## INTRODUCTION

### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

### PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by a qualified technician only.

### FCC COMPLIANCE AND TYPE NUMBERS

Type acceptance number	Frequency range	Compliance
ALHTK-630H-1	29.7~37.0MHz	Parts 22, 74 and 90
ALHTK-630H-2	35.0~43.0MHz	Parts 22, 74 and 90
ALHTK-630H-3	41.0~50.0MHz	Parts 22, 74 and 90

Serial No. 411XXXX has new features, so a revised service manual for the TK-630H(B) (B51-8151-10) is issued. Use it together with the previous service manual (B51-8151-00).

#### Main contents of new features

The following operating features in this service manual have been changed.

- 1-2. Scan start conditions (See page 9.)
- 1-7. The "off hook revert channel" has been renamed the revert channel", and "off hook scan = No" and "off hook scan = Yes" have been added. (See page 9.)
8. The home channel has been added. (See page 10.)
9. Squelch level adjustable function has been added. (See page 10.)

See the text for details.

# TK-630H(B)

## GENERAL

### PRE-INSTALLATION CONSIDERATIONS

#### 1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

#### 2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

### 3. PRE-INSTALLATION CHECKOUT

#### 3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

#### 3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. QT equipment operation should be verified.

### 4. PLANNING THE INSTALLATION

#### 4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

#### 4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

#### 4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

#### 4-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.

#### CAUTION

*If DC power is to be controlled by the vehicle ignition switch, a switching relay should be used to switch the positive power lead. The vehicle ignition switch then controls DC to the relay coil.*

3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

### 5. INSTALLATION PLANNING – CONTROL STATIONS

#### 5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

#### 5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

### SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

## SYSTEM SET-UP

## Before Reading About System Set-up

The TK-630H is a transceiver main unit (without a panel or speaker) that you complete by adding options. See the list of options for the options available (page 7). The options are classified into four types according to operation and function.

1. Install the front panel kit (controller) directly on a radio to operate it. (Form : Radio + KCH-3/4)
2. Remotely control one radio with one controller. (Form : Radio + KRK-2 + KCH-3/4 + KCT-12A/B/C)
3. Remotely control two radios with one controller. (Form : Radios (two) + KRK-4DB + KCH-3/4 + KCT-12A/B/C)
4. Remotely control one radio with two controllers. (Form : Radio + KRK-3DH + KCH-3/4 (two) + KCT-12A/B/C (two))

If you use the KCH-4, an external speaker (KES-4) is required because the radio does not contain a speaker. The basic configurations are illustrated in system set-up.

**Note :** When you modify your radio as described in system set-up, take the following precaution. The rating of pin 7 (SB) of the accessory connector (J4) on the rear of the radio is 13.4V (1A). Insert a 1A fuse if you use the SB pin for external equipment.

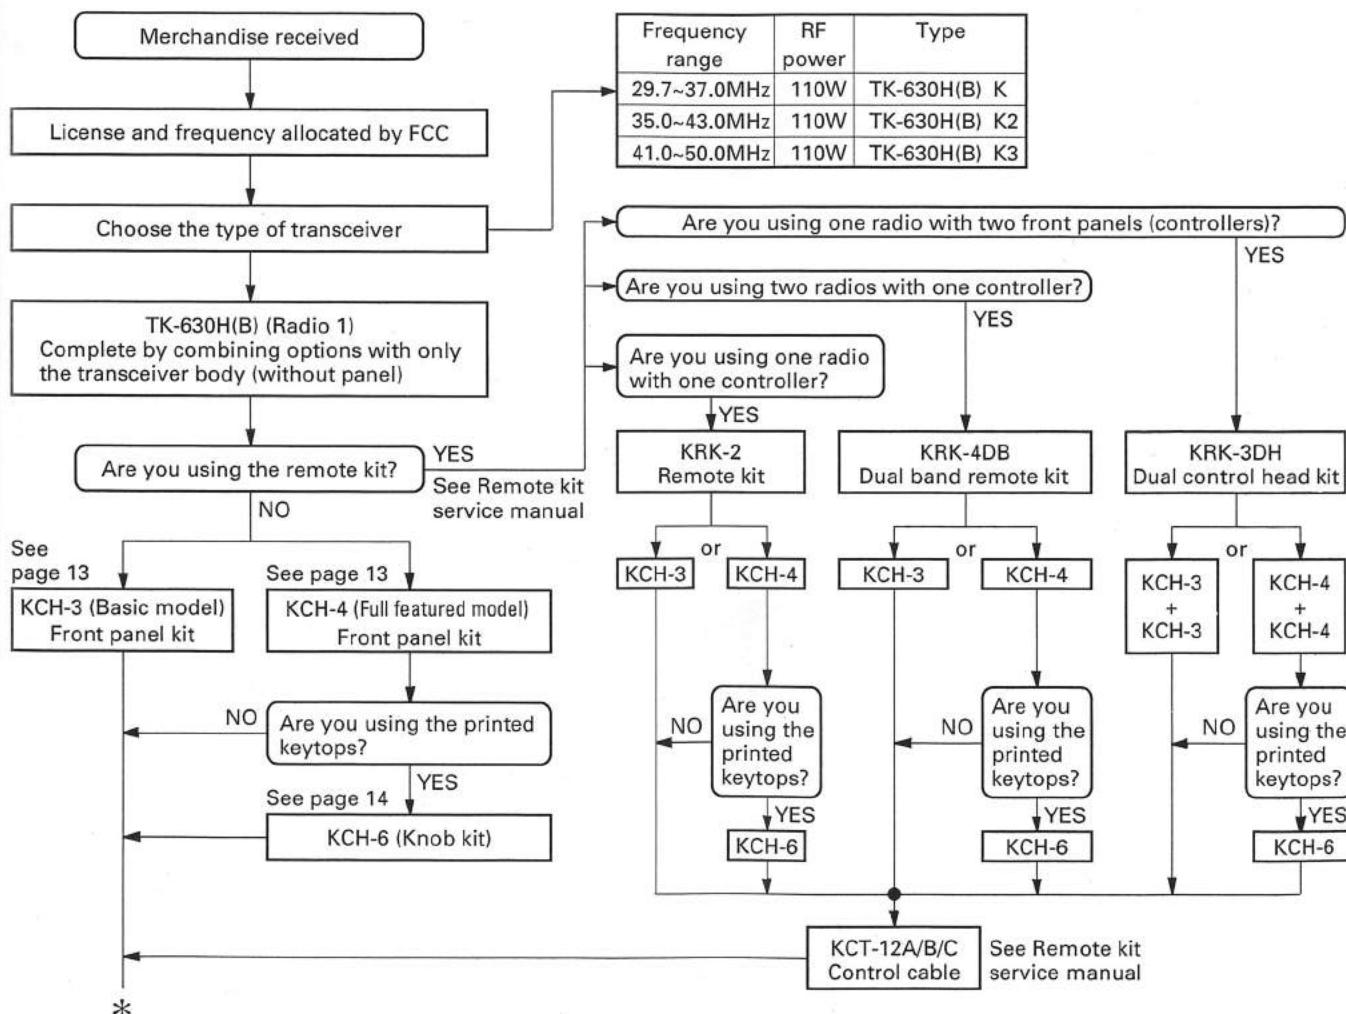

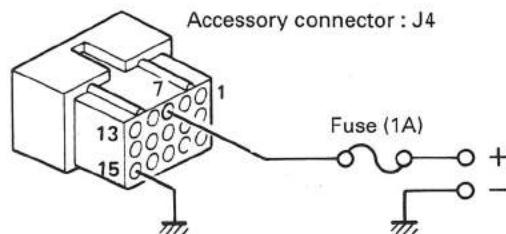

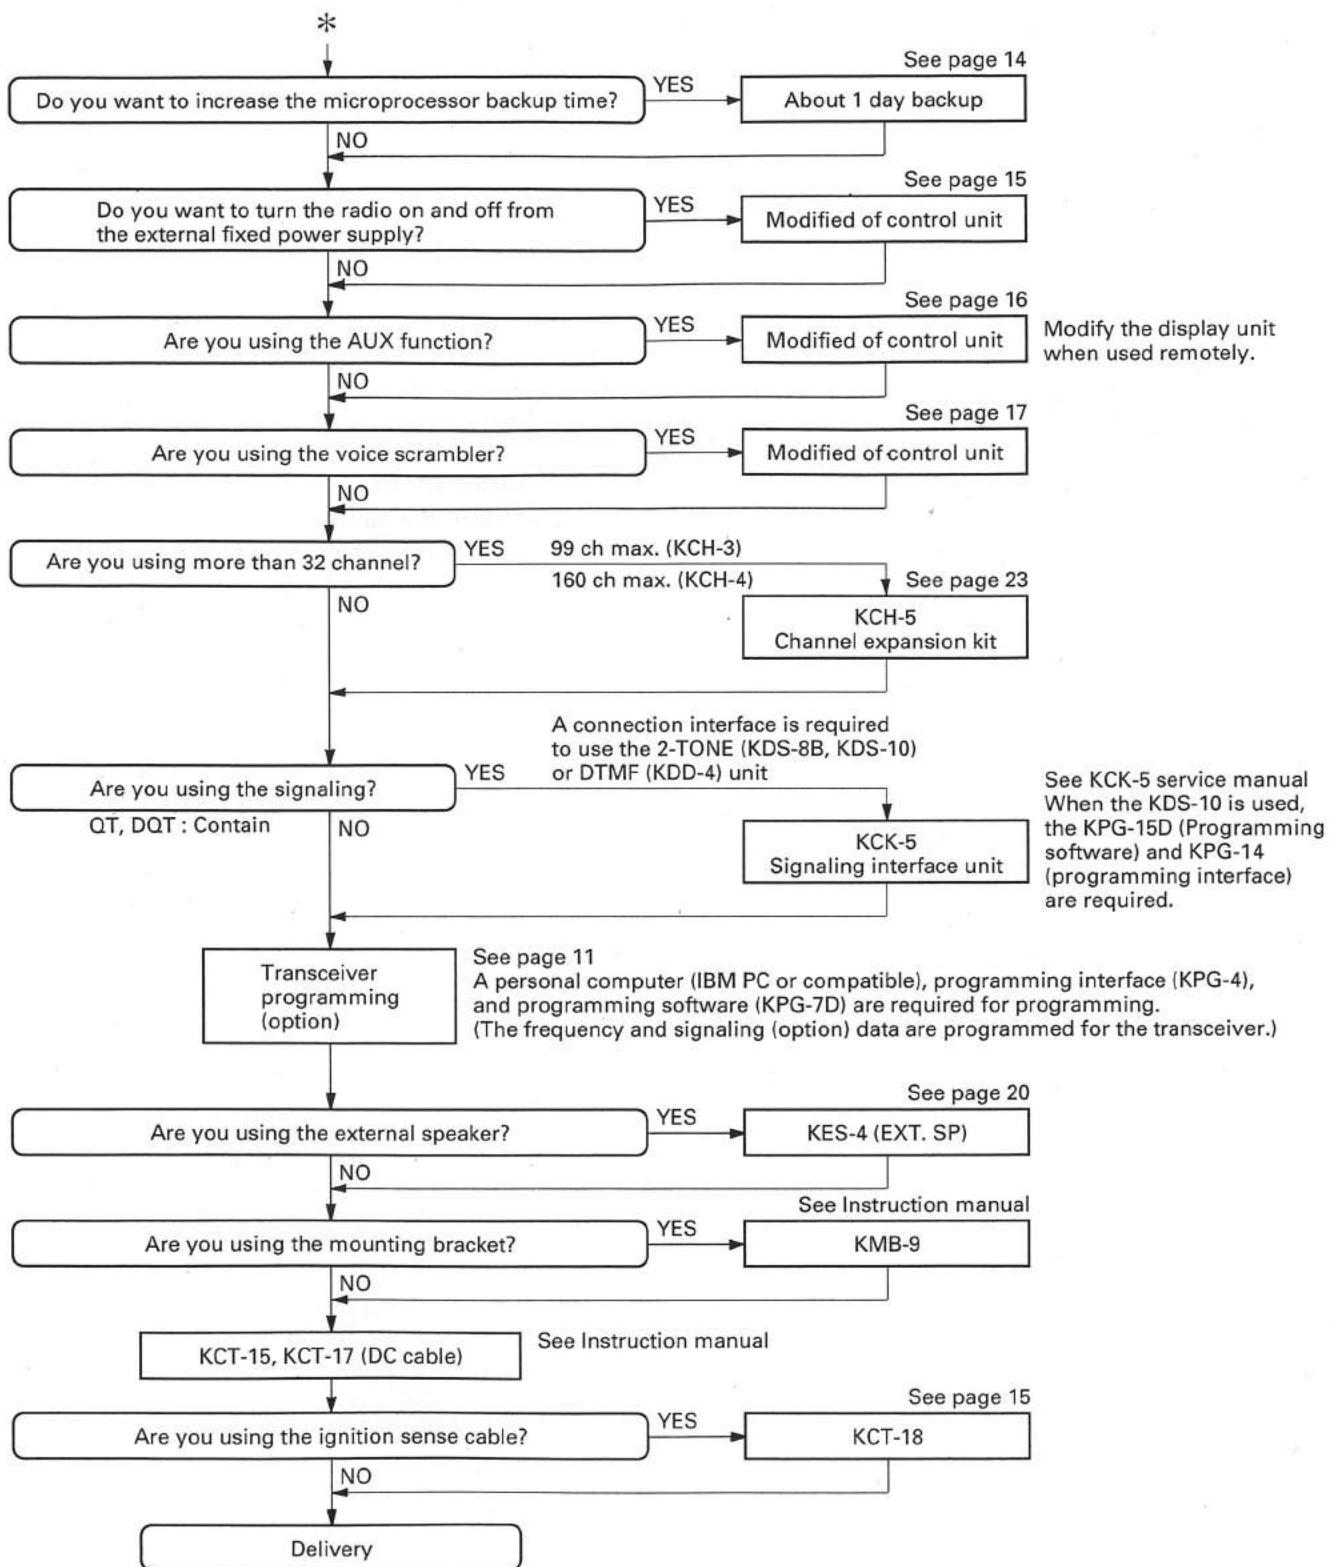

Table showing combinations of dual bands

Radio 1 Radio 2	TK-830 series	TK-730 series	TK-630H(B)
TK-830 series	X	O	O
TK-730 series	O	X	O
TK-630H(B)	O	O	X

O : Can be combined, X : Cannot be combined

# TK-630H(B)

## SYSTEM SET-UP

## LIST OF OPTIONAL MODELS

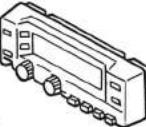

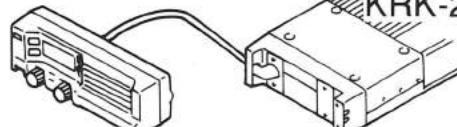

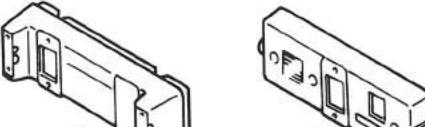

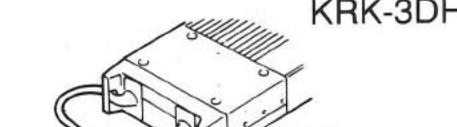

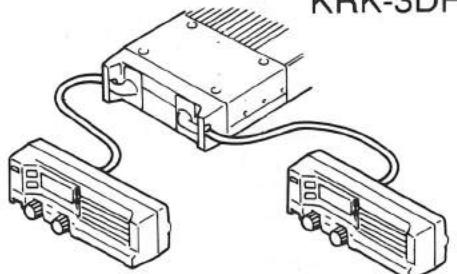

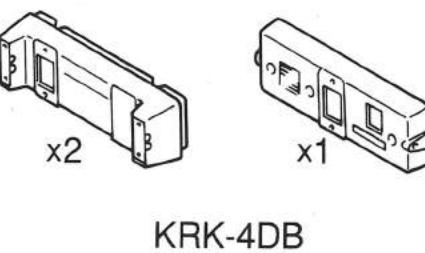

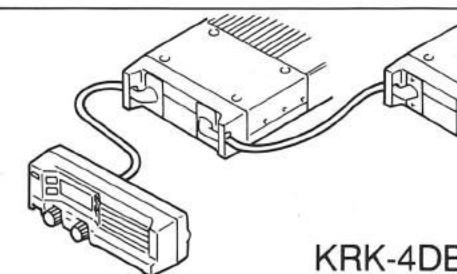

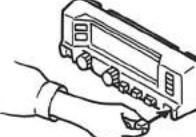

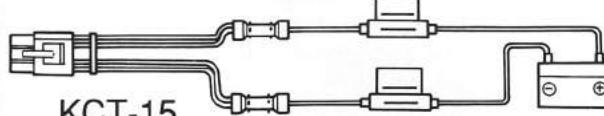

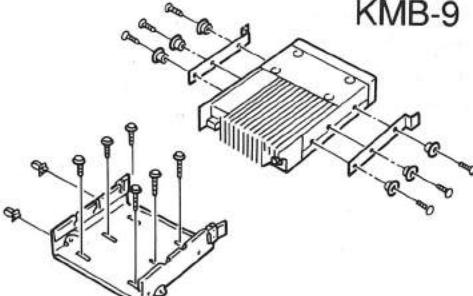

Model	Function description	Remarks
KCH-3	The front panel kit (controller) contains a speaker (5W/8Ω), and can display up to 99 alphanumeric characters if a KCH-5 is installed (normally, it displays 32 channels). The channel display and alphanumeric display show two characters.	See page 13
KCH-4	The front panel kit (controller) can display up to 160 channels if a KCH-5 is installed (normally, it displays 32 channels). It has a large LCD that can display 12 alphanumeric characters. It does not contain a speaker.	See page 13
KRK-2	This single-control remote kit has a removable front panel.	See
KRK-3DH	This dual-control head kit allows one radio to be controlled by two front panel kits (controllers).	Remote kit
KRK-4DB	This dual-band remote kit allows tow radios (1 and 2) to be controlled by one front panel kit (controller). It allows two-band dual priority scan.	KRK-2/KRK-3DH KRK-4DB
KCH-6	KCH-4 keytop set. One set contains 12 keytops (PA, TA, HA, AN, IC, D/A, OPT, AUX, SP, HC, SQL, and blank).	See page 14
KCH-5	Channel expansion kit (two EEPROMs : X24C16PI). When a basic controller (KCH-3) is used, the maximum number of channels is increased from 32 to 99. When a full-function controller (KCH-4) is used, the maximum number of channels is increased from 32 to 160.	See page 23
KCK-5	The signaling interface unit for connecting the 2-TONE (KDS-8B or KDS-10) or DTMF (KDD-4) unit is installed in the radio control unit. The externally connected equipment can be switched on and off by energizing and deenergizing the relay in the KCK-5 by the signaling output.	See KCK-5
KCT-18	The sense cable (10.5 feet) is used to turn the radio on and off with the ignition key.	See page 19
KES-4	The external speaker has a maximum input of 20W/4Ω.	See page 20
KCT-12A /12B/12C	The control cable is used to connect the radio and the control head when the radio is used as a remote mount. KCT-12A : 8 feet, KCT-12B : 17 feet, KCT-12C : 25 feet	See Remote kit
KCT-15/17	KCT-15 : DC cable (10 feet) for TK-830H(B)/730H(B)/630H(B) (high-power) system dash mounting. KCT-17 : DC cable (23 feet; ground side : 3.3 feet) for TK-830H(B)/730H(B)/630H(B) (high-power) system remote mounting.	See Instruction manual
KDS-8B	2-TONE decoder. The tone frequency can be in the range 288 to 1433Hz.	See KCK-5
KDD-4	Code memory (EEPROM). (DTMF decoder)	See KCK-5
KDS-10	2-TONE frequency memory (EEPROM). The tone frequency can be set in the range 282.2 to 3487.0Hz in 0.1Hz steps.	See KDS-10
KPG-15D	Programming disk used to program the KDS-10 (2-TONE decoder).	See KDS-10
KPG-14	Programming interface used for the KDS-10.	See KDS-10
KMB-9	Mounting bracket for remote mount or dash mount. Key lock mount is provided.	See Instruction manual

## Service Manual Parts List

Model	Parts No.

# OPERATING FEATURES

## 1. Scan Operating

### 1-1. Scan types according to operation section (control head: KCH-3/4)

1. When you use the KCH-3 (basic), you can scan all the channels that can be selected with the channel selector.
2. When you use the KCH-4 (full featured), you can select one of the following two scan types using the programming software (KPG-7D).
  - 2-1. Single group scan : You can scan all the channels in the displayed group that can be selected with the channel selector.
  - 2-2. Multi-group scan : You can scan all the channels that can be selected with the group UP/DOWN key and the channel selector.

### 1-2. Scan start conditions

One or more non-priority channels must be added to all the channels that can be scanned. The transceiver must be in normal receive mode (PTT off, and microphone onhook). However, if OFF HOOK SCAN = YES, the scan starts whether the microphone is onhook or offhook.). When you press and release the SCAN key, the scan starts. The **SCAN** indicator lights when you use the KCH-3 (basic), and the **SCN** indicator lights when you use the KCH-4 (full featured).

### 1-3. Scan stop conditions

The scan stops temporarily if the following conditions are satisfied :

1. A carrier is detected (the **BUSY** indicator lights) on channels for which receive signaling is not set by the programming software (KPG-7D) or when the **MON** indicator lights.
2. A carrier is detected, then signaling matches on channels for which receive signaling is set by the programming software.

### 1-4. Scan channel types

1. Priority channel 1 is the most important channel for the scan, and always detects a signal during scan and when the scan stops temporarily.
2. Priority channel 2 is the next most important channel for the scan, and always detects a signal during scan and when the scan stops temporarily at a channel other than priority channel 1.
3. Non-priority channels detect a signal during scan. For the channels that can be selected with the group or channel selector when the scan does not occur, ▼ (CH ADD) lights for the KCH-3 (basic), and ▼ (GR ADD) and ▼ (CH ADD) light for the KCH-4 (full featured).

### 1-5. Priority channel setting

Priority channels 1 and 2 can be set as follows with the programming software (KPG-7D) :

1. Specify priority channels 1 and 2 as fixed priority channels.
2. Make selected channels priority channels.
3. Operator selectable; specify the initial channel before the operator changes it.

### 1-6. Scan types according to the number of priority channels

1. When no priority channels are set : Only the non-priority channels are scanned. If a non-priority channel stops temporarily, it stops until there is no signal on that channel.
2. When one priority channel is set : Either priority channel 1 or 2 is scanned. If a non-priority channel stops temporarily, a priority channel signal is detected at certain intervals. If a priority channel stops temporarily, it stops until there is no signal on the priority channel.
3. When two priority channels are set : The non-priority channel, priority channel 1 and 2 are scanned. If a non-priority channel stops temporarily, priority channel 1 and 2 signals are detected at certain intervals. If priority channel 2 stops temporarily, the priority channel 1 signal is detected at certain intervals. If priority channel 1 stops temporarily, it stops until there is no signal on priority channel 1.

### 1-7. Revert channel

The revert channel is used to transmit during scanning and set by the programming software (KPG-7D).

1. Priority 1 \*
2. Priority 2 \*
3. Selected channel : Channel displayed immediately before you operate the SCAN switch under the above scan start conditions.
4. Last-used channel : Channel at which the transceiver user pressed PTT just before he set the transceiver offhook.
5. Last call channel : Channel at which the user canceled the AF mute, except beep and alert, just before he set the transceiver offhook.

There are two cases for moving to the revert channel according to the setting.

- (1) Off hook scan = No  
Move to the revert channel when the microphone is set offhook.
- (2) Off hook scan = Yes  
Move to the revert channel by the PTT is pressed, regardless whether the microphone is onhook or offhook.

\* If priority channel 1 or 2 is not set by the programming software (KPG-7D) or if the transceiver user deletes (the ▼ indicator lights), the channel shifts to the selected channel, last-used channel, or last call channel, and stops temporarily.

## OPERATING FEATURES

**1-8. Scan end**

If you press and release the SCAN key when the SCN or SCAN indicator is on and the transceiver is not transmitting, the scan ends, the SCN or SCAN indicator goes off, and the transceiver switches to the selected channel automatically.

**2. Alphanumeric Display**

The programming software (KPG-7D) enables you to set the alphanumeric display (2 digits for the KCH-3; 12 digits for the KCH-4) as shown in Figure 1.

