

MF/HF Radiotelephone

JSB-196GM

Instruction Manual

Japan Radio Co., Ltd.

Preface

Thank you for purchasing the JSB-196GM MF/HF Radiotelephone.

This equipment is installed on small-scale ships for general telecommunications over the high-frequency band.

- Be sure to read this manual for full comprehension before using the equipment.
- Save this manual near at hand for quick reference in the future.
Make use of this manual when experiencing operation difficulties.

Before Operation

Concerning the symbols

This manual uses the following symbols to explain correct operation and to prevent injury or damage to property.

The symbols and descriptions are as follows. Understand them before proceeding with this manual.

Indicates a warning that, if ignored, may result in serious injury or even death.

Indicates a caution that, if ignored, may result in injury or damage to property.

Examples of symbols

The \triangle symbol indicates caution (including DANGER and WARNING). The illustration inside the \triangle symbol specifies the content of the caution more accurately. (This example warns of possible electrical shock.)

The \ominus symbol indicates that performing an action is prohibited. The illustration inside the \ominus symbol specifies the contents of the prohibited operation. (In this example disassembly is prohibited.)

The \bullet symbol indicates operations that must be performed. The illustration inside the \bullet symbol specifies obligatory instructions. (In this example unplugging is the obligatory instruction.)

Concerning warning labels

A warning label is pasted to the top cover of this product.
Do not remove, damage or modify the label.

Handling Precautions

⚠ WARNING

Do not disassemble or customize this unit. Doing so may cause fire, electrical shock or malfunction.

Do not use a voltage other than specified. Doing so may cause fire, electrical shock or malfunction.

Do not touch any parts where this warning label is pasted. Doing so may cause electrical shock.

Handling Precautions

CAUTION

Do not use this equipment for anything other than specified. Doing so may cause failure or malfunction.

Do not turn the trimmer resistors or the trimmer capacitors on the PCB unit, except when and if they need to be adjusted. Doing so may cause failure or malfunction. They are preset at the factory.

Do not install this equipment in a place near water or in one with excessive humidity, steam, dust or soot. Doing so may cause fire, electric shock, or malfunction.

Do not insert anything flammable into the ventilation holes. Doing so may cause fire, electric shock or malfunction.

Do not block the ventilation holes. Doing so will cause heat to accumulate, and may cause fire or malfunction.

Do not get this equipment wet or spill any liquids on or near this equipment. Doing so may cause electrical shock or malfunction.

Do not place this equipment anywhere vibration or impact is likely to occur. Doing so may cause a fall or damage to property and persons.

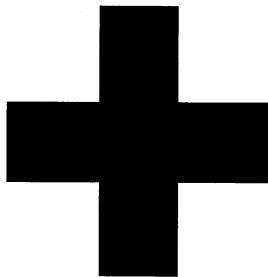

Never touch the antenna terminal, grounding terminal or counterpoise when the JSB-196GM is turned ON. Doing so, may cause electrical shock.

Place Antenna Tuner NFC-196, antenna and counterpoise in position where no one touches them. Doing not so, may cause electrical shock.

Leave installation of this equipment to our repair center or agents. Installation by an unauthorized person may lead to malfunction.

CAUTIONS AGAINST HIGH VOLTAGE

Radio and radar devices are operated by high voltages of anywhere from a few hundred volts up to many hundreds of thousands of volts. Although there is no danger with normal use, it is very dangerous if contact is made with the internal parts of these devices. (Only specialists should attempt any maintenance, checking or adjusting.)

There is a very high risk of death by even a few thousand volts, in some cases you can be fatally electrocuted by just a few hundred volts. To circumvent accidents, you should avoid contact with the internal parts of these devices at all costs. If contact is inevitable as in the case of emergency, you must switch off the devices and ground a terminal in order to discharge the capacitors. After making certain that all the electricity is discharged, only then can you insert your hand into the device. Wearing cotton gloves and putting your free hand in your pocket, in order not to use both hands simultaneously, are also very good methods of shock prevention. Quite often, an injury occurs by secondary factors, therefore it is necessary to choose a sturdy and level working surface. If someone is electrocuted it is necessary to thoroughly disinfect the affected area and seek medical attention as soon as possible.

Cautions concerning treatment of electrocution victims

When you find an electrocution victim, you must first switch off the machinery and ground all circuits. If you are unable to cut off the machinery, move the victim away from it using a non-conductive material such as dry boards or clothing.

When someone is electrocuted, and the electrical current reaches the breathing synapses of the central nervous system inside the brain, breathing stops. If the victim's condition is stable, he or she can be administered artificial respiration. An electrocution victim becomes very pale, and their pulse can be very weak or even stop, consequently losing consciousness and becoming stiff. Administration of first aid is critical in this situation.

First aid

★Note points for first aid

Unless there is impending danger leave the victim where he or she is, then begin artificial respiration. Once you begin artificial respiration, you must continue without losing rhythm.

- (1) Make contacts with the victim cautiously, there is a risk that you may get electrocuted.
- (2) Switch off the machinery and then move the victim away slowly if you must.
- (3) Inform someone immediately (a hospital or doctor, dial emergency numbers, etc.).
- (4) Lay the victim on his or her back and loosen any constructive clothing (a tie, or belt).
- (5) (a) Check the victim's pulse.
(b) Check for a heartbeat by pressing your ear against the victim's chest.
(c) Check if the victim is breathing by putting the back of your hand or face near the victim's face.
(d) Check the pupils of the eyes.
- (6) Open the victim's mouse and remove any artificial dentifrice, food or chewing gum. Leave the mouth opened and flatten the tongue with a towel or by putting something into the mouth to prevent the victim's tongue from obstructing the throat (If he or she is clenching their teeth and it is difficult to open the mouth, use a spoon or the like to pry open the mouth).
- (7) Continually wipe the mouth to prevent the accumulation of saliva.

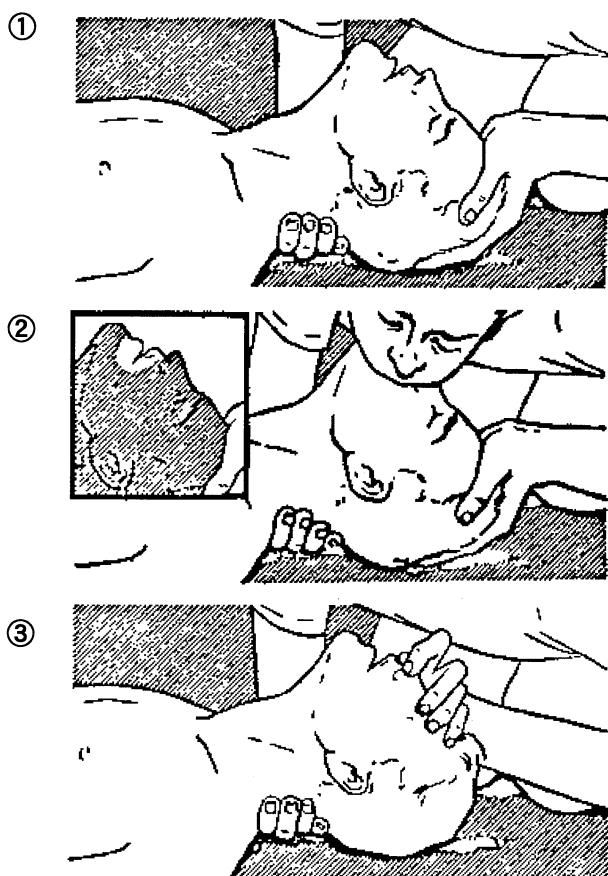

★If the victim has a pulse but is not breathing

("Mouth to mouth" resuscitation)

Figure 1

- (1) Place the victim's head facing backward (place something under the neck like a pillow).
- (2) Point the chin upward to widen the trachea.
- (3) Pinch the victim's nose, take a deep breath, then put your mouth over the victim's mouth and exhale completely, making sure that your mouth completely covers the victim's mouth. Then remove your mouth. Repeat this routine 10 to 15 times per minute (holding the nostrils).
- (4) Pay attention to the victim to notice if he or she starts to breath. If breathing returns, stop resuscitation.
- (5) If it is impossible to open the victim's mouth, put something like a plastic straw or vinyl tube into one of the nostrils then blow air in while covering the mouth and the other nostril.
- (6) Occasionally, when the victim comes back to consciousness, they immediately try to stand up. Prevent this and keep them in a laying position. Give them something warm to drink and be sure that they rest (do not give them any alcohol).

Administering artificial respiration by raising the head.

"Mouse to mouse" artificial respiration

Figure 1

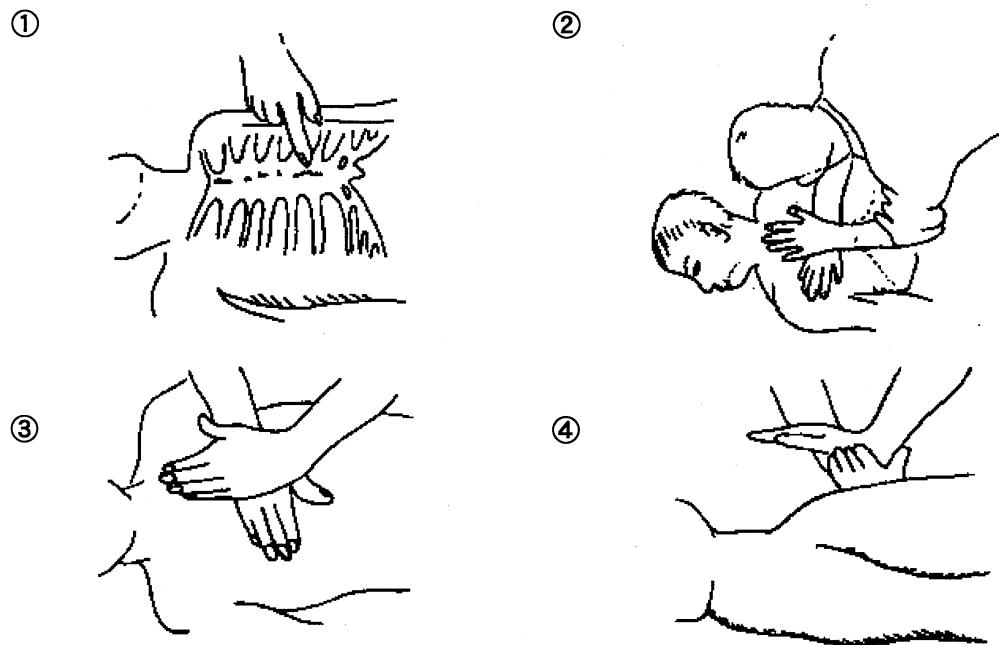

- (1) Raise the back of head, then place one hand on the forehead and place the other hand under the neck. →①
Most victims open their mouth when doing this, making "mouth to mouth" resuscitation easier.
- (2) Cover the victim's mouth by opening your mouth widely, then push your cheek against the victim's nose, →②
or pinch the victim's nose to prevent air from leaking out of it. →③
- (3) Completely exhale into the lungs.
Exhale into the lungs until the chest is inflates.
You have to blow as rapidly as possible for the first 10 times.

