and Test Equipment Requirements

The columns in Table I, Tool and Test Equipment Requirements are as follows:

a. Tools and Equipment. The numbers in this column coincide with the numbers used in the tools and equipment column of the Maintenance Allocation Chart. The numbers indicate the applicable tool for the maintenance function.

b. Maintenance Category. The codes in this column indicate the maintenance category normally allocated the facility.

c. Nomenclature. This column lists tools, test, and maintenance equipment required to perform the maintenance functions.

d. Federal Stock Number. This column lists the Federal stock number of the specific tool or test equipment.

e. Tool Number. Not used.

APPENDIX D ORGANIZATIONAL MAINTENANCE REPAIR PARTS AND SPECIAL TOOLS LISTS

Section I. INTRODUCTION

D-1. Scope

This appendix lists repair parts required for the performance of organizational maintenance of the AN/PRC-74B and AN/PRC-74C. It authorizes the requisitioning and issue of spares and repair parts as indicated by the source and maintenance codes.

2. General

This Repair Parts and Special Tools List is divided into the following sections:

a. Section II. Repair Parts List. A list of spares and repair parts authorized for use in the performance of maintenance. The list also includes parts which must be removed for replacement of authorized parts. Parts list are composed of functional groups in numeric sequence, with the parts in each group listed in figure and item number sequence. Bulk materials are listed in the NSN sequence.

b. Section III. Special Tools List. Not applicable.

c. Section IV. National Stock Number and Part Number Index. A list, in National item identification number (NIIN) sequence, of all National stock numbers (NSN) appearing in the listings, followed by a list in alphanumeric sequence, of all part numbers appearing in the listings. National stock numbers and part numbers are cross-referenced to each illustration figure and item number appearance.

D-3. Explanation of Columns

a. Illustration. This column is divided as follows:

(1) *Figure number.* Indicates the figure number of the illustration on which the item is shown.

(2) *Item number.* The number used to identify item called out in the illustration.

b. Source, Maintenance, and Recoverability (SMR) Codes.

(1) Source code. Source codes indicate the manner of acquiring support items for maintenance, repair, or overhaul of end items. Source codes are entered in the first and second positions of the Uniform SMR Code format as follows:

Code Definition

- PA- Item procured and stocked for anticipated or known usage.
- PB- Item procured and stocked for insurance purposes because essentiality dictates that a minimum quantity be available in the supply system.
- PD- Support item, excluding support equipment procured for initial issue or outfitting and stocked only for subsequent or additional initial issues or outfitting. Not subject to automatic replenishment.
- AF- Item to be assembled at direct support maintenance level.
- AH– Item to be assembled at general support maintenance level.
- XA- Item is not procured or stocked because the requirements for the item will result in the replacement of the next higher assembly.
- XB- Item is not procured or stocked. If not available through salvage, requisition.

NOTE

Cannibalization or salvage may be used as a source of supply for any items source coded above, except those coded XA and aircraft support items as restricted by AR 700-42.

(2) *Maintenance code*. Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the Uniform SMR Code format as follows:

(a) The maintenance code entered in the third position will indicate one of the following levels of maintenance:

- Code Application/Explanation
- C- Crew or operator maintenance performed within organizational maintenance.
- O- Support item is removed , replaced, used at the organizational level.

(b) The maintenance code entered in the fourth position indicates whether the item is to be repaired and identifies the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance functions.). This position will contain one of the following maintenance codes:

Code Application/Explanation

- F- The lowest maintenance level capable of complete repair of the support item is the direct support level.
- H– The lowest maintenance level capable of complete repair of the support item is the general support level.
- D- The lowest maintenance level capable of complete repair of the support item is the depot level.
- Z– Non-repairable. No repair is authorized.

(3) *Recoverability code.* Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the Uniform SNR Code format as follows:

Recoverability Application/Explanation

Codes

- Z- Non-repairable item. When unserviceable, condemn and dispose of at level indicated in position 3.
- F- Repairable item. When uneconomically repairable, condemn and dispose of at the direct support level.
- H– Repairable item. When uneconomically repairable, condemn and dispose of at the general support level.
- D- Repairable item. When beyond lower level repair capability, return to the depot. Condemnation and disposal not authorized below depot level.

c. National Stock Number. Indicates the National stock number assigned to the item and will be used for requisitioning purposes.

d. Part Number. Indicates the primary number used my the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item engineering bv means of its drawings. specifications, standards, and inspection requirements to identify an item or a range of items.