Display →	A	B	C	D	E	F	G	H	I
Key in →	A	B	C	D	E	F	G	H	I
	J	K	L	M	N	O	P	Q	R
	J	K	L	M	N	O	P	Q	R
	S	T	U	V	W	X	Y	Z	'
	S	T	U	V	W	X	Y	Z	'
	1	2	3	4	5	6	7	8	9
	1	2	3	4	5	6	7	8	9
	0	--	+	/	=	#	*	,	)
	:	—	—	—	—	All on	Blank		
	(	—	—		Space	→	—		

Fig. 1

**3. P.A (Public Address) Function**

Available for a transceiver to which an optional public address speaker (KES-4) is connected via the accessory connector (J4).

The public address function amplifies the voice input from the microphone with a BTL-type audio amplifier with a 13W (4Ω) rated output, and outputs it from the public address speaker. The transceiver does not enter the transmit mode when this is done.

When you press and release the key set as the P.A switch by the programming software (KPG-7D), the KCH-3 (basic) shows P.A, and the KCH-4 (full featured) shows PUBLIC, ADRS, and the transceiver becomes ready to output your voice from the speaker. If you press PTT and talk into the microphone, your voice is output from the speaker. The volume of the public address speaker can be adjusted with the AF VR of the operation section (control head) that controls the PTT.

If dual band is used with the KRK-4DB (dual-band remote kit), the voice signal is output from the accessory connector (J4) of radio 1.

**4. T.A (Talk Around) Function**

The talk around function enables you to talk with the other party directly without using a repeater on the channel that has a repeater. This function makes the transmit frequency and signaling equal to the receive transmit frequency and signaling, and transmits data.

When you press and release the key set as the T.A switch by the programming software (KPG-7D), the TA indicator lights and the talk around function is enabled.

**5. Time-out Timer Function**

You can select 15 to 225 seconds (15-second units) or set this function off with the programming software (KPG-7D).

If you do not set the function off, and the time from the transceiver entering the transmit mode to returning to the receive mode exceeds the preset time, the transmission ends and a warning tone is output. The warning tone sounds until you release PTT.

When you release PTT, the timer is cleared.

**6. Busy Channel Lockout Function**

You can set this function on and off with the programming software (KPG-7D).

If you set it on, and there is no signaling or a signaling-unmatched signal is input in receive mode on the channel for which receive signaling is set, you cannot enter the transmit mode even if you press PTT, and a warning tone is output until you release PTT.

This function does not work while the MON indicator is lit.

**7. Offhook Decode Enable Function**

You can set this function on and off with the programming software (KPG-7D).

If you set it off, you cannot cancel signaling during offhook. This function only cancels signaling, and does not affect the offhook revert channel during scanning.

**8. Home Channel**

A home channel can be allocated to any key which you prefer. This function can be specified through the F.P.U. Pressing the key which is allocated for the home channel causes the radio to change immediately to the home channel.

**9. Squelch Level Adjustable Function**

Once activated through the F.P.U. SQL level can be adjustable from front panel key. Once a key (allocated for SQL ADJ) is pressed the radio goes into the SQL adjustable mode, and the L.C.D. indicates as follows;

KCH-3	1 / ~	1 / 15
KCH-4	CODE / ~	CODE 15

# OPERATING FEATURES

## 10. Dual Head Special Function

### (When the KRK-3DH is Used)

See the KRK-3DH service manual for the assembly method.

#### 10-1. Intercom function

The intercom function enables you to make conversation between control head 1 and control head 2. The transceiver does not enter the transmit mode when you use this function. You can talk in simplex mode.

When you press and release the key set as the IC (intercom) key by the programming software (KPG-7D), the KCH-3 (basic) shows IC, and the KCH-4 (full featured) shows **INTERCOM** to indicate that you can talk. If you press PTT and talk into the microphone, your voice is output from the speaker of the other control head. The speaker volume can be adjusted with the AF VR on the other operation section (panel).

#### 10-2. Transmit Audio Monitor Function

You can set this function on and off with the programming software (KPG-7D).

If you set it off, and you press PTT on control head 1 or 2, your voice is transmitted when you talk into the microphone, but it is not output from the speaker of control head 2 or 1 to prevent howling.

If you set it on, your voice is transmitted and output from the speaker of the other control head. The contents of the transmission are heard, and you can understand what is being said.

## 11. Data Writing Method

### 11-1. PC programming method

- Preparation**

Install optional front panel kit KCH-3 or KCH-4 (see Installation 1), and do as follows :

- Preface**

The TK-630H transceiver is programmed by using a personal computer, programming interface (KPG-4), and programming software (KPG-7D).

The programming software can be used with an IBM PC or compatible. Figure 2 shows the setup of an IBM PC for programming.

- KPG-4 description**

#### (P.C. programming interface cable : Option)

The KPG-4 is required to interface the TK-630H to the computer. It has a circuit in its D-subconnector (25 pin) case that converts the RS-232C logic level to the TTL level.

The KPG-4 connects the front panel modular microphone connector of the TK-630H to the computer RS-232C serial port.

- Programming software description**

The KPG-7D is the programming software for the TK-630H supplied on a 5.25" and 3.5" floppy disk.

This software runs under MS-DOS (Version 3.1 or later) on an IBM-PC/XT, AT, or PS2, or compatible. Data can be input to or read from the TK-630H and edited on the screen, and programmed data can be printed.

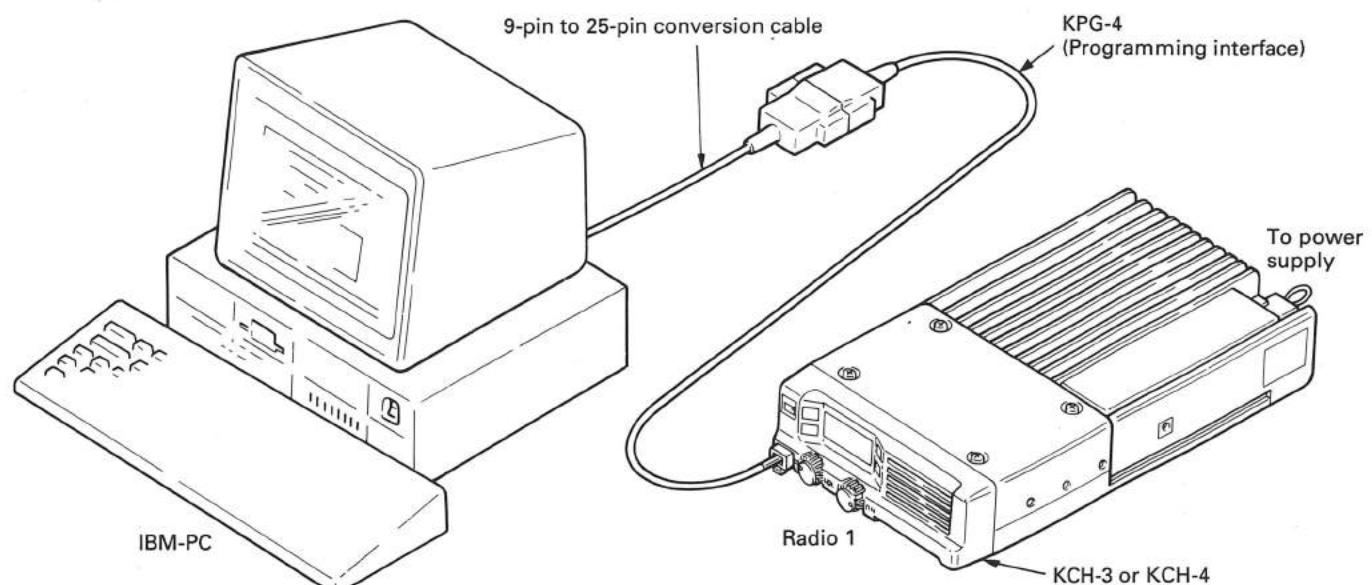

Fig. 2

# TK-630H(B)

## OPERATING FEATURES

### • Program mode

After you finish preparatory, you can write data into the EEPROM of the radio (TK-630H).

The KCH-3 can associate the optional functions with the four switches (MON, SCN, OPT (KEY1), and D/A (KEY2)) using the PC program.

The KCH-4 can associate the optional functions with the six switches (MON, SCN, KEY1 to KEY4).

For example, you can assign a function to KEY1 as follows when you assign functions to the KCH-3/4 switches (MON, SCN, KEY1 to KEY4) :

**Note :** See page 13 for the LCD readout and error messages.

1. Hold down the KEY1 key (until "PG" (basic) or "PROGRAM" (full featured) appears), and switch the radio on. (See Figure 3-a and 3-b.)
2. "PG" (KCH-3) or "PROGRAM" (KCH-4) appears on the display. Release the KEY1 key.
3. Transfer the data stored in the PC. The data is written into the EEPROM of the radio.

### Notes :

If dual control is used (KRK-3DH is used), use the HEADER of HEAD1. ("TO CONTROL HEAD1" is shown on the rear of the KRK-3DH.)

If dual band is used (KRK-4DB is used), supply power to radios 1 and 2.

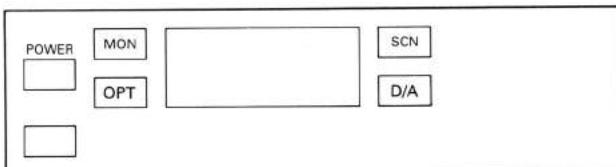

Fig. 3-a KCH-3 (basic) functions

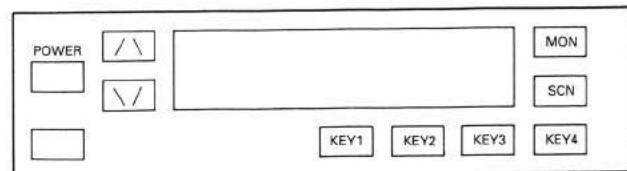

Fig. 3-b KCH-4 (full) functions

### 11-2. Writing by the clone function

Programming data can be transferred from one radio to another by connecting them at their microphone connectors. (The two radios must be of the same model to use this function.) The operation is as follows (the transmit radio is the master unit and the receive radio is a slave unit) :

1. Hold down the KEY1 key (until "PG" (KCH-3) or "PROGRAM" (KCH-4) appears), and switch the master and slave units on. (See Figure 3-a and 3-b.)
2. Connect the master and slave units with a microphone cable. (See Figure 4.)
3. Hold down the MON key on the master unit. Hold it down until "CL" (KCH-3) or "CLONE" (KCH-4) appears on the display.
4. Press the SCN key.
5. The display shows "MAX → 3 → 2 → 1 → EN" (KCH-3) or "MAX → 3K → 2K → 1K → END" (KCH-4). When EN or END appears, writing is complete.

### Notes :

See page 13 for the LCD read out and error messages. If dual control is used (KRK-3DH is used), use the HEADER of HEAD1 for cloning. ("TO CONTROL HEAD1" is shown on the rear of the KRK-3DH.)

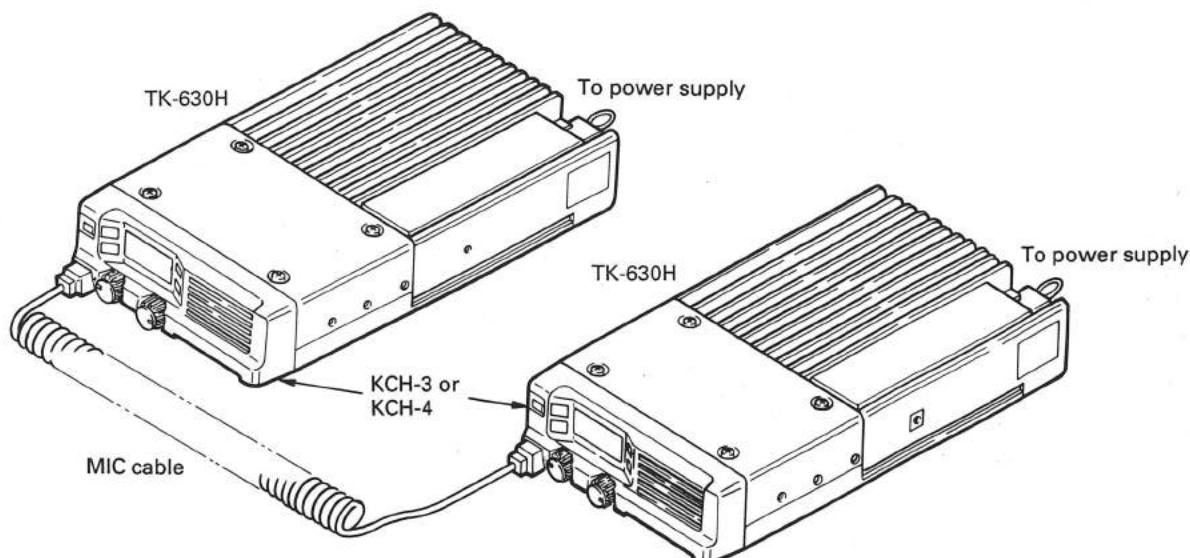

Fig. 4

## OPERATING FEATURES/INSTALLATION

## 11-3. LCD readout examples (program mode)

Status	When KCH-3 is used	When KCH-4 is used
Program mode readout	PG	_PROGRAM_
Clone master unit readout	CL	_CLONE_
Data transfer readout (remaining quantity readout)	.20	_WAIT_32K_
	_1	_WAIT_1K_
Data transfer start readout	EX	_EXECUTION_
Data transfer end readout	EN	_END_
Error message (*1)	ER	_ERROR_
Error message (*2)	E1	CH_OFFLINE_
Error message (*3)	E2	_MISMATCH_
Error message (*4)	E3	CAN'T_WRITE_

## Readout examples in program mode

## • Description of error messages

(\*2, \*3, and \*4 are displayed only on the master unit during cloning.)

\*1 : ER (ERROR)

PC programming error readout

Slave unit error readout during cloning

\*2 : E1 (CH \_ OFFLINE)

Master unit error readout during cloning ; The data line is not connected. (Cable connector error, broken cable, etc.)

\*3 : E2 (\_ MISMATCH)

Master unit error readout during cloning ; The model name is different.

\*4 : E3 (CAN'T \_ WRITE)

Master unit error readout during cloning ; Cannot write due to a cause not given by 2 and 3 (defective EEPROM, etc.)

## 1. Front Panel Kit (KCH-3, KCH-4)

## 1-1. Connection with TK-630H

1. Remove the upper and lower halves of the case of the TK-630H. (Remove the four screws from the upper half and the six screws from the lower half.)
2. Connect the lead (W105) with a connector of the control unit (X57-3960 A/3) to CN2 of the KCH-3 or KCH-4.
3. Install the KCH-3 or KCH-4 on the radio using the screws (N32-3006-46) (①) supplied with the front panel kit. Take care not to get the lead between the KCH-3 or KCH-4 and an edge of the case. (You can install the panel upside down if necessary to install the radio.)
4. Reinstall the upper and lower halves of the case.

**Note :** The split legends (A/3 to C/3) of the control, TX-RX, and AF units shown in this manual are different from those silk-printed on the PC board. They are listed below.

Unit name	Service manual	PC board silk print
Control	X57-3960-XX A/3	X57-3960-XX A/4
TX-RX	X57-3960-XX B/3	X57-3960-XX B/4
AF	X57-3960-XX C/3	X57-3960-XX C/4

PC board split legend

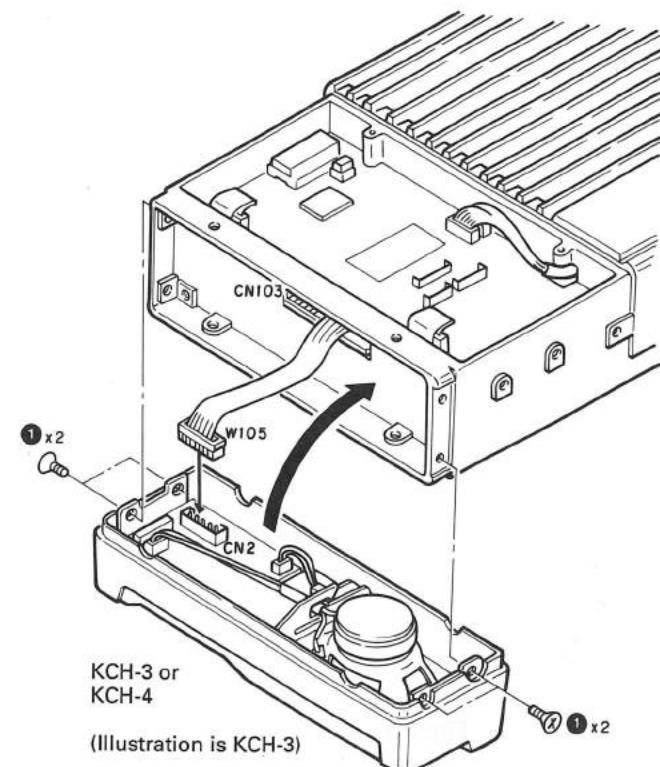

Fig. 1

# TK-630H(B)

## INSTALLATION

5. Insert the supplied knobs (with no functions printed) or optional KCH-6 (knobs with functions printed) into KEY1 to KEY4 of the KCH-4. Insert the knobs with their dents facing downward. (Fig. 2-a)

**Note :** To remove a knob, insert a screwdriver into the dent of the knob from underneath. (Fig. 2-b)

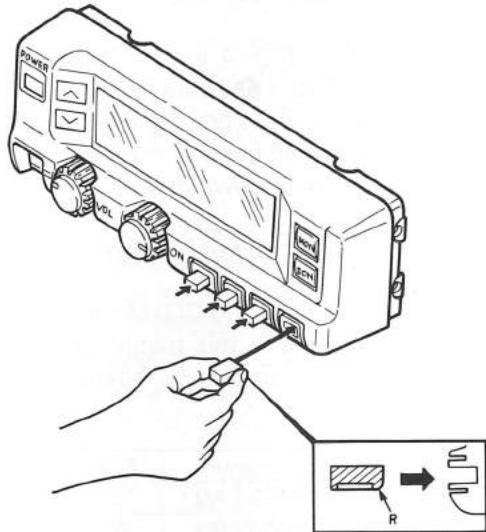

Fig. 2-a Knob insertion

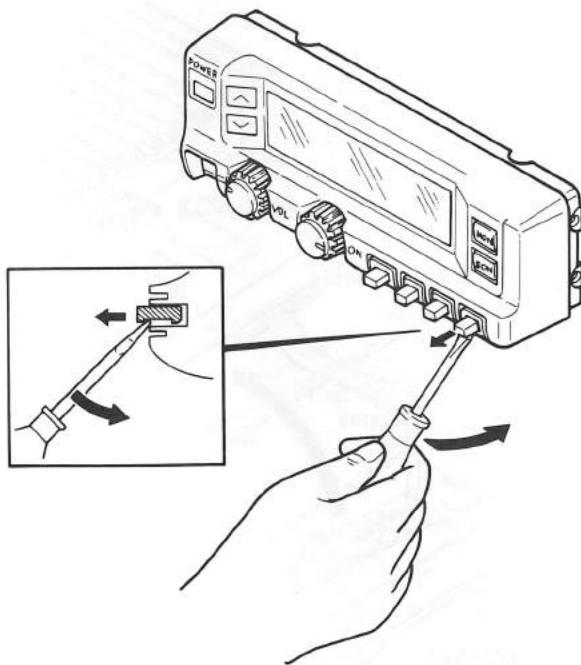

Fig. 2-b Knob removal

### 1-2. Remote kit connection

See the service manuals for the KRK-2, KRK-3DH, and KRK-4DB.

### 2. KCH-6 (Optional Knob for the KCH-4)

When a function is set by the programming software (KPG-7D), the key legend can be changed by inserting the KCH-6 knob into KEY1 to KEY4 of the KCH-4. The KCH-6 contains a set of 12 knobs : PA, HA, TA, IC, AN, SP, D/A, OPT, AUX, HC, SQL, and blank.

#### 2-1. Installation method

See Item 5 above. (Fig. 2)

### 3. Modification for Changing the Microcomputer Backup Time

#### 3-1. Mobile operation

When this radio is connected to a car battery, the microcomputer is always backed up. (The RAM contents are retained regardless of whether you turn the radio power switch on or off.) If you disconnect the battery from the radio, the RAM contents disappear in a short time.

#### 3-2. Fixed operation

If the power switch of the fixed power supply connected to the radio is on, the microcomputer is always backed up regardless of whether you turn the radio power switch on or off. If the power switch of the fixed power supply is off, the RAM contents disappear in a short time.

# INSTALLATION

### 3-3. Backup function modification

The minimum backup time when the radio power is off can be changed to one day by making the following modification :

1. Remove the upper half of the radio case.
2. Remove the control unit (X57-3960 A/3) from the chassis.
3. Add C217 to the control unit. (Pay attention to the polarity.) C217 : 0.047F (C90-2079-05)

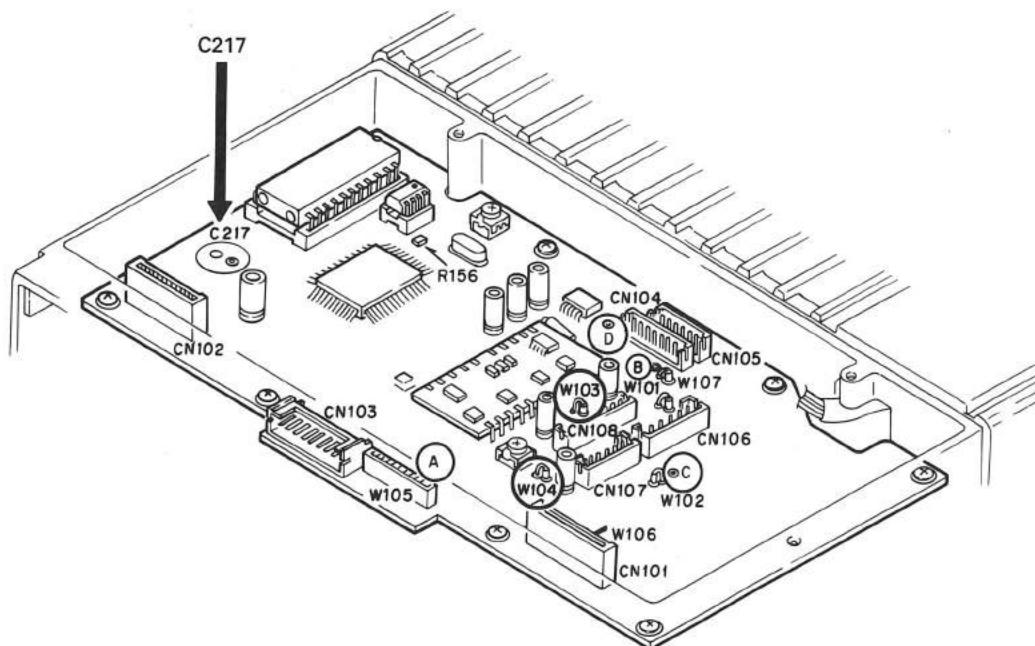

Fig. 3

### 4. Radio Power On/Off Function with the External Fixed Power Supply (Fixed Operation)

If you modify the radio as follows, the radio power can be turned on by turning on the power switch of the power supply, even if the radio power switch is off. If the radio power switch is turned off, and the power is switched off, then on again immediately, this function does not work ; switch the radio power on.

#### 4-1. Modification method

1. Remove the upper half of the radio case.
2. Remove the control unit (X57-3960 A/3) from the chassis. See the rear of the PC board.
3. Remove R105 (R92-0670-05) from the control unit, and install it on the pattern next to R106.

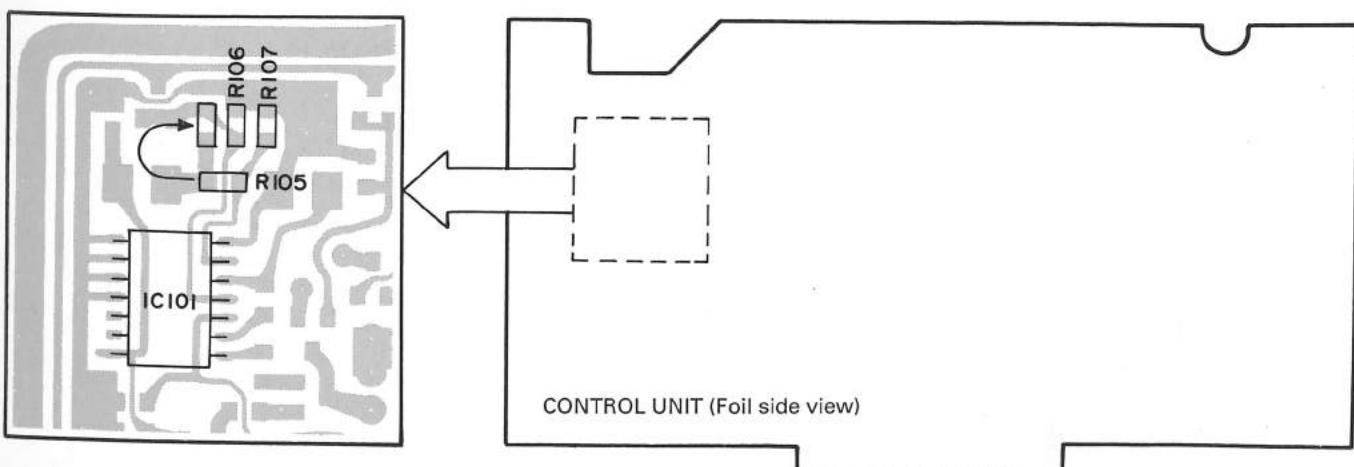

Fig. 4

# TK-630H(B)

## INSTALLATION

### 5. Auxiliary Function

The programming software (KPG-7D) enables you to assign an auxiliary function to the AUX key. When you press the AUX key, "•" lights on the KCH-3, and "AUX" lights on the KCH-4, and the auxiliary function turns on.

