

Service Manual

DJM-800

ORDER NO.
RRV3340

DJ MIXER

DJM-800 ROTARY VOLUME KIT **DJC-800RV**

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
DJM-800	KUCXJ	AC120V	
DJM-800	WYXJ5	AC220 - 240V	
DJM-800	TLXJ	AC110 - 120V / 220 - 240V	
DJC-800RV	ZXJ/WL5	—	

For details, refer to "Important Check Points for good servicing".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

B Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

C Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

D Measure leakage current to a known earth ground (waterpipe , conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

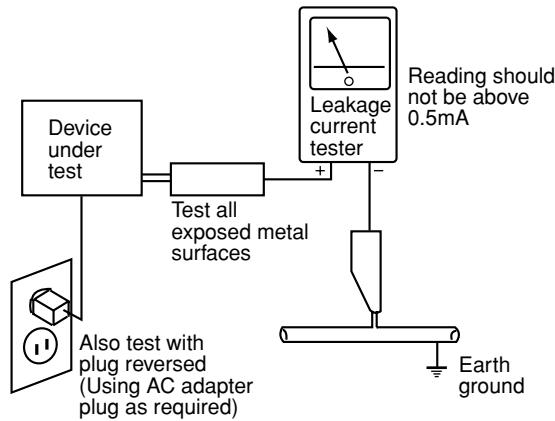

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

AC Leakage Test

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

A NOTES: • Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 • The \triangle mark found on some component parts indicates the importance of the safety factor of the part.
 Therefore, when replacing, be sure to use parts of identical designation.
 • Screws adjacent to ∇ mark on product are used for disassembly.
 • For the applying amount of lubricants or glue, follow the instructions in this manual.
 (In the case of no amount instructions, apply as you think it appropriate.)

This circuit diagram illustrates the signal flow and power supply connections for the REC-D/A converter.

Power Supplies:

- V3R3:** Connected to the **YB** terminal of the **C833** capacitor and the **Q** terminal of the **47/10 JQ** operational amplifier.
- V+5A:** Connected to the **YB** terminal of the **C830** capacitor and the **Q** terminal of the **47/10 JQ** operational amplifier.
- GND:** Ground connection.

DAC (録音用): The **PCM1742-E-TBB** chip (IC803) is configured as a D/A converter. Its pins are connected as follows:

- SCK:** Connected to pin 16.
- ML:** Connected to pin 15.
- MC:** Connected to pin 14.
- MD:** Connected to pin 13.
- BCK:** Connected to pin 1.
- DATA:** Connected to pin 2.
- LRCK:** Connected to pin 5.
- DGND:** Connected to pin 4.
- VDD:** Connected to pin 6.
- VCC:** Connected to pin 7.
- ZEROL:** Connected to pin 12.
- VCOM:** Connected to pin 10.
- AGND:** Connected to pin 9.
- VOUTL:** Connected to the **YB** terminal of the **C842** capacitor and the **Q** terminal of the **0.01/50 YB** operational amplifier.
- VOUTR:** Connected to the **YB** terminal of the **C843** capacitor and the **Q** terminal of the **220/10 JQ** operational amplifier.

Feedback and Control:

- The **(RECD)** signal is fed back through a **R851** resistor to the **DATA** pin of the **PCM1742**.
- The **(REC)** signal is fed back through a **R899** resistor to the **DATA** pin of the **PCM1742**.
- The **D/A** output is also connected to the **DATA** pin of the **PCM1742**.

NOTE FOR PCB DIAGRAMS :

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

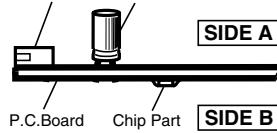

| Symbol In PCB Diagrams | Symbol In Schematic Diagrams | Part Name |
|------------------------|------------------------------|--------------------------|
| | | Transistor |
| | | Transistor with resistor |
| | | Field effect transistor |
| | | Resistor array |
| | | 3-terminal regulator |

3. The parts mounted on this PCB include all necessary parts for several destinations.

For further information for respective destinations, be sure to check with the schematic diagram.

4. View point of PCB diagrams.

5. PCB PARTS LIST

- A NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

| | | | | |
|-------|------------------------|-------|-------|-----------------|
| 560 Ω | → 56 × 10 ¹ | → 561 | | RD1/4PU[5 6 1]J |
| 47k Ω | → 47 × 10 ³ | → 473 | | RD1/4PU[4 7 3]J |
| 0.5 Ω | → R50 | | | RN2H[R 5 0]K |
| 1 Ω | → 1R0 | | | RS1P[1 R 0]K |

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

| | | | | |
|---------|-------------------------|--------|-------|-------------------|
| 5.62k Ω | → 562 × 10 ¹ | → 5621 | | RN1/4PC[5 6 2 1]F |
|---------|-------------------------|--------|-------|-------------------|

6. ADJUSTMENT

- There is no information to be shown in this chapter.

F

7. GENARAL INFORMATION

7.1 DIAGNOSIS

7.1.1 TEST MODE

1. Description of Test Modes

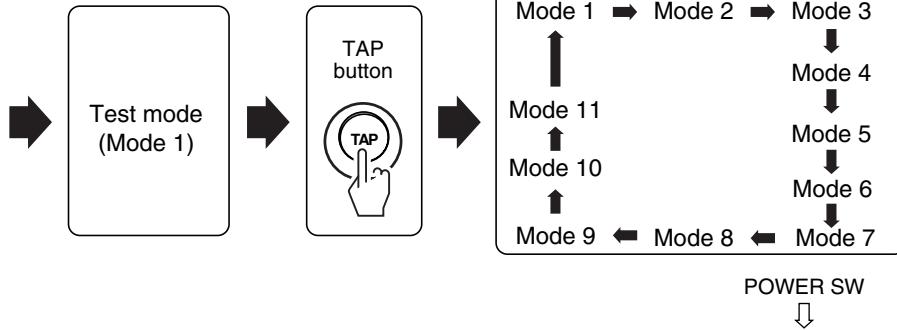

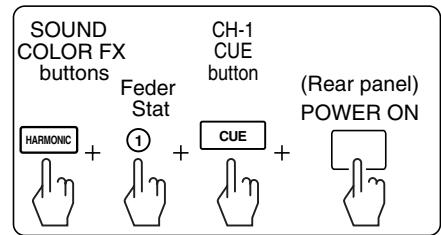

The following eight test modes are provided for this unit:

- ① **mode 1** : For confirmation of the software version
- ② **mode 2** : All LEDs and FL display "OFF" MODE. "ALL CLR"
- ③ **mode 3** : All LEDs and FL display "ON" MODE. "ALL SET"
- ④ **mode 4** : KEY operating TEST. (KEY TEST)
- ⑤ **mode 5** : SELECT SW Operating Test. (SW TEST)
- ⑥ **mode 6** : Volume Test 1. (VOLTEST1)
- ⑦ **mode 7** : Volume Test 2. (VOLTEST2)
- ⑧ **mode 8** : Volume Test 3. (VOLTEST3)
- ⑨ **mode 9** : Volume Test 4. (VOLTEST4)
- ⑩ **mode 8** : Fader Test . (FDRTEST)
- ⑪ **mode 9** : Meter LED Test . (METERTEST)

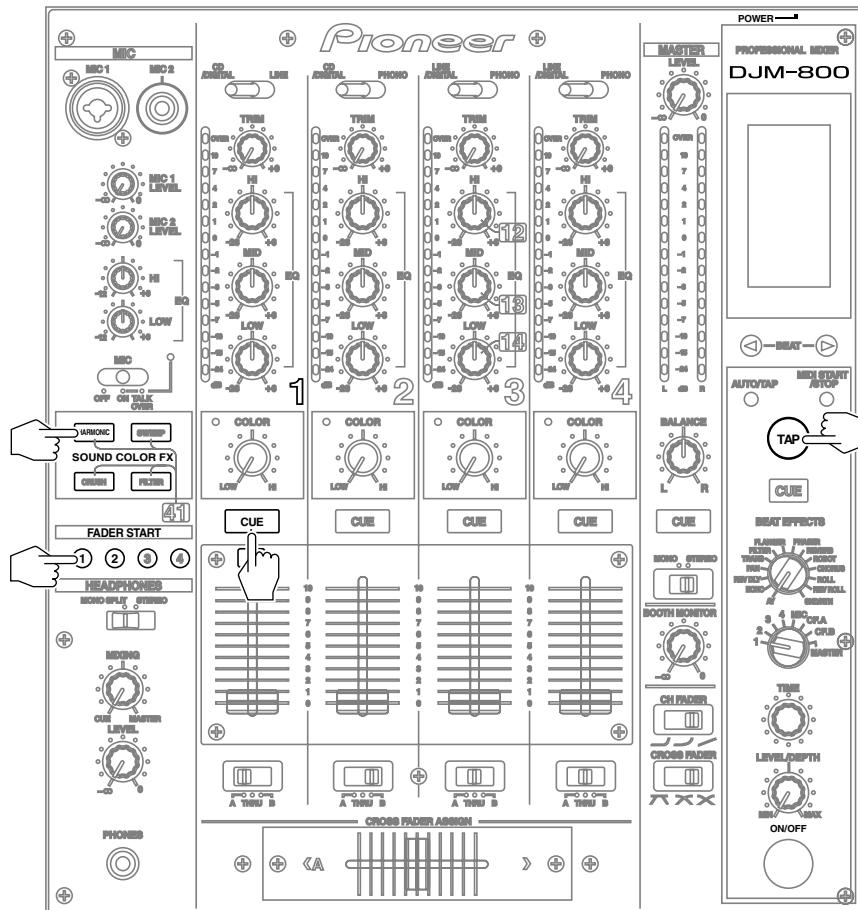

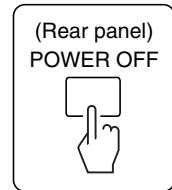

B

2. Test Mode

Test mode : ON

Test mode : CANCEL

How to start the Test Mode.