**★If the victim has no pulse and is not breathing
(Heart massage in combination with artificial respiration.)**

Figure 2

If the victim has no pulse, his or her pupils are dilated, and if you cannot detect a heartbeat, the heart may have stopped, beginning artificial respiration is critical.

- (1) Put both hands on the diaphragm, with hands on top of each other keeping both arms straight (If your elbows are bent, you cannot push with as much power). Press the diaphragm with your body weight until the chest sinks about 2 cm (about 50 times per minute).
- (2) If administering first aid when alone:
Perform the heart massage about 15 times then blow in twice. Repeat this routine.
If administering first aid with two people:
One person performs the heart massage 5 times, and the other person blows air in once.
Repeat this routine (Heart massage and "mouth to mouth" resuscitation used together).
- (3) Constantly check the pupils and the pulse, if the pupils become normal and the pulse steadies, keep them in a laying position and give them something warm to drink, be sure that they rest (do not give them any alcohol). In any case you have to entrust major decision making to a doctor. Having understanding people around is essential to the victim's recovery from the mental shock of electrocution.

Heart massage in combination with artificial respiration.

Figure 2

DISTRESS CALLS

NCT-196

There are three methods of transmitting a distress call. These are described below. These methods are described in order of ease of use, with the easiest first.

Transmitting Distress Calls 1

Procedure

1. Open the cover on the left and press **DISTRESS**.

The following screen is displayed.

DISTRESS CALL	Transmissible
Address	: XXXXXXXXX
Nature	: UNDESIGNATED DIST
Dist-position	: 12° 34'N123° 45'E
Dist-UTC	: 01:26
Dist-telecomm	: J3E TEL
End of sequence	: EOS
Call TX/RX freq:	2,187.5 / 2,187.5 kHz

Note

- If stop the distress transmission, press **STOP**.

2. Press **DISTRESS** at least 3.5 seconds.

Note

- If stop the distress transmission, release **DISTRESS**.

3. After appear the following screen.

The following screen is displayed. If connect the printer prints out the distress message.

DISTRESS CALL	Transmitting
TX frequency	: 2,187.5 kHz
TX date&time	: 06.Sep.2001(Thu) 01:26
1/5	

The message is transmitted 5 times in successively.

Note

- Press **STOP** to cancel the distress transmission.

When the transmission is completed, the following screen is displayed.

DISTRESS CALL	Send Completed
TX frequency	: 2,187.5 kHz
TX date&time	: 06.Sep.2001(Thu) 01:27
5/5	

The distress call transmission is repeated at random intervals of 3.5 to 4.5 minutes.

On completion of the transmission, the following screen is displayed. Transmission of the distress call is repeated when the displayed time has counted down to zero.

DISTRESS CALL	2,187.5 kHz
NEXT DISTRESS CALL : AFTER 3.0 min	

Transmitting Distress Calls 2

Front panel

Procedure

1. Press **2187.5kHz** or **8414.5kHz**.

2. Open the cover on the left and press **DISTRESS**.

The following screen is displayed.

DISTRESS CALL	Transmissible
Address	: XXXXXXXXX
Nature	: UNDESIGNATED DIST
Dist-position	: 12°34'N123°45'E
Dist-UTC	: 01:26
Dist-telecomm	: J3E TEL
End of sequence	: EOS
Call TX/RX freq:	2,187.5/ 2,187.5 kHz

Note

- If stop the distress transmission, press **STOP**.

3. Press **DISTRESS** at least 3.5 seconds.

Note

- If stop the distress transmission, release **DISTRESS**.

4. After appear the following screen.

The following screen is displayed. If connect the printer prints out the distress message.

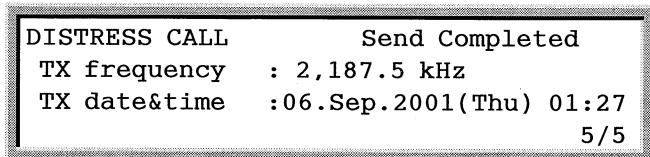

DISTRESS CALL	Transmitting
TX frequency	: 2,187.5 kHz
TX date&time	: 06.Sep.2001(Thu) 01:26
	1/5

The message is transmitted 5 times in successively.

Note

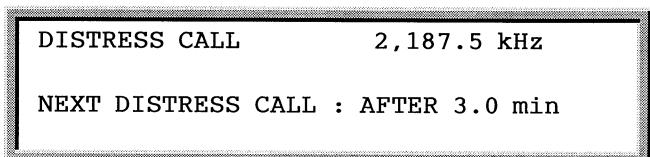

- Press **STOP** to cancel the distress transmission.

When the transmission is completed, the following screen is displayed.

The distress call transmission is repeated at random intervals of 3.5 to 4.5 minutes.

On completion of the transmission, the following screen is displayed. Transmission of the distress call is repeated when the displayed time has counted down to zero.

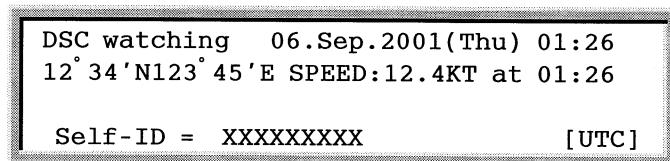

Transmitting Distress Calls 3

The NCT-196 enables an operator to create and edit messages for transmission.

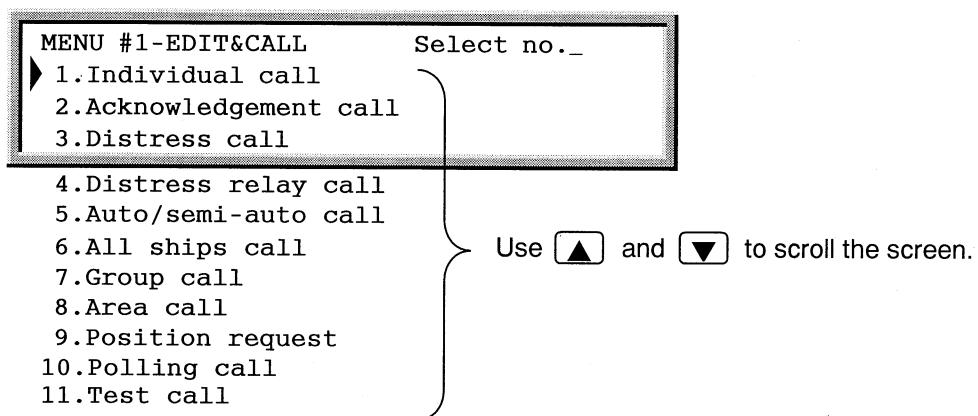

Procedure

1. Confirm that the "DSC watching" screen is displayed.

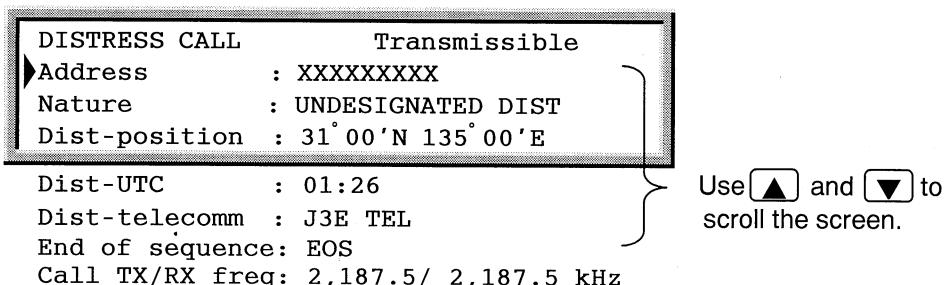

2. Press [MENU].

The "MENU #1-EDIT&CALL" screen is displayed.

3. With the "MENU #1-EDIT&CALL" screen displayed, press [3] and then [ENT].

The "DISTRESS CALL" screen is displayed.

You can set up the following items on this screen.

*「Address」	: XXXXXXXXX
「Nature」	: UNDESIGNATED DIST
「Dist-position」	: 31° 00'N 135° 00'E
「Dist-UTC」	: 01:26
「Dist-telecomm」	: J3E TEL
*「End of sequence」	: EOS
「Call TX/RX freq」	: 2,187.5/ 2,187.5 kHz

Note

* Not edit the these setting.

4. Open the cover on the left and press **DISTRESS** for at least 3.5 seconds (until the intermittent alarm tone changes to a continuous tone).

The following screen is displayed, followed by the transmission of the edited message. The message is transmitted 5 times in succession.

DISTRESS CALL	Transmitting
TX frequency	: 2,187.5 kHz
TX date&time	: 06.Sep.2001(Thu) 01:26
1/5	

Note

- Press **STOP** to cancel the distress transmission.

When the transmission is completed, the following screen is displayed.

DISTRESS CALL	Send Completed
TX frequency	: 2,187.5 kHz
TX date&time	: 06.Sep.2001(Thu) 01:27
5/5	

The distress call transmission is repeated at random intervals of 3.5 to 4.5 minutes.

On completion of the transmission, the following screen is displayed. Transmission of the distress call is repeated when the displayed time has counted down to zero.

DISTRESS CALL	2,187.5 kHz
NEXT DISTRESS CALL : AFTER 3.0 min	

Receiving Distress Calls

When a distress call is received, the "DISTRESS/URGENCY" LED lights up red and the alarm tone sounds. Up to 20 received distress calls are automatically stored in memory for future confirmation.