When you press the AUX key again, "•" or "AUX" goes off, and the auxiliary function turns off. When you set the AUX key on, the display backlight (LED) goes off; when you set the AUX key off, the display backlight (LED) goes on.

The auxiliary function can be assigned to the OPT key using the programming software (KPG-7D). If this is done, "OPT" appears, and the OPT key works like the AUX key.

#### 5-1. Radio modification

The control unit of the radio has a pattern marked with a D, and contains switching transistor Q116, which drives pattern D. The control unit (X57-3960 A/3) IC105 pin 7 goes high when the AUX key is turned on, and low when the AUX key is turned off. So when the AUX key is turned on and off, Q116 output D (max. 100mA) turns on and off. Connect D to a desired port.

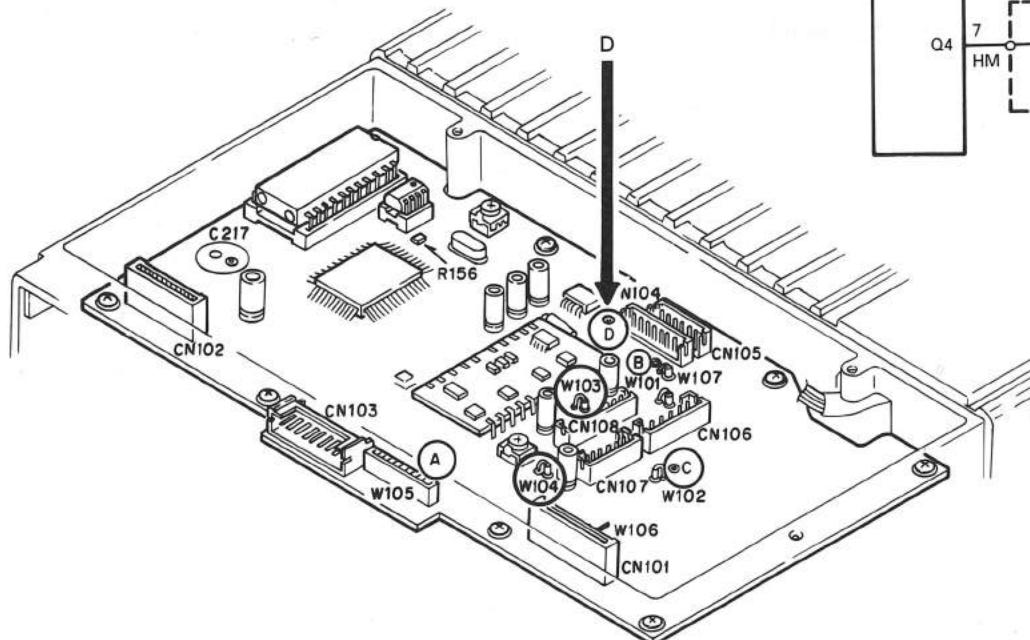

Fig. 5

#### 5-2. Modification method if remote kit

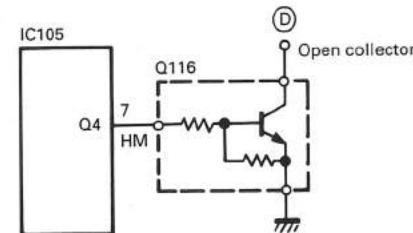

##### (KRK-2, KRK-3DH, or KRK-4DB) is used

If you use a remote kit and modify it as follows, you can turn pin 3 (AUX) of the accessory connector (6-pin) on the rear of the control head on and off by turning the AUX key on and off. You can use pin 3 to control external equipment.

1. If you use the KCH-3 (basic control head), remove R20 from the display unit (X54-3100 A/2) with a soldering iron. (Fig. 6-a)
2. If you use the KCH-4 (full-featured control head), remove R35 from the display unit (X54-3110 A/2) with a soldering iron. (Fig. 6-b)
3. You can control external equipment by connecting it to pin 3 (AUX) of the plug (6-pin : P703/P704) of the accessory connector (6-pin) on the rear of the control head. (Fig. 6-c)

#### 5-3. Backlight on/off function

When you set the auxiliary function, the backlight on/off function is also set. To set the auxiliary function without setting the backlight on/off function, modify the TK-630H as described in Section 5-2.

## INSTALLATION

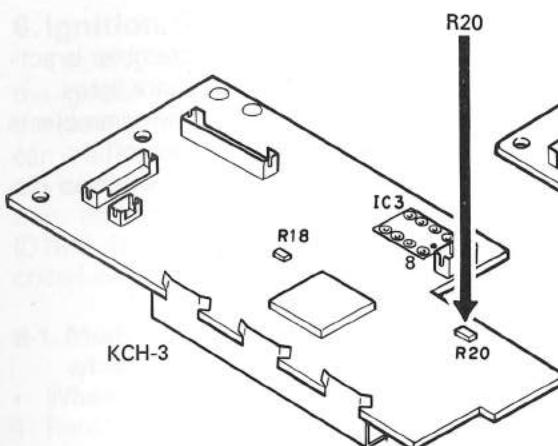

Fig. 6-a

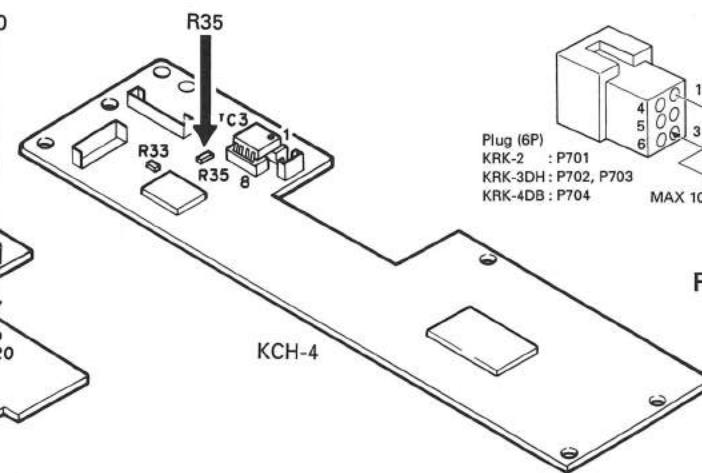

Fig. 6-b

**6. OPTION (Scrambler) Function**

This function is available when you assign it to the OPT key with the programming software (KPG-7D). When you press the OPT key, the "OPT" indicator lights, and the OPTION (Scrambler) function turns on. When you press the key again, the "OPT" indicator goes off, and the OPTION (Scrambler) function turns off.

The OPTION (Scrambler) function can be assigned to the AUX key using the programming software (KPG-7D). If this is done, "•" (KCH-3), "AUX" (KCH-4) appears, and the AUX key works like the OPT key.

Normally, the OPTION (Scrambler) function operates the port of connector CN108 of the control unit (X57-3960 A/3) as follows :

**6-1. AC1 (pin 5)**

AC1 is normally high (OPT : Off). When you press the OPT key, AC1 goes low, and the "OPT" indicator lights. When you press the key again, AC1 goes high and the "OPT" indicator goes off.

**6-2. Ports 0, 2, 4, and 8 (pins 9 to 12)**

Data stored in the RAM is output as the initial data. It is 0000 when the microcomputer is reset.

If you hold down the SCN key and press the OPT key, you enter the code setting mode, and "1" to "16" (KCH-3) or "CODE1" to "CODE16" (KCH-4) appears on the display. When you set codes, the port output is changed from 1 to 16 by changing the display from 0 to F with the encoder. If you hold down the OPT key again, the code setting mode is terminated, and the set code for the port remain unchanged.

**6-3. Voice scrambler connection example****• Modification method**

1. Remove the upper half of the case of the TK-630H. (Four screws)
2. Cut W103 and W104 of the control unit (X57-3960 A/3).

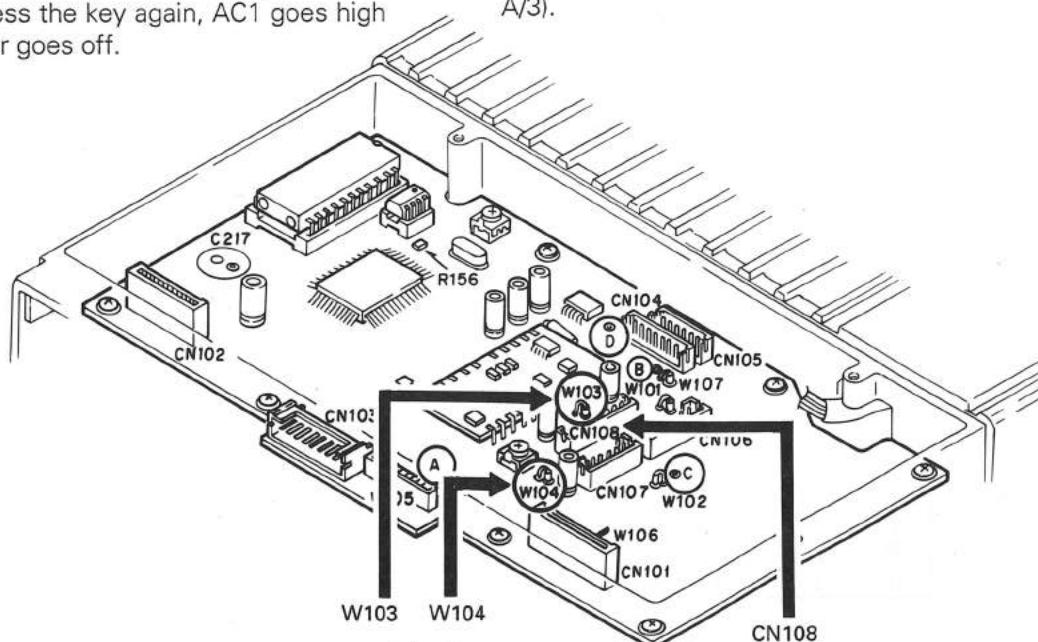

Fig. 7

# TK-630H(B)

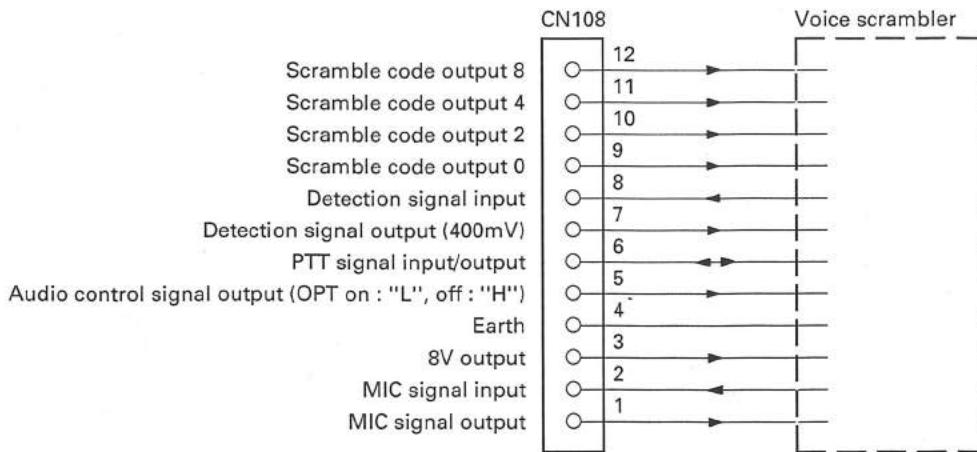

## INSTALLATION

- Connection method

Connect control unit (X57-3960 A/3) CN108 and the voice scrambler as follows :

- Operation method

1. When you press the OPT key, the scrambler is activated and scrambles. The "OPT" indicator lights.
  2. When you press the OPT key again, the scrambler is deactivated and the "OPT" indicator goes off.
  3. Set the scrambler code with the encoder as described in Section 6-2.

## **7. Operator Selectable Tones/Codes Function**

This function is available when you assign it to the OPT key with the programming software (KPG-7D). When you press the OPT key, the "OPT" indicator lights, and the operator selectable tones/codes function turns on. When you press the key again, the "OPT" indicator goes off, and the operator selectable tones/codes function turns off.

The operator selectable tones/codes function can be assigned to the AUX key using the programming software (KPG-7D). If this done, "•" (KCH-3), "AUX" (KCH-4) appears, and the AUX key works like the OPT key.

### **7-1. Setting the operator selectable tones/codes**

When you assign the operator selectable tones/codes function to the OPT key using the programming software (KPG-7D), you should use the programming software to set a maximum of 16 operator selectable tones/codes in addition to the operator selectable tones/codes for each channel.

### 7-2. Operation method

1. You can select operator selectable tones/codes from 16 codes as follows to replace the operator selectable tones/codes for each channel.  
Hold down the SCN key and press the OPT key in channel display mode to enter code selection mode. Select from 1 to 16 with the channel selector. The display shows the following :

KCH-3 : 11 to 16

KCH-4 : CODE1 to CODE16

To return to channel display mode, press the OPT key.

2. To use the tone/code selected from the 16 codes, press the OPT key in channel display mode with that code. The signaling of the channel operates as the selected tone/code, and the "OPT" indicator lights. When you press the OPT key again, the "OPT" indicator goes off, and the signaling of the displayed channel returns to the original condition (the signaling set for each channel by the programming software).
  3. The operator selectable tones/codes function can be also assigned to the AUX key using the programming software. In this case, the "AUX" indicator lights.

Code	Decode	Encode
1	67.0	100.0
2	D023N	D754I
⋮	⋮	⋮
15	D754I	250.3
16	150.7	D023N

# INSTALLATION

## 8. Ignition Sense Cable (KCT-18)

The KCT-18 is an optional cable used to implement the ignition function. This function allows you to turn the radio power on and off using the ignition key of the car. You can disable the horn alert function during driving with the ignition key. (To use the horn alert function, the optional KCK-5 (interface unit) and KDD-4 (DTMF decoder) or KDS-8B or KDS-10 (two-tone decoder) are required.

### 8-1. Modification to switch the power on and off with the ignition key

- When you use the TK-630H and KCH-3 or KCH-4
  - Remove the short plug (P1) from the accessory connector (15-pin : J4) on the rear of the radio.
  - Insert the KCT-18 contact into pin 3 (IGN). (Fig. 8-a)
  - Remove the upper half of the radio case.
  - Cut W101 of the control unit (X57-3960 A/3) (Fig. 8-c), and reinstall the upper half of the radio case.

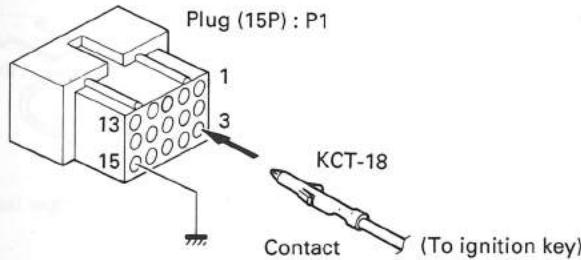

Fig. 8-a

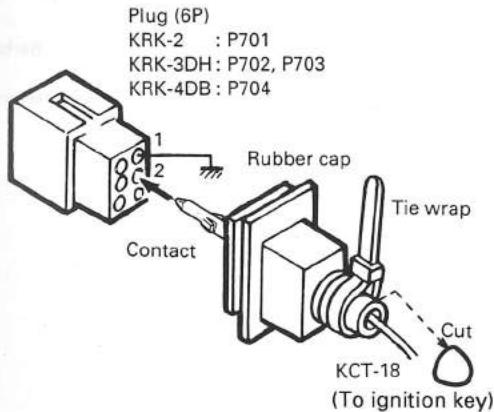

Fig. 8-b

- When you use the remote kit (KRK-2, KRK-3DH, or KRK-4DB) (Fig. 8-b)

If you use the accessory connector (15-pin : J4) on the rear panel of the radio, use the same procedure as above.

When you use the KRK-4DB, use the 15-pin accessory connector of radio 1.

If you use the accessory connector (6-pin) on the rear of the control head :

- Remove the short plug from the accessory connector (6-pin) on the rear panel of the control head.
- Cut off the end of the rubber cap (accessory), insert the KCT-18 into the cap, and insert it into pin 2 (SPR) of the short plug.
- Install the short plug and rubber cap on the connector on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.
- Remove the upper half of the radio case.
- Cut W101 of the control unit (X57-3960 A/3). Insert jumpers into lands A and B, and solder them on the rear of the board. (If you use the KRK-4DB, modify only radio 1.)
- Install the upper half of the radio case.

**Note :** If you use the KCT-18 with the KRK-4DB, use the 15-pin plug on the rear of radio 1, and the plug (6-pin) on the rear of the control head. You cannot use the 15-pin accessory connector on the rear of radio 2.

### 8-2. Horn alert function on/off with the ignition key

Modify as described in 8-1 above. Cut W107, not W101.

### 8-3. Backup when the ignition sense cable is used

If the car battery is connected, the microcomputer of this radio is always in backup state. (The RAM contents are retained regardless of whether the radio power is on or off.) If the radio is disconnected from the battery, the RAM contents are cleared in a short time.

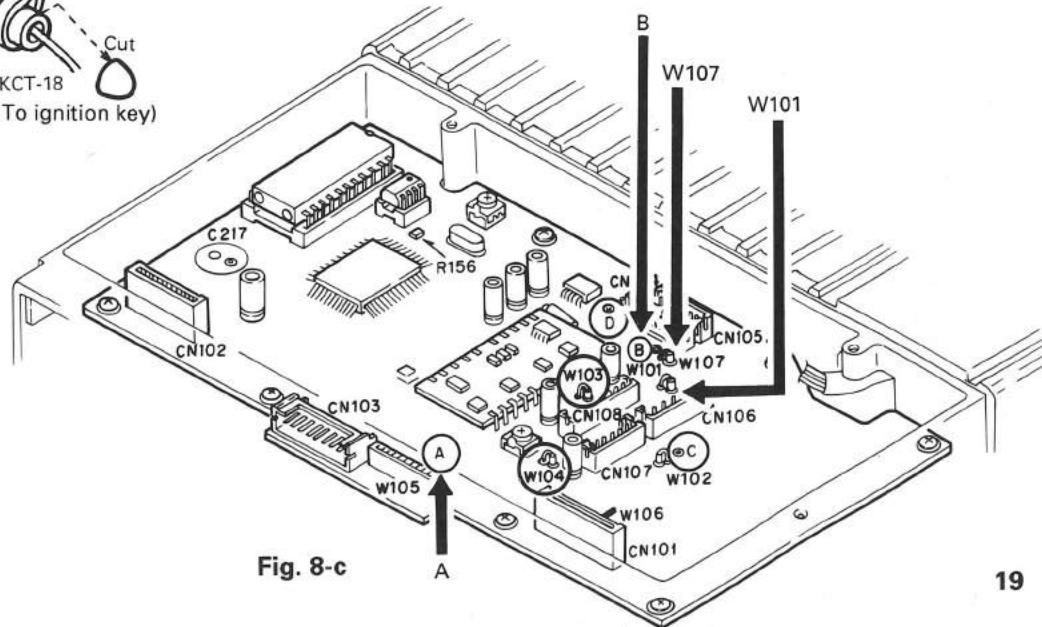

Fig. 8-c

# TK-630H(B)

## INSTALLATION

### 9. External Speaker (KES-4)

The TK-630H speaker output is as follows :

1. The KCH-3 contains a speaker (5W/8Ω).
2. The KCH-4 does not contain a speaker.
3. The external speaker output from the accessory connector (15-pin) on the rear of the radio is 13W/4Ω. Use external speaker KES-4.
4. If you use a remote kit (KRK-2, KRK-3DH, KRK-4DB), the external speaker output from the accessory connector (6-pin) on the rear of the control head is 5W/4Ω. Use external speaker KSP-1A or KES-4. You can use the KSP-1A only when you short pins 9 and 12 of the accessory connector (15-pin) on the rear of the radio and do not increase the speaker output (see page 22).

**Note :** The TK-630H does not have a ground because it uses a BTL audio amplifier. Do not connect leads to the ground.

#### 9-1. Connection for the KES-4 with the TK-630H

##### • When taking the AF output from the accessory connector (15-pin) on the rear of the radio

The following tools are required for changing the connector.

##### Extracting tool

The following extracting tool is recommended :

Molex Inc. Order No. : 11-03-0002

1. Remove the connector with jumper from the external speaker connector on the rear panel of the radio. (Fig. 9-a)

**Note :** Save the jumper, which is required when the radio is used without the external speaker.

2. Remove the terminals with the jumper from the connector housing holes number 9 and 12 using the extracting tool.

##### Removing the jumper lead (Fig. 9-b)

- 1) Insert the extracting tool (11-03-0002) into the connector while pushing the jumper lead in the direction of (a).
- 2) Push the extracting tool into collapse the barbs of the crimp terminal.
- 3) Pull out the lead while continuing to push the extracting tool in the direction (b).
3. Reinsert the terminal with the black and white stripe lead into hole number 12, and the terminal with the block lead into hole number 6. (fig. 9-c)
4. Attach the connector to the external speaker connector on the radio.

**Note :** Relationship between accessory connector (15-pin) connection and speaker output

When pins 9 and 12 are shorted ; The 5W internal speaker is used.

When pins 9 and 12 are open and output is from pins 6 and 12 ; The 20W external speaker (KES-4) is used.

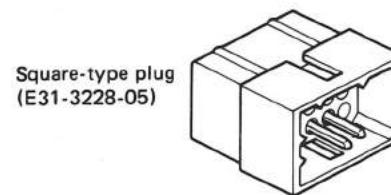

Fig. 9-a

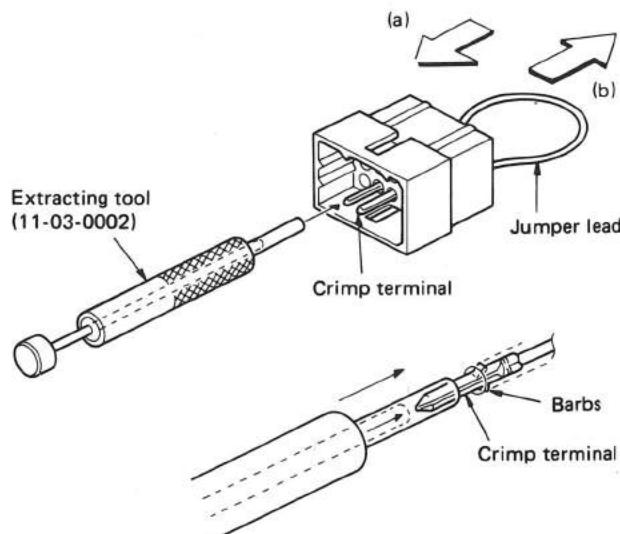

Fig. 9-b

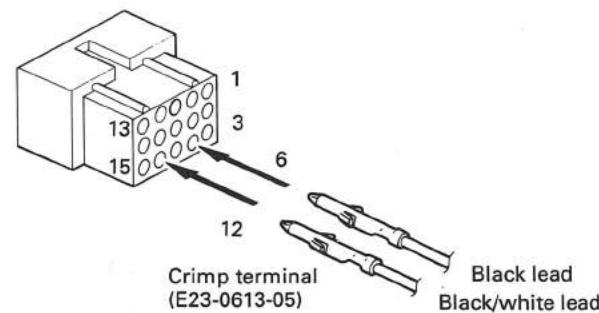

Fig. 9-c

# INSTALLATION

## 9-2. Connection for the KES-4 with the remote kit

(KRK-2, KRK-3DH, or KRK-4DB)

(When output is from the 6-pin accessory connector on the rear of the control head  
: remote operation)

### • Modification of plug (6-pin)

1. Remove the short plug from the accessory connector (6-pin) on the rear of the control head.
2. Remove the cables from pins 4 and 5 with the extracting tool. (Remove them as described in Section 9-1.)
3. Cut off the end of the rubber cap, insert the KES-4 speaker cable into the cap, and insert it into pins 5 and 6.
4. Install the plug and rubber cap on the accessory connector on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.