To enter test mode, turn the Power button while pressing all of the HARMONIC, FADER START CH1, CUE CH1 buttons.

There are 11 modes in this Test Mode.

If the TAP button is pressed, Mode1 ~ 11 can be selected by selector switch.

When set up mode is started, Mode 1 is selected automatically.

Once Test Mode starts, it keeps the test mode until turning the Power off.

Test mode Contents.

① Mode 1 : Confirmation of software version.

Mode that confirms version of microcomputer, DSP (program), DSP (data), and FPGA.

It is displayed a version of firmware by FL display.

For example
 Microcomputer : 1.000
 DSP (program) : 1.000
 DSP (data) : 005
 FPGA : 1.0

M 1.000
 D 1.000
 005
 F 1.0

② Mode 2 : ALL LED & FL display "OFF" MODE. "ALL CLR"

It displays "ALL CLR" on the FL display in the first 2 seconds.

③ Mode 3 : ALL LED & FL display "ON" MODE. "ALL SET"

It displays "ALL SET" on the FL display in the first 2 seconds.

A ④ Mode 4 : KEY OPERATING TEST. "KEY TEST"

- While the self-illumination buttons are being pressed, LEDs lights.
- The abbreviated name of selected key is displayed on the FL display.

LED TABLE

| Buttons | Lighting LED | FL Display | Remark |
|-----------------|---------------------|------------|--------|
| HARMONIC | HARMONIC LED | MIX_A | |

A (5) Mode 5 :SELECT SW Operating Test. " SW TEST "

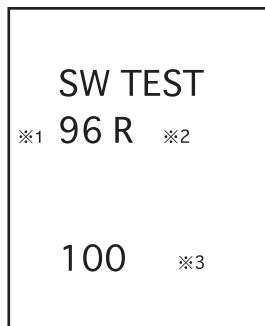

- The status is displayed on the FL Display about the following.

| Switch | Position of FL Display | FL Display |
|-------------------------------------|------------------------|--|
| Digital Out Sampling Rate Select SW | ※1 | "48k" is selected : Display "48".
"96k" is selected : Display "96". |
| RETURN IN | ※2 | When the cable is connected up to L side terminal, it displays as "R". |
| TIME Encoder | ※3 | <ul style="list-style-type: none"> Default "0" Upper limit "100" Lower limit "-100" |

B

C

Example

※1. Example of selecting 96k

※3. Example of selecting Upper Limit

D

E

F

⑥ Mode 6 : Volume Test 1. " VOLTEST1 "

A

- This mode displays a value of volume as shown below on a Level Meter.
- HI of MIC,HI of CH1,CH2,CH3,CH4
- MASTER LEVEL

| Volume | Lighting LED | Remark |
|--------------|-----------------------------|--|
| MIC HI | Master Level Meter L CH LED | "-12" : Lights off
"+6" : Full Illuminate |
| CH1 HI | CH1 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH2 HI | CH2 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH3 HI | CH3 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH4 HI | CH4 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| MASTER LEVEL | Master Level Meter R CH LED | "-∞" : Lights off
"0" : Full Illuminate |

B

- This mode displays a value of CH1 TRIM volume in the FL Display.

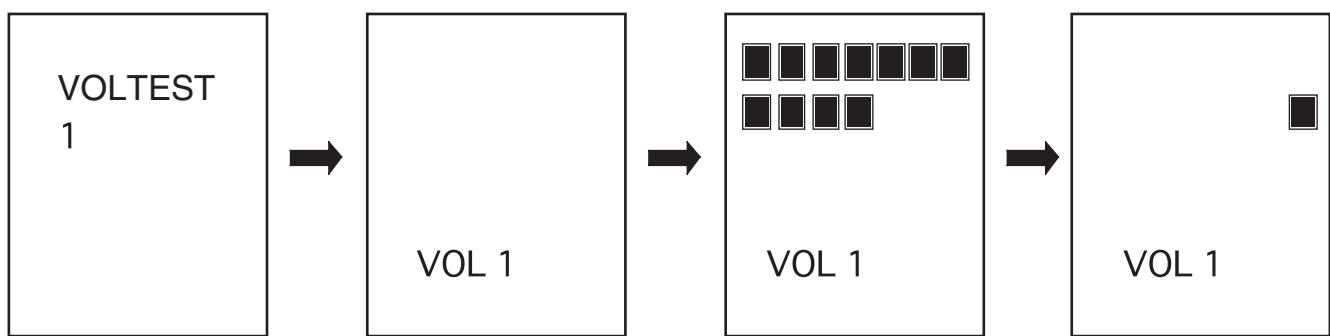

I will turn on from upper left according to value of TRIM in turn, and only lower berth rightmost edge of effect name display lights it that I finish turning it.

C

It displays "VOLTEST1" on the FL display in the first 2 seconds.

Then it displays "VOL 1" on the bottom of the FL Display. (in order to let you display TRIM value)

D

E

F

A

⑦ Mode 7 :Volume Test 2. " VOLTEST2 "

- This mode displays a value of volume as shown below on a Level Meter.
- LOW of MIC,MID of CH1,CH2,CH3,CH4
- MASTER BARANCE

| Volume | Lighting LED | Remark |
|----------------|-----------------------------|--|
| MIC LOW | Master Level Meter L CH LED | "-12" : Lights off
"+6" : Full Illuminate |
| CH1 MID | CH1 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH2 MID | CH2 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH3 MID | CH3 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH4 MID | CH4 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| MASTER BARANCE | Master Level Meter R CH LED | "L" : Lights off
"R" : Full Illuminate |

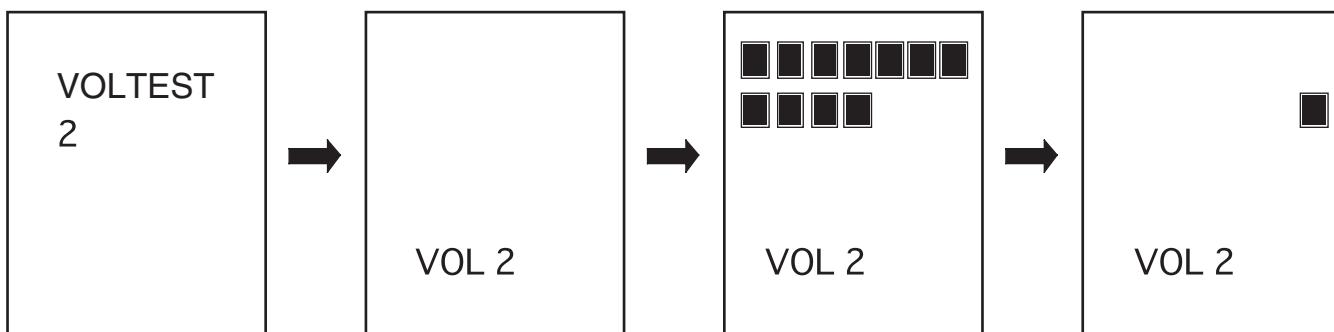

- This mode displays a value of CH 2 TRIM volume in the FL Display.

I will turn on from upper left according to value of TRIM in turn, and only lower berth rightmost edge of effect name display lights it that I finish turning it.

It displays "VOLTEST2" on the FL display in the first 2 seconds.

Then it displays "VOL 2" on the bottom of the FL Display. (in order to let you display TRIM value)

D

F

(8) Mode 8 : Volume Test 3. " VOLTEST "

A

- This mode displays a value of volume as shown below on a Level Meter.
 - H.P. MIXING,LOW of CH1,CH2,CH3,CH4
 - BOOTH MONITOR

| Volume | Lighting LED | Remark |
|---------------|-----------------------------|--|
| H.P. MIXING | Master Level Meter L CH LED | "CUE" : Lights off
"MASTER" : Full Illuminate |
| CH1 LOW | CH1 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH2 LOW | CH2 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH3 LOW | CH3 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| CH4 LOW | CH4 Level Meter LED | "-26" : Lights off
"+6" : Full Illuminate |
| BOOTH MONITOR | Master Level Meter R CH LED | "-∞" : Lights off
"0" : Full Illuminate |

- This mode displays a value of CH3 TRIM volume in the FL Display.

I will turn on from upper left according to value of TRIM in turn, and only lower berth rightmost edge of effect name display lights it that I finish turning it.

It displays "VOLTEST3" on the FL display in the first 2 seconds.