Note

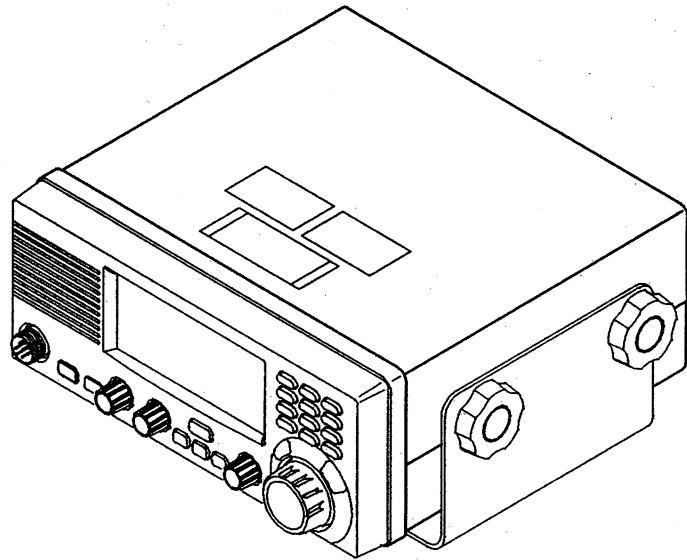

The distress messages are automatically deleted 48 hours after they have been received in order to prevent unnecessary distress message relay transmission. Distress messages more than 48 hours old cannot be displayed. This does not indicate a fault in the device.

ATTENTION

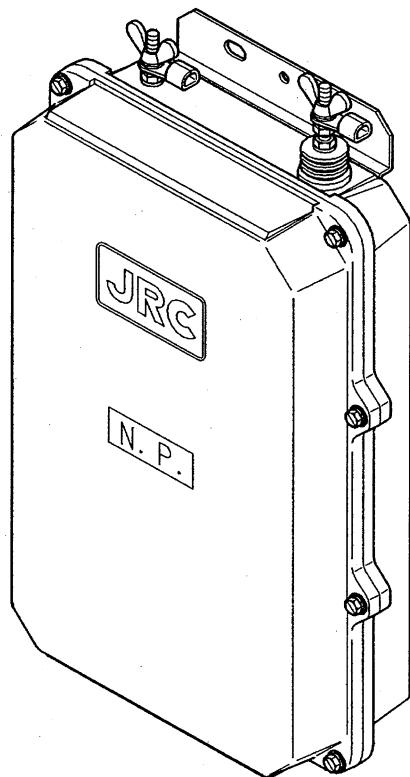

- When a distress call is received, be sure to inform the ship's captain or officer in charge and log the distress call. There is the possibility of legal repercussions if such a procedure is not followed.
- If a distress call is received, perform communication according to "DSC Alert Response Procedures."

1 . GENERAL

1.1 Outlines

The JSB-196GM is a 150W MF/HF Radiotelephone designed for fishing vessels and other middle or small vessels. The small and lightweight components allow installation at any convenient location on any vessels. SSB radio communication is effectively available with simple operations, continuously covering 1.6 MHz to 27.5 MHz for transmission and 0.1MHz to 29.9999MHz for reception in 100Hz steps.

1.2 Features

● Simple Installation on Small Ship

Each equipment is of very compact design for simple installation on small ship. The GMDSS-based system consists of the JSB-196GM MF/HF Radiotelephone, the NCT-196 DSC Terminal and a DC-DC converter. The main unit of the JSB-196GM and the NCT-196 can be integrated as a stacked system and installed in a easy-to-operation place on the bridge.

● Simple Operation

The JSB-196GM is designed for user-friendly operation using a single large control dial for routine work, frequency channel selection, mode setting and high/low transmit power switching. The NCT-196 integrates the DSC modem and the watch-keeping receiver in it, enabling operations to fully meet the GMDSS requirement.

● Digital Signal Processing (DSP)

The JSB-196GM Radiotelephone uses 32-bit floating fixed point DSP for digital signal processing in and after the IF stage. The DSP technology improves a number of functions including noise reduction and various types of interference rejection, ensuring enhanced performance.

● Wide Frequency Range

The JSB-196GM covers fully HF marine band, 1.6 to 27.5MHz for transmission and 0.1 to 29.9999MHz for reception in 100Hz steps, and also all ITU channels are factory programmed for ease of use.

● Self-diagnosis Function

A built-in high grade self-diagnosis facilitates troubleshooting, checking and repairing to ensure easy maintenance.

● High Expandability

The JSB-196GM can provide the HF E-mail communication capability by connecting a dedicated modem and a general-purpose personal computer.

1.3 Components

2. PART NAMES AND FUNCTIONS

2.1 JSB-196GM MF/HF Radiotelephone

2.1.1 External View

2.1.2 Operating Panel

① **Liquid Crystal Display Panel**

⑧ **ENT**

Enters the input information.

② **MIC**

Connects the hand microphone or handset.

⑨ **CH**

Starts channel selection.

③ **POWER**

Turns power ON or OFF.

⑩ **Jog Dial**

Used to select a channel or receive frequency or to select a menu.

④ **DIMMER**

Controls the brightness of the LCD.

⑪ **VOLUME**

Controls the sound volume of reception.

⑤ **RF GAIN**

Controls the RF gain.

⑫ **ATT**

Turns the attenuator ON or OFF.

⑥ **CLARI**

Adjusts the frequency variation, which ranges from -200 to +200Hz in 1Hz steps.

⑬ **ANT TUNE**

Starts antenna tuning.

⑦ **0 ~ 9 , MENU CLR**

These buttons are used to input frequency/channel values or to set a menu.