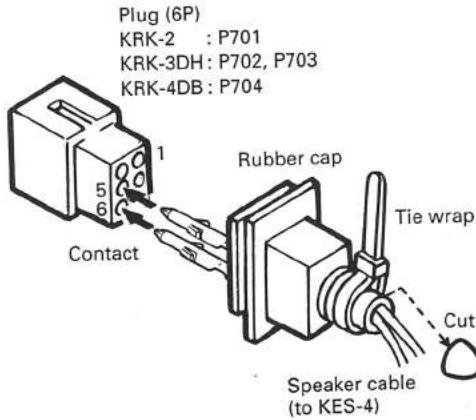

Fig. 10

### Notes :

1. Since the output from the accessory connector (6-pin) is 5W, you can use the KSP-1A (speaker).

2. Relationship between accessory connector (6-pin) connection and speaker output

When pins 4 and 5 are shorted ; The 5W internal speaker is used (KCH-3 only).

When pins 4 and 5 are open and output is from pins 5 and 6 ; The 5W external speaker is used.

### • Modification of the control unit (X57-3960 A/3)

Modify the radio connected with a remote kit as follows :

Remove the upper half of the case of the radio, and solder (short) W106 of the control unit. If you do not, the control head speaker output will deteriorate. If the radio is restored to the basic model (the remote kit is removed), open W106, otherwise the maximum head speaker input will be exceeded.

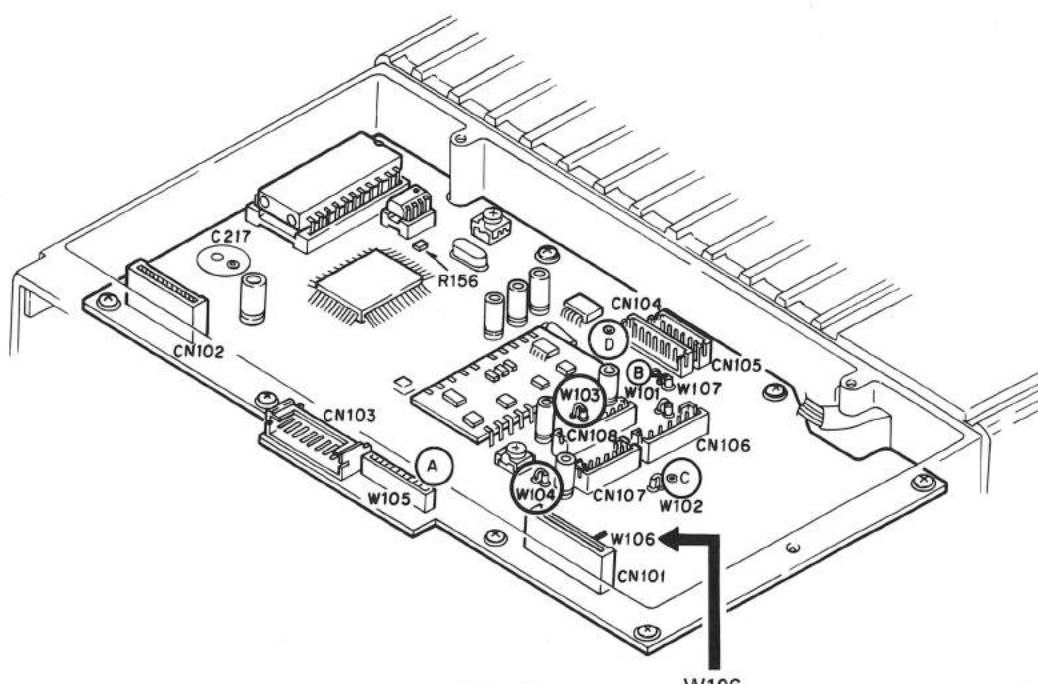

Fig. 11

# TK-630H(B)

## INSTALLATION

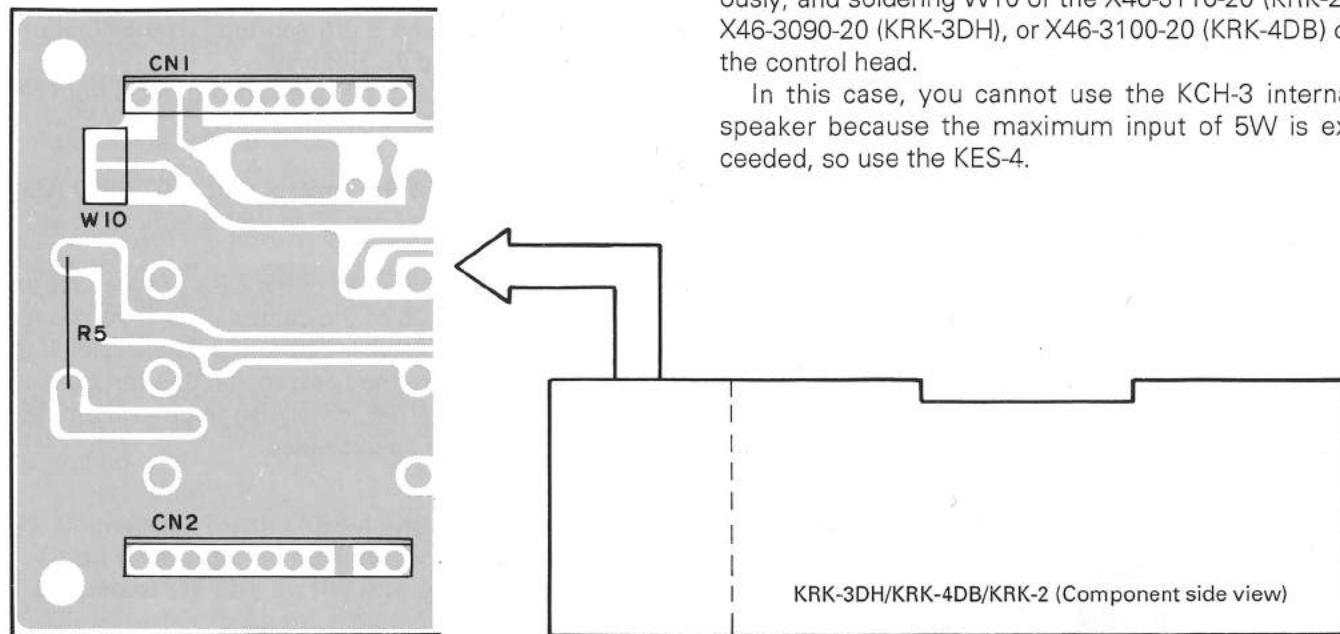

Fig. 12

### 9-3. Use as public address speaker

1. Remove the short plug (P1) from the 15-pin accessory connector (J4) on the rear of the radio. (Remove the jumpers as described in Section 9-1.)
2. Insert the KES-4 speaker leads into pins 13 and 14 of P1.
3. If you remove jumper shorting pins 9 and 12, the 20W PA (public address) voice signal is output from pins 13 and 14. (Only when the PA or SP switch is on)
4. If you use the radio with pins 9 and 12 shorted, the internal speaker is available (when the KCH-3 is used). The KCH-4 does not contain a speaker.

#### Note :

Relationship between accessory connector (15-pin) connection and speaker output

When pins 9 and 12 are shorted ; The 5W internal speaker is used (KES-3 only).

When pins 9 and 12 are open and output is from pins 13 and 14 ; The 20W external speaker is used.

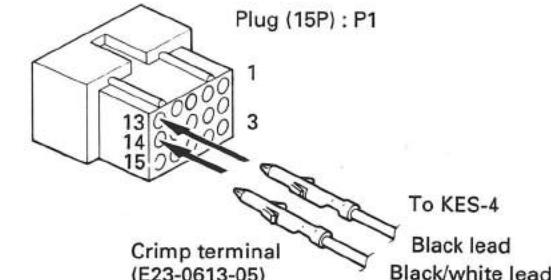

Fig. 13

# INSTALLATION

## 10. Channel Expansion Kit (KCH-5)

This optional kit increases the number of channels and AN (alphanumeric) channels of the radio.

### 10-1. System configuration

- \*32B : Basic control head (32 ch)
- 99B : Basic control head (99 ch)
- 32A : Basic + Alphanumeric (32 ch)
- 99A : Basic + Alphanumeric (99 ch)
- \*32F : Full featured control head (32 ch)
- 160F : Full featured control head (160 ch)
- \* : Factory setting

### 10-2. System modification

#### • KCH-3 (basic control head) is used

##### 1. 99B (basic control head : 99 channels)

Modify the radio with the basic control head (32 channels) so that it supports a 99-channel display.

- 1) Remove the upper half of the radio case.
- 2) Remove IC109 from the control unit (X57-3960 A/3) and install the KCH-5 EEPROM (X24C16PI) by soldering. (Fig. 14)

**Note :** Install it in the correct direction. Check the mark on the IC (KCH-5), and insert it.

- 3) Remove R156 (R92-0670-05) of the control unit. (Fig. 14)

##### 2. 32A (basic + alphanumeric display : 32 channels)

Modify the radio with the basic control head (32 channels) so that it supports a 32-channel alphanumeric display.

- 1) Install the KCH-5 EEPROM in IC3 of the KCH-3 display unit (X54-3100-20 A/2) by soldering.

**Note :** Install it in the correct direction. Check the mark on the IC (KCH-5), and insert it. (Fig. 15-a)

- 2) Remove R18 (R92-0670-05) of the display unit.

(Fig. 15-a)

3. 99A (basic + alphanumeric display : 99 channels)  
Modify the radio with the basic control head (32 channels) so that it supports a 99-channel and alphanumeric display.

- 1) Install the KCH-5 EEPROM in the control unit by soldering, and remove R156. Remove R18 of the display unit.

#### • KCH-4 (full-feature control head) is used

##### 1. 160F (Full-featured control head : 160 channels)

Modify the radio with the basic control head (32 channels) so that it supports a 160-channel and alphanumeric display.

- 1) Remove the upper half of the radio case.
- 2) Remove IC109 (X24C04PI) of the control unit (X57-3960 A/3) from the socket, and install the KCH-5 (X24C16PI). (Fig. 14)

**Note :** Install the IC in the correct direction. Check the mark on the IC (KCH-5), and insert it.

- 3) Remove R156 (R92-0670-05) of the control unit. (Fig. 14)

- 4) Remove IC3 (X24C04PI) of the KCH-4 display unit (X54-3110-20 A/2) from the socket, and install the KCH-5 (X24C16PI). (Fig. 15-b)

**Note :** Install the IC in the correct direction. Check the mark on the IC (KCH-5), and insert it.

- 5) Remove R33 (R92-0670-05) of the display unit. (Fig. 15-b)

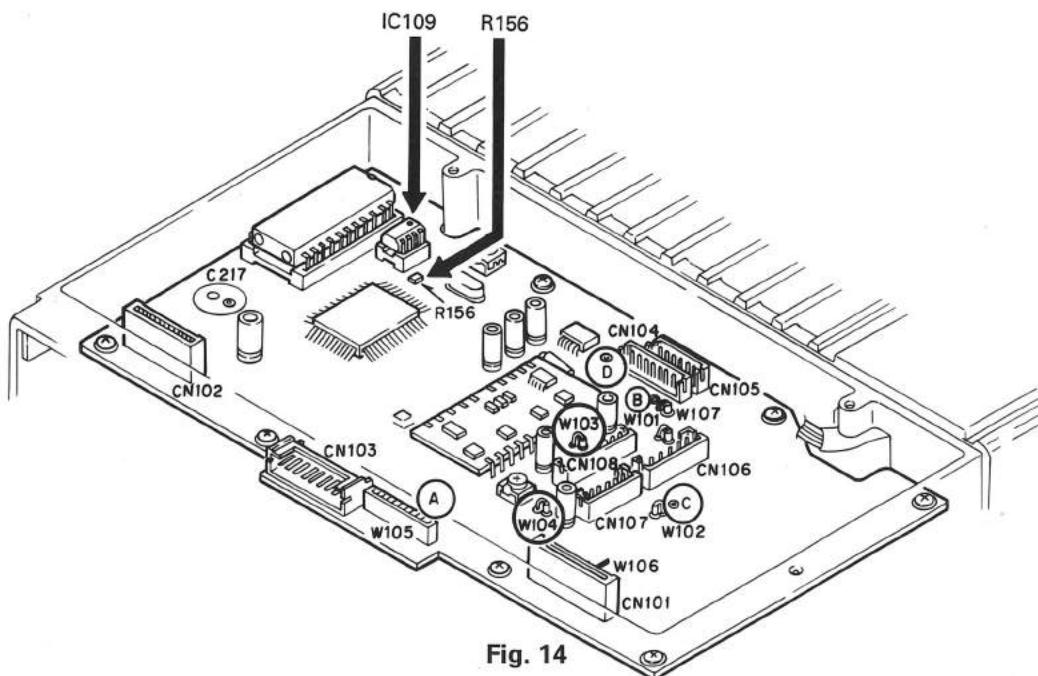

Fig. 14

# TK-630H(B)

## INSTALLATION

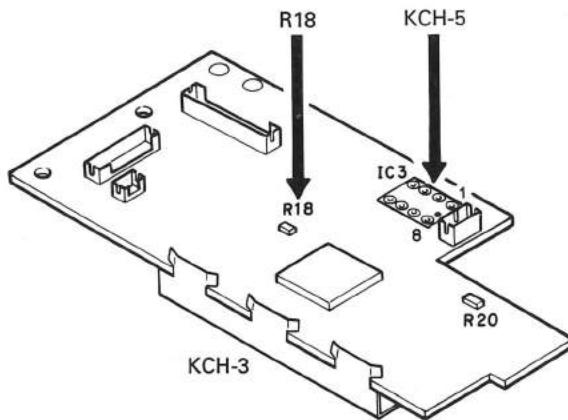

Fig. 15-a

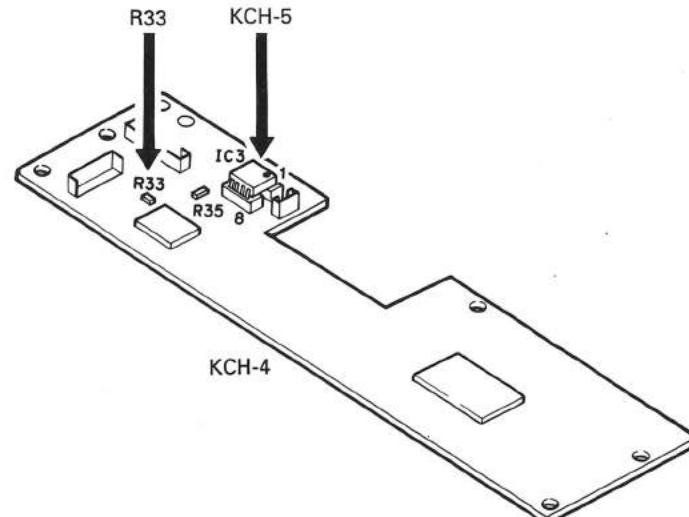

Fig. 15-b

### 11. Horn Alert Function

The horn alert function is available for a transceiver to which the optional KCK-5 (interface kit) and KDD-4 (DTMF decoder), KDS-8B (two-tone decoder), or KDS-10 (two-tone decoder) have been added and for which jumper W107 in the control unit (X57-3960 A/3) has been cut. (For the installation method, see the KCK-5 service manual.)

1. The horn alert function controls external equipment by energizing the relay of the interface unit (KCK-5) for a certain time after the above optional decoder detects matching of the call signal.
2. If you set OTHER SIGNALING to "Y" with the programming software (KPG-7D) for a channel, and you press and release the key set as the H.A key, HA (KCH-3) or „HORN „ ALERT (KCH-4) appears on the display, and the radio goes into standby. (The microphone must be onhook.)

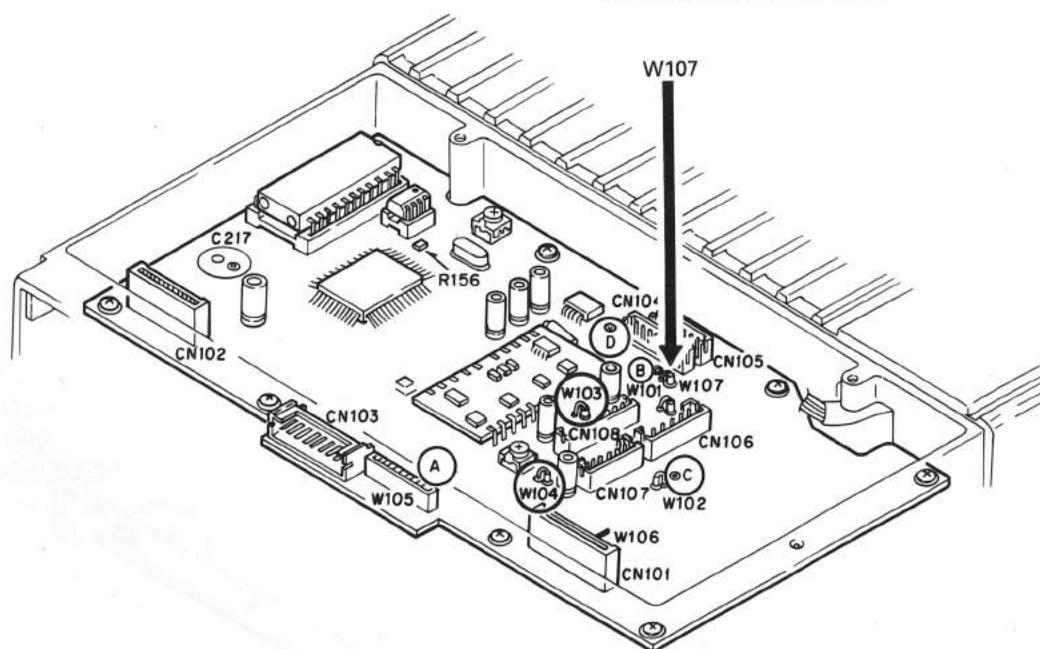

Fig. 17

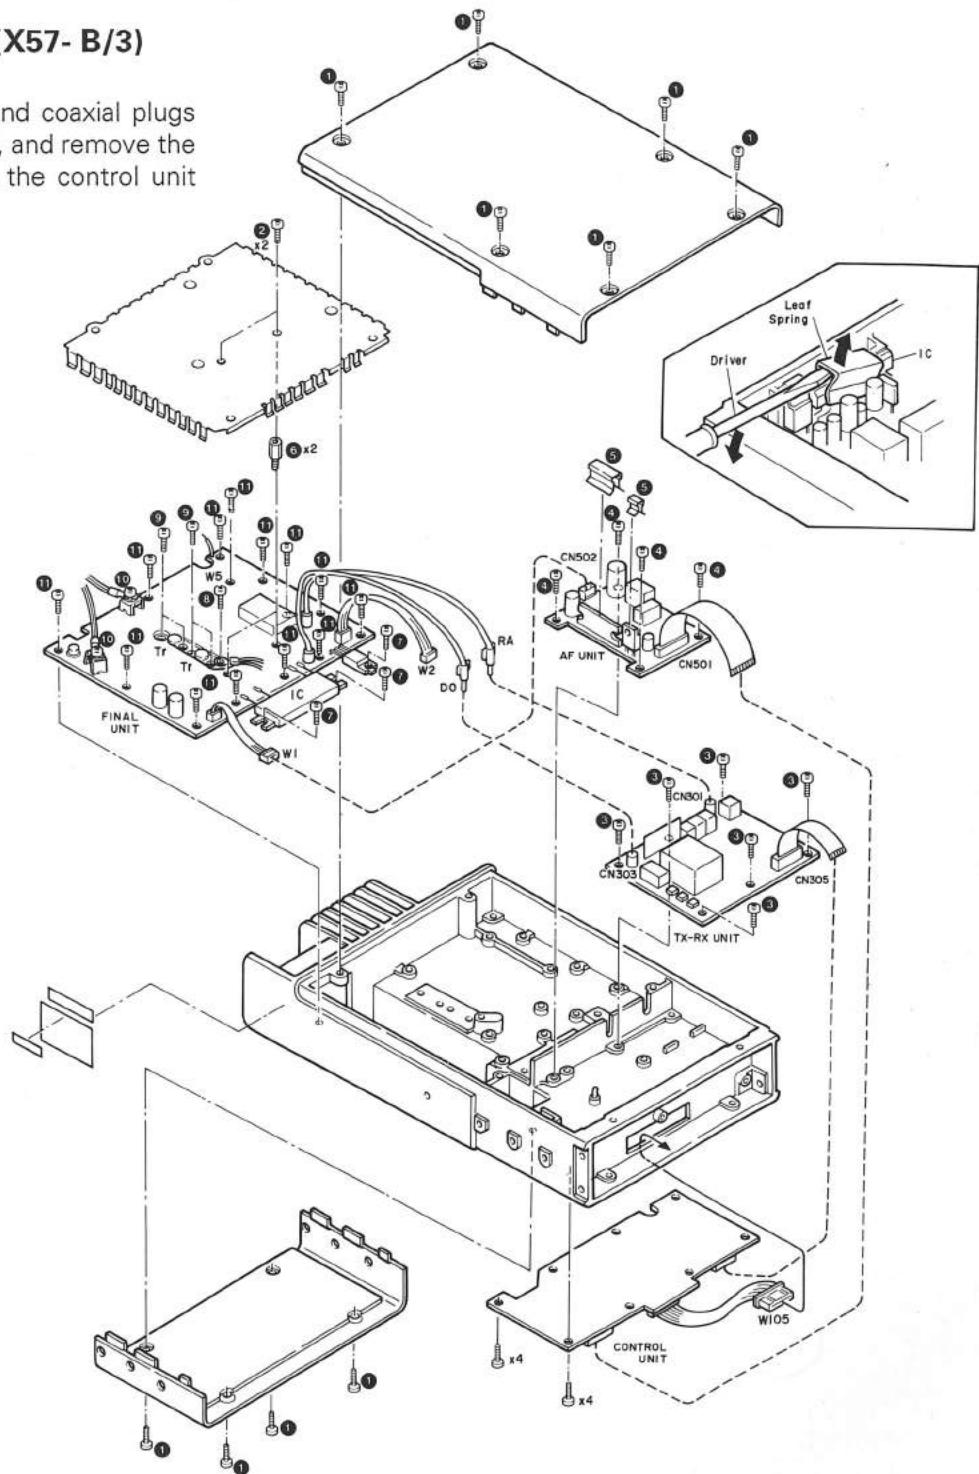

# DISASSEMBLY FOR REPAIR

## 1. Removing the Case and Shield Cover

1. Remove the ten screws (①), and remove the upper and lower halves of the case. (Remove the four screws holding the upper half and the six screws holding the lower half.)
2. Remove the two screws (②), and remove the shield cover.

