<b>Supply Voltage</b>	: $\pm 15V$ dc $\pm 10\%$
<b>Maximum Ripple Voltage</b>	: 0.1 V pp
<b>Current Consumption, steady state</b>	: approx. 100mA
<b>Current Consumption, during heat-up</b>	: approx. 275mA in 45 seconds
<b>Temperature Range</b>	: -20 to +60°C (-4 to +140°F)
<b>Frequency Range (0.5dB points)</b>	: 20 c/s to 20,000 c/s
<b>Input Filter</b>	: see fig. 4
<b>Input Impedance within freq. range</b>	: see Input Terminations fig. 1
<b>Output Impedance within freq. range</b>	: see Output Terminations fig. 2
<b>Minimum Load Impedance</b>	: 100 ohms
<b>Basic Amplification</b>	: see fig. 3 Characteristics
<b>Compression Range</b>	: see fig. 3 Characteristics
<b>Compression Ratio</b>	: adjustable 1:1 2:1 3:1 5:1 20:1
<b>Attack Time</b>	: adjustable 100 microseconds 20dB to 200 milliseconds 20dB (11 steps)
<b>Recovery Time</b>	: adjustable 60 milliseconds 20dB to 4 seconds 20dB and one "Auto" position
<b>"Auto" dual time constants</b>	: 200 msec. upon 15 seconds (11 steps)
<b>Recovery Delay</b>	: switchable 0 or 50 milliseconds
<b>Distortion under static conditions</b>	: less than 0.5% up to 20dB gain reduction
<b>Signal to noise ratio at compression threshold</b>	: 80 dB A-curve
<b>Instrument Output</b>	: 0 to 1 mA for 0 to 20dB compression Linear dB scale
<b>Limiter Function</b>	
<b>Attack Time</b>	: 1.5 millisecond combined with a full-wave logarithmic clipping circuit
<b>Recovery Time</b>	: following the recovery time set for the compressor
<b>Limitation Threshold "Normal"</b> Note 1	: +6 dBu output with any of the three output-terminations shown in fig. 2
<b>Limitation Threshold "High"</b> Note 1	: +19 dBu output when using the 0.7 : 1 output transformer : +16 dBu output when using the direct output or the 1:1 output transformer
<b>Stereo Operation</b>	

The control voltages of two units may be linked so as to obtain equal gain reduction in the two stereo channels. The control voltage is accessible at the connector.

Connector : Tuchel T2700 Standard Colour : Dull Black

Mechanical Outline : A1-module

Front 40x190mm (1.58x7.5")

Depth 105 mm (4.1")

Weight : approx. 1 Kg

(approx. 35 oz.)

**Note 1:** The limitation level stated above applies to steady state conditions. Peaks shorter than 1.5ms will be limited at a level max. 3dB above steady state conditions.

Denne tegning gælder for følgende SN.  
leveret til Kajaani og DR.  
7380-7414, 7477-7480, 7848-7870, 8101-8105.

Normally the Compressor Amplifier will stay correctly adjusted, except when a component has failed and has been replaced; then it may be necessary to make certain adjustments. Before attempting to make any adjustments, note the permissible indication errors stated in Technical Specifications.

The functions of the trimpotentiometers are as follows:

- P1 Bias adjustment of Op. amp A1
- P2 Compensates for individual pinch-off of the F.E.T. (Q1)
- P3 Compensates for individual slope  $\frac{\Delta R_{SD}}{\Delta V_{GD}}$  of the F.E.T.
- P4 Linearity adjustment of the FET Attenuator circuit.
- P5 Adjusts for minimum distortion of the FET attenuator.
- P6 Adjusts the threshold level.

Do not attempt to make any adjustments until the current consumption has fallen to a steady level approx. 100 mA after 60 sec. Correct sequence of adjustments is as follows:

a. Bias adjustment of P1

Conditions: No input signal.  
Recovery switch in pos. 0.06 sec.