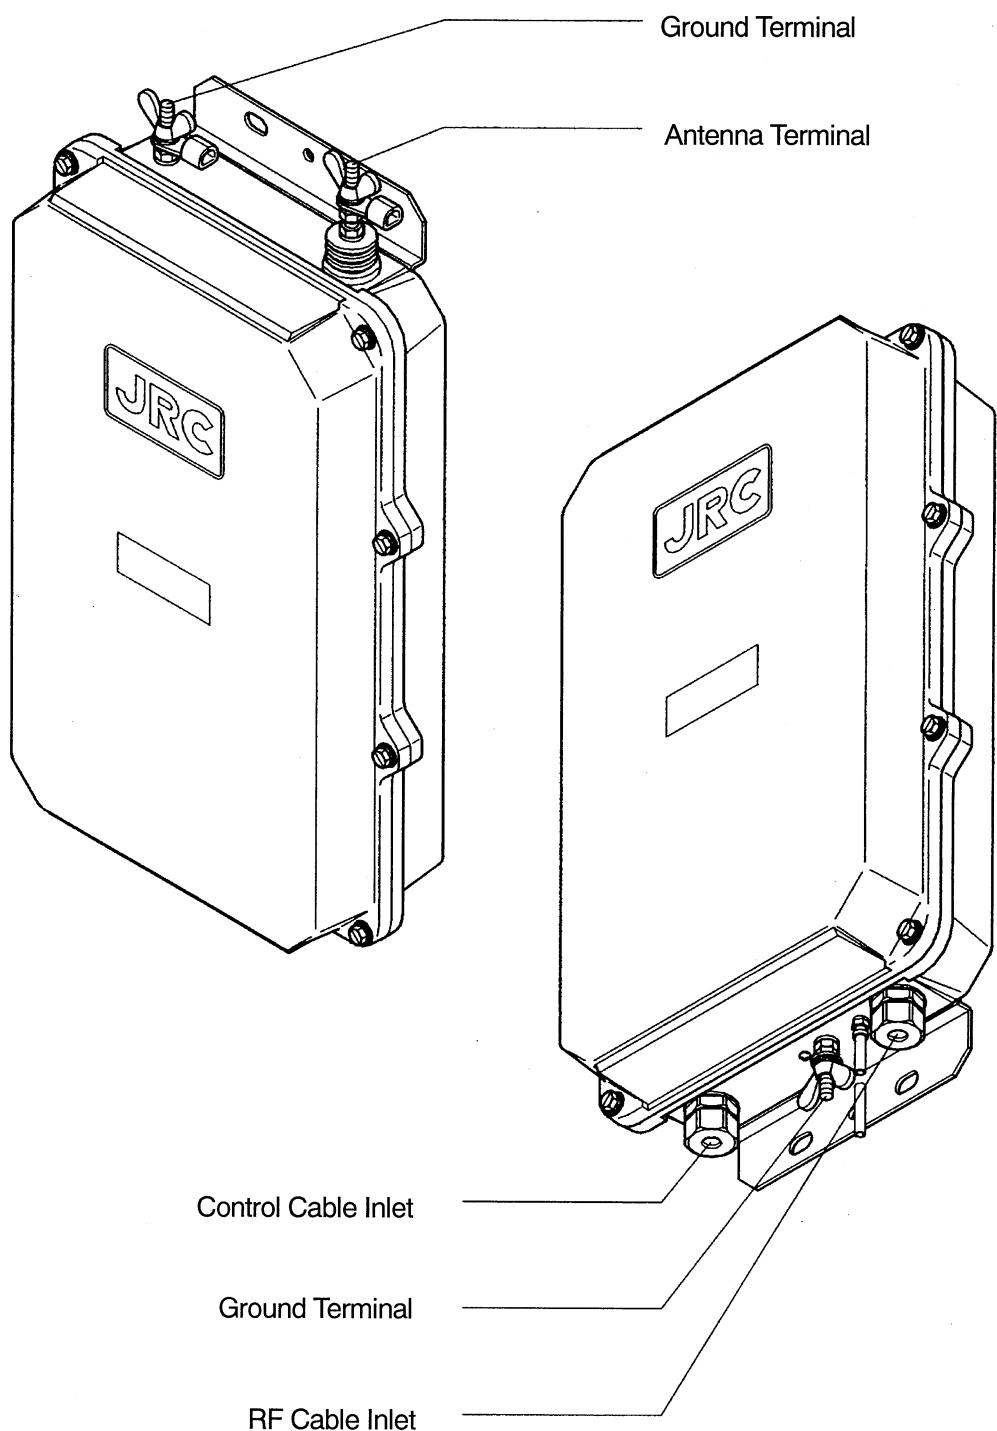

⑭ **LISN/ TX**

Temporarily monitors the transmission frequency in the Semi-Duplex mode

⑮ **NR**

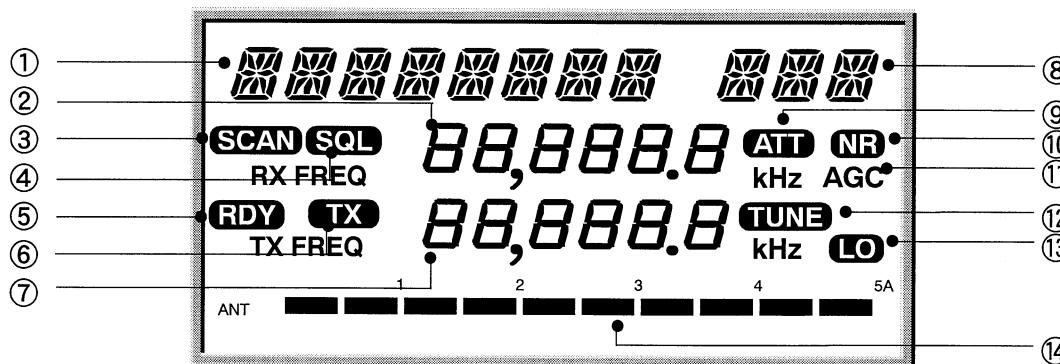

Reduces pulsating noises.

2.2 NFC-196 Antenna Tuner

3 . DISPLAYS

3.1 LCD Panel of JSB-196GM

- ① **Channel display field**
User channel number or ITU channel number with channel name is displayed. While a menu function is being set, necessary information responding to the menu item is displayed.
- ② **RX frequency display**
The RX frequency responding to the channel numbers or freely-entered frequency is displayed.
- ③ **SCAN**
Indicates that the scanning reception is in progress.
- ④ **SQL**
Indicates that the squelch closed.
- ⑤ **RDY**
Indicates that transmitting is ready.
- ⑥ **TX**
Indicates the on/off state of transmission.
- ⑦ **TX frequency display**
The TX frequency responding to the channel numbers or freely-entered frequency is displayed.
- ⑧ **Mode display field**
Communication mode is displayed. While a menu function is being set, necessary information responding to the menu item is displayed.

- ⑧ **ATT**
Indicates that the attenuator is ON.
- ⑨ **NR**
Indicates that the noise reduction is ON.
- ⑩ **AGC**
Indicates that the AGC is ON.
- ⑪ **TUNE (Blinking)**
Indicates that the antenna matching is required.
- ⑫ **TUNE**
Indicates while the antenna tuner is tuning.
- ⑬ **LO**
Indicates that the transmission output is reduced to low power level.
- ⑭ **Meter**
During reception, the stronger the signal, the more bar appears.
The output power or antenna current appears during transmission.

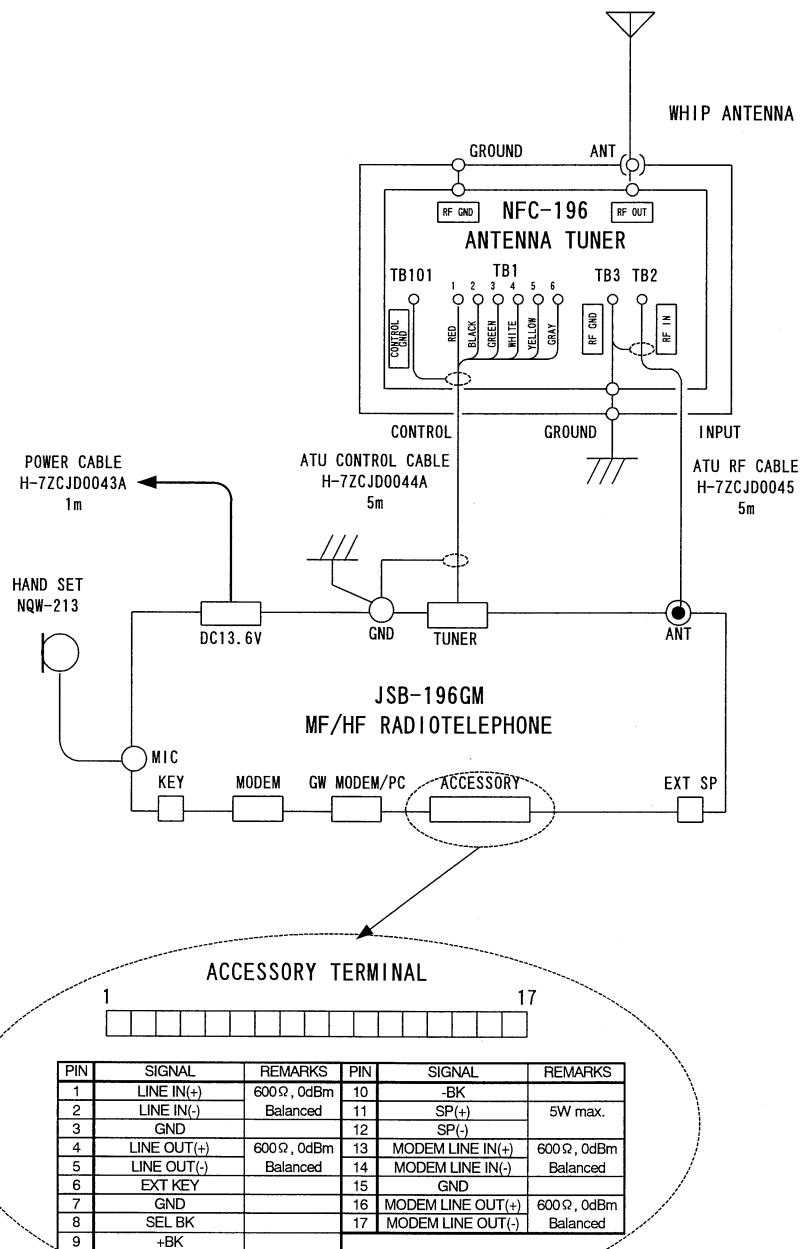

4 . CONNECTION DIAGRAM

! CAUTION

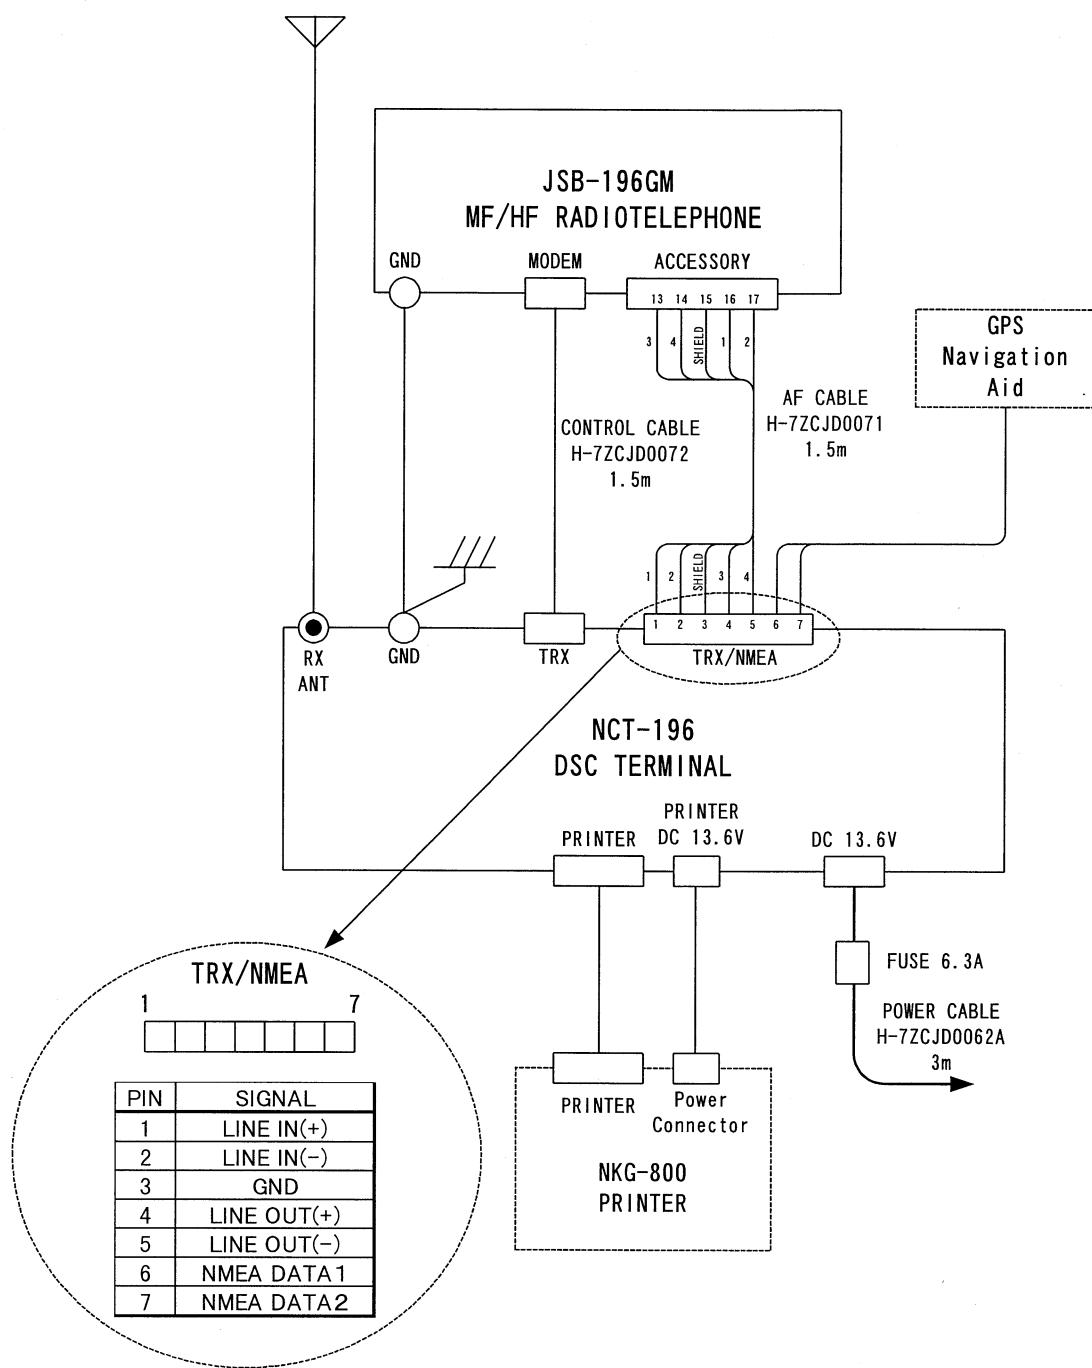

Leave installation of this equipment to our service center or agents.
Installation by an unauthorized person may results in malfunction.