## 2. Removing the TX-RX Unit (X57- B/3)

1. Remove the seven screws (③).
2. Remove the connector (CN304) and coaxial plugs (CN301, CN303) from the final unit, and remove the flat cable (CN305) upwards from the control unit (CN102)

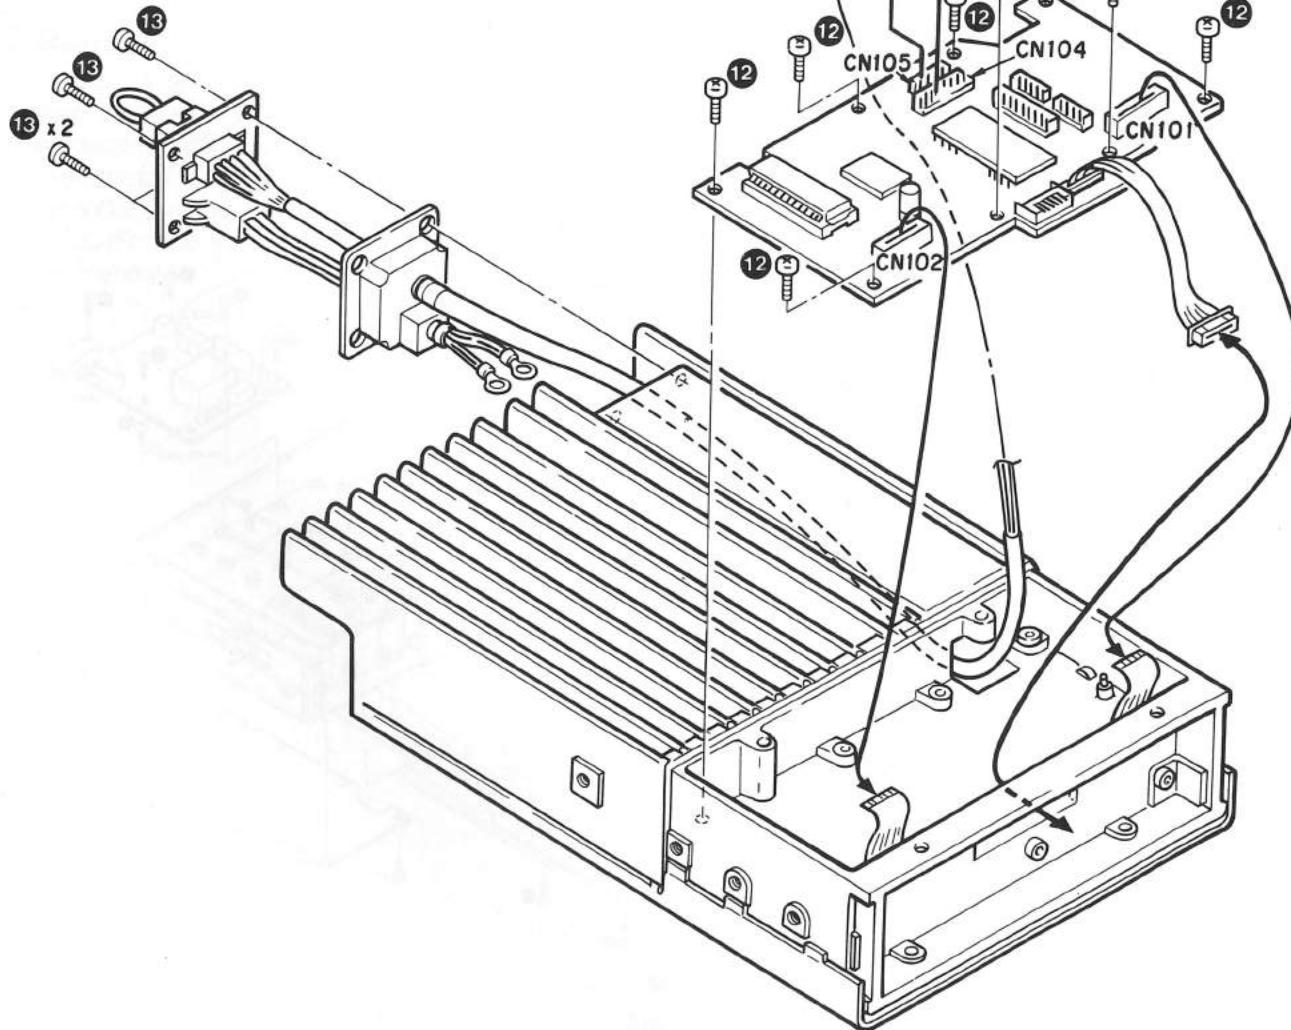

## DISASSEMBLY FOR REPAIR

**3. Removing the AF Unit (X57- C/3)**

1. Remove the four screws (④).
2. With a screwdriver, remove the two leaf springs (⑤) holding the IC to the frame.
3. Remove the connector (CN502) from the final unit (W1), and remove the flat cable (CN501) upwards from the control unit (CN101).

**4. Removing the Final Unit (X45-)**

1. Remove the two hexagonal bosses (⑥).
2. Remove the three screws (⑦) holding the power module and transistor to the frame.
3. Remove the one screw (⑧) holding TH1.
4. Remove the four screws (⑨) holding the final transistor.
5. Remove the two screws (⑩) holding the lead terminal from ACC connector (6P) on the rear.
6. Remove the 13 screws (⑪) holding the PC board.
7. Desolder W5 on the antenna connector side.

**5. Removing the Control Unit (X57- A/3)**

1. Remove the eight screws (⑫).
2. Remove flat cables CN101 and CN102.
3. Remove the two connectors (CN104 and CN105) from ACC connector (15P) on the rear.

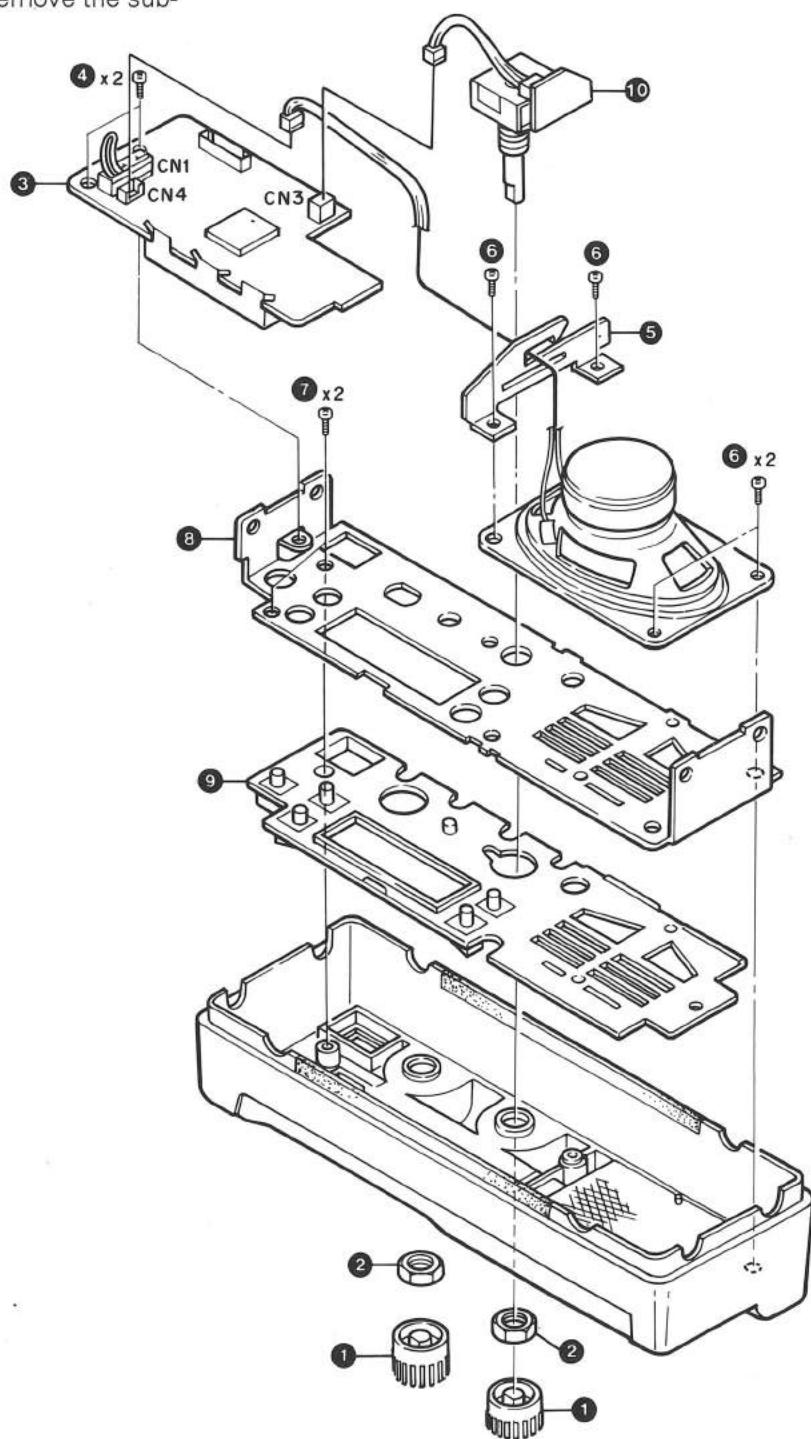

**6. Removing the Accessory Connector****(ACC 15P, ACC 6P) on the Rear**

1. Confirm that the screw holding CN3 and the screw holding CN4 of the final unit (X45-) are removed, and that CN104 and CN105 of the control unit (X57- A/3) are disconnected. Remove the four screws on the rear (⑬).
2. Pull out the connector. (Take the connector terminals out through the opening in the frame.)

## DISASSEMBLY FOR REPAIR

**7. Disassembly of the KCH-3**

1. Pull out the VOL and CH knobs (①).
2. Remove the two hexagonal nuts (②).
3. Disconnect the two connectors (CN3 and CN4) (③) of the display unit (X54-3100 A/2), and remove the two screws (④). You can remove the channel encoder (⑩) and display unit.
4. Remove the four screws (⑥) holding the speaker and PC board fitting (⑤).
5. Remove the two screws (⑦), and remove the sub-panel (⑧) and keytop (⑨).

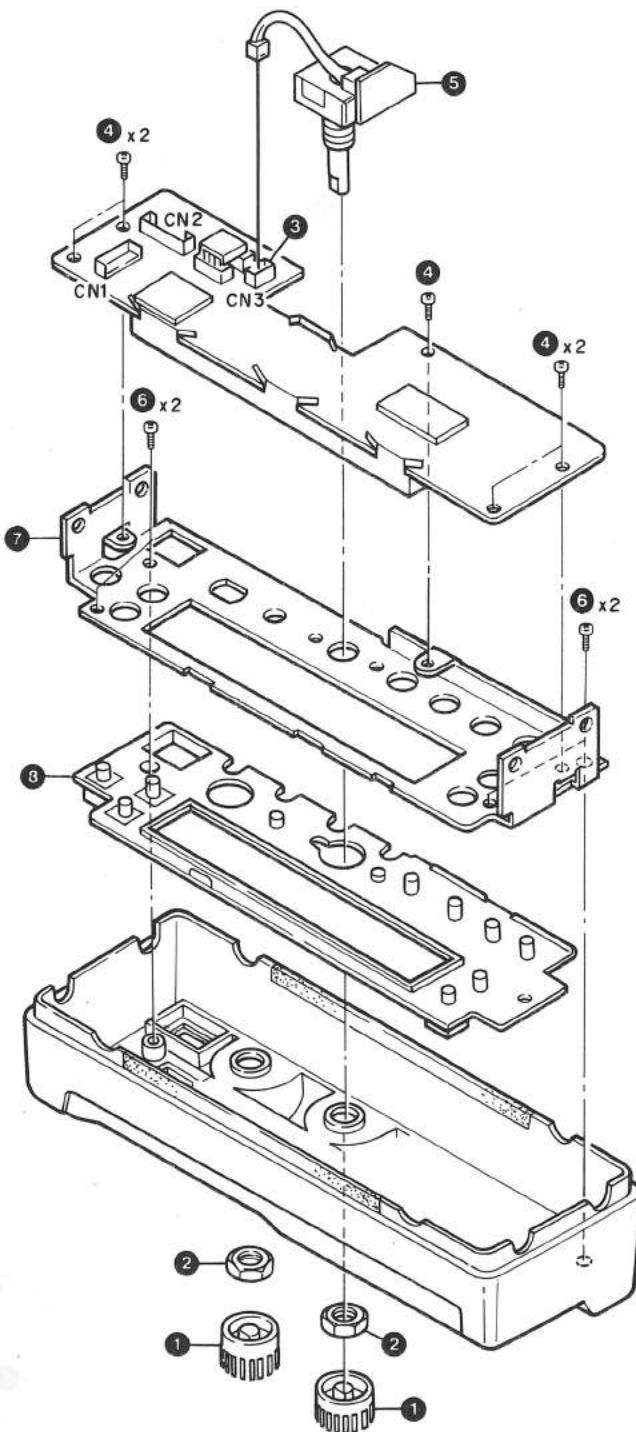

# TK-630H(B)

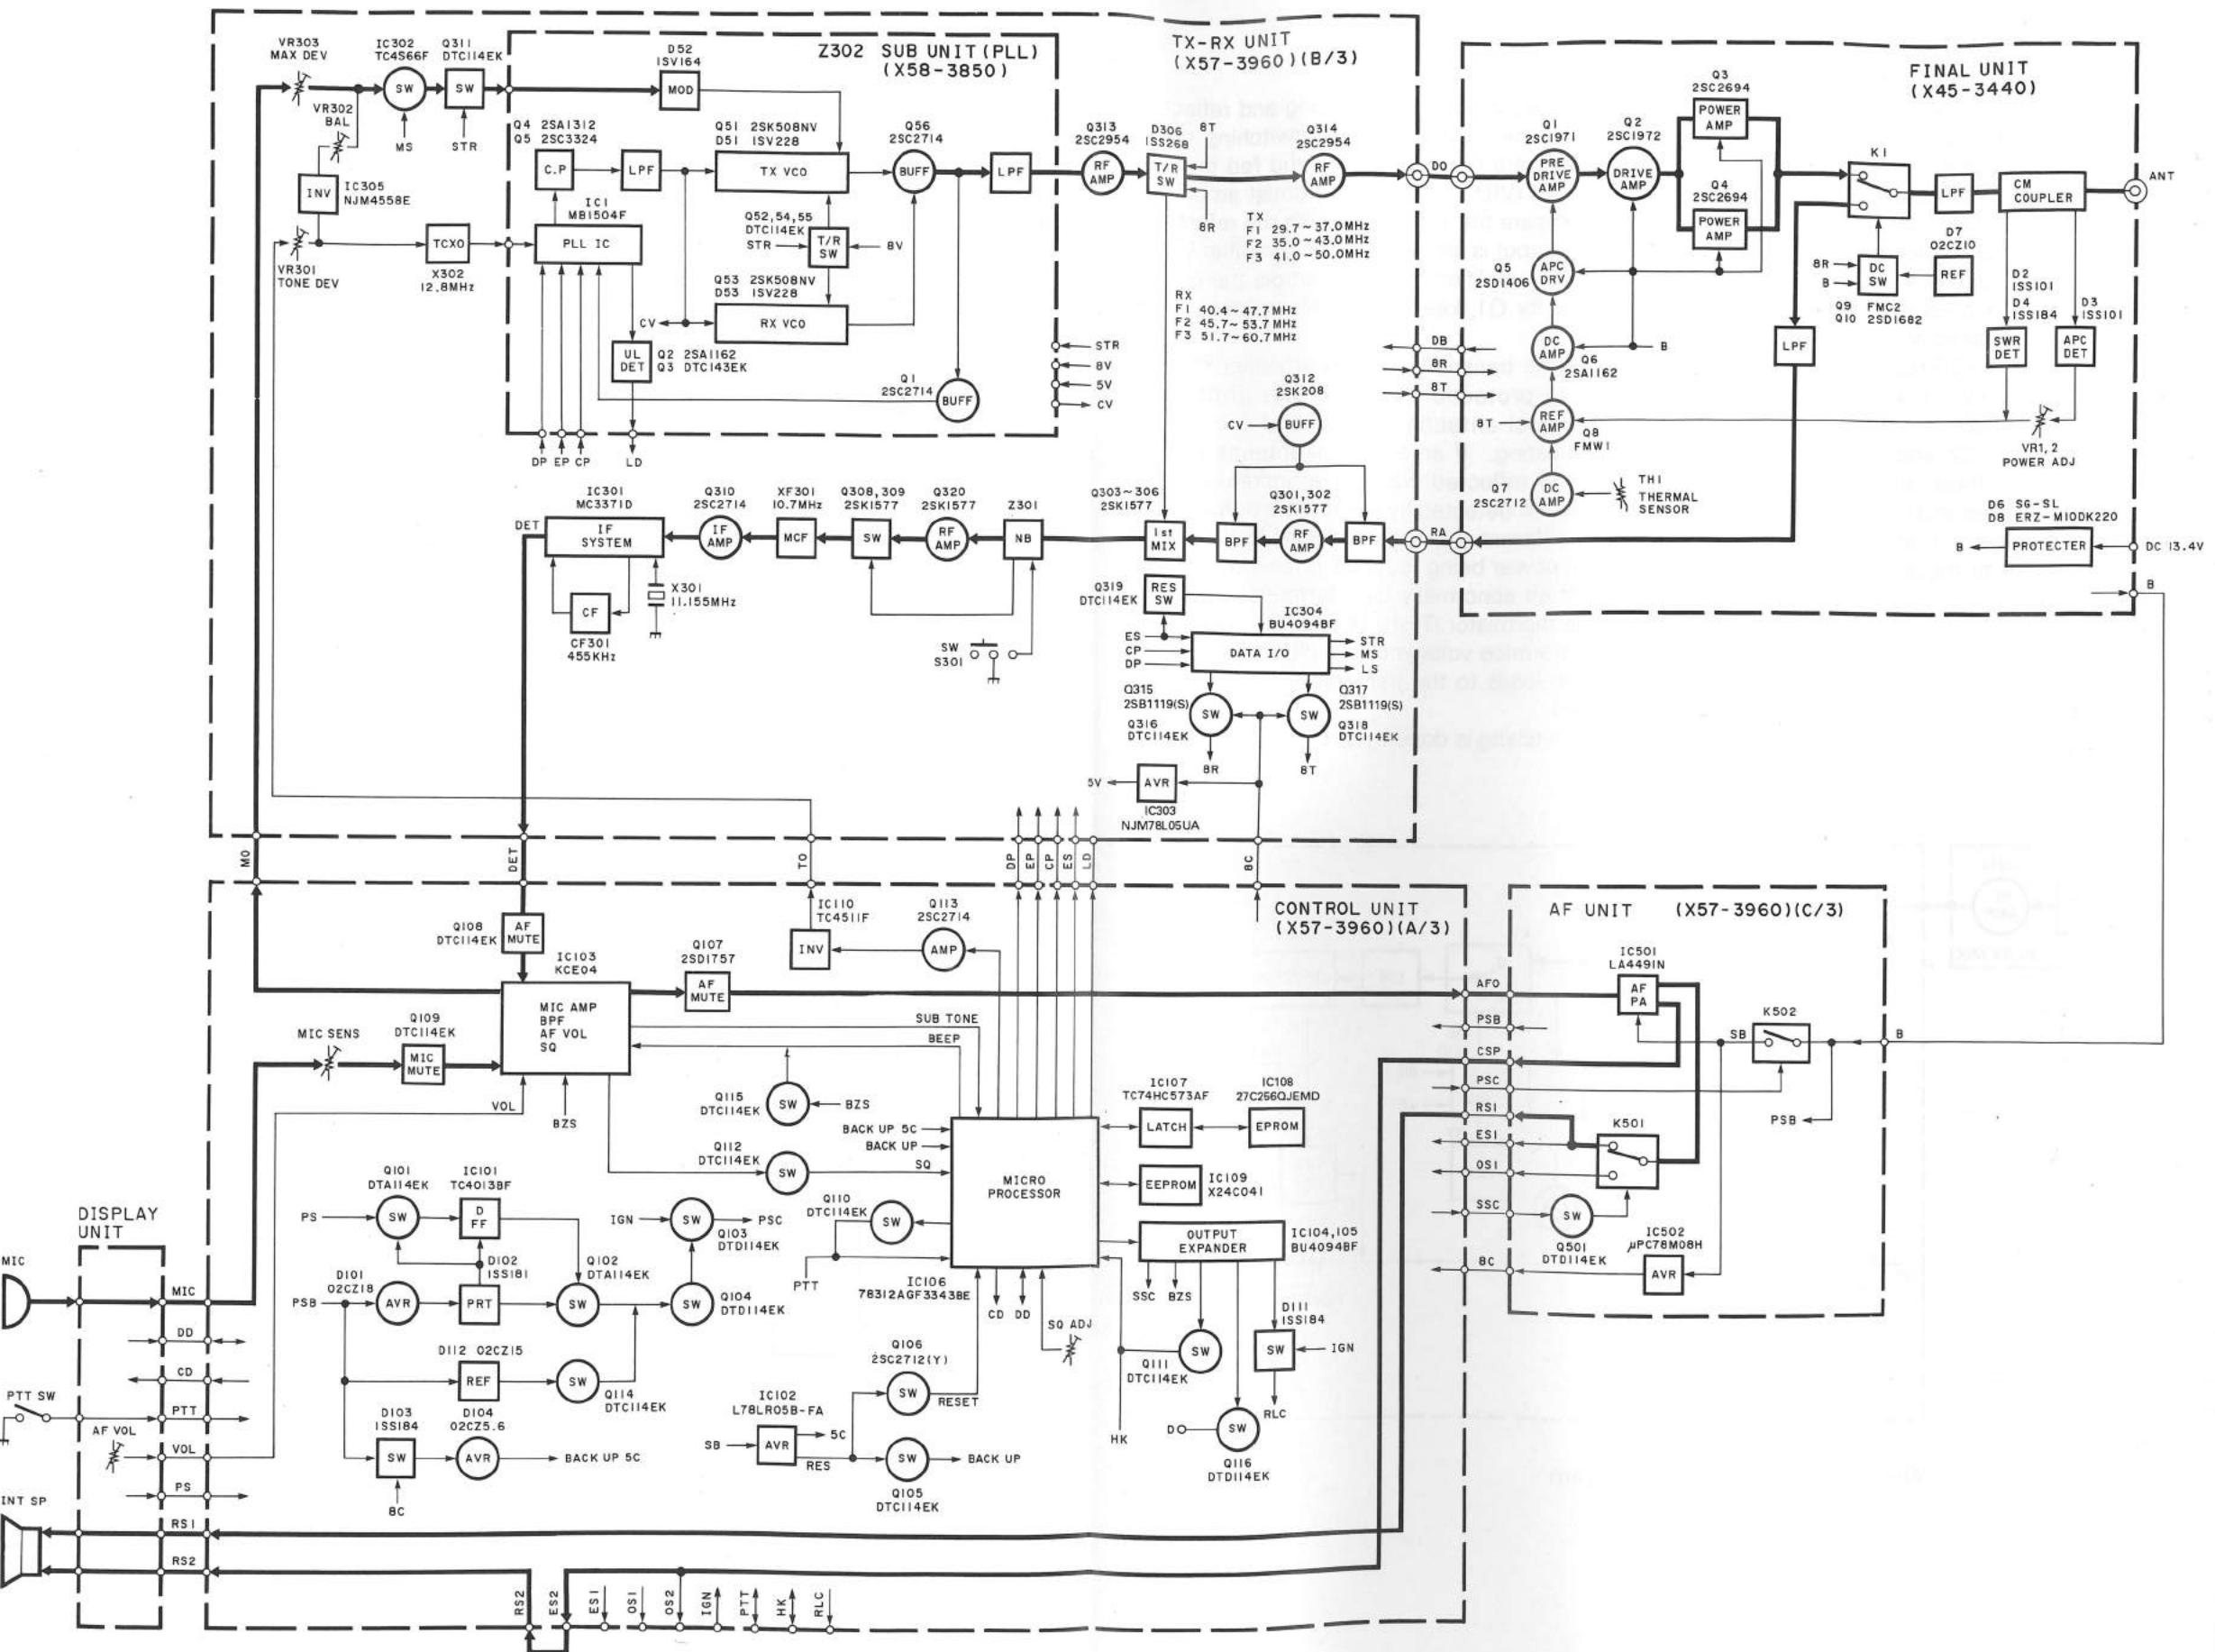

## DISASSEMBLY FOR REPAIR

### 8. Disassembly of the KCH-4

1. Pull out the VOL and CH knobs (①).
2. Remove the two hexagonal nuts (②).
3. Disconnect the connector (CN3) (③) of the display unit (X54-3110 A/2), and remove the five screws (④). You can remove the channel encoder (⑤) and display unit.
4. Remove the four screws (⑥), and remove the sub-panel (⑦) and keytop (⑧).

# TK-630H(B) TK-630H(B) BLOCK DIAGRAM

# CIRCUIT DESCRIPTION

## 1. Transmitter Circuit

The audio input from the microphone is attenuated by VR101 and input to MC1 of the audio HIC of IC103 (KCE04). It passes through the active low-pass filter in IC1, limiter D1, the pre-emphasis circuit in IC1, and the active low-pass filter in IC2, which are part of IC103, and is output from the MC0 terminal to the CN102 MO terminal. Q109 is used as a microphone mute switch.

The signal from the MO terminal goes to D52 in the VCO unit (Z302), and the VCO is directly modulated. The transmit signal output from the VCO (Z302) passes through switch D306, is amplified by Q314, and is applied to pre-drive amplifier Q1 and Q2.

The signal is power amplified by Q2, and the output of Q2 is divided into two signals ; these are amplified by Q3 and Q4. The signals are mixed and the resulting signal is fed through transmit/receive switching relay K1 and the 7-pole low-pass filter to the antenna connector.

There is a line for detecting traveling and reflected waves prior to the transmit/receive switching relay. Traveling waves are detected by D3 and fed through the APC control (VR1, VR2) to differential amplifiers Q8, which compare the signal level with the reference voltage. The output is amplified by DC amplifier Q6 to control APC DC amplifier Q5. Q5 controls the power supply voltage for Q1, keeping the transmitter output constant.