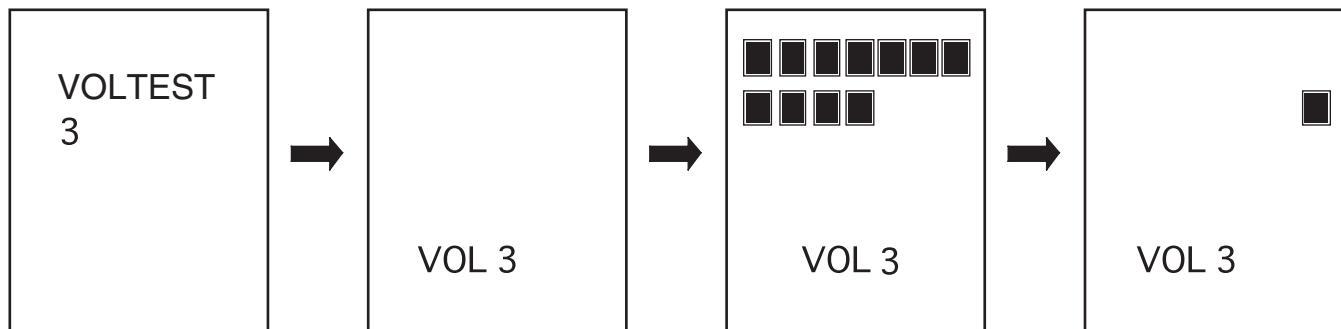

Then it displays "VOL 3" on the bottom of the FL Display.(in order to let you display TRIM value)

B

C

D

E

F

⑨ Mode 9 : Volume Test 4. " VOLTEST "

- This mode displays a value of volume as shown below on a Level Meter.
 - H.P. LEVEL,COLOR of CH1,CH2,CH3,CH4
 - LEVEL/DEPTH

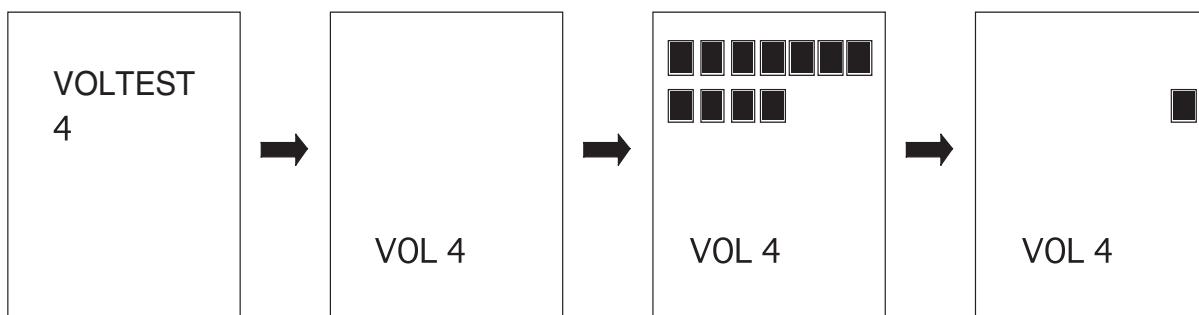

| Volume | Lighting LED | Remark |
|-------------|-----------------------------|---|
| H.P. LEVEL | Master Level Meter L CH LED | "-•" : Lights off
"0" : Full Illuminate |
| CH1 COLOR | CH1 Level Meter LED | "LOW" : Lights off
"HI" : Full Illuminate |
| CH2 COLOR | CH2 Level Meter LED | "LOW" : Lights off
"HI" : Full Illuminate |
| CH3 COLOR | CH3 Level Meter LED | "LOW" : Lights off
"HI" : Full Illuminate |
| CH4 COLOR | CH4 Level Meter LED | "LOW" : Lights off
"HI" : Full Illuminate |
| LEVEL/DEPTH | Master Level Meter R CH LED | "MIN" : Lights off
"MAX" : Full Illuminate |

- This mode displays a value of CH4 TRIM volume in the FL Display.

I will turn on from upper left according to value of TRIM in turn, and only lower berth rightmost edge of effect name display lights it that I finish turning it.

It displays "VOLTEST4" on the FL display in the first 2 seconds.

Then it displays "VOL 4" on the bottom of the FL Display. (in order to let you display TRIM value)

⑩ Mode 10 : Fader Test. " FDRTEST "

- Mode that confirms a value of each CH Fader and Cross Fader.

| FADER | Lighting LED | Remark |
|-------------|-----------------------------|--|
| CH1 FADER | CH1 Level Meter LED | "0" : Lights off
"10" : Full Illuminate |
| CH2 FADER | CH2 Level Meter LED | "0" : Lights off
"10" : Full Illuminate |
| CH3 FADER | CH3 Level Meter LED | "0" : Lights off
"10" : Full Illuminate |
| CH4 FADER | CH4 Level Meter LED | "0" : Lights off
"10" : Full Illuminate |
| CROSS FADER | Master Level Meter L CH LED | "A" : Full Illuminate
"B" : Lights off |

⑪ Mode 11 : Meter LED Test. " METERTEST "

- Mode that confirms a value of each CH Fader and Cross Fader.
- LED of each CH of Level Meter lights from the bottom one by one when the CUE key is pressed.
The default all Lights off.

It is possible to return to all Lights off when pressing it 15 times
again after it presses it (LED on lights most) and to repeat from the beginning.

7.1.2 REWRITING THE FIRMWARE

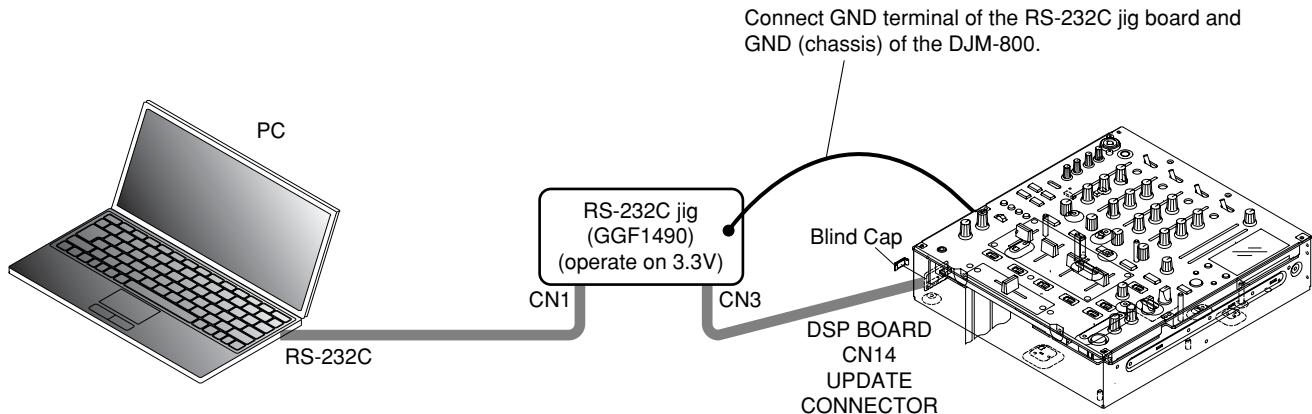

■ Items required

- DJM-800 (This model)
 - PC (Windows 98, XP, 2000)
 - RS-232C jig (GGF1490)
 - Flash Development Tool Kit (ver. 3.3)
 - Program Flash File

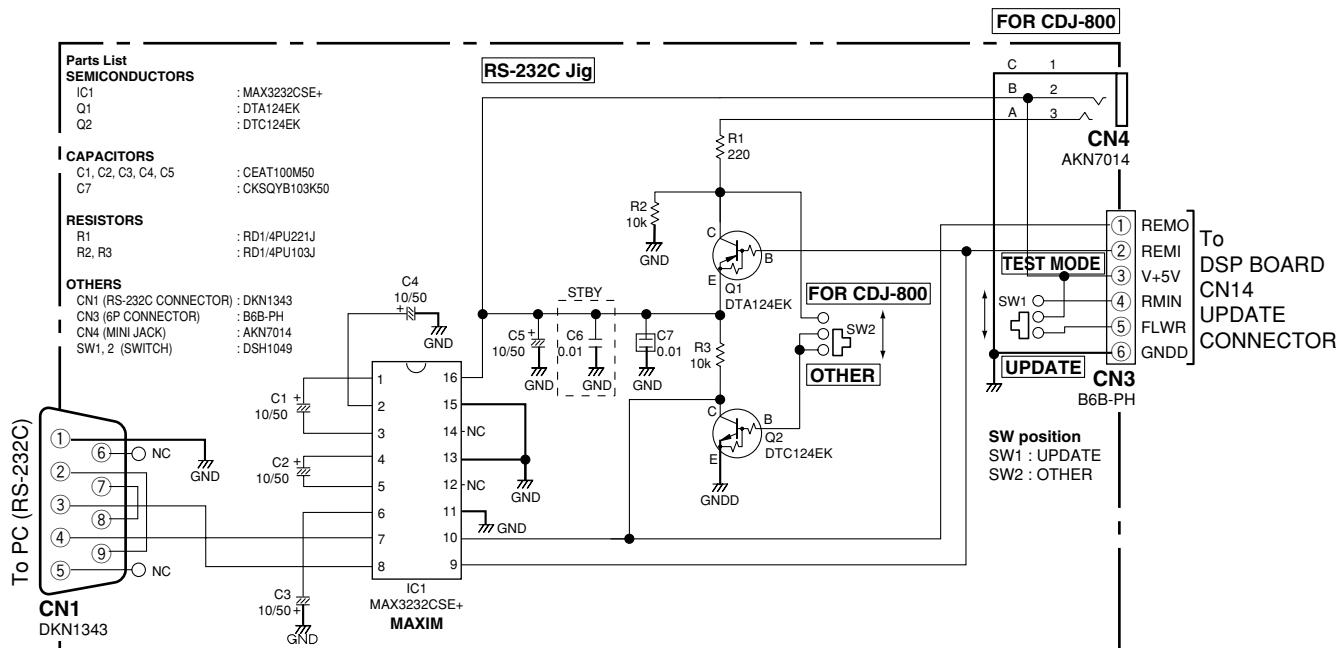

About these softwares (Flash Development Tool kit and Program Flash Files)

To obtain these software, contact your nearest Pioneer service center.