NOTE

When a stock-numbered item is requisitioned, the repair part received may have a different part number than the part being replaced.

e. Federal Supply Code for Manufacturer (FSCM). The FSCM is a 5-digit numeric code listed in SB-708-42 which is used to identify the manufacturer, distributor, or Government agency etc.

f. Description. Indicates the Federal item name and, if required, a minimum description to identify the item. *g.* Unit of Measure (U/M). Indicates the standard of the basic quantity of the listed item as used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation (e.g., ea, in, pr, etc). When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required units of measure will be requisitioned.

h. Quantity Incorporated in Unit. Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for a functional group, subfunctional group, or an assembly. A "V" appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, (e.g., shims, spacers, etc.).

D-4. Special Information

a. Usable on codes are shown in the description column. Uncoded items are applicable to all models. Identification of the usable on codes used in this publication are:

- Code Used on
- CNY AN/PRC-74B
- ASY AN/PRC-74C

b. Action change codes indicated in the lefthand margin of the listing page denote one of the following:

- N– Indicates an added item
- R– Indicates a change in the NSN only

C– Indicates a change in data

c. Detailed assembly instructions for items source coded to be assembled are found in TM 11-5820-590-12-1. Assembly components are listed immediately following the item to be assembled.

d. National stock numbers (NSN's) that are missing from the P source coded items have been applied for and will be added to this TM by future change/revision when they are entered into the Army Master Data File (AMDF). Until the NSN's are established and published, submit exception requisitions to: Commander, US Army Electronics Command, ATTN: DRSEL-MM, Fort Monmouth, NJ 07703 for the part required to support your equipment.

D-5. How to Locate Repair Parts

a. When the National stock number or part number is unknown.

(1) *First.* Using the table of contents, determine the functional group within which the item belongs. This is necessary since illustrations are prepared for functional groups and listings are divided into the same groups.

(2) Second. Find the illustration covering the functional group to which the item belongs.

(3) *Third.* Identify the item on the illustration and note the illustration figure and item number of the item.

(4) *Fourth.* Using the Repair Parts Listing, find the figure and item number noted on the illustration.

b. When National stock number or part number is known.

(1) *First.* Using the Index of National Stock Numbers and Part Numbers, find the pertinent National stock number or part number. This index is in NIIN sequence followed by a list of part numbers in alphanumeric sequence. crossreferenced to the illustration figure number and item number.

(2) Second. After finding the figure and item number, locate the figure and item number in the repair parts list.

D-6. Abbreviations

(Not applicable)

THE METRIC SYSTEM AND EQUIVALENTS

'NEAR MEASURE

. Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches

- 1 Meter = 100 Centimeters = 1000 Millimeters = 39.37 Inches
- 1 Kilometer = 1000 Meters = 0.621 Miles

VEIGHTS

Gram = 0.001 Kilograms = 1000 Milligrams = 0.035 Ounces 1 Kilogram = 1000 Grams = 2.2 lb.

1 Metric Ton = 1000 Kilograms = 1 Megagram = 1.1 Short Tons

LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces

1 Liter = 1000 Milliliters = 33.82 Fluid Ounces

SQUARE MEASURE

1 Sq. Centimeter = 100 Sq. Millimeters = 0.155 Sq. Inches

1 Sq. Meter = 10,000 Sq. Centimeters = 10.76 Sq. Feet

1 Sq. Kilometer = 1,000,000 Sq. Meters = 0.386 Sq. Miles

CUBIC MEASURE

1 Cu. Centimeter = 1000 Cu. Millimeters = 0.06 Cu. Inches 1 Cu. Meter = 1,000,000 Cu. Centimeters = 35.31 Cu. Feet

TEMPERATURE

 $5/9(^{\circ}F - 32) = ^{\circ}C$

212° Fahrenheit is evuivalent to 100° Celsius

90° Fahrenheit is equivalent to 32.2° Celsius

32° Fahrenheit is equivalent to 0° Celsius

 $9/5C^{\circ} + 32 = {}^{\circ}F$