Connect a DC voltmeter (or DC-oscilloscope sens. approx. 20mV/div.) between TP7 and TP1.  
P1 is adjusted until the voltage measured is the same whether TP2 is connected to TP9 or not.

b. Pinch-off adjustment of P2

Conditions: Input signal +6dBu 1kHz  
Ratio switch in pos. 1:1  
Lim. level switch in pos. "high"

P2 is adjusted until the output voltage is +6dBu (0dB amplification).

The adjustment range can be altered by connecting or disconnecting R15 and/or R16.

c. Slope dB/V and Linearity adjustment of P3 and P4

Conditions: Like referred under pos. b.

A floating external DC-source 0-6 V is connected between term. 3 and 5, term. 3 positive. The DC voltage is set to 3.0 Volt, and P3 is adjusted so that the output level is -9dBu (15 dB attenuation). Now the DC voltage is set to

6.0 Volt, and P4 is adjusted until the output level is -24 dBu (30 dB attenuation). Because of mutual dependence between P3 and P4 the adjustments are repeated until correct output level is obtained.

d. Threshold level adjustment of P6

Conditions: Input signal +6 dBu 1kHz  
Ratio switch in pos. 20:1  
Lim. level switch in pos. "high"  
Compression switch in pos. 15 dB

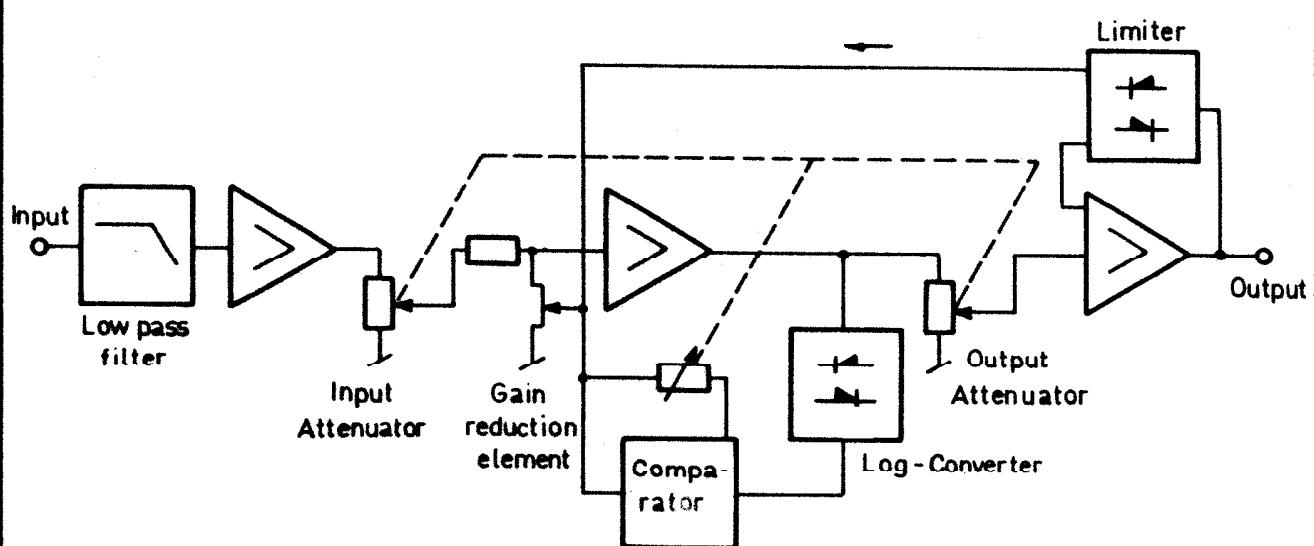

P6 is adjusted to an output level of +6 dBu

e. Distortion adjustment of P5

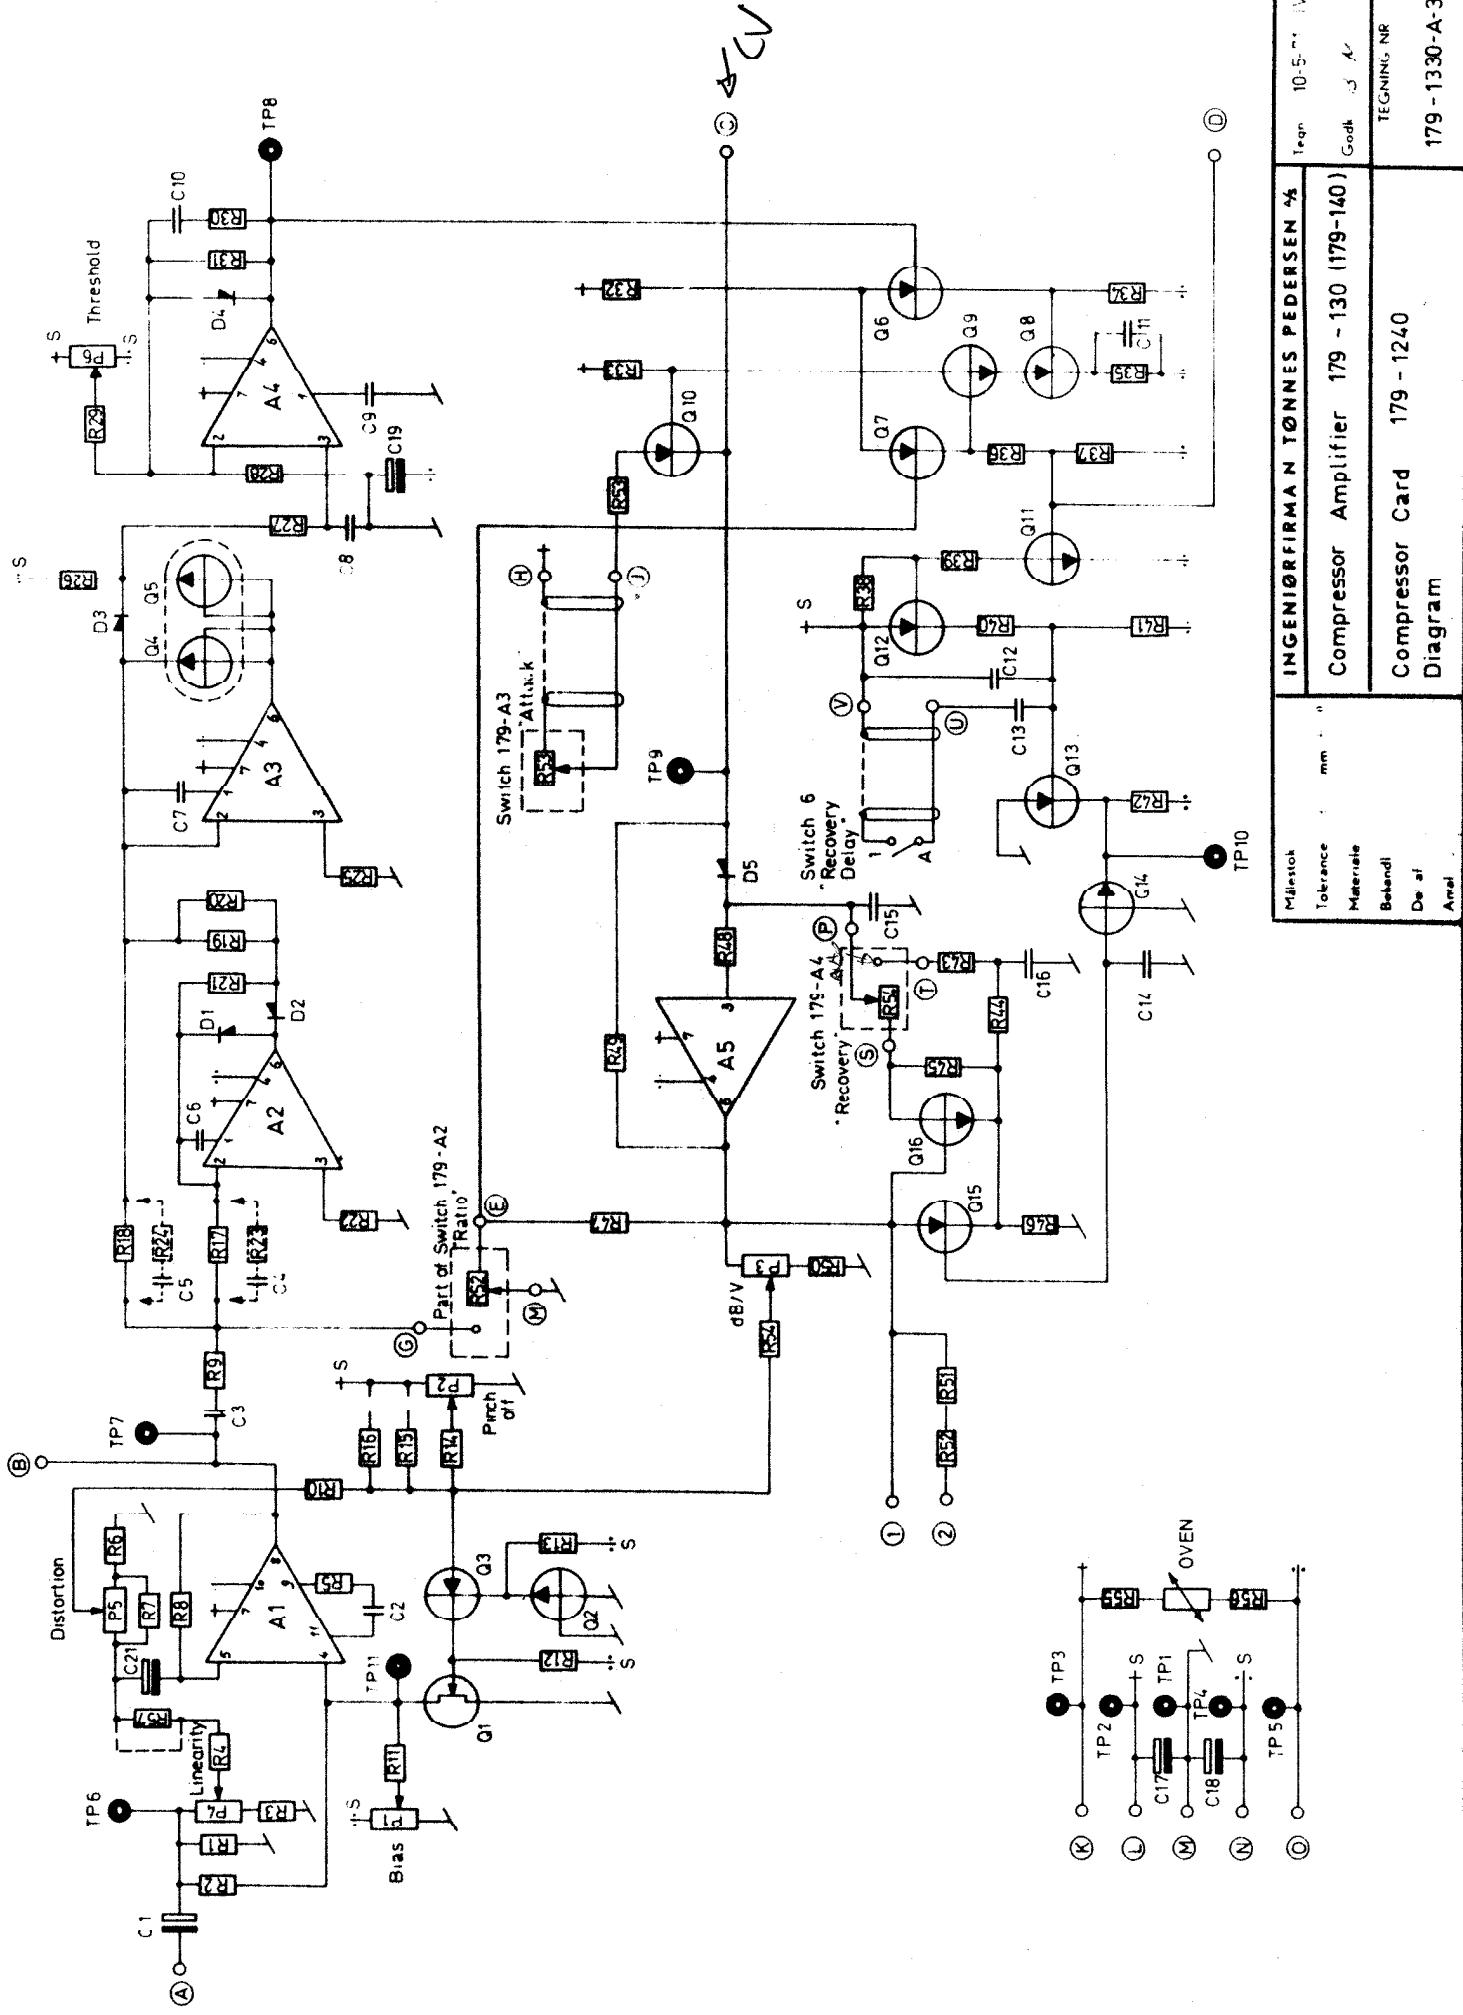

Conditions: Ratio switch in pos. 2:1  
Input level and the other controls are set like under pos. d.

P5 is adjusted to minimum distortion.