■ Connections

■ RS-232C jig (GGF1490) Schematic diagram

DJM-800

■ Order of updating

- A 1. Update of the DSP program (if required)
2. Update of DSP data (if required)
3. Update of the microcomputer software

Note: Be sure to update the microcomputer software after updating of the DSP program and /or DSP data is performed.

■ How to update the microcomputer software

1. For the method for updating the microcomputer software, see "How to use the Flash Development Toolkit." (The updating method is the same as with the EFX-1000.)

- B Use "djm800_xxxx.mot" as the update file.

Note: If the Flash Development Toolkit is not installed on your PC, see "How to install the Flash Development Toolkit."

■ How to update the DSP program and DSP data

How to update the DSP program

1. Update the DSP program of the DJM-800, using the "dsp_upp_xxxx.mot" update file, in the same way as with the microcomputer software.
2. After disconnecting the special tool from the DJM-800, turn the DJM-800 on.
3. Once data transmission to and writing on the DSP FLASH starts, wait until the message "UPDATE END" is displayed on the FL display. The LED for the TAP button is unlit while the DJM-800 is starting up, flashes while the DSP program is being updated, then lit after the updating is finished.
4. Updating of the DSP program is completed when "UPDATE END" is displayed on the FL display or the LED for the TAP button lights up.
5. If updating of DSP data is required, go to "How to update DSP data." If it is not required, update the microcomputer software, using the "djm800_xxxx.mot" update file.

How to update DSP data

1. Update DSP data of the DJM-800, using the "dsp_upd_xxxx.mot" update file, in the same way as with the microcomputer software.
2. After disconnecting the special tool from the DJM-800, turn the DJM-800 on.
3. Once data transmission to and writing on the DSP FLASH starts, wait until the message "UPDATE END" is displayed on the FL display. The LED for the TAP button is unlit while the DJM-800 is starting up, flashes while DSP data are being updated, then lit after the updating is finished.
4. Updating of DSP data is completed when "UPDATE END" is displayed on the FL display or the LED for the TAP button lights up.
5. Be sure to update the microcomputer software, using the "djm800_xxxx.mot" update file.

Installing Flash Development Toolkit

1. Installation

1.1 Installation

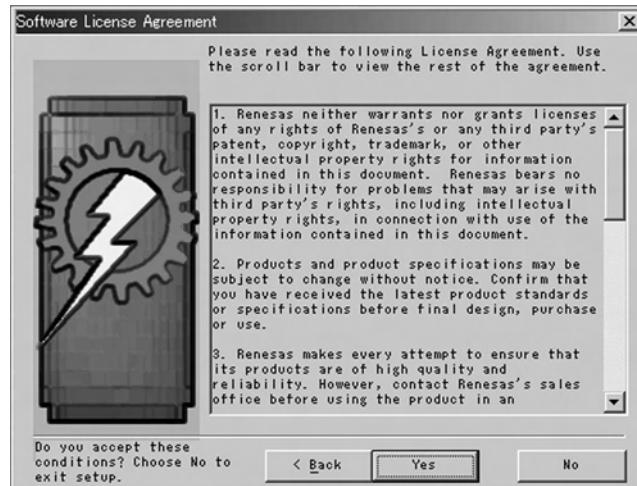

Double-click on the fdt3_3.exe file icon. The window shown below will open.
Click on Next.

Select International (English), then click on Next.

Read the Software License Agreement, and if you accept the conditions, click on Yes.

Leave the check boxes as they are and click on Next.

Leave the check boxes as they are and click on Next.

Leave the check boxes as they are and click on Next.

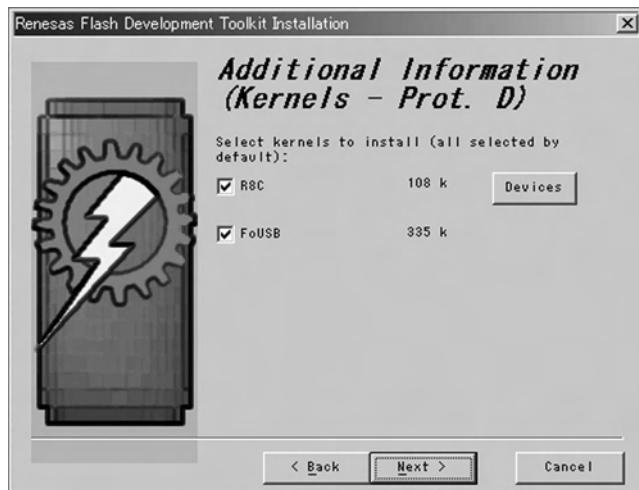

The location where Flash Development Tool Kit 3.3 is to be installed will be displayed.

With the default setting, the program will be installed under Program Files on Drive C. You may change the location. If you do not wish to change the location, skip to Step 1.3.

Leave the check boxes as they are and click on Next.

C

D

E

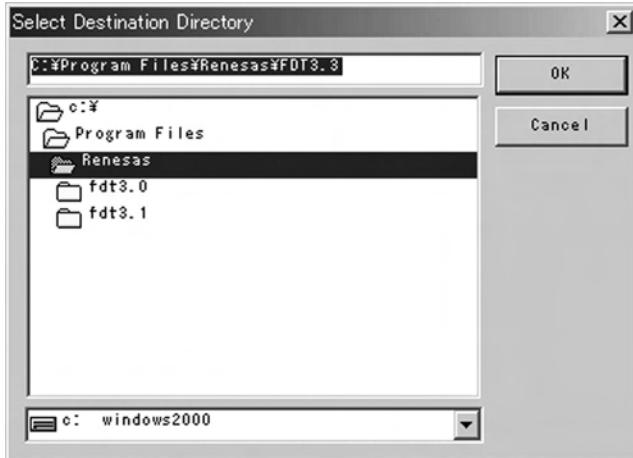

F

1.2 Changing the location for installation

Click on Browse....

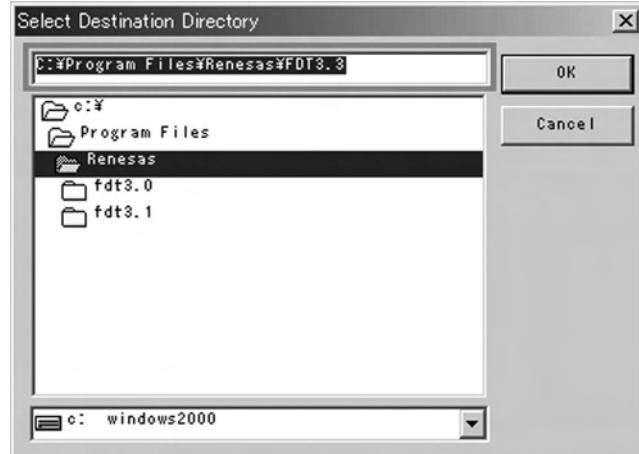

The window shown below will open.

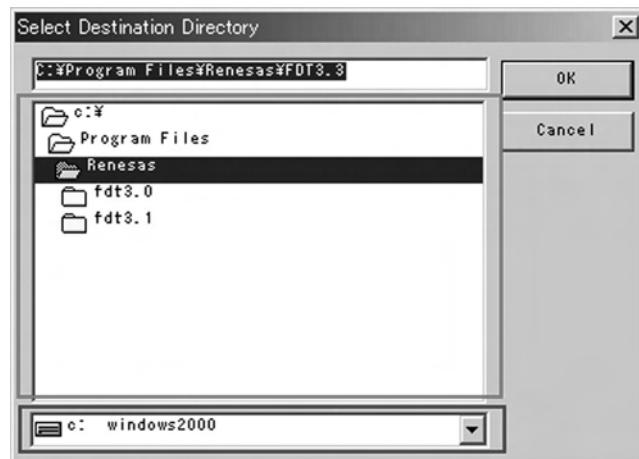

Method ①

You can directly enter the location for installation in the box enclosed in the frame in the illustration below:

Method ②

You can select the drive in the box enclosed in the lower frame and the folder in the box enclosed in the upper frame in the illustration below:

After designating the location for installation, click on OK. Then the Select Destination Directory window will close.

1.3 The location where the backup directory will be created is displayed.

- A If you wish to change the location, you can change it in the same manner as in Step 1.2.
Normally, leave the location setting as it is and click on Next.

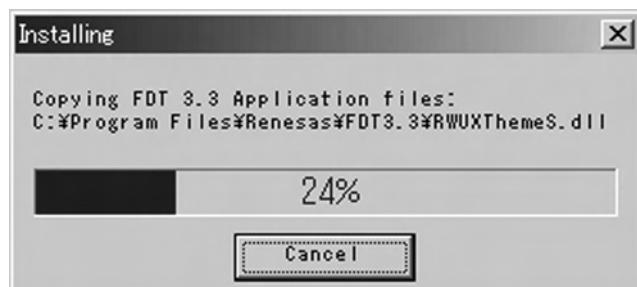

Click on Install. Installation starts.