4.1 JSB-196GM and NFC-196 Connection

4.2 JSB-196GM and NCT-196 Connection

5 . OPERATION

5.1 Turning the Power ON / OFF

⚠ CAUTION

Never touch the antenna terminal, grounding terminal or counterpoise when the JSB-196GM is turned ON. Doing so, may cause electrical shock.

Place Antenna Tuner NFC-196, antenna and counterpoise in position where no one touches them. Doing not so, may cause electrical shock.

5.1.1 Turning the Power ON

Press [POWER] on the front panel until the channel and frequencies are displayed as follows:

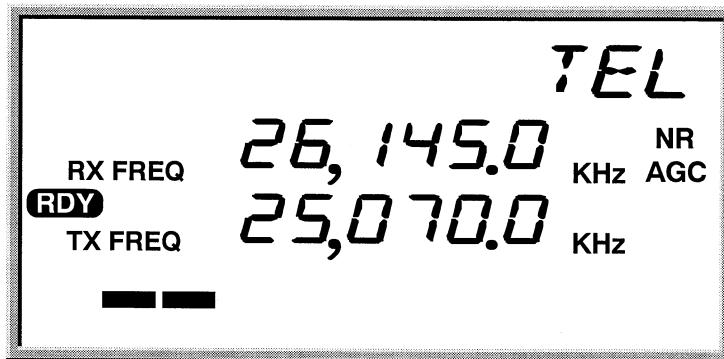

Figure 5.1 Initial display on the LCD (immediately after the equipment is powered on)

5.1.2 Turning the Power OFF

Press [POWER] until LCD disappears.

Note

The latest frequency and set-up state information such as communication mode are stored in memory when the equipment is turned OFF. It will be set automatically when the equipment is powered on again except the following items and these items will be set to as follows:

- Built-in loudspeaker ON/OFF (ON as default)
- Squelch value (0 as default)

5.2 Communication Procedure

The JSB-196GM employs the Jog Dial for simply setting or selection for principal functions such as TX/RX frequency, communication mode, output power, squelch, AGC, etc. and the following procedures are provided for pleasant communication.

5.2.1 Setting the channel number with the Jog Dial

User channels can be set with the Jog Dial.

Procedure

Example of user channel number 101

1. Press **CH**.

Group number appears in the channel field of the LCD.

2. Turn the Jog Dial. (*1)

Turn the Jog Dial until the group number, ex. "GROUP 6 TEL", including the objective channel number is displayed.

3. Press **ENT**.

User channel number is displayed.

4. Turn the Jog Dial again until the objective number, "USR-101" is displayed and complete setting.

If **TUNE** is blinking, press **ANT TUNE**.

TUNE lights steadily during tuning, and disappear when tuning is completed.

5. With these steps, the JSB-196GM is ready to communicate. Start communication by pressing PTT on the hand set.

TX FREQ —
—

Note

For easy selection of a channel number, you can allocate an identification label to each channel (See "5.3.6 Registering a user channel").

5.2.2 Monitoring the transmission frequency

In semi-duplex mode the TX/RX frequency are set differently, though only one way transmission or reception is possible at the same time. The transmission frequency signal can be checked for interference.

Procedure

1. Press **LISN/
TX**.

JSB-196 starts to receive TX frequency. After the check, press **LISN/
TX** again or transmit to return to the initial state.

5.2.3 Setting the channel number with keypad

User channel number can be set with keypad as follows.

Procedure

Example of user channel number 101 (RX frequency 26145.0 kHz / TX frequency 25070.0 kHz).

1. Press **CH**.

"GROUP 1 TEL" appears in the channel field of the LCD.

2. Press **1**, **0** and **1**.

The channel number is displayed in the channel field of the LCD.

3. Press **ENT**.

The input channel number is fixed.

4. Input the RX/TX frequency.

See the 「5.3.6 Registering the user channel step 4~7」.

5. If **TUNE** is blinking, press **ANT
TUNE**.

TUNE lights steadily during tuning, and disappear when tuning is completed.

6. With these steps, the JSB-196GM is ready to communicate. Start communication by pressing PTT on the Hand set.

Examples of display on the LCD

(in the TEL mode)

GRoUP 1 TEL

CH- 101 TEL

USR- 101 TEL

RX FREQ	---	---	---	KHz
RDY	---	---	---	TUNE
TX FREQ	---	---	---	KHz
—				

USR- 101 TEL

RX FREQ	26, 145.0	KHz
RDY	25, 070.0	KHz
TX FREQ	—	—
—		

5.2.4 Manually inputting frequency

In this case, communication mode must be set in advance(For setting of a radio mode, see "5.3.1 setting a communication mode"). TX and RX frequency can be set with keypad as follows.

Procedure

Example of RX frequency 4357.0 kHz / TX frequency 4065.0 kHz .

1. Press [4], [3], [5], [7] and [0] for the RX frequency. The RX frequency is displayed in the channel field of the LCD.

2. Press [ENT].

The RX frequency is fixed. When you want to use this frequency also as a TX frequency, press [ENT] again.

3. Press [4], [0], [6], [5] and [0] for the TX frequency. The TX frequency is displayed in the channel field of the LCD.

4. Press [ENT].

The TX frequency is fixed.

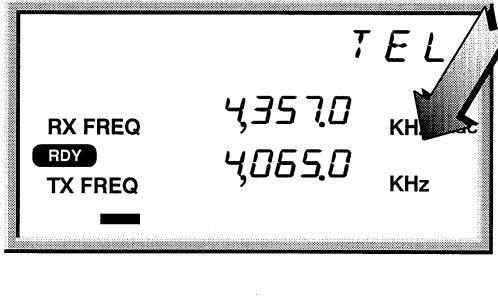

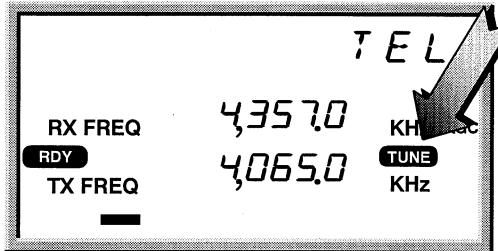

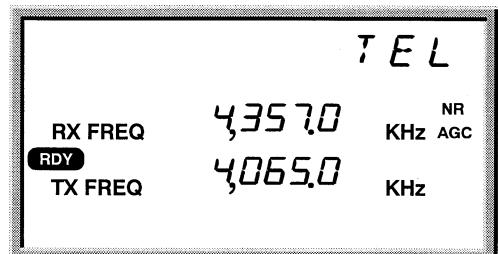

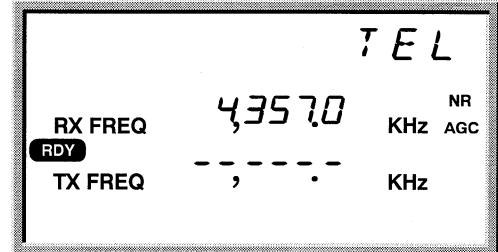

5. If [TUNE] is blinking, press [ANT TUNE].

[TUNE] lights steadily during tuning, and disappear when tuning is complete.

6. With these steps, the JSB-196GM is ready to communicate. Start communication by pressing PTT on the Hand set.

Examples of display on the LCD

(in the TEL mode)

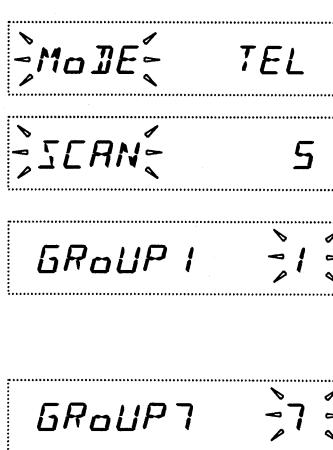

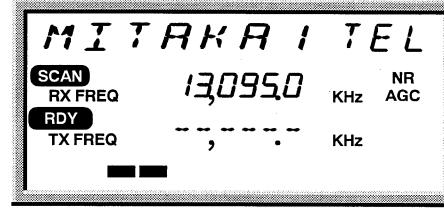

Note

- Press two or three times [CH], enable to change the RX/TX frequency individually.
- Press [0] to change the DISTRESS frequency 2,182.0 kHz.

5.2.5 Scanning reception

The reception frequency stored in user channel group 1 to 10, each 20 channels can be scanned. You can select a desired group (20 user channels per group) for scanning.

Procedure	Examples of display on the LCD
<p>Example of group 7.</p> <ol style="list-style-type: none">1. Press MENU, then turn the Jog Dial until "SCAN" appears in the channel field of the LCD.2. Press ENT. "Group 1 1" appears in the channel field of the LCD.3. Turn the Jog Dial until objective group is displayed.4. Press ENT. Scanning reception starts. SCAN appears on the center left of the LCD. The group name and number which are scanned are displayed in the channel field of the LCD.5. To cancel scanning, press CLR. The last communication mode and the frequencies are set.	<p style="text-align: center;">(in the TEL mode)</p>  

5.3 Other Function Settings

The function setting is basically executed by using **MENU** key and the Jog Dial, and the settable items blinks and is set with **ENT** key.

5.3.1 Setting the communication mode

In the use of manually inputting frequency, communication mode must be set in advance.

Procedure

Example of CW.

1. Press **MENU**.

"MODE" in the channel field of the LCD blinks.