To protect the transmitter power amplifier stages, there are two protection circuits, one protecting against abnormal antenna loading and the other, against overheating. If an abnormal antenna load is connected, the reflected wave level increases. Reflected waves are detected by D2 and the output level is fed to the differential amplifier, leading to the transmitter output power being reduced in the way already described. If an abnormally high temperature is detected by the thermistor (TH1), DC SW Q7 is made to reduce the reference voltage of the differential amplifier. This also leads to the transmitter output power being reduced.

Antenna switching is done by a relay (K1).

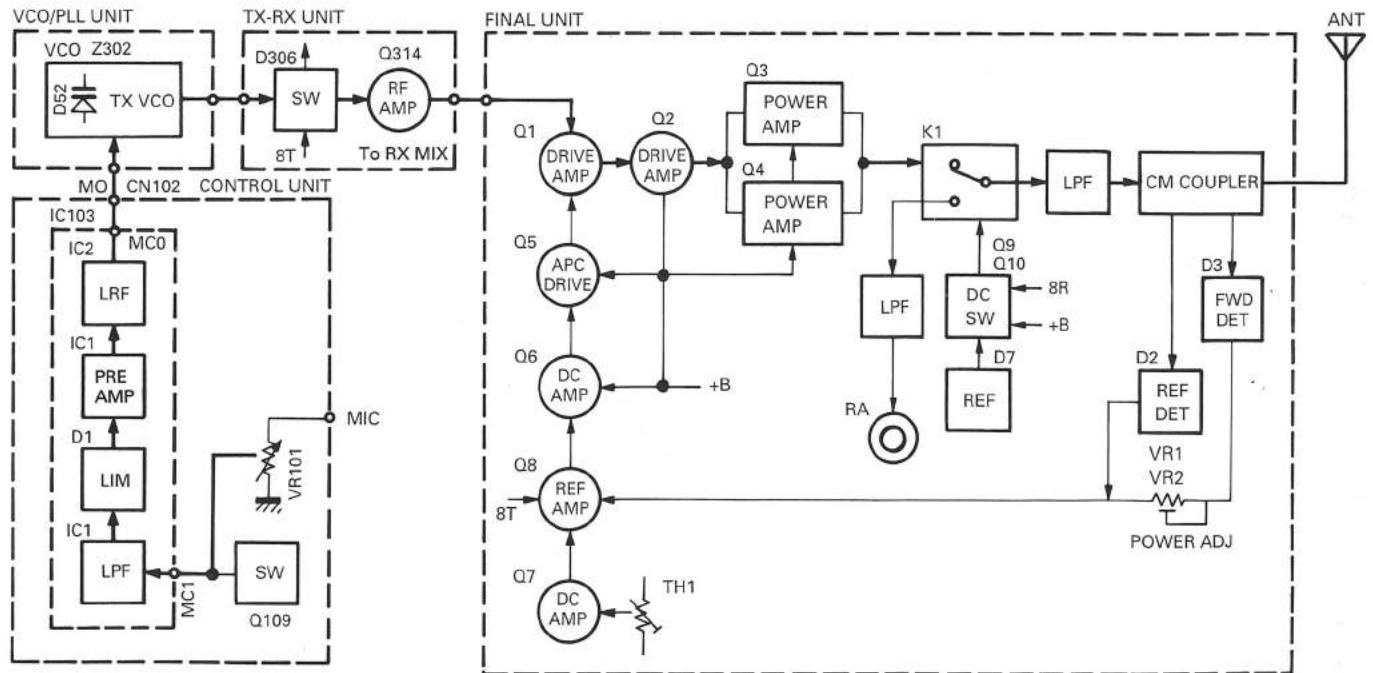

Fig. 1 Transmitter block diagram

# TK-630H(B)

## CIRCUIT DESCRIPTION

### 2. Receiver Circuit

The incoming received signal from the antenna socket passes through the low-pass filter, the transmit/receive switching relay (K1), and the second low-pass filter, then is fed to CN301 in the TX-RX unit.

The signal passes through the band-pass filter in the TX-RX unit, is amplified by RF amplifier Q301 and Q302, then passes through the second band-pass filter (BPF). The BPF is interlocked with the PLL lock voltage, and changes the cut-off frequency according to the receive frequency.

After the signal has passed through the BPF, it enters RX first mixer Q303 to Q306. The local signal (received frequency + 10.7MHz) from the PLL (Z302) also enters the first mixer. The first mixer is a double-balanced type consisting of four FETs, which converts the receive signal to the 10.7MHz first IF signal.

The 10.7MHz IF signal passes through NB (noise blanker) unit Z301 and IF amplifier Q320, and enters NB gate Q308 and Q309. The pulse noise in the IF signal is detected by the NB unit, and removed by the NB gate. The IF signal passes through the monolithic crystal filter (XF301) and IF amplifier Q310, and enters FM IF system IC IC301.

The signal is heterodyned again to 455kHz, using the second local signal generated by the crystal oscillator (11.155MHz), at the second mixer in IC301. The second IF signal is filtered by CF301 (ceramic filter), amplified by limiting amplifiers IN IC301, and is detected as an FM signal.

The output signal from IC301 passes through IC103 (KCE04) in the control unit, goes to the audio unit, and, having been amplified, is output from the speaker.

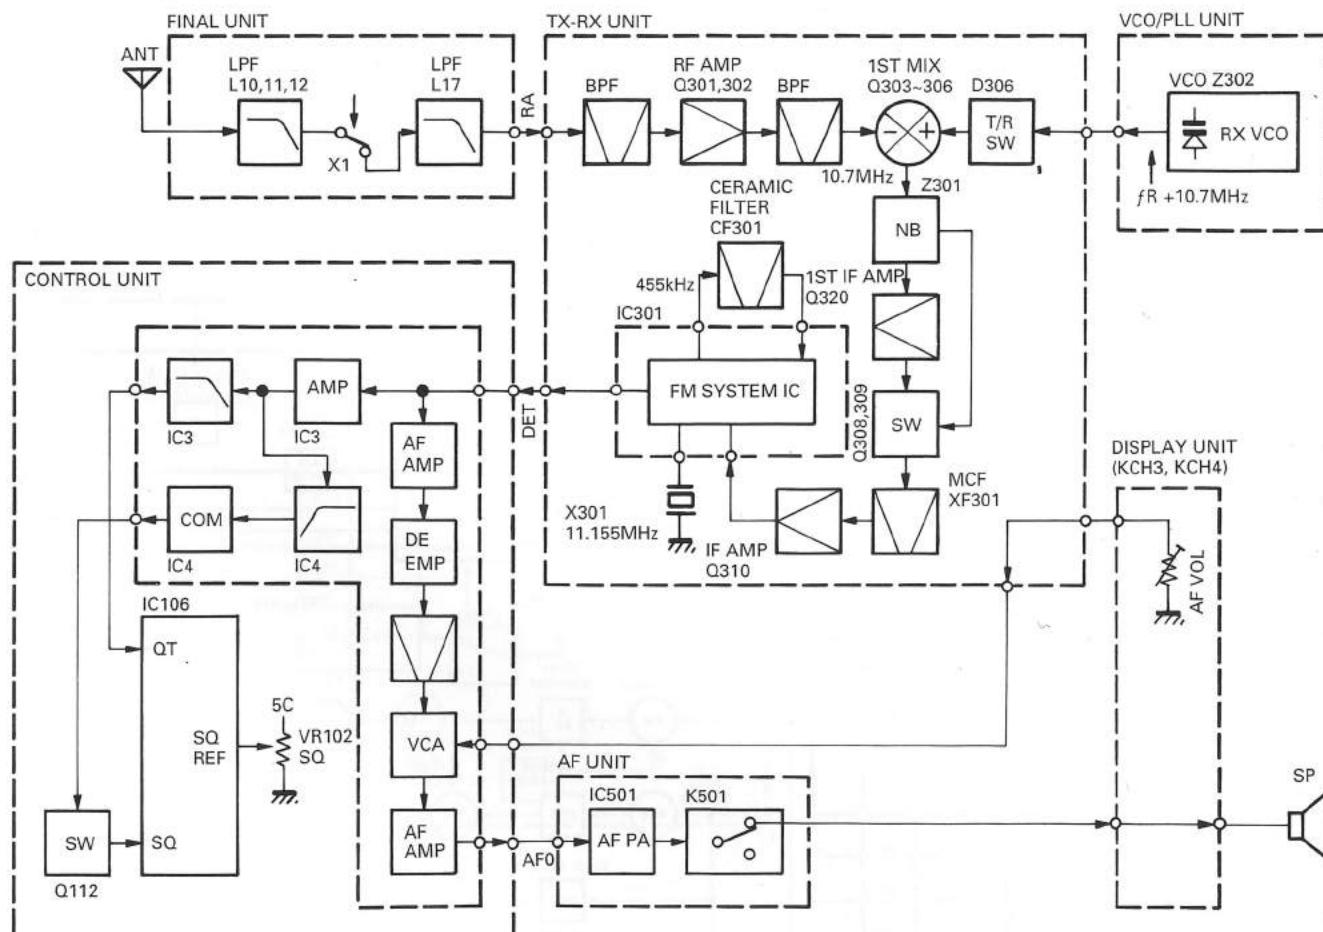

Fig. 2 Receiver block diagram

## CIRCUIT DESCRIPTION

Item	Rating
Nominal center frequency	10.7MHz
Pass bandwidth	$\pm 7.5\text{kHz}$ or more at 6dB
Attenuation bandwidth	$\pm 22.5\text{kHz}$ or less at 60dB
Ripple	2.0dB or less
Insertion loss	3.0dB or less
Guaranteed attenuation	60dB or more within $\pm 1\text{MHz}$
Terminating impedance	$3\text{k}\Omega \pm 10\%$

Table 1 MCF (L71-0257-05) : TX-RX unit XF301

Item	Rating
Nominal center frequency	$455\text{kHz} \pm 1\text{kHz}$
6dB bandwidth	$\pm 6\text{kHz}$ or more (from 455kHz)
50dB bandwidth	$\pm 12\text{kHz}$ or less (from 455kHz)
Ripple (within $\pm 4\text{kHz}$ of 455kHz)	3dB or less
Insertion loss	6dB or less
Guaranteed attenuation (within $\pm 100\text{kHz}$ of 455kHz)	50dB or more
I/O matching impedance	$1.5\text{k}\Omega$

Table 2 Ceramic filter (L72-0342-05) : TX-RX unit CF301

### 3. Squelch Circuit

#### 3-1. Squelch

The signal from the detector is input to the IC103 audio HIC. It is amplified by IC3, and passes through IC4 (high-pass filter), and pulses are output by IC4 (comparator). The pulse level is shifted by Q112, and is input to the pulse count port of IC106 (CPU). The CPU compares the number of pulses with the voltage of the A/D conversion port of the SQREF to detect squelch.

#### 3-2. QT/DQT

The signal from the detector is input to the IC103 audio HIC. It is amplified by IC3 (1/2), and only the signal components below 300 Hz are output from IC103 by IC3 2/2 (low-pass filter). This signal is input to the analog input port (QT) of IC106 (CPU), and is digitized by the CPU. Digital signal processing is performed by the digital filter, and QT/DQT is detected.

### 4. Audio Circuit

The AF unit consists of IC501 (audio power amplifier), K502 (power on/off relay), K501 (speaker switching relay), and IC502 (8V AVR).

The audio signal output from IC103 of the control unit passes through the AFO terminal, is amplified by power amplifier IC501 to the rated output, passes through K501, and is output from the RS1 terminal to drive the speaker.

Power on/off relay K502 is operated by PSC (low at power on) from the control unit to turn the transceiver power on and off.

The 13.4V DC voltage is regulated to 8V by the 8V AVR (IC502).

Speaker output switching relay K501 changes the signal output destination when Q501 is turned on by SSC (normally low). When public address output is performed or a receive signal is output to the public address speaker (the PA or SP key is on), SSC goes high, and is output from the OS1 terminal.

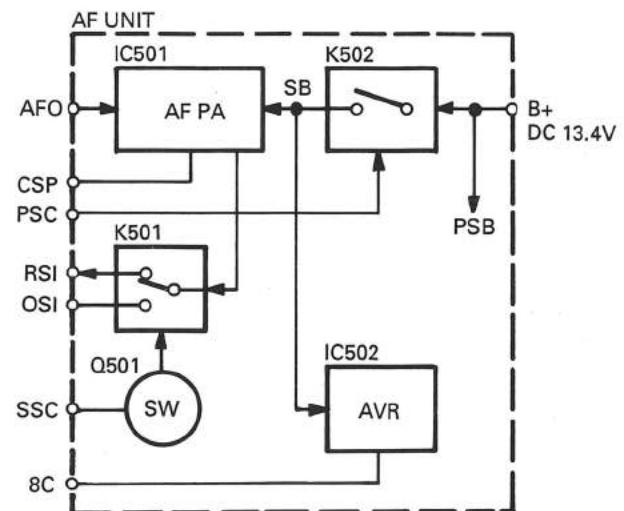

Fig. 3 Audio block diagram

# TK-630H(B)

## CIRCUIT DESCRIPTION

### 5. VCO/PLL Unit (Z302)

The PLL generates the transmit signal and the first local oscillator receive signal. The RF signal generated by Q51 (TX) or Q53 (RX) in the VCO unit is amplified by Q56, and the resulting signal is output to the TX-RX unit. TX and RX Q51 and Q53 are switched by turning the source line for Q51 and Q53 on and off. This is done by Q52, Q54 and Q55 using the control signal (STR) generated by the serial-to-parallel converter in the TX-RX unit. The RF signal passes through Q56 of the VCO unit and amplifier Q1, and is input to IC1 (PLL IC : MB1504PF). The 12.8MHz PLL reference signal generated by the TCXO (X302) in the TX-RX unit is also input to IC1.

Both signals are divided according to the division data from the control unit to produce a 5kHz signal. The phases are compared, and a phase difference signal is output and passes through Q4 and Q5 (charge pump) and the low-pass filter of the lug lead to produce the control voltage for Q51/Q53 (VCO). This voltage is applied to D51 (TX) or D53 (RX) in the VCO unit to control the frequency. If the PLL is unlocked, the IC1 lock detect signal (LD) is converted to a DC signal by Q2 and Q3, and is sent to the microcomputer (IC106) of the control unit. The microcomputer determines that the PLL has been unlocked, and stops signal transmission. It outputs a beep as a warning.

The modulation signal (MP) passing through the VR in the TX-RX unit goes to D52, which is connected to Q51 of the VCO in the VCO unit, and the VCO is directly modulated.

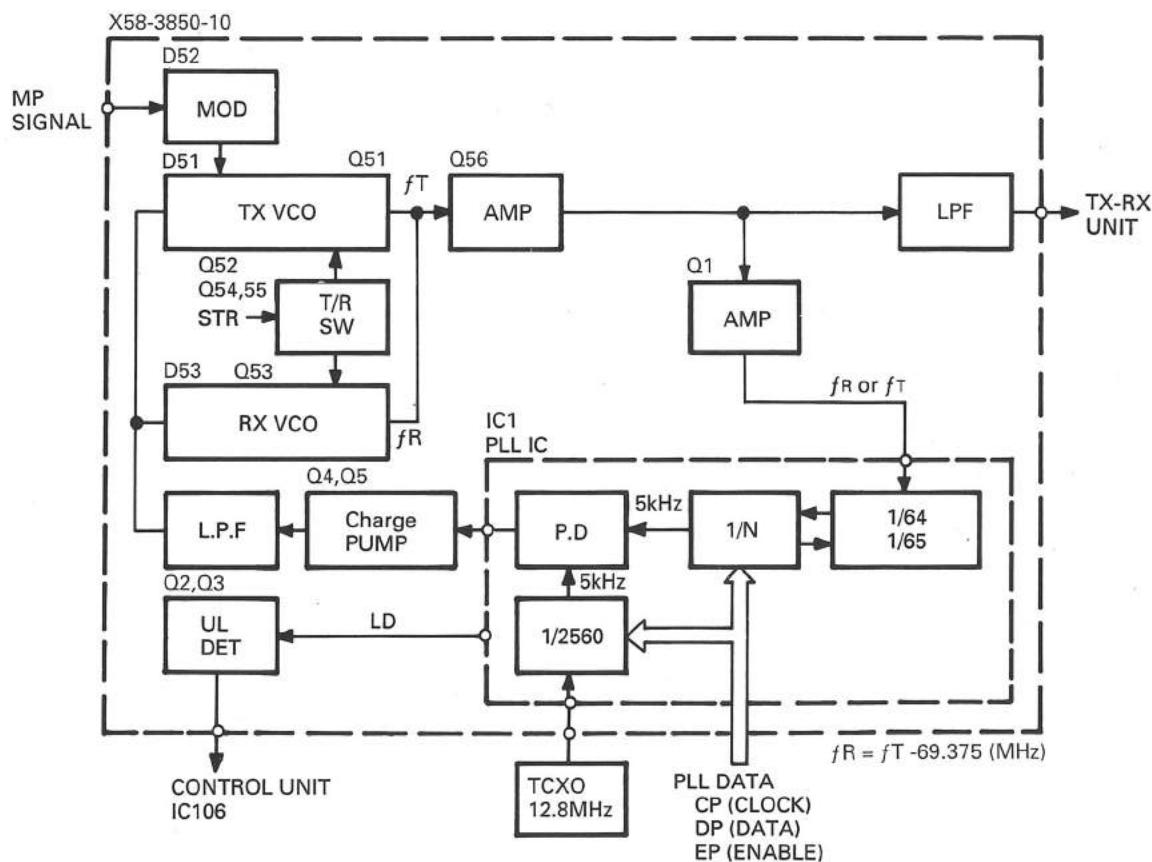

Fig. 4 VCO/PLL block diagram

# CIRCUIT DESCRIPTION

## 6. Control Circuit

### 6-1. CPU backup and reset

When the CPU is backed up ( $8C=0V$ ,  $SB=0V$ ), the PSB voltage passes through a diode OR switch (D103), and is made into a constant voltage of 5V (AVR) by a zener diode (D104) to supply power to the VDD pin of the CPU (IC106). Q105 and Q106 are off, and Reset and NMI (backup interrupt) are high (5V).

When the power switch is turned on, 8C and SB go high. SB is supplied to IC102, and when the output voltage becomes 4.8V, reset delay capacitor C113 is charged. When charging ends, a high signal is output to the IC106 Reset pin.

Q105 turns on and NMI goes low. Q106 is turned on momentarily by reverse polarity diode D106 and pulse generation capacitor C113, and the CPU Reset pin goes low, resetting the CPU.

### 6-2. Peripheral circuits of the CPU

The transceiver system and channel data is stored in IC109. The PTT and HOOK signals are converted to serial data and sent to the CPU (IC106) from the display unit (KCH-3 or KCH-4). The serial data signal output

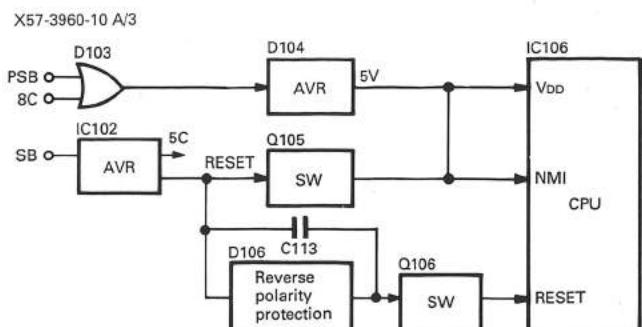

Fig. 5 CPU backup and reset

from the CPU is sent to the display unit, and data is displayed on the LCD by the LCD driver.

Q110 and Q111 are switching transistors that turn the CPU output on and off.

IC104 and IC105 are used as IC106 expansion ports.

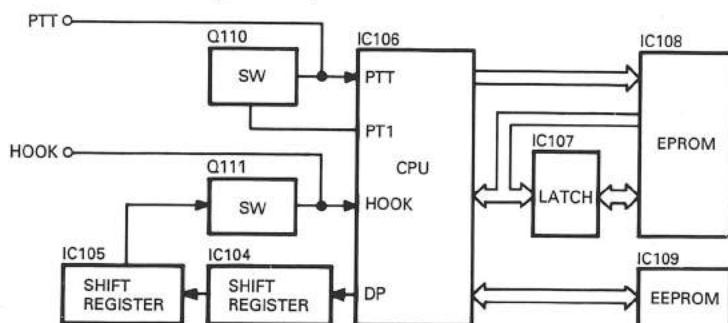

Fig. 6 Peripheral circuit of the CPU

### 6-3. Transceiver power supply relay (K502: AF unit) control circuit

The voltage is always applied from PSB. The voltage is used to protect IC101 (D/FF) by D101. Pulses from which chattering has been eliminated by Q101 are input to the IC101 clock line. These clock pulses reverse the output. The reversed output drives Q104

via Q102. Since Q103 ANDs Q104, relay K502 cannot be activated unless a voltage is applied to IGN.

If zener diode D112 is connected to PSB, and 24V is supplied to the radio by mistake, Q114 turns on, Q104 turns off, and PSC goes high; The power is forced to be turned off.

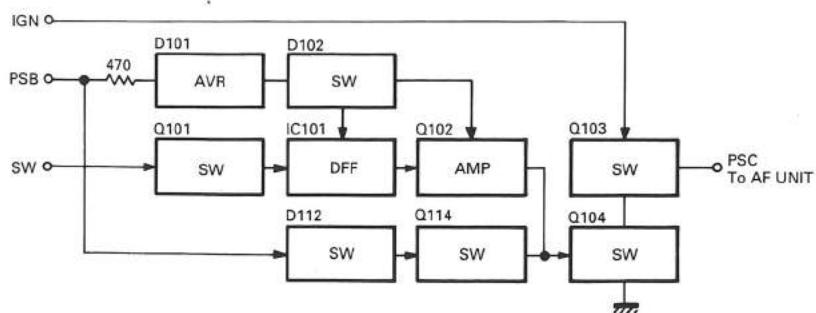

Fig. 7 Transceiver power supply relay control circuit

# TK-630H(B)

## CIRCUIT DESCRIPTION

### 7. Display Unit

The optional display unit (front panel unit) for the TK-630H comes in two models : KCH-3 and KCH-4.

#### 7-1. KCH-3

This display unit consists of a CPU (IC1) containing the LCD driver, a reset AVR (IC2), and other components.

##### • Encoder

Channels are changed by the rotary encoder (ENC). The up/down pulses from the rotary encoder enter the CPU (IC1) by interrupt processing by D5 (diode OR), are converted to a serial data signal, and are sent to the control unit.

##### • Power supply

Power is supplied to the CPU and backlight lamp (D6, LED assembly) by converting SB from the control unit to 5V by IC2. The CPU (IC1) is reset by the reset output from IC2 when the power is switched on.

##### • CPU (containing LCD driver)

The on/off signals of keys other than the power switch, and the PTT and HOOK signals, are converted to serial data and sent to the control unit. Data is displayed on the 13-segment, 2-digit LCD by the built-in LCD driver using the serial data signal from the control unit.

##### • LED (LCD backlight) on/off

When the AUX key is turned on, Q1 turns on, Q2 turns off, and the LED is tuned off by the output from the CPU (IC1). Q1 turns the AUX output on and off if the AUX key is not used to turn the LED on and off.