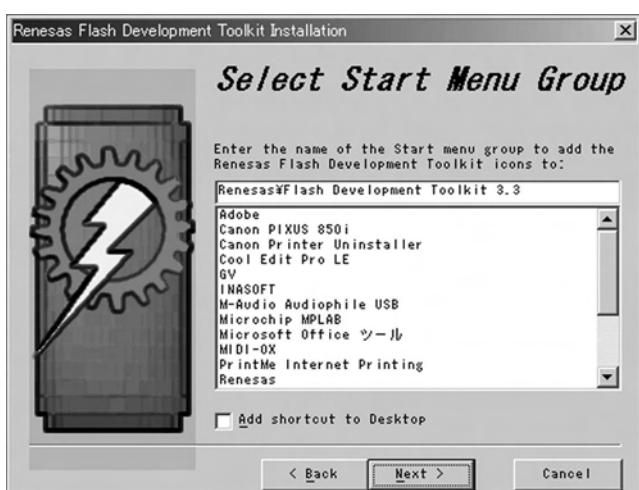

B

During installation, the display shown below indicates the progress of installation.

C

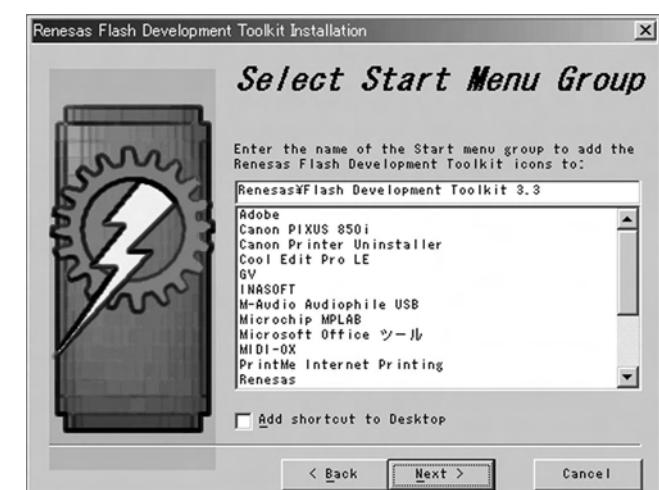

When installation is completed, the message shown below will be displayed. Click on Finish. Installation is completed.

D

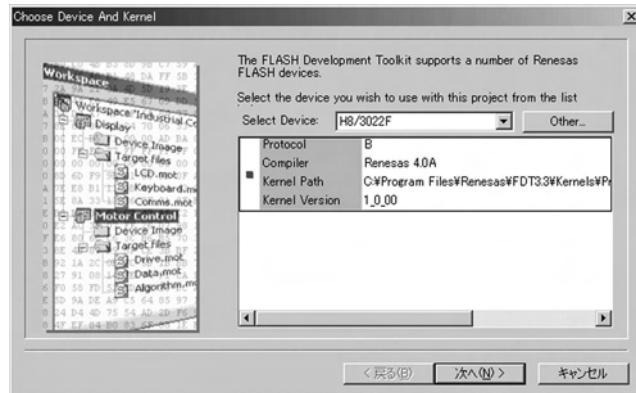

1.4 You can register the program on the Start menu.

Normally, leave the setting as it is and click on Next.

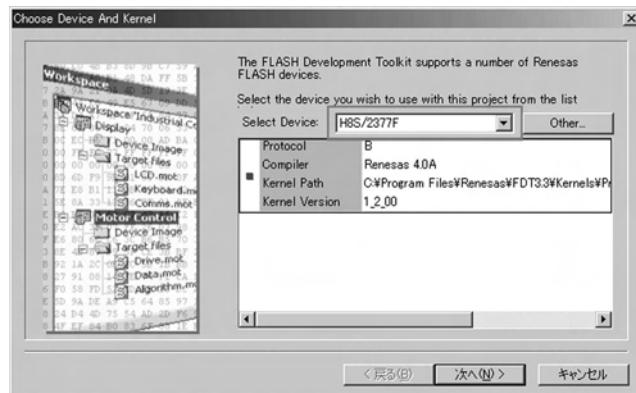

2. Initial settings

Click on Start, and select Program, Renesas, Flash Development Tool Kit 3.3, then Flash Development Tool Kit 3.3 Basic. The program will start up, and the window shown below will open.

2.1 Selection of the device and kernel

Select H8S/2377F in the Select Device: box then click on Next.

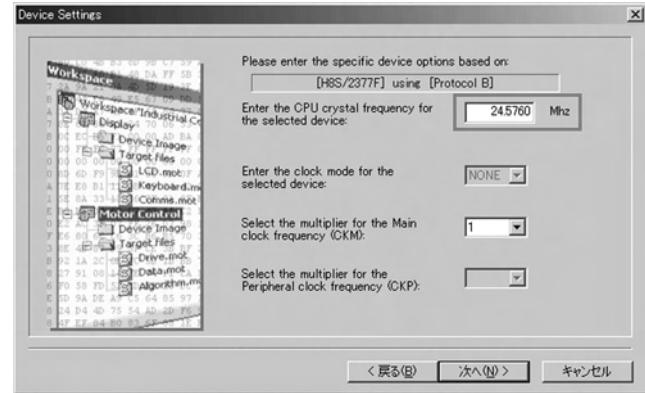

2.2 Selection of the port

Select the port to be used in the Select port: box then click on Next.

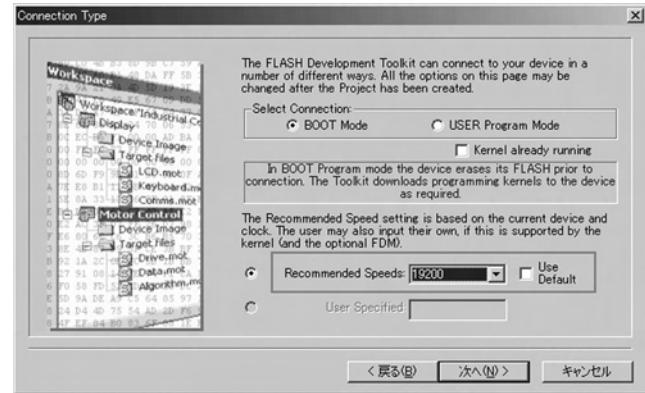

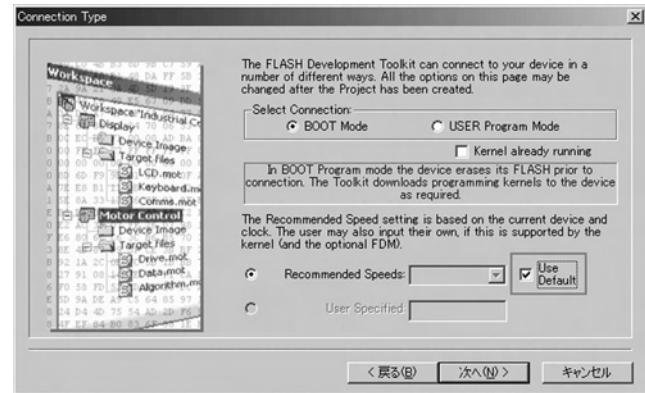

2.3 Device setting

Enter 24.5760 in the Enter the CPU crystal frequency for the selected device: box. Leave other settings as they are. Click on Next.

2.4 Connection type

Click on the Use Default check box to remove the check mark for this option. Select 19200 in the Recommended Speeds: box.

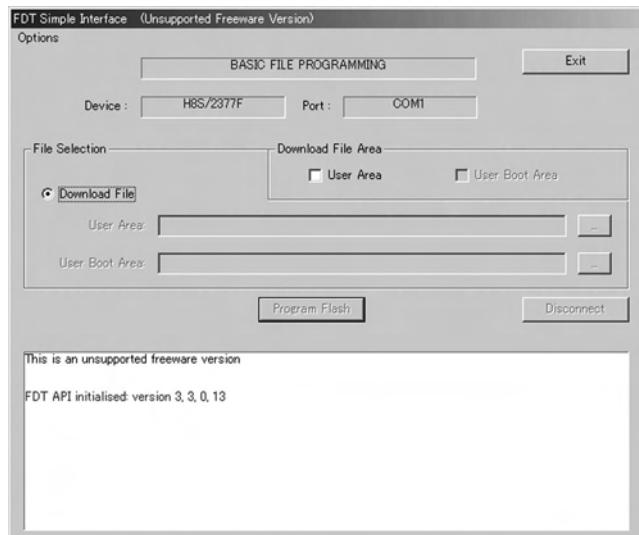

2.5 Registering the initial settings

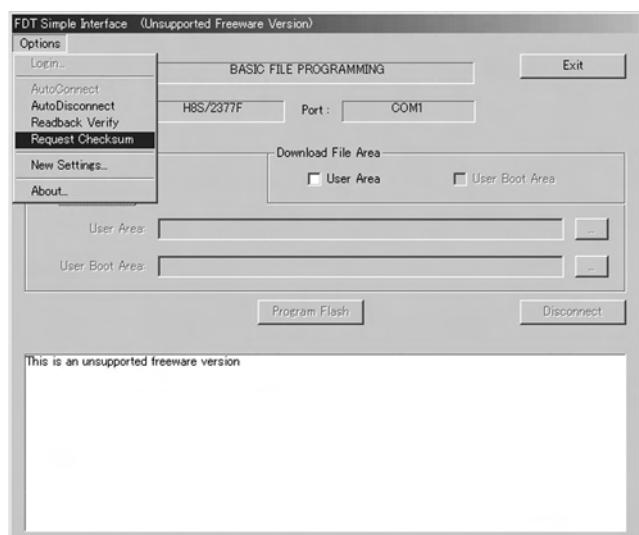

Click on Finish to register the initial settings.

The program starts.