2. Press **ENT**.

The current communication mode "TEL" blinks.

3. Turn the Jog Dial.

Turn the Jog Dial until objective mode. "CW" is blinking.

4. Press **ENT**.

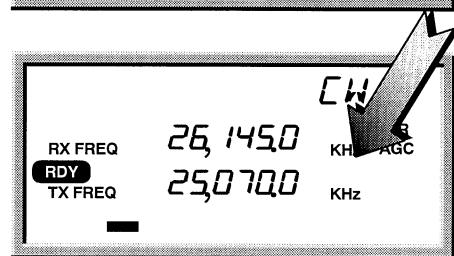

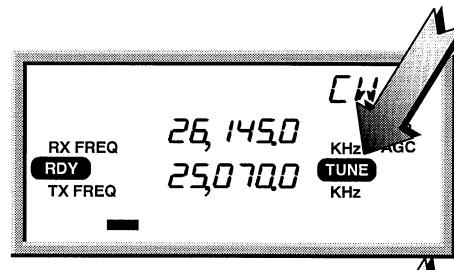

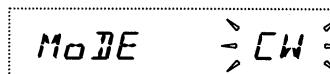

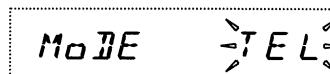

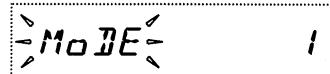

CW is fixed as communication mode.

5. If **TUNE** is blinking, press **ANT TUNE**.

TUNE lights steadily during tuning. And disappear when tuning is complete.

Examples of display on the LCD

(in the TEL mode)

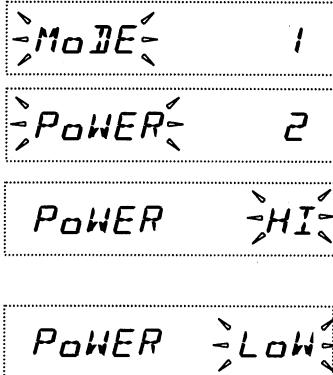

Note

- Press **CLR** to change the communication mode successively.

5.3.2 Setting the output power

The output power can be set to "HI (150W)" or "LOW (50W)".

Procedure	Examples of display on the LCD
<ol style="list-style-type: none">1. Press MENU, then turn the Jog Dial until "Power" in the channel field of the LCD blinks.2. Press ENT. <p>The current out power "HI" blinks.</p> <ol style="list-style-type: none">3. Turn the Jog Dial until "LOW" blinks.4. Press ENT. <p>The output power is set to "LOW". LO on the lower right corner of the LCD turns on.</p>	

5.3.3 Turning the Automatic Gain Control (AGC) ON

The AGC circuit functions to maintain a constant receiver output by automatically adjusting the gain according to the strength of the reception signals.

Procedure	Examples of display on the LCD
<ol style="list-style-type: none">1. Press MENU, then turn the Jog Dial until "AGC" in the channel field blinks.2. Press ENT. <p>The current AGC status "SLW" blinks.</p> <ol style="list-style-type: none">3. Turn the Jog Dial until desirable state "FST" or "OFF" appears.4. Press ENT. <p>The desirable "AGC" state is fixed.</p> <p>"AGC" turn on the right corner of the LCD when you set to "SLW" or "FST".</p>	

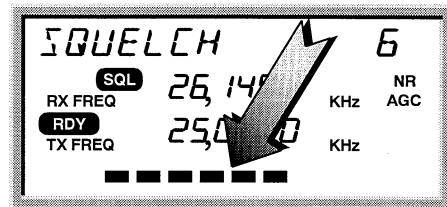

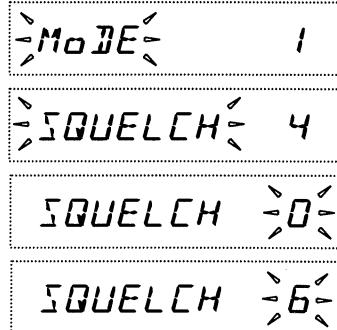

5.3.4 Adjusting squelch level

The squelch circuit functions to mute received signals based on its level. The larger the squelch level, the larger the antenna input level is required to open the squelch circuit. When the squelch circuit is activated (mute status), **SQL** in the LCD turns on.

Procedure

1. Press **MENU**, then turn the Jog Dial until "SQUELCH" blinks.
2. Press **ENT**.
The current squelch level "0" blinks.
3. Turn the Jog Dial until desired squelch level appears. When turn the Jog Dial, the bar on the bottom of the LCD expands to indicate the squelch level.
4. Press **ENT**.
The squelch level is fixed.

Examples of display on the LCD

5.3.5 Setting the scanning speed

The scanning time for each channel is settable between 0.3 to 5 seconds.(multiple of 0.1 second)

Procedure	Examples of display on the LCD
Example of 0.3 seconds.	
1. Press MENU , then turn the Jog Dial until "SCAN SPD" blinks.	
2. Press ENT .	
The current value "10" blinks.	
3. Turn the Jog Dial until desirable scanning time appears or manually input the value from keypad.	
4. Press ENT .	
The scanning time is fixed to 0.3 seconds.	

5.3.6 Registering the user channel

You use frequently can be registered as a user channel up to 200, channel number 1 to 200.

Procedure	Examples of display on the LCD
Example of registration for RX frequency 4357.0 kHz / TX frequency 4065.0 kHz, communication mode is TEL, Channel Label Registration is MITAKA1 at the user channel number 1.	
1. Make sure that a objective communication mode is set and press MENU and then turn the Jog Dial until "USR MEMO" blinks.	
2. Press ENT .	
Select the user channel number with the Jog Dial or keypad.	
3. Press ENT .	
Select the communication mode with the Jog Dial ^{(*)1} .	

Procedure

4. Press **ENT**.

Press **4**, **3**, **5**, **7** and **0** for the RX frequency. The RX frequency is displayed in the channel field of the LCD.

5. Press **ENT**.

The RX frequency is fixed^{(*)2}.

6. Press **4**, **0**, **6**, **5** and **0** for the TX frequency. The TX frequency is displayed in the channel field of the LCD.

7. Press **ENT**.

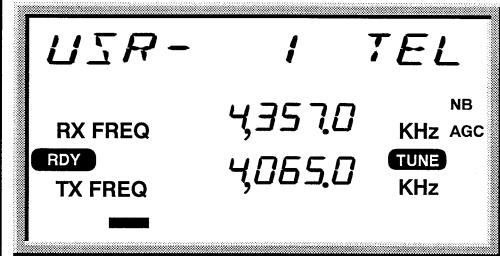

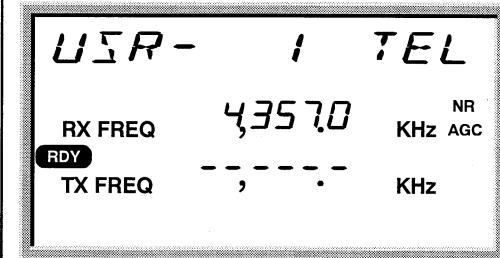

The TX frequency is fixed.

8. Select an alphabet or number(MITAKA1) with the Jog Dial. Input decision or "SPACE" key is **ENT**.

After selection, press **CLR**, and fix to press **ENT**^{(*)3}.

9. The Channel Label Registration mode is set. If you want to complete the inputting user channel, two times **CLR**.

Examples of display on the LCD

Note

*1 When correct the registered channel, press **ENT**, then select the collection item as follows:

In case of change the communication mode or clear the channel, turn the Jog Dial. Then press **ENT**.

In case of change the RX or TX frequency or the channel Label, press **CH** successively and input the new parameter.

*2 In step 2, the frequency can be inputted manually. RX frequency and a TX frequency in this order and go to step 8 (When you want to use an identical frequency for reception and transmission, press **ENT** only after inputting RX frequency).

*3 In step 7, you do not need the label, press **ENT** and go to step 9.

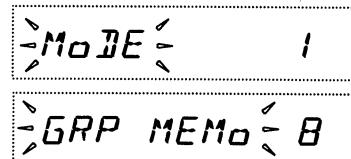

5.3.7 Registering a channel group name

200 user channels are grouped into 10 groups, each 20 channels. These groups are used for scanning reception, and can be named for quick selection.

Procedure

1. Press **MENU**, then turn the Jog Dial until "GRP MEMO" blinks.
2. Press **ENT**.
A group number "1" blinks in the right end of the channel field of the LCD.
3. Turn the Jog Dial until the objective group appears.
4. Press **ENT**.
"_" blinks.
5. Repeat to select an alphabet or number with the Jog Dial, and press **ENT** eight times.
After selection, press **CLR** and fix to press **ENT**.
6. Channel group number is fixed.

Examples of display on the LCD

5.3.8 Setting the meter indication mode

The bar indicator on the bottom of the LCD indicates signal level during reception or output during transmission, furthermore output indication is settable to the output power mode or antenna current mode.

Procedure

1. Press **MENU**, then turn the Jog Dial until "METER" blinks.
2. Press **ENT**.
"PWR" blinks.
3. Turn the Jog Dial until desired mode appears.
"PWR" : Indication for output power.
"ANT" : Indication for antenna current.
4. Press **ENT**.
Indication mode, "PWR" or "ANT", is fixed.

Examples of display on the LCD

MODE 1

METER 9

METER PWR

METER ANT

5.3.9 Setting the Automatic Tuning Start (ATS)

The ATS function is used for pre-tuning at change of channel / frequency, and tuning starts automatically when the standing-wave ratio (SWR) is wrong.

Procedure

1. Press **MENU**, then turn the Jog Dial until "ATS" blinks.
2. Press **ENT**.
"OFF" blinks.
3. Turn the Jog Dial to set "ON" or "OFF".
4. Press **ENT**.

The ATS function is turned "ON" or "OFF".

Examples of display on the LCD

MODE 1

ATS 10

ATS OFF

ATS ON

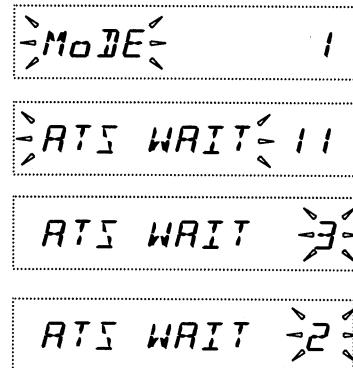

5.3.10 Setting the wait time for ATS

On the ATS function, wait time for tuning start after change of channel / frequency is adjustable.