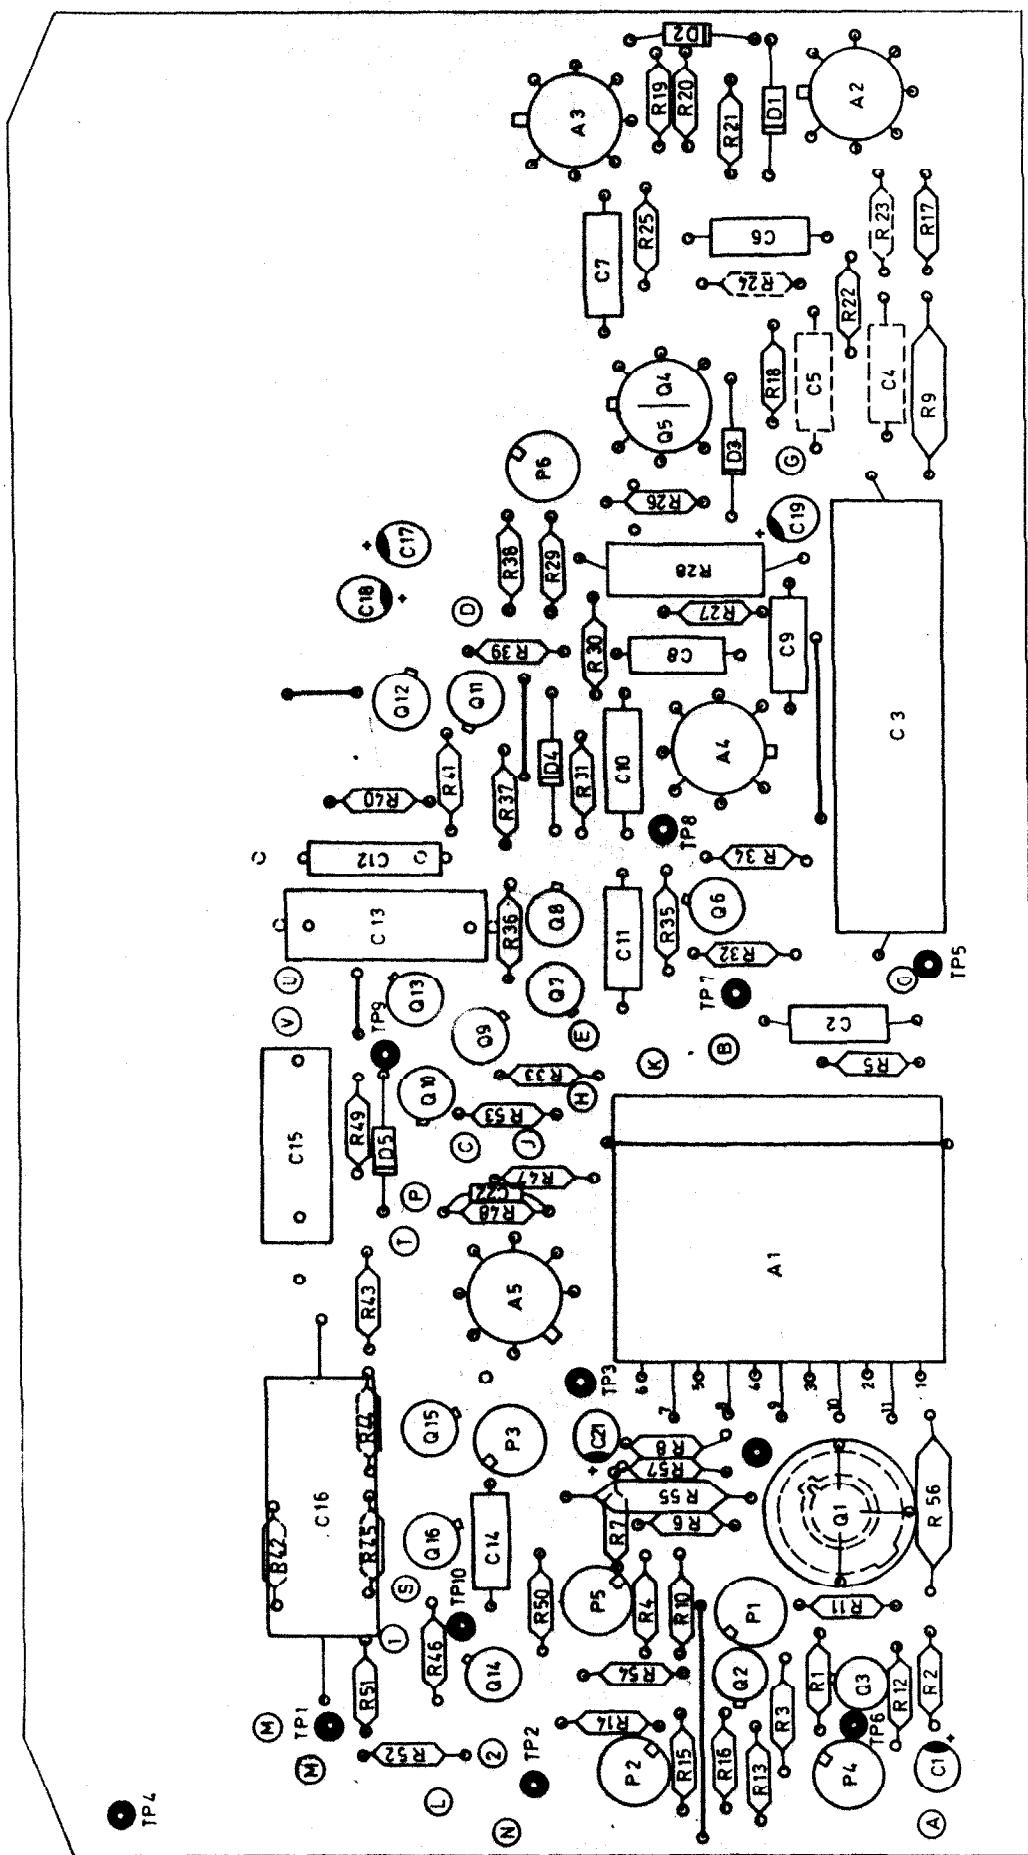

Because of interaction between P5 and P2, the adjustment mentioned under pos. b is carried out once more.