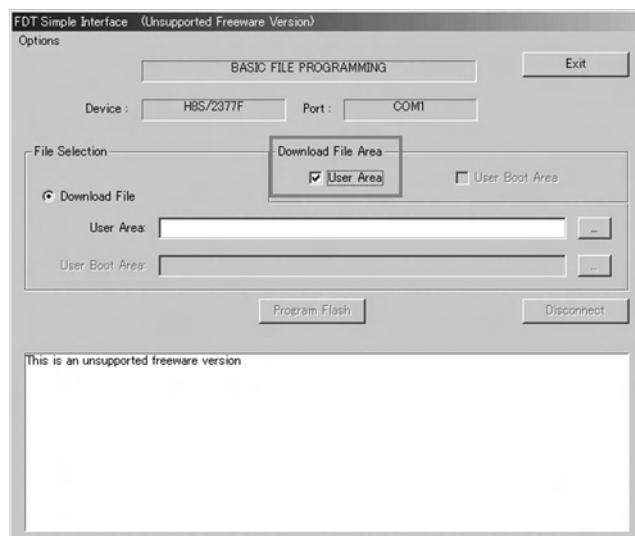

Click on Options then click to place a check mark in the Request Checksum check box.

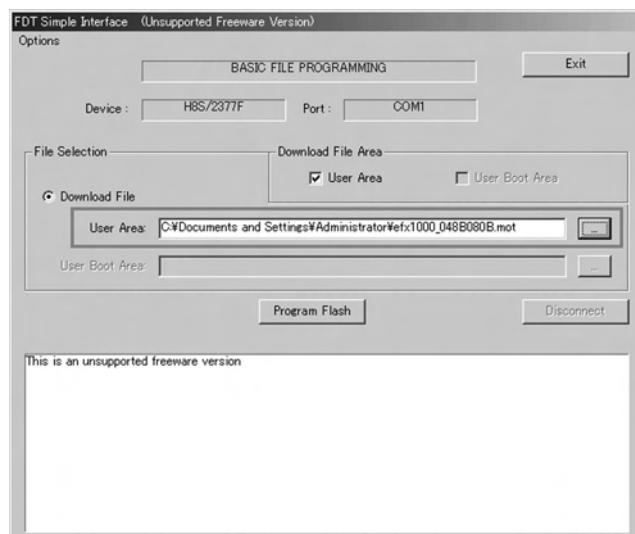

F Now installation and registration of the initial settings have been completed.

3. How to use

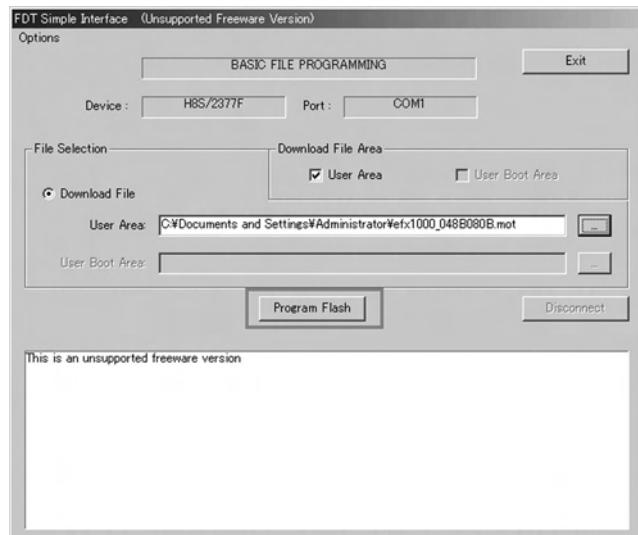

Click on the User Area check box in Download File Area to place a check mark in the check box.

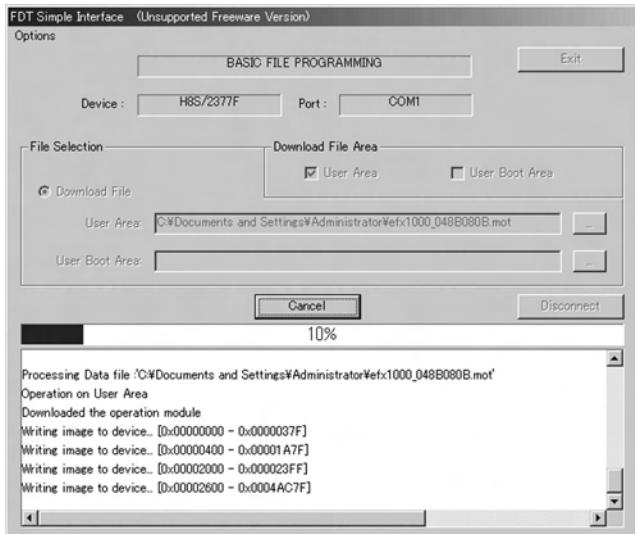

Designate the file in the User Area: box in File Selection.

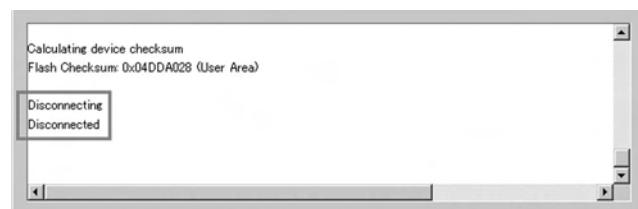

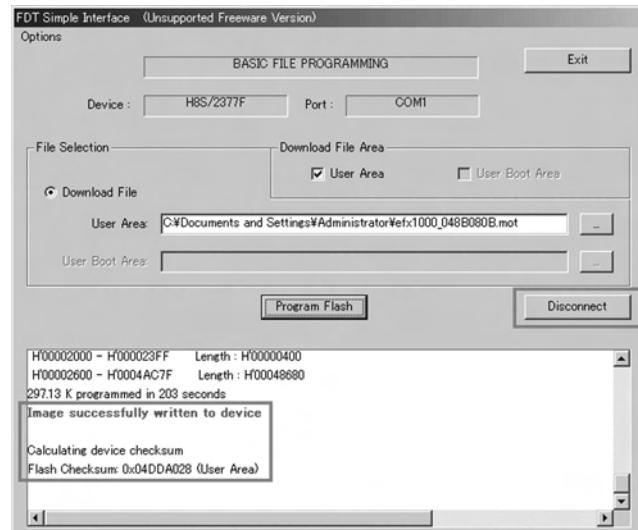

Click on Program Flash.

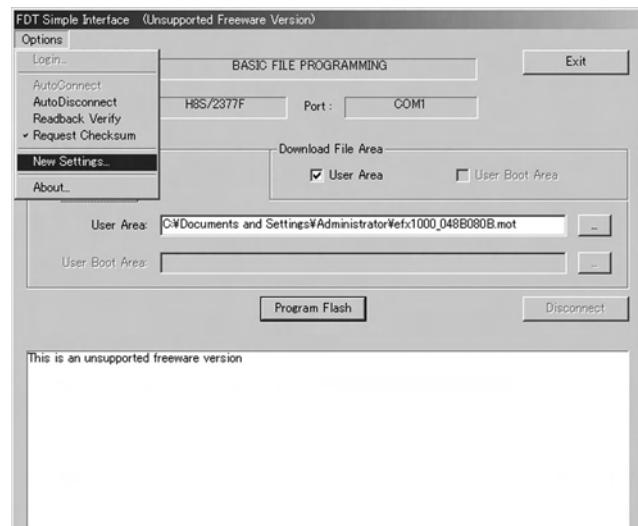

Downloading will start.

When downloading is finished, click on Disconnect. After confirming that "Disconnected" is displayed in the window, turn off the DJM-800(exf1000).

If you wish to change the device or port settings, select Options then New Settings.
Change settings, referring to "2. Initial settings."

Instruction Manual for Flash Development Tool Kit

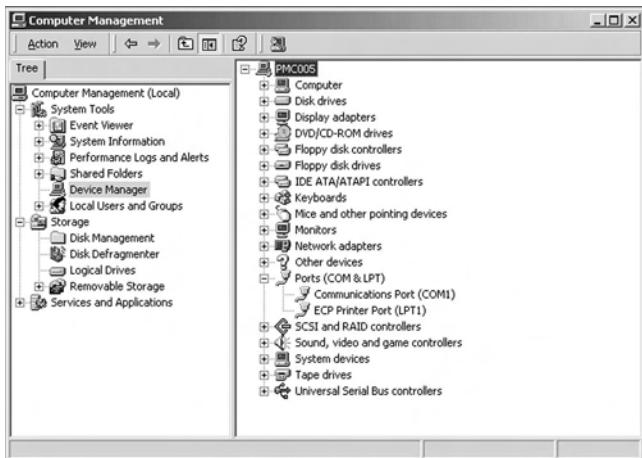

A

Preparation: Connect the DJM-800(efx1000) and your PC, using the RS-232C jig.

Note: After the above connection is made, when the DJM-800 is turned on, it will enter Writing mode. In Writing mode, all the LEDs remain unlit. However, when the DJM-800(efx1000) is turned on or off, it clicks.

• How to confirm the port to be used on your PC

Double-click on System in Control Panel, or right-click on My Computer and select System Properties. Click on the Hardware tab and select Device Manager. You can confirm the port at Port (COM and LPT).