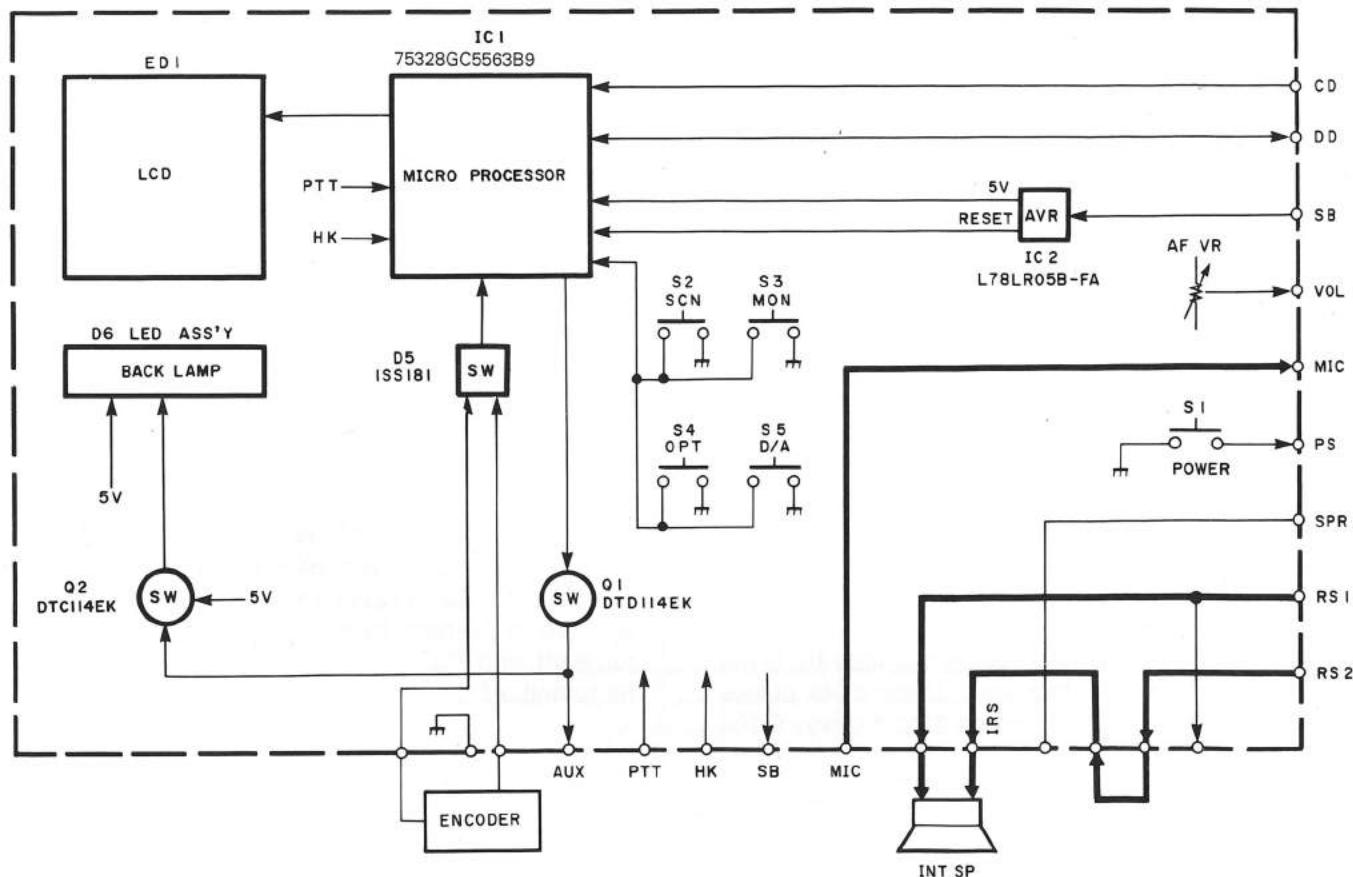

Fig. 8 KCH-3 block diagram

# CIRCUIT DESCRIPTION

## 7-2. KCH-4

This display unit (front panel unit) consists of a CPU (IC1) containing the LCD driver, a reset AVR (IC2), an EEPROM (IC3), an LCD driver (IC4), and other components.

### Encoder

Channels are changed by the rotary encoder (ENC). The up/down pulses from the rotary encoder enter the CPU (IC1) by interrupt processing by D5 (diode OR), are converted to a serial data signal, and are sent to the control unit.

### Power supply

Power is supplied to the CPU (IC1) and backlight lamp (D7, LED assembly) by converting SB from the control unit to 5V by IC2. The CPU (IC1) is reset by the reset output from IC2 when the power is switched on.

### • CPU (containing LCD driver)

The on/off signals of keys other than the power switch, and the PTT and HOOK signals, are converted to serial data signals and sent to the control unit. The display data stored in IC3 is displayed on the 13-segment, 12-digit LCD by the built-in LCD driver using the serial data signal from the control unit.

### • LED (LCD backlight) on/off

When the AUX key is turned on, Q1 turns on ; Q3, which supplies SB to Q2 and D6 of the LED constant-voltage circuit, outputs 0V ; and the LED goes off. Q1 turns the AUX output on and off if the AUX key is not used to turn the LED on and off.

Q111	DTC114EK	HOOK switch	ON when on hook.
Q112	DTC114EK	SQ level shifter	8V → 5V.
Q113	2SC2714(Y)	DC amplifier	
Q114	DTC114EK	DC switch	ON when 24V input → Q104 off.
Q115	DTC114EK	Beep switch	
Q116	DTD114EK	DC switch	ON when AUX key on.

# TK-630H(B)

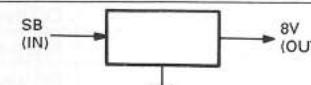

## DESCRIPTION OF COMPONENTS

Ref. No.	Part No.	Use/Function	Operation/Condition
D101	02CZ18(X,Y)	Voltage reference	
D102	1SS181	Reverse current prevention	
D103	1SS184	DC switch	
D104	02CZ5.6(X,Y)	Voltage reference	
D105	1SS184	Reverse current prevention	
D106	1SS184	DC switch	
D107~110	1SS226	Surge absorption	ON when 5V or more and 0V or less.
D111	1SS184	DC switch	
D112	02CZ15(X,Y)	Voltage reference	

### TX-RX UNIT (X57-3960-XX) (B/3) -10 : K -11 : K2 -12 : K3

Ref. No.	Part No.	Use/Function	Operation/Condition
IC301	MC3371D	IF system	1,2 : Oscillator (11.155MHz) 3 : Mixer output 4 : Vcc 5 : Limiter input 6,7 : Decoupling 8 : Quad input 9 : AF output 16 : Input (10.7MHz)
IC302	TC4S66F	MIC signal/TONE signal switch	
IC303	NJM78L05UA	Voltage regulator	
IC304	BU4094BF or XRU4094BF	Shift register	
IC305	NJM4558E	Inverter	
Q301, 302	2SK1577(1)	RX amplifier	
Q303~306	2SK1577(1),(3)	RX 1st mixer	
Q308, 309	2SK1577(1)	NB gate	
Q310	2SC2714(Y)	RX 1st IF amplifier	10.7MHz.
Q311	DTC114EK	MIC mute switch	ON when RX.
Q312	2SK208(Y)	DC amplifier	PLL lock voltage.
Q313	2SC2954	RF amplifier	Common VCO output.
Q314	2SC2954	RF amplifier	TX.
Q315	2SB1119(S)	DC switch	RX : 8V, TX : 0V.
Q316	DTC114EK	DC switch	ON when RX.
Q317	2SB1119(S)	DC switch	RX : 0V, TX : 8V.
Q318	DTC114EK	DC switch	ON when TX.
Q319	DTC114EK	DC switch	Reset (shift register BU4094BF).
Q320	2SK1577(1)	RX 1st IF amplifier	10.7MHz.
D301	1SS226	Protector	
D302~305	1SV228	BPF tuning	Vari-cap tuning.
D306	1SS268	TX/RX switch	Common VCO output.

### AF UNIT (X57-3960-XX) (C/3) -10 : K -11 : K2 -12 : K3

Ref. No.	Part No.	Use/Function	Operation/Condition
IC501	LA4491N	Audio power amplifier	
IC502	$\mu$ PC78M08H	AVR	
Q501	DTD114EK	Speaker switch	ON when PA SP switch on.
D501,502	1SS193	Reverse current prevention	
D503	1SS184	Protector	ON when the power switch off.

# DESCRIPTION OF COMPONENTS

**VCO/PLL UNIT (X58-3850-XX) -10 : K -11 : K2 -12 : K3**

Ref. No.	Part No.	Use/Function	Operation/Condition
IC1	MB1504PF	PLL system	1 : TCXO input 8 : VCO output 15 (P), 16 (R) : Charge pump output 4 : 5V 7 : LD ("H" when lock) 9 (CLK), 10 (DAT), 11 (LE) : PLL data input
Q1	2SC2714(Y)	Buffer amplifier	"H" when lock.
Q2	2SA1162(Y)	Lock detect switch	"H" when lock.
Q3	DTC143EK	Lock detect switch	"H" when lock.
Q4	2SA1312(GR)	Charge pump	D/A converter.
Q5	2SC3324(G)	Charge pump	D/A converter.
Q51	2SK508NV(K52)	OSC	TX-VCO.
Q52	DTC114EK	TX/RX switching	
Q53	2SK508NV(K52)	OSC	RX-VCO.
Q54, 55	DTC114EK	TX/RX switching	
Q56	2SC2714(Y)	Buffer amplifier	
D51	1SV228	Vari-cap diode	Frequency controller (TX VCO).
D52	1SV164	Modulator	
D53	1SV228	Vari-cap diode	Frequency controller (RX VCO).

**DISPLAY UNIT (X54-3100-20) : KCH-3**

Ref. No.	Part No.	Use/Function	Operation/Condition
IC1	75328GC5563B9	CPU, LCD dirver	
IC2	L78LR05B-FA	AVR	
Q1	DTD114EK	LED or AUX switch	ON when AUX key on.
Q2	DTC114EK	DC switch	OFF when AUX key on.
D1~4	1SS226	Surge absorption	ON when 5V or more and 0V or less.
D5	1SS181	Encoder interrupt	
D6	B38-0322-05	LED assy	LCD back light.
ED1	B38-0353-05	LCD	

**DISPLAY UNIT (X54-3110-20) : KCH-4**

Ref. No.	Part No.	Use/Function	Operation/Condition
IC1	75328GC5563B9	CPU	
IC2	L78LR05B-FA	AVR	
IC3	X24C04PI	EEPROM	
IC4	MSM5265GS-V1K	LCD driver	
Q1	DTD114EK	LED or AUX switch	ON when AUX key on.
Q2	2SC2873(Y)	DC switch	
Q3	FMC5	LED switch	OFF when AUX key on.
D1~4	1SS226	Surge absorption	ON when 5V or more and 0V or less.
D5	1SS181	Encoder interrupt.	
D6	02CZ10(X,Y)	Voltage reference	
D7	B38-0352-05	LED assy	LCD back light.
ED1	B38-0354-05	LCD

## PARTS LIST

### CAPACITORS

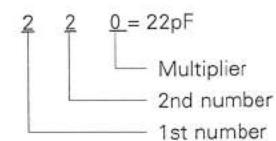

CC 45 TH 1H 220 J  
1 2 3 4 5 6

- 1 = Type ... ceramic, electrolytic, etc.  
2 = Shape ... round, square, ect.  
3 = Temp. coefficient  
4 = Voltage rating  
5 = Value  
6 = Tolerance

#### • Capacitor value

010 = 1pF  
100 = 10pF  
101 = 100pF  
102 = 1000pF = 0.001μF  
103 = 0.01μF

#### • Temperature coefficient

1st Word	C	L	P	R	S	T	U
Color*	Black	Red	Orange	Yellow	Green	Blue	Violet
ppm/°C	0	-80	-150	-220	-330	-470	-750

2nd Word	G	H	J	K	L
ppm/°C	±30	±60	±120	±250	±500

Example : CC45TH = -470 ± 60 ppm/°C

#### • Tolerance

Code	C	D	G	J	K	M	X	Z	P	No code	
(%)	±0.25	±0.5	±2	±5	±10	±20	+40	+80	+100	More than 10μF	-10 ~ +50

Less than 10pF

Code	B	C	D	F	G
(pF)	±0.1	±0.25	±0.5	±1	±2

#### • Voltage rating

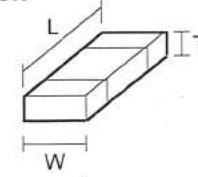

2nd word	A	B	C	D	E	F	G	H	J	K	V
1st word											
0	1.0	1.25	1.6	2.0	2.5	3.15	4.0	5.0	6.3	8.0	-
1	10	12.5	16	20	25	31.5	40	50	63	80	35
2	100	125	160	200	250	315	400	500	630	800	-
3	1000	1250	1600	2000	2500	3150	4000	5000	6300	8000	-

#### • Chip capacitors (Refer to the table above except dimension)

(EX) CC 73 E SL 1H 000 J  
1 2 3 4 5 6 7

(Chip) (CH, RH, UJ, SL)

#### Dimension

(EX) CK 73 E F 1H 000 Z  
1 2 3 4 5 6 7

(Chip) (B, F)

### RESISTORS

#### • Chip resistor (Carbon)

(EX) RD 73 E B 2B 000 J  
1 2 3 4 5 6 7

(Chip) (B, F)

#### • Carbon resistor (Normal type)

(EX) RD 14 B B 2C 000 J  
1 2 3 4 5 6 7

- 1 = Type ... ceramic, electrolytic, etc.  
2 = Shape ... round, square, ect.  
3 = Dimension  
4 = Temp. coefficient  
5 = Voltage rating  
6 = Value  
7 = Tolerance

#### • Dimension (Chip capacitor)

Dimension code	L	W	T
Empty	5.6 ± 0.5	5.0 ± 0.5	Less than 2.0
E	3.2 ± 0.2	1.6 ± 0.2	Less than 1.25
F	2.0 ± 0.3	1.25 ± 0.2	Less than 1.25

#### • Dimension (Chip resistor)

Dimension code	L	W	T	Wattage
E	3.2 ± 0.2	1.6 ± 0.2	0.57	2B
F	2.0 ± 0.3	1.25 ± 0.2	0.45	2A

#### Rating wattage

Code	Wattage	Code	Wattage	Code	Wattage
2A	1/10W	2E	1/4W	3A	1W
2B	1/8W	2H	1/2W	3D	2W
2C	1/6W

## ADJUSTMENT

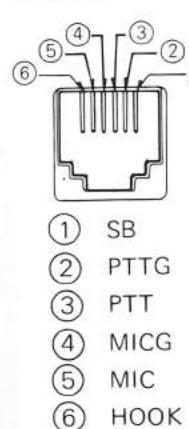

### Test Equipment Required for Alignment

No.	Test Equipment	Major Specifications	
1	Standard Signal Generator (SSG)	Frequency Range Modulation Output	100MHz or more. Frequency modulation and external modulation. 0.1µV to greater than 1mV.
2	Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω. 100MHz or more. Vicinity of 200W.
3	Deviation Meter	Frequency Range	100MHz or more.
4	Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC. High input impedance for minimum circuit loading.
5	Oscilloscope		DC through 30MHz.
6	High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 100MHz. 0.2ppm or less.
7	Ammeter		30A.
8	AF Volt Meter (AFVTVM)	Frequency Range Voltage Range	50Hz to 10kHz. 3mV to 3V.
9	Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more. 0 to 1V.
10	Distortion Meter	Capability Input Level	3% or less at 1kHz. 50mV to 10Vrms.
11	Voltmeter	Measuring Range Input Impedance	10 to 1.5V DC or less. 50kΩ/V or greater.
12	4Ω Dummy Load		Approx. 4Ω, 30W.
13	Regulated Power Supply		13.4V, approx. 30A (adjustable from 9 to 17 V). Useful if ammeter equipped.
14	Pulse Generator	Output	0.5Vp-p/50Ω or more.

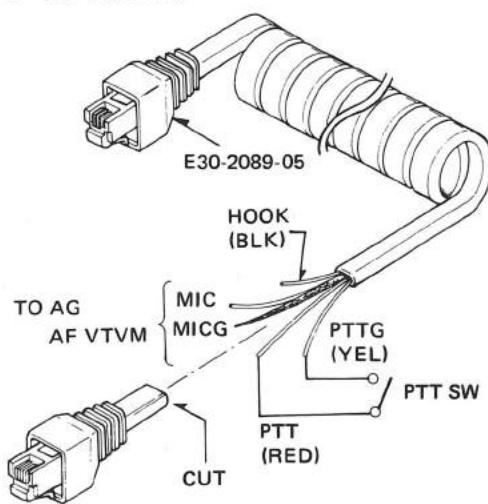

### Caution

Since the RX AF output is a BTL output, there is a DC component. Isolate this with a capacitor or transformer as shown in the figure.

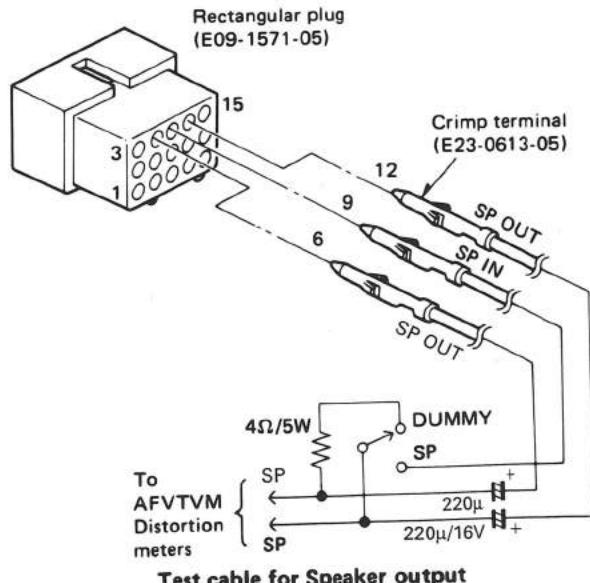

**MIC connector front view**

- The following test cables are recommended.

Test cable for Microphone input

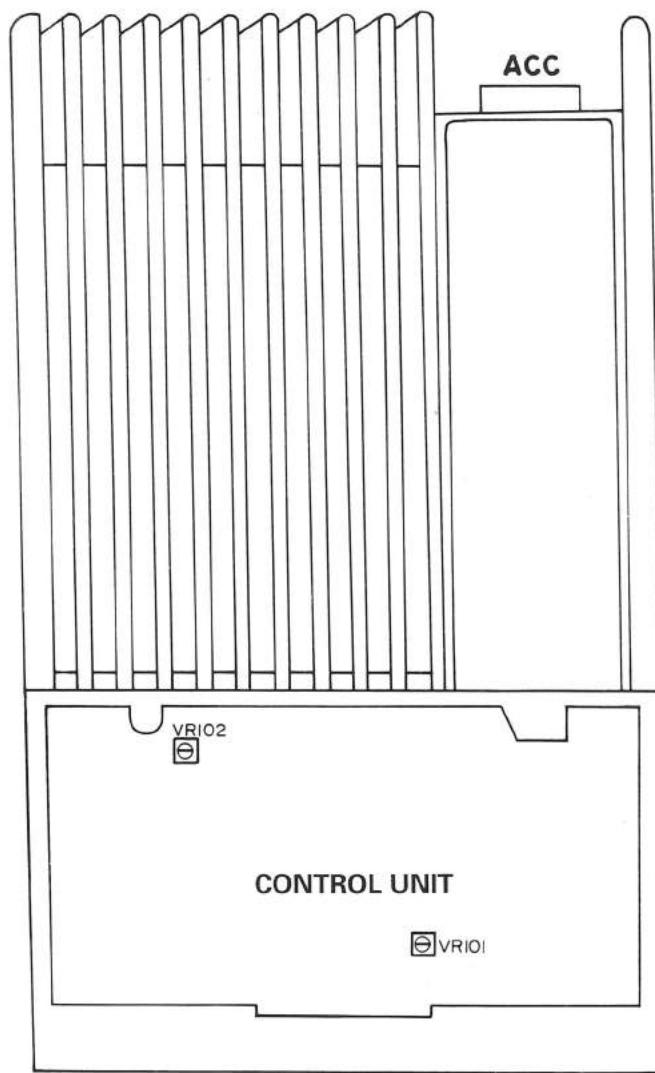

Test cable for Speaker output

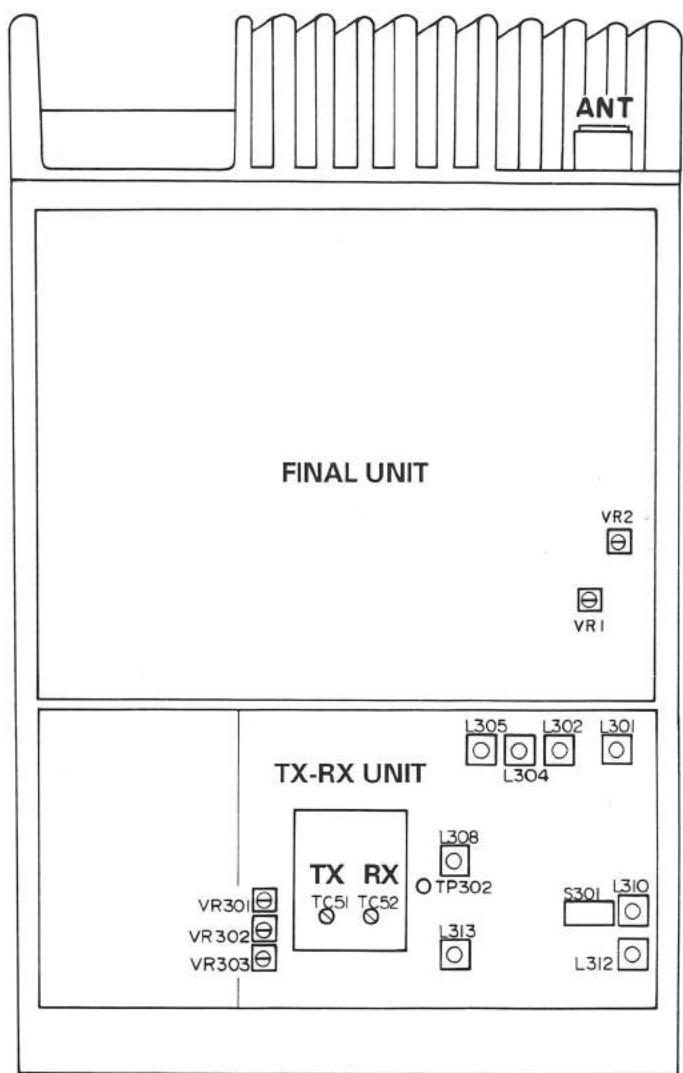

## ADJUSTMENT

## Adjustment Points

- Upper side

- Lower side

## CONTROL UNIT

VR101 : MIC sensitivity  
VR102 : Squelch

## TX-RX UNIT

L301, 302, 304, 305, 308 : BPF  
L308, 310, 312, 313 : Distortion  
VR301 : QT  
VR302 : DQT  
VR303 : Maximum deviation

## VCO/PLL

TC51, 52 : PLL lock voltage

## FINAL UNIT

VR1, 2 : Power (APC)

# TK-630H(B)

## ADJUSTMENT

The set has been adjusted for the frequencies shown in the following table.

When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

### Test mode

		K	K2	K3
CH1	f <sub>TX1</sub> (MHz)	33.300	39.000	45.500
	f <sub>RX1</sub> (MHz)	33.340	39.040	45.540
	TONE	-	-	-
CH2	f <sub>TX2</sub> (MHz)	29.700	35.000	41.000

CH10	f <sub>TX10</sub> (MHz)	31.600	37.500	43.240
	f <sub>RX10</sub> (MHz)	31.600	37.500	43.240
	TONE	DQT 023N	DQT 023N	DQT 023N
CH11	f <sub>TX11</sub> (MHz)	31.600	37.500	43.240
	f <sub>RX11</sub> (MHz)	31.600	37.500	43.240
	TONE	QT 100Hz	QT 100Hz	QT 100Hz
CH12	f <sub>TX12</sub> (MHz)	31.600	37.500	43.240
	f <sub>RX12</sub> (MHz)	31.600	37.500	43.240
	TONE	DQT 444N	DQT 444N	DQT 444N

The set frequency is subject to change without prior notice.

If sensitivity suppression occurs due to internal beat with the operating frequency (30, 36, 42, and 48MHz), remove R150 ( $0\Omega$ ) in the control unit (X57-3960-XX A/3).