Procedure

1. Press **MENU**, then turn the Jog Dial until "ATS WAIT" blinks.
2. Press **ENT**.
"3" blinks.
3. Turn the Jog Dial to select the time or manually input the time with keypad.
4. Press **ENT**.
The wait time is fixed.

Examples of display on the LCD

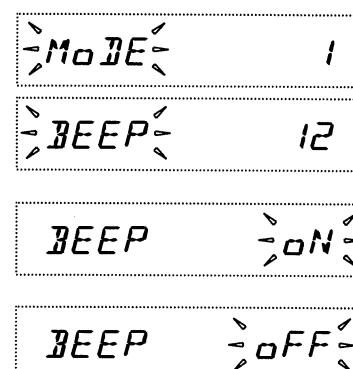

5.3.11 Turning the key-in sounds ON / OFF

The key-in sounds are available for keypad operation.

Procedure

1. Press **MENU**, then turn the Jog Dial until "BEEP" blinks.
2. Press **ENT**.
"BEEP" lights steadily and "ON" blinks.
3. Turn the Jog Dial to select "ON" or "OFF".
4. Press **ENT**.
The key-in sounds are turned "ON" or "OFF".

Examples of display on the LCD

Note

The key-in sounds are suspended, when set the loudspeaker OFF.

5.3.12 Setting the loudspeaker output ON / OFF

The loudspeaker output can be turned OFF.

Procedure

1. Press **[MENU]**, then turn the Jog Dial until "SPEAKER" blinks.
 2. Press **[ENT]**.
"SPEAKER" lights steadily and "ON" blinks.
 3. Turn the Jog Dial to select "ON" or "OFF".
 4. Press **[ENT]**.
- The loudspeaker output is turned "ON" or "OFF".

Examples of display on the LCD

MODE 1

SPEAKER 13

SPEAKER **ON**

SPEAKER **OFF**

5.3.13 List of shortcut keys

The following shortcut keys are provided for easy selection of menu items.

Using a shortcut key: The expression "1. Press **MENU**, then turn the Jog Dial" in the above procedure steps can be substituted by " Press **MENU** and input its shortcut key number with keypad".

Menu item	Shortcut key number	Function
MODE	1	Select the communication mode. TEL (J3E), DSC (F1B), TLX (F1B), CW (A1A), AME (H3E)
POWER	2	Set the output power to low (50 watts).
AGC	3	Select the AGC (Auto Gain Control) function.
SQUELCH	4	Adjust the squelch level.
SCAN	5	Enable the scanning function.
SCAN SPD	6	Set the scanning time.
USR MEMO	7	Register the user channel.
GRP MEMO	8	Register the channel group name.
METER	9	Select the bar-meter function. ANT: antenna current, PWR: output power.
ATS	10	Enable the ATS (Automatic Tuning Start) function.
ATS WAIT	11	Set the wait time for the ATS function.
BEEP	12	Disable the key-in sound panel.
SPEAKER	13	Disable the output of the built-in loudspeaker.
CHECK	14	Perform the Self Diagnosis function.
VERSION	15	Display the farm-ware version on Control unit CDJ-1960, DSP and NFC-196.

6. MAINTENANCE AND INSPECTION

The performance and longevity of this equipment depend on careful maintenance. To maintain the best performance, the following periodic inspections are highly recommended.

- (1) Keep the power supply voltage within the specified value.
- (2) Know the condition of normal status when the equipment is properly functioning. Keep comparing the current status to the normal status to immediately detect any malfunctions.

WARNING

With the exception of qualified service personnel, do not attempt to service the interior of this equipment, as doing so may cause fire, electric shock or malfunction.

Each internal circuit has been fine-tuned, therefore be sure not to tune or modify without measuring instruments. If any malfunctions are detected, contact our service center or agents.

6.1 General Maintenance and Inspection

Below are listed general maintaining and inspecting items which can be done with usual tools and apparatus.

No.	Item	Maintenance and inspection
1	Cleaning	Gently clean the surface of the panel, knobs, switches, and upper/bottom cover with a soft cloth or silicon oil. Remove dust in the unit using a brush or vacuum cleaner. No oil is needed because this unit has no moving mechanisms inside.
2	Looseness of parts	Inspect for looseness and correctly tighten the following: screws, nuts, knobs, switches, volume pots, connectors and relays inserted into sockets.
3	Fuse	If the power source fuse is blown, be sure to inspect the cause before replacing the blown fuse with a new one.
4	PCB Unit	Remove screws mounting the unit, demount the unit from the main chassis, and inspect the unit for discoloration and parching of components. To exchange parts, call our service center or agents.

Note

If you remove the PCB unit, be sure to store it in a non-conductive bag. If you wrap it up with materials such as aluminum, the buck-up power supply may short circuit and the IC may be damaged.

6.2 Maintenance Function in MENU

The JSB-196GM has the self diagnosis function and firmware-version displaying for maintenance.

6.2.1 Self Diagnosis

The Self Diagnosis function checks whether the internal circuit is functioning correctly or not.

Procedure	Examples of display on the LCD														
1. Press MENU .															
"MODE" blinks in the channel field of the LCD.															
2. Turn Jog Dial until "CHECK" appears.															
"CHECK" blinks in the channel field of the LCD.															
3. Press ENT .															
Self Diagnosis function starts.															
4. After completion, the result of the self diagnosis is displayed.															
<ul style="list-style-type: none">• No fault• Fault of Serial data line (Control unit – ATU)• Fault of Serial data line (Control unit – DSP unit)• Fault of CMN-1960 TRX unit• Fault of CAH-1960 PA unit• Fault of ATU or Antenna• Fault of RF cable (PA unit – ATU)	<table border="1"><tbody><tr><td></td><td>CHECK OK</td></tr><tr><td></td><td>CoNTRoL - RT</td></tr><tr><td></td><td>CoNTRoL - DS</td></tr><tr><td></td><td>CMN- 1960 TR</td></tr><tr><td></td><td>CAH- 1960 PR</td></tr><tr><td></td><td>RTU oR RNT</td></tr><tr><td></td><td>RF CABLE</td></tr></tbody></table>		CHECK OK		CoNTRoL - RT		CoNTRoL - DS		CMN- 1960 TR		CAH- 1960 PR		RTU oR RNT		RF CABLE
	CHECK OK														
	CoNTRoL - RT														
	CoNTRoL - DS														
	CMN- 1960 TR														
	CAH- 1960 PR														
	RTU oR RNT														
	RF CABLE														
5. Press CLR .															
The JSB-196GM exits the self diagnosis mode.															

Note

Shortcut key is available for the Self Diagnosis function as explained in "5.3.13 List of shortcut keys".

6.2.2 Farm-ware Version Display

With this function, you can check the version of respective farm-ware installed in Control unit CDJ-1960, DSP and ATU NFC-196. Use this version number when you call our service center or agents.

Procedure	Examples of display on the LCD
1. Press MENU . "MODE" blinks in the channel field of the LCD.	 MODE
2. Turn Jog Dial until "VERSION" appears. "VERSION" blinks in the channel field of the LCD.	 VERSION
3. Press ENT . The farm-ware version number is displayed.	 VER TRX 1.5
4. Turn Jog Dial. Farm-ware version numbers are displayed in the following order:	<ul style="list-style-type: none">• CDJ-1960 Control UNIT • DSP • NFC-196 ATU
5. Press CLR . The JSB-196GM exits the farm-ware version display mode.	 CLR

Note

Shortcut key is available for the farm-ware version display mode as explained in "5.3.13 List of shortcut keys".