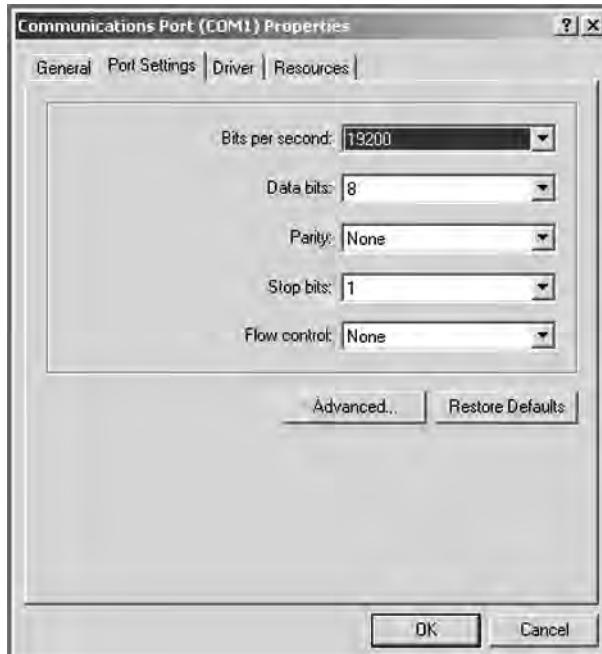

Set the baud rate of the port to be used to 19200.

Example: COM1

Double-click on the port name to be used.

Click on the Port Setting tab and select 19200 in the bps box.

Click on OK. The setting is completed.

B

C

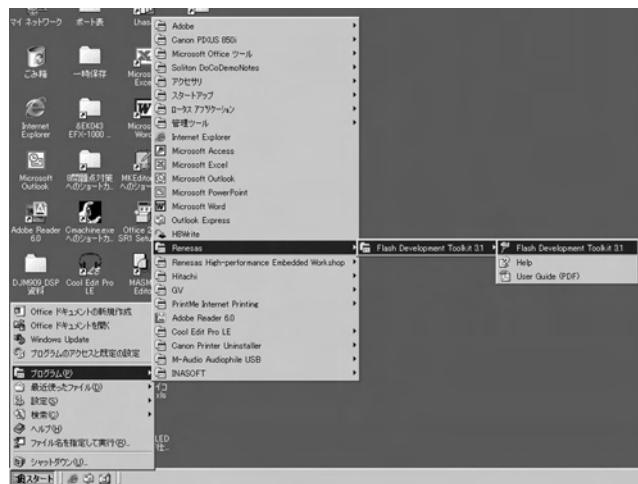

D

E

F

1. Starting the program

Click on Start, and select Program, Renesas, Flash Development Tool Kit 3.1, then Flash Development Tool Kit 3.1.

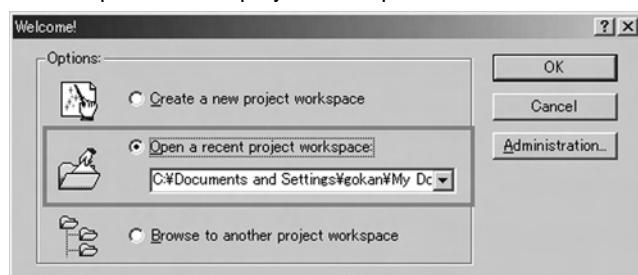

When the program starts, the following message will be displayed.

Click on OK.

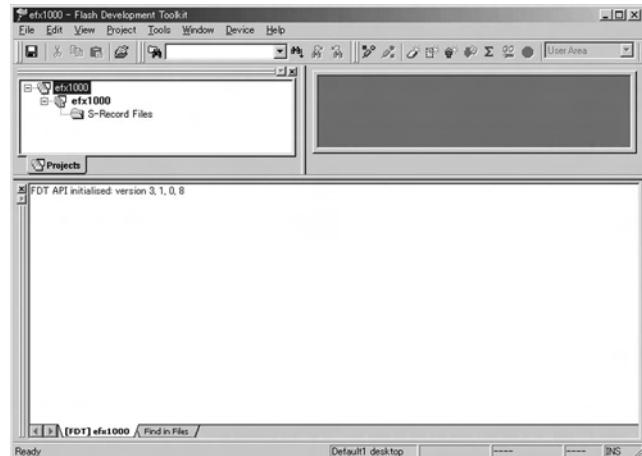

Then the window shown below will be displayed.

Select Open a recent project workspace then click on OK.

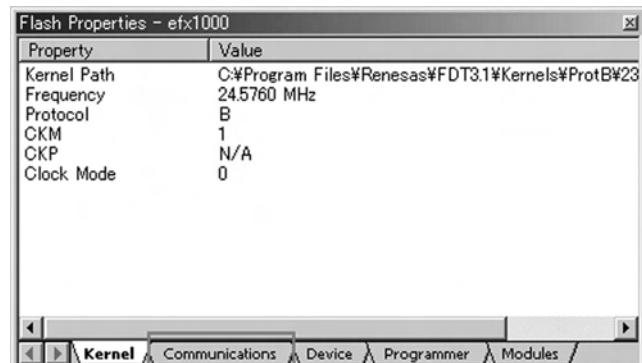

The workspace will open.

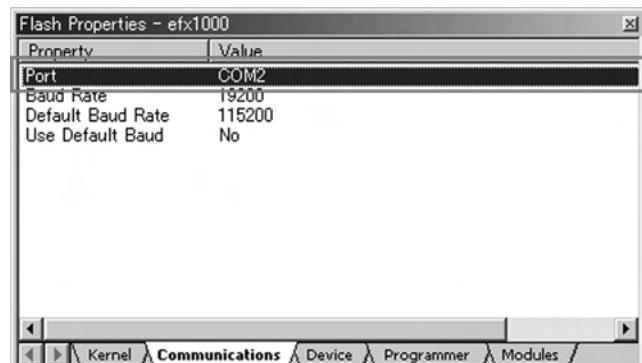

To change the port where the RS-232C jig is to be connected, modify the setting in the following way (if the port does not need to be changed, skip to "2. Selecting the .mot file to be downloaded into the DJM-800(efx1000)": Click on the Configure Flash Project icon.

The Flash Properties window will be displayed.

Click on the Communications tab. The screen shown below will be displayed. Click on Port.

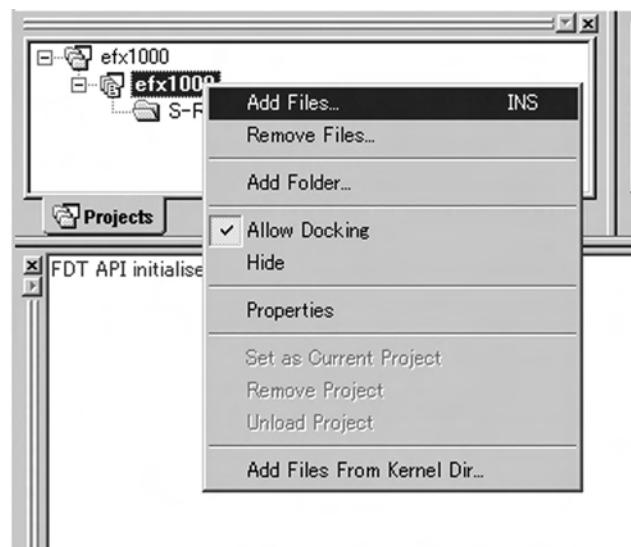

- A The window shown below will open. Designate the port then click on Finish. The Communications Port window will then close.

B

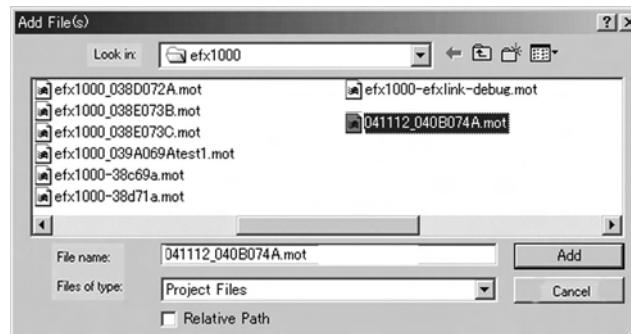

2. Selecting the .mot file to be downloaded into the DJM-800(efx1000)

Right-click on the project name and select Add Files....

C

Select a .mot file to be downloaded from the folder then click on Add.

D

The .mot file to be downloaded will be added.

F

3. Downloading the .mot file into the DJM-800

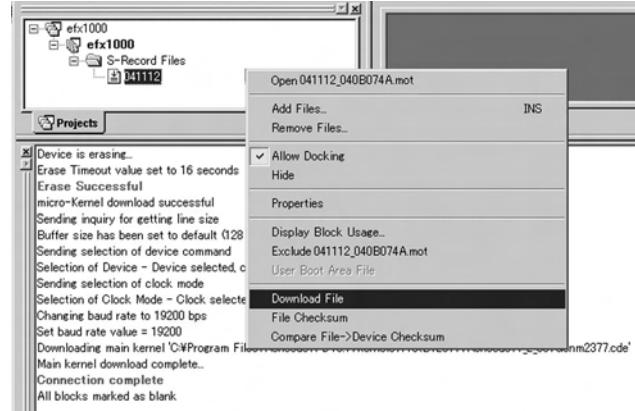

Turn on the DJM-800(efx1000). Click on the Connect icon to activate connection of the DJM-800(efx1000) with the PC.