### Alignment

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. Setting	1) Connect the front panel (KCH-4) to the TK-630H(B). 2) Front panel VR : MIN 3) Write in frequency designed with EEPROM writer. 4) Connect the power cable to the rear panel. 5) TX-RX unit VR301 and VR303 : Center 6) Final unit VR1 and VR2 : CW 7) Power SW : ON

## TERMINAL FUNCTIONS

Connector No.	Terminal No.	Terminal Name	I/O	Terminal Function
<b>FINAL UNIT (X45-3440-XX)</b>				
CN1 To TX-RX unit	1	RA	O	Receiver signal output, coaxial connector.
CN2 To TX-RX unit	1	DO	I	Transmission signal input, coaxial connector. (200mV)
CN3	1	B	I	Power supply input. (13.4V±15%)
CN4	1	E	-	Earth.
W1 To AF unit	1	E	-	Earth.
2	B	O	Power supply output. (13.4V±15%)	
3	B	O	Power supply output. (13.4V±15%)	
W2 To TX-RX unit	1	DB	O	Transmission drive control voltage output. (APC)
2	E	-	Earth.	
3	8R	I	8V input during reception.	
4	8T	I	8V input during transmission.	
<b>CONTROL UNIT (X57-3960-XX) (A/3)</b>				
CN101 To AF unit	1	8C	I	Common 8V. (8V±5%)
2	SB	I	Power input after power switch. (13.4V±15%)	
3	SB	I	Power input after power switch. (13.4V±15%)	
4	SB	I	Power input after power switch. (13.4V±15%)	
5	PSB	I	Power input. (unswitched)	
6	PSC	O	Controls power switch relay. (Power SW ON : "L", OFF : "H")	
7	AFO	O	Audio output.	
8	SSC	O	Controls SPEAKER select relay.	
9	E	-	Earth.	
10	E	-	Earth.	
11	RS1	I	Input for remote speaker 1. (BTL 4W)	
12	CSP	I	Input for common speaker. (BTL 13W)	
13	CSP	I	Input for common speaker. (BTL 13W)	
14	ES1	I	Input for external speaker A. (BTL 13W)	
15	ES1	I	Input for external speaker A. (BTL 13W)	
16	OS1	I	Input for external speaker B. (BTL 13W)	
17	OS1	I	Input for external speaker B. (BTL 13W)	
CN102 To TX-RX unit	1	DP	O	DATA output for PLL.
2	EP	O	ENABLE output for PLL.	
3	CP	O	CLOCK output for PLL.	
4	LD	I	LOCK detect input for PLL. "H" : LOCK, "L" : UNLOCK	
5	TO	O	TONE signal output.	
6	ES	O	ENABLE output for shift register.	
7	MO	O	Modulation signal output.	
8	8C	O	Common 8V. (8V±5%)	
9	E	-	Earth.	
10	8C	O	Common 8V. (8V±5%)	
11	DET	I	Detection signal input.	
12	NC	-	Not use.	
13	NC	-	Not use.	
CN103 To control cable	1	E	-	Earth.
2	DP	O	DATA output for PLL.	
3	CP	O	CLOCK output for PLL.	
4	EI	O	ENABLE interface output.	
5	DD2	I/O	DATA input/output for HEAD 2.	
6	CD2	O	CLOCK output for HEAD 2.	
7	TXD	O	TX DATA output for HEAD 1.	
8	RXD	I	RX DATA input for HEAD 2.	

Connector No.	Terminal No.	Terminal Name	I/O	Terminal Function
	9	BZ2	O	Beep output for HEAD 2.
	10	5C	O	Common 5V. (5V±5%)
	11	DE3	O	Detection signal output for HEAD 2.
CN104 To ACC connector	1	MIC	I/O	MIC signal input/output.
	2	ME	-	MIC earth.
	3	DEO	O	Detection signal output.
	4	E	-	Earth.
	5	HN1	O	Horn alert signal output.
	6	HN2	O	Horn alert signal output.
	7	IGN	I	Ignition input.
	8	OS1	O	Input for external speaker B. (BTL 13W)
CN105 To ACC connector	1	PTT	I/O	PTT signal input/output.
	2	HK	I/O	MIC HOOK signal input/output.
	3	RS2	I	Output for remote speaker. (BTL 4W)
	4	ES1	O	Output for external speaker A. (BTL 13W)
	5	SB	O	Power output after power switch. (13.4V/1A)
	6	ES2	O	Output for external speaker A. (BTL 13W)
	7	OS2	O	Output for external speaker B. (BTL 13W)
CN106 To signaling (option)	1	AC2	I	Audio control signal input by the signaling (option).
	2	PTT	I/O	PTT signal input/output for signaling (option).
	3	DEO	O	Detection signal output.
	4	E	-	Earth.
	5	RST	O	RESET signal output for signaling (option).
	6	RLC	O	Controls Horn alert relay. ("L" : Horn alert switch ON)
	7	ALT	I	ALERT signal input for signaling (option).
	8	HN1	I	Horn alert signal input.
	9	HN2	I	Horn alert signal input.
CN107 To signaling (option)	1	MCM	I/O	MIC MUTE signal input/output.
	2	DTM	I	DTMF (option) signal input.
	3	MCO	I	MIC signal input.
	4	8C	O	Common 8V. (8V±5%)
	5	DBD	I	DEAD BEAT DISABLE input.
	6	DT3	O	Five-tone data rewrite output.
	7	CK3	O	Five-tone data rewrite output.
CN108 To voice scramble	1	MIC	O	MIC signal output.
	2	MCO	I	MIC signal input.
	3	8C	O	Common 8V. (8V±5%)
	4	E	-	Earth.
	5	AC1	O	Audio control signal output.
	6	PTT	I/O	PTT signal input/output.
	7	DEO	O	Detection signal output.
	8	DE2	I	Detection signal input.
	9	0	O	SCRAMBLE code output.
	10	2	O	SCRAMBLE code output.
	11	4	O	SCRAMBLE code output.
	12	8	O	SCRAMBLE code output.
W105 To remote head	1	RS2	O	Output for remote speaker. (BTL 4W)
	2	RS1	O	Output for remote speaker 1. (BTL 4W)
	3	SB	O	Power output after power switch. (13.4V±15%)
	4	SPR	I	SPARE reserved input terminal.
	5	PS	I	Power switch control signal input.
	6	CD	O	CLOCK output to the display unit (option).
	7	DD	I/O	DATA signal input/output for display unit (option).
	8	VOL	I	Electronic volume control signal input.
	9	E	-	Earth.

### 1. Functions of Pins Used During System Set-up

#### 1-1. 15-pin ACC terminal

1 pin : HK (MIC Hook Signal Input/Output)

This normally functions the same as for the transceiver MIC HOOK (microphone). High (5V) : Offhook; Low : Onhook.

Since the MIC HOOK can be controlled by using this pin as an input pin, the hook operation need not be performed from the microphone. Set this pin to low to automatically perform the onhook operation.

2 pin : ME (MIC Earth)

Use this MIC earth pin if the ACC terminal MIC is used.

3 pin : IGN (Ignition Input)

If you use this pin, see the KCT-18 section (page 19) of this service manual.

4 pin : DEO (Detect Signal Output)

The transceiver detection output (400mV/47kΩ) is present.

5 pin : MIC (MIC Signal Input/Output)

Same as the transceiver MIC input because this pin is directly connected to the transceiver MIC input.

5mV/3kHz dev. (600Ω) modulation is gained on input.

The input from the transceiver panel is output as it is.

6 pin : ES1 (Output for External Speaker A)

12 pin : ES2 (Output for External Speaker A)

Output for External Speaker (BTL 13W/5%)

7 pin : SB (DC Power Output after Power Switch)

When you modify your radio as described in system set-up, take the following precaution.

The rating of pin 7 (SB) of the accessory connector (J4) on the rear of the radio is 13.4V (1A). Insert a 1A fuse if you use the SB pin for external equipment.

8 pin : PTT (PTT Signal Input/Output)

Normally functions the same as the transceiver PTT (microphone). It is high (5V) when the PTT is off and low when the PTT is on, to control the external PTT. Since the PTT can be controlled by using this terminal as an input pin, the microphone PTT operation is not required. Set this pin to low to perform the PTT operation.

9 pin : RS2 (Output for Remote Speaker)

If the speaker input is not applied to this remote speaker input pin, the front panel speaker is non-functional. (See the KES-4 section (page 20).)

10 pin : HN1 (Horn Alert Signal Output 1)

11 pin : HN2 (Horn Alert Signal Output 2)

Output pin for the horn alert relay when the KCK-5 is connected (rating: 24V DC/1A). See the KCK-5 service manual. (B51-8155-10)

If you do not use the KCK-5, another function could be output to this pin after special modification.

13 pin : OS1 (Output for External Speaker B)

14 pin : OS2 (Output for External Speaker B)

PA speaker output pin (BTL 13W/5%)

15 pin : E (Earth)

Use this pin as the ground pin when external equipment is connected to the ACC terminal.

#### 1-2. Control unit (X57-3960-XX) (A/3)

##### • CN106 to signaling

1 pin : AC2 (Audio Control 2)

External audio control pin for optional signaling. Normally high (5V). When it is switched to low by external control, such as optional signaling, audio muting is canceled and the [CALL] indicator flashes. Note that the audio muting is not canceled unless the SQ on the main unit is also canceled.

2 pin : PTT (PTT Signal Input/Output)

Same as pin 8 of the 15-pin ACC terminal.

3 pin : DEO (Detect Signal Output)

Same as pin 4 of the 15-pin ACC terminal.

4 pin : E (Earth)

# TK-630H(B)

## TERMINAL FUNCTIONS

### 5 pin : RST (Reset)

Reset pin for optional signaling.

Normally high. A reset pulse is output in synchronization with the PTT, HOOK, MON SW, and channel encoder operation.

### 6 pin : RLC (Relay Control)

Relay control pin for horn alert (KCK-5).

Normally high. It switches to low when the horn alert is turned on by selecting the HA switch.

### 7 pin : ALT (Alert)

Normally unused. An alert signal for optional custom signaling can be input to this pin.

### 8 pin : HN1 (Horn Alert Signal Input)

### 9 pin : HN2 (Horn Alert Signal Input)

Output pin for horn alert relay when the KCK-5 is connected.

### • CN107 to signaling

#### 1 pin : MCM (MIC Mute Signal Input/Output)

MIC mute signal pin. High : MIC mute; Low : Unmute.

#### 2 pin : DTM (DTMF Signal Input)

DTMF external modulation input pin.

380mV/1kHz dev.

1.2V/3kHz dev.

#### 3 pin : MCO (MIC Signal Input/Output)

Normally functions the same as pin 5 of the 15-pin ACC terminal. If the transceiver is modified to connect a scramble unit, scrambled MIC modulation is output.

#### 4 pin : 8C (Common 8V)

8V AVR output pin ( $8V \pm 10\%$ ).

#### 5 pin : DBD (Dead Beat Disable)

Transmit inhibit signal input pin.

Normally high (5V). When it switches to low, transmission is inhibited. When the optional KDD-4 is connected, the DBD operation is available.

#### 6 pin : DT3 (DATA 3)

#### 7 pin : CK3 (CLOCK 3)

Unused pin; Do not connect anything to this pin. Otherwise, the radio may malfunction.

### • CN108 to voice scramble

#### 1 pin : MIO (MIC Signal Output)

#### 2 pin : MIO (MIC Signal Input)

Modulation input/output pin when the scrambler is connected.

Normally, functions the same as pin 5 of the 15-pin ACC terminal.

#### 3 pin : 8C (Common 8V)

8V AVR output ( $8V \pm 10\%$ ).

#### 4 pin : E (Earth)

#### 5 pin : AC1 (Audio Control 1)

Audio control signal output pin.

It is low for on and high for off when the OPT function switch is selected.

#### 6 pin : PTT (PTT Signal Input/Output)

Same as pin 8 of the 15-pin ACC terminal.

#### 7 pin : DE0 (Detect Signal Output)

Same as pin 4 of the 15-pin ACC terminal.

#### 8 pin : DE2 (Detect Signal Input)

AF BPF input pin

} AF signal  
input/output  
pins when  
scrambler is  
connected

#### 9 pin : 0

#### 10 pin : 2

#### 11 pin : 4

#### 12 pin : 8

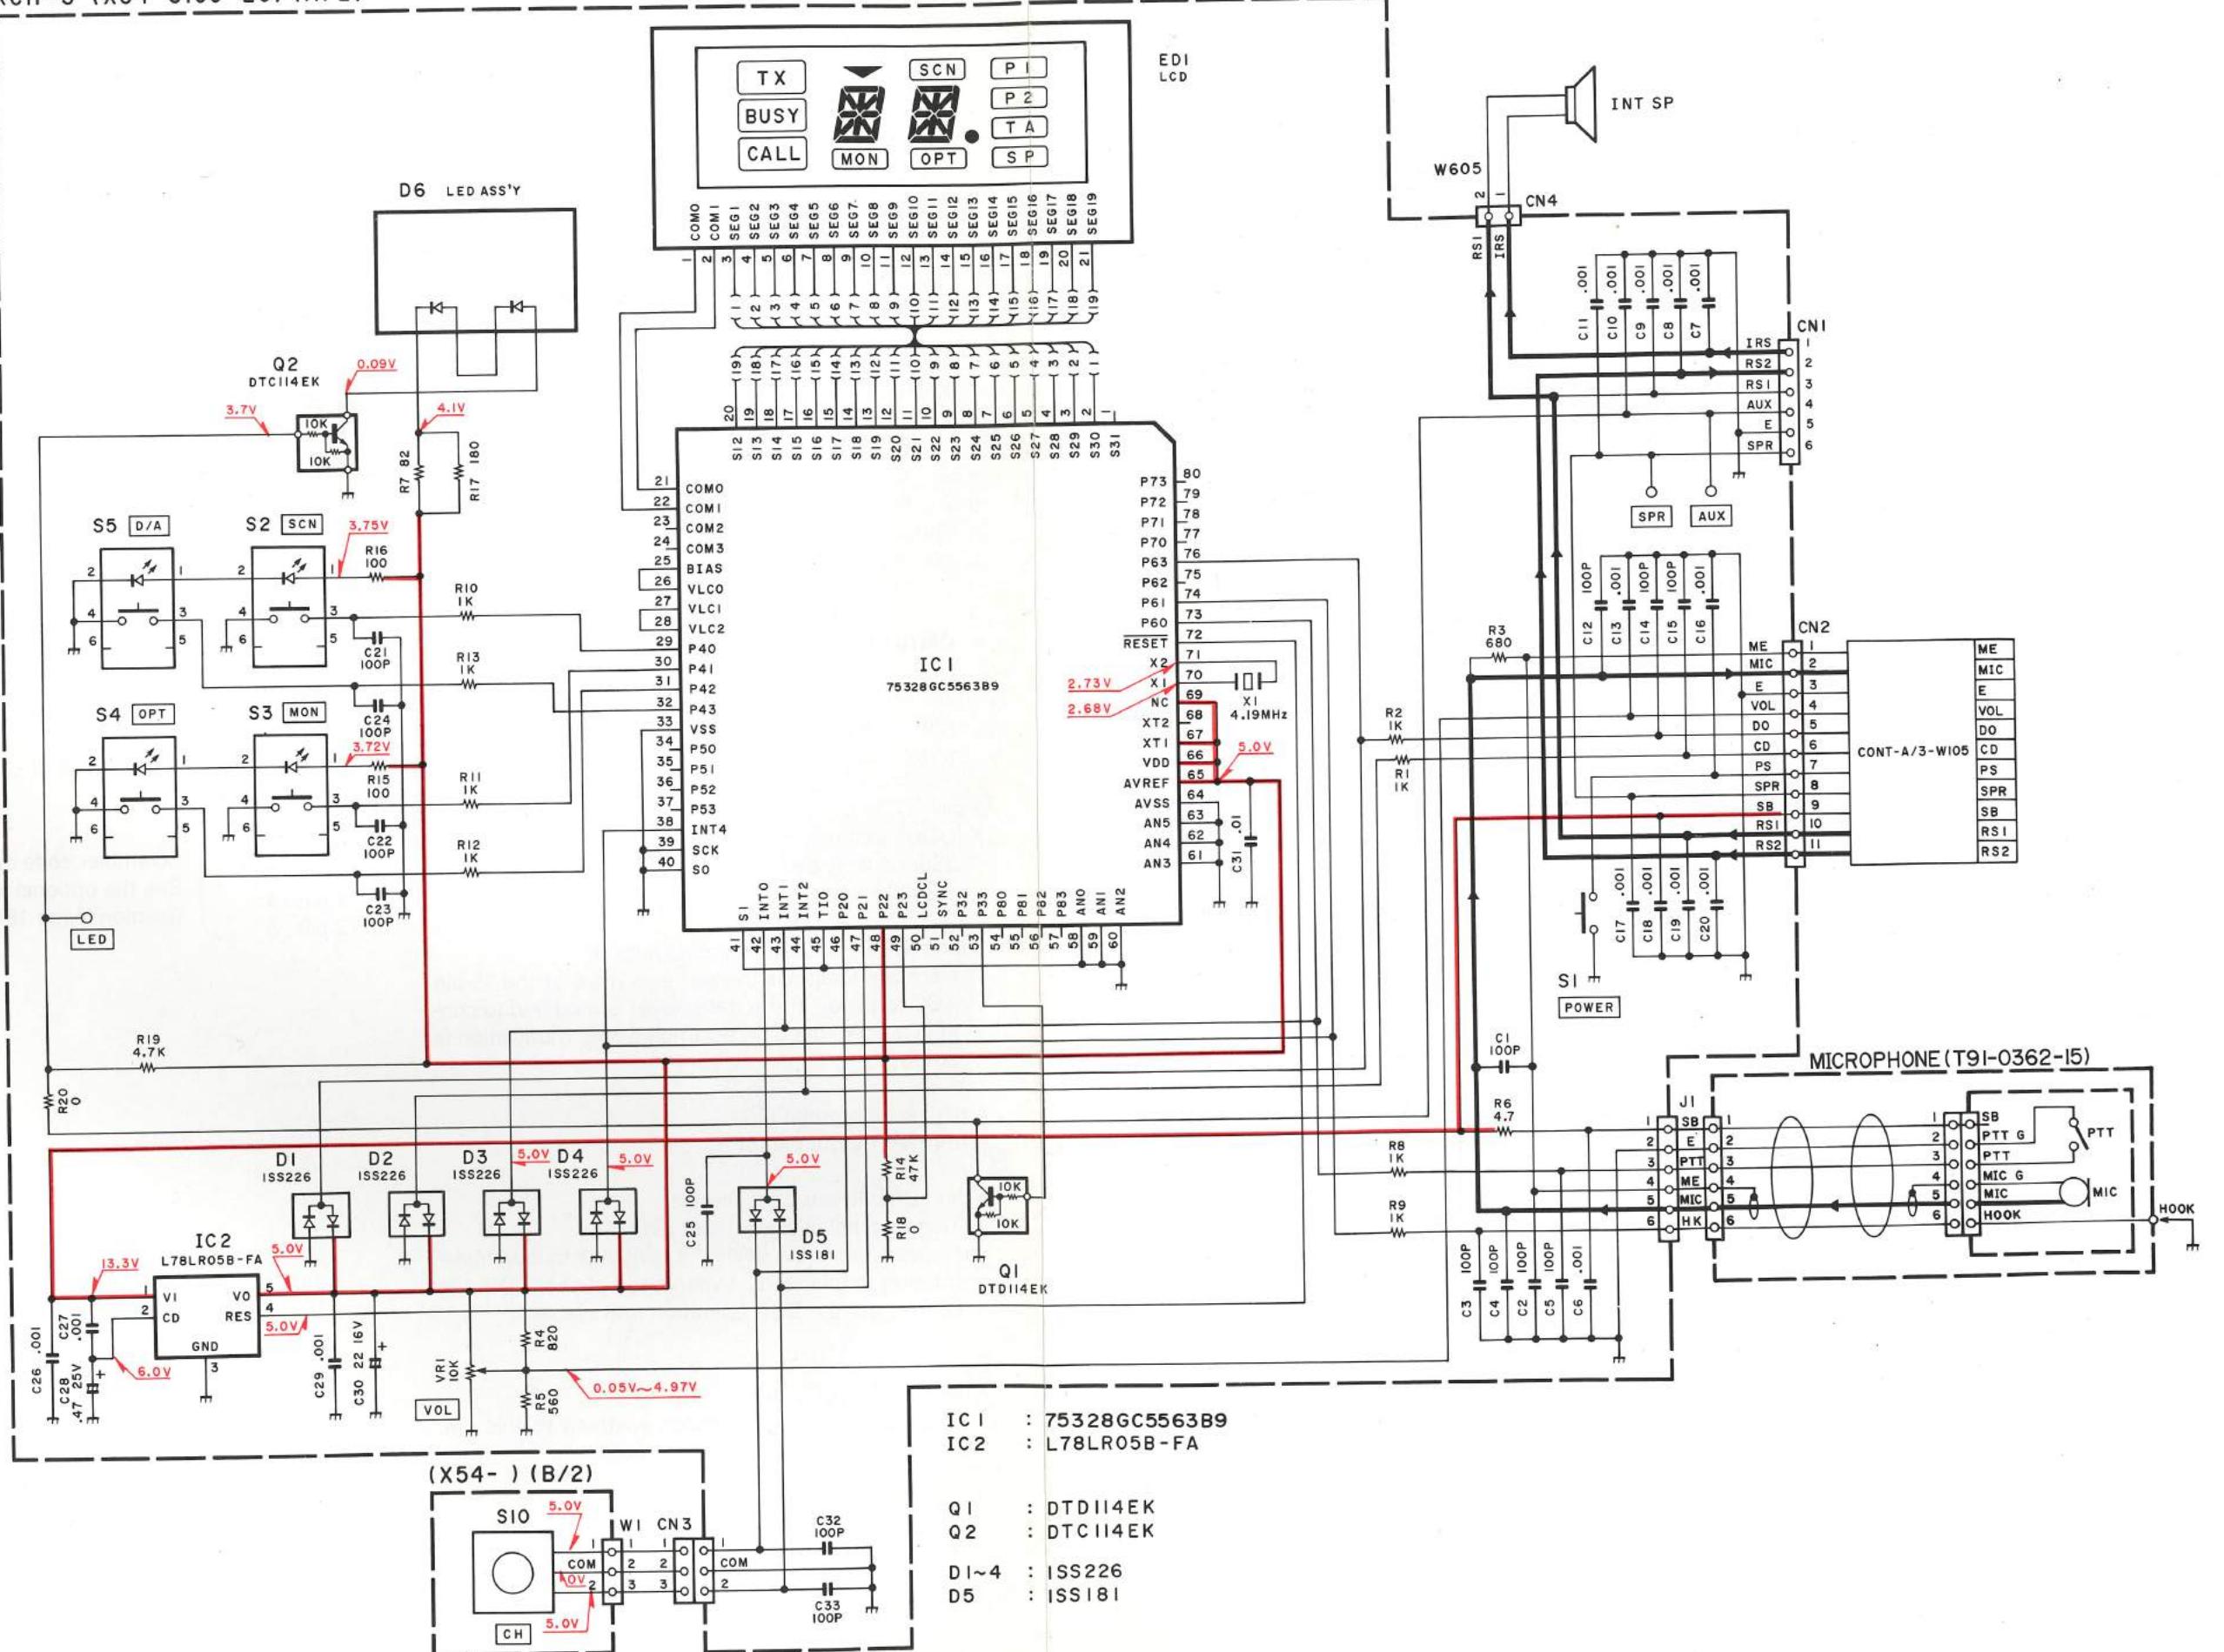

} Scrambler code output.

} See the optional (scrambler) function (page 18).

# SPECIFICATIONS

## GENERAL

Frequency Range .....	29.7 to 50MHz
Number of Channel .....	32 semi-duplex channels (KCH-3 basic front panel model modifiable to 99 channels with KCH-5, KCH-4 full featured front panel model modifiable to 160 channels with KCH-5)
Channel Spacing .....	20kHz (PLL channel step 5kHz)
Input Voltage .....	13.4V DC negative ground
Current Drain .....	0.6A on standby 2.2A on receive (at 13W) 25A on transmit
Duty Cycle .....	Transmitter 20%
Temperature Range .....	-30°C to +60°C (-22°F to +140°F)
Dimensions & weight .....	7.05" (179mm) W x 2.36" (60mm) H x 12.97" (329.5mm) D, 8.38lbs (3.8kg) : with KCH-3 or KCH-4

## RECEIVER (Measurements made per EIA standard EIA-204-D)

RF Input Impedance .....	50Ω
Sensitivity (EIA 12dB SINAD) .....	0.25µV
Modulation Acceptance .....	±7kHz
Selectivity .....	-85dB
Intermodulation .....	-80dB
Spurious and Image Rejection .....	-85dB
Audio Power Output .....	13W at 4Ω less than 5% distortion
Frequency stability .....	±0.0005% from -30°C to +60°C
Channel Frequency Spread .....	7.3MHz (29.7 to 37.0MHz) 8.0MHz (35.0 to 43.0MHz) 9.0MHz (41.0 to 50.0MHz)

## TRANSMITTER (Measurements made per EIA standard EIA-152-C)

RF Power Output .....	110W adjustable to 45W
RF Output Impedance .....	50Ω
Spurious and Harmonics .....	-80dB
Modulation .....	F3E, F1D, F2D
FM Noise .....	-55dB
Microphone Impedance .....	Low impedance
Audio Distortion .....	Less than 2% at 1000Hz
Frequency Stability .....	±0.0005% from -30°C to +60°C
Channel Frequency Spread .....	7.3MHz (29.7 to 37.0MHz) 8.0MHz (35.0 to 43.0MHz) 9.0MHz (41.0 to 50.0MHz)