6.3 Troubleshooting

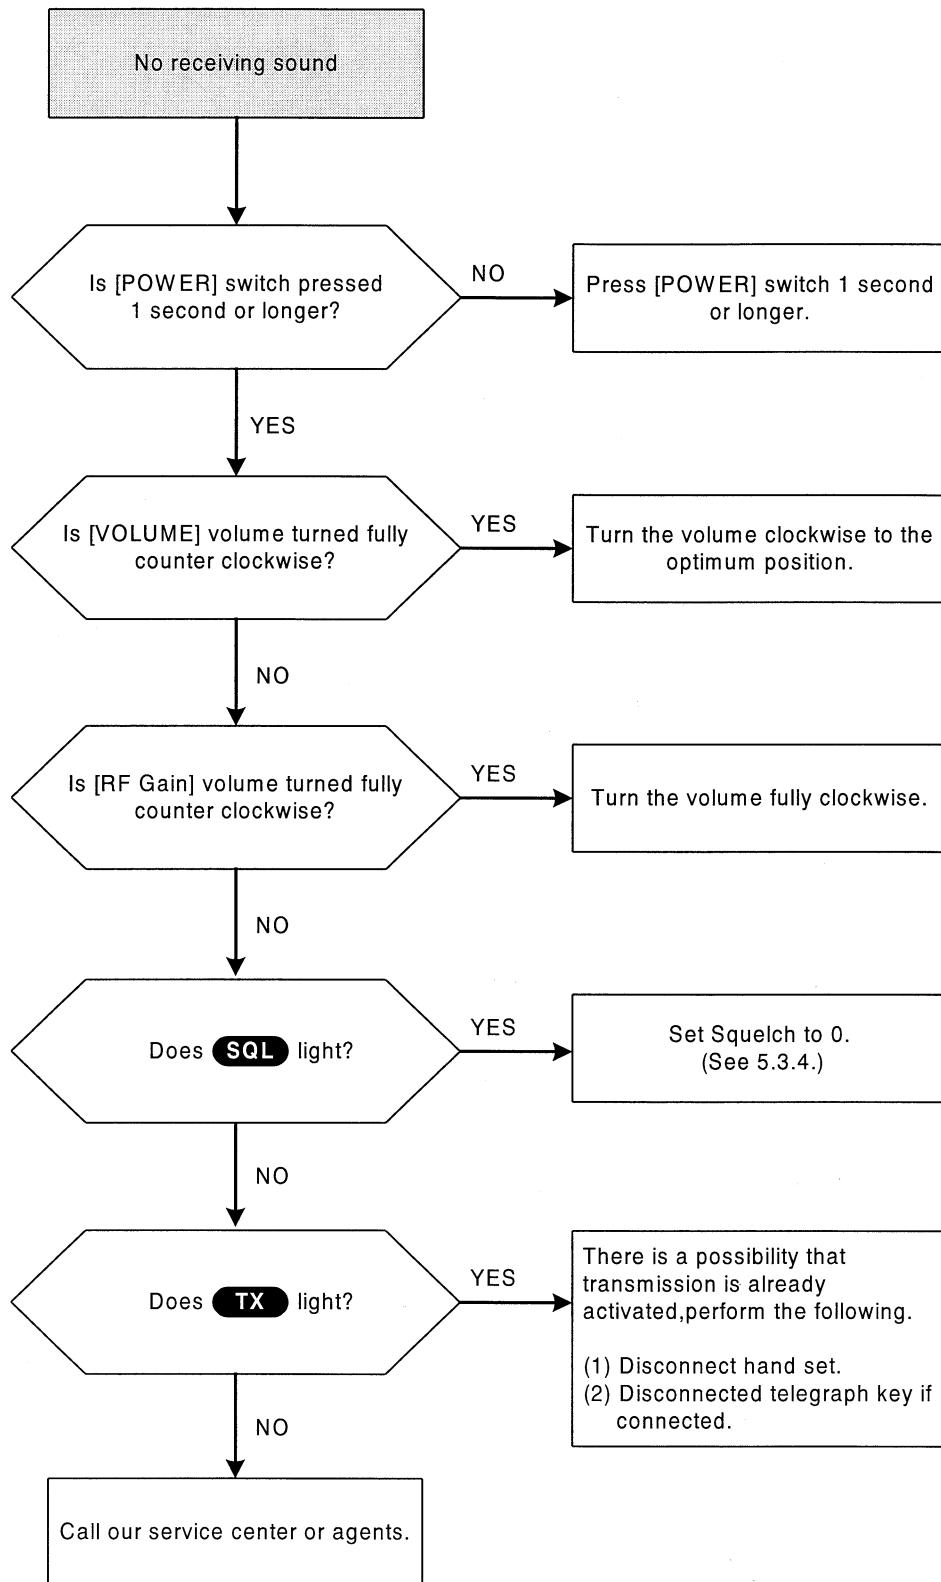

Each rectangle indicates process.

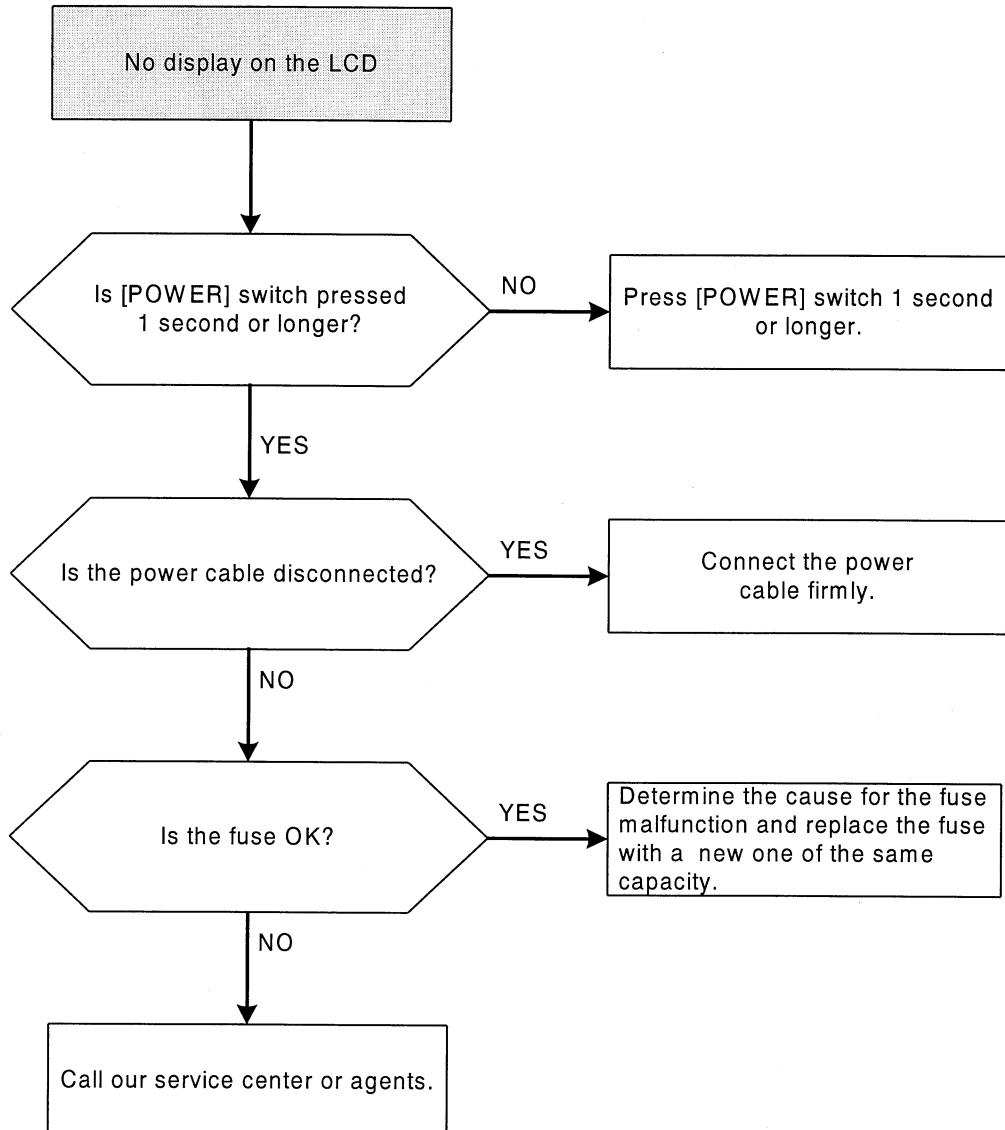

Each hexagon indicates decision.

(1) No receiving sound

(2) No display on the LCD

7. AFTER-SALES SERVICE

Before returning repair

If what appears to be a defect is detected, refer to "6.3 Troubleshooting" to check if the equipment is actually defective before requesting repair.

If the defect persists, immediately stop operation and call our service center or agents.

- During the warranty period, we or our agencies (*1) will repair the malfunction without any fee, according to the specified procedure.
- After the warranty expires, we will repair the malfunction for a fee, if repair is possible.
- Item for notification
Product name, type, manufactured data, serial number, information about the malfunction (the more detailed, the better), your company or organization name, address and phone number.

Periodical maintenance recommended

Performance of this equipment may degrade over time because parts wear out, although degradation depends on how this unit has been maintained.

We recommend periodic professional maintenance checks in addition to daily maintenance.

Call our service center or agents for periodic professional maintenance (This maintenance requires a service charge).

Call our office or the nearest agency for detailed information about after-sales service.

(*1) Refer to the inside of the back cover for contact numbers.

8 . SPECIFICATIONS

8.1 JSB-196GM MF/HF Radiotelephone

(1) General

Frequency range:	Transmit: 1.6 to 27.5MHz (100Hz steps) Receive: 0.1 to 29.9999MHz (100Hz steps)
Frequency tolerance:	$\pm 10\text{Hz}$ or better
Emission mode:	J3E (TEL), F1B (DSC/TLX), A1A (CW), H2B, H3E (AME: reception only)
User definable channels:	200ch (20ch X 10 Groups)
Preset ITU channels:	1722ch [TEL:283, DSC:29, TLX:891, CW:519]
Scanning channel	20 user defined channels
Communication mode:	Simplex and semi-duplex
Antenna impedance:	50 ohms
Operating temperature:	-15 to +55°C
Power requirement:	13.6V DC $\pm 10\%$ (12.3V DC to 15.0V DC), negative-grounded Tx: 40A max Rx: 2A max (Operable between 10.2V DC and 16.2V DC)
Compass safe distance:	1.5m
Dimensions and mass:	250mm(W) \times 100mm(H) \times 260mm(D), Approx. 7.4 kg

(2) Transmitter

Output power:	100Wpep (1.6 to 4MHz), 150Wpep (4 to 27.5MHz)
Duty cycle:	Intermittent cycle
Occupied bandwidth:	J3E (TEL) 3kHz or better F1B (DSC/TLX), A1A (CW) 0.5kHz or better
Carrier suppression:	40dB or better
Spurious suppression:	43dB or better
AF frequency response:	350 to 2700Hz (6dB bandwidth)
Microphone input:	600 ohms (-40dBm standard)
Line input:	600 ohms, 0dBm (balanced)

(3) Receiver

Receiving system:	Triple superheterodyne
Intermediate frequencies:	70.455MHz, 455kHz, 20.217kHz
Sensitivity (SINAD 20dB):	J3E (TEL) 6.3uV or better (1.6 to 4MHz) 3.5uV or better (4 to 27.5MHz)
	F1B (DSC/TLX) 1.8uV or better (1.6 to 4MHz) 1.0uV or better (4 to 27.5MHz)
Selectivity:	J3E (TEL) 6dB bandwidth 2.4 to 3kHz, 66dB bandwidth Within ±2.1kHz
	F1B (DSC/TLX) 6dB bandwidth 270 to 300Hz, 60dB bandwidth Within ±550Hz
Spurious response:	60dB or better
Clarifier range:	±200Hz in 1Hz steps
AF output:	5.0W max. 1W rated
Line output:	600 ohms, 0dBm (balanced)

8.2 NFC-196 Antenna Tuner

Frequency range:	1.6 to 30MHz
Power capability:	200Wpep
SWR after tuning:	2:1
Tuning method:	Automatic tuning and preset tuning
Tuning time:	Automatic tuning: typical 3sec Preset tuning: typical 0.5sec
Operating temperature:	-30 to +60 °C
Power requirement:	10.2V DC to 16.2V DC, negative-grounded 1.5A max
Dimensions and mass:	230mm(W) × 380mm(H) × 90mm(D), Approx. 3.3 kg