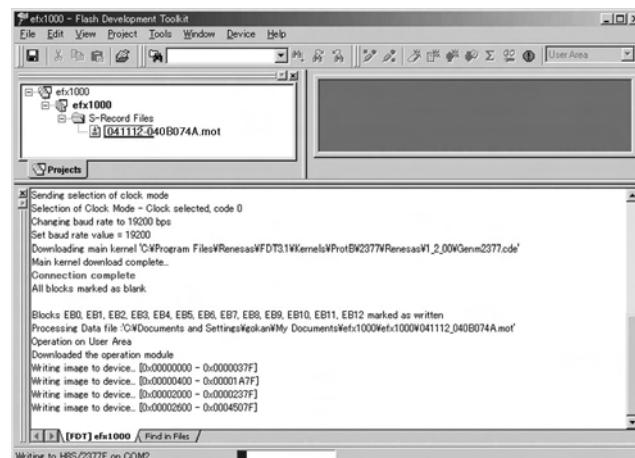

If the display shown below appears, the connection has been successfully made.

Right-click on the .mot file and select Download File.

Downloading will start.

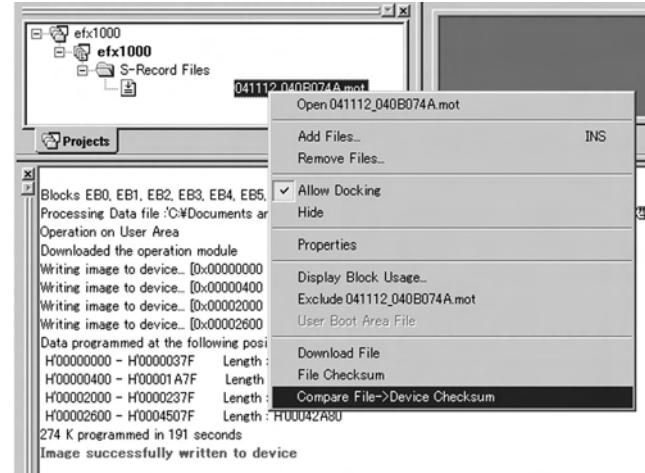

When the message "Image successfully written to device" is displayed, downloading has been finished.

• Confirming if downloading has been successfully completed

Right-click on the .mot file, and select Compare File → Device Checksum.

Check the values enclosed in the frames in the illustration below. If these two values are the same, downloading has been successfully completed.

4. Exiting from the program

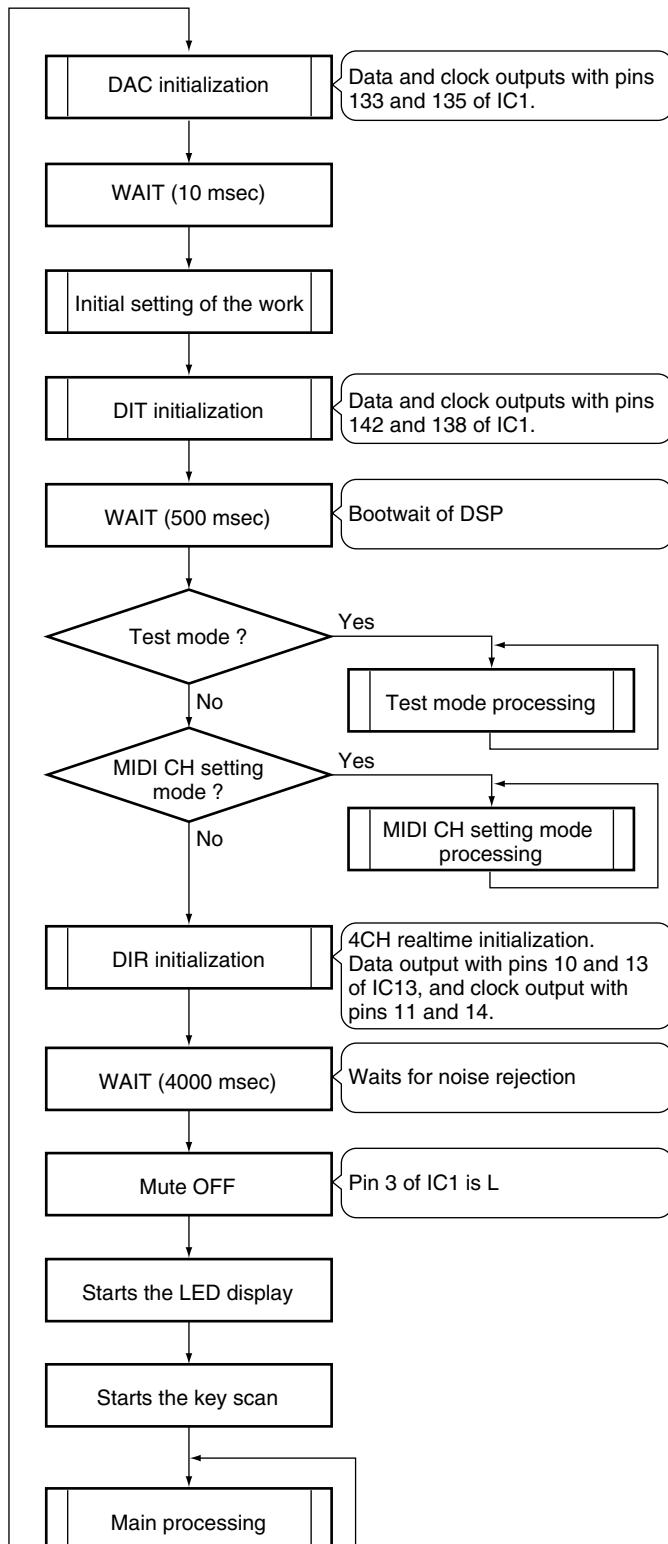

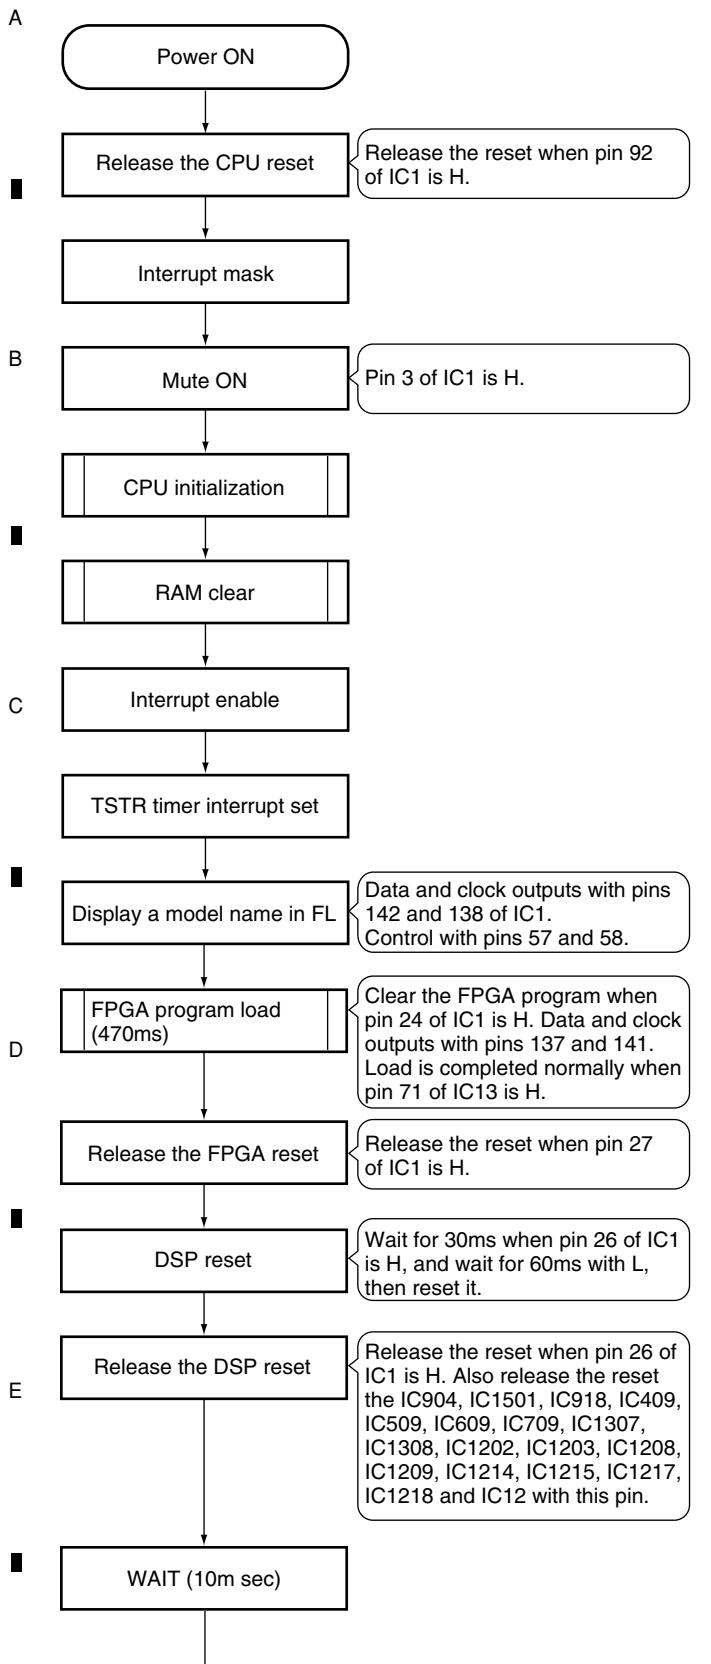

Click on the Disconnect icon to deactivate connection of the DJM-800(efx1000) with the PC.

Turn off the DJM-800(efx1000), and unplug the cables of the RS-232C jig.

7.2 POWER ON SEQUENCE

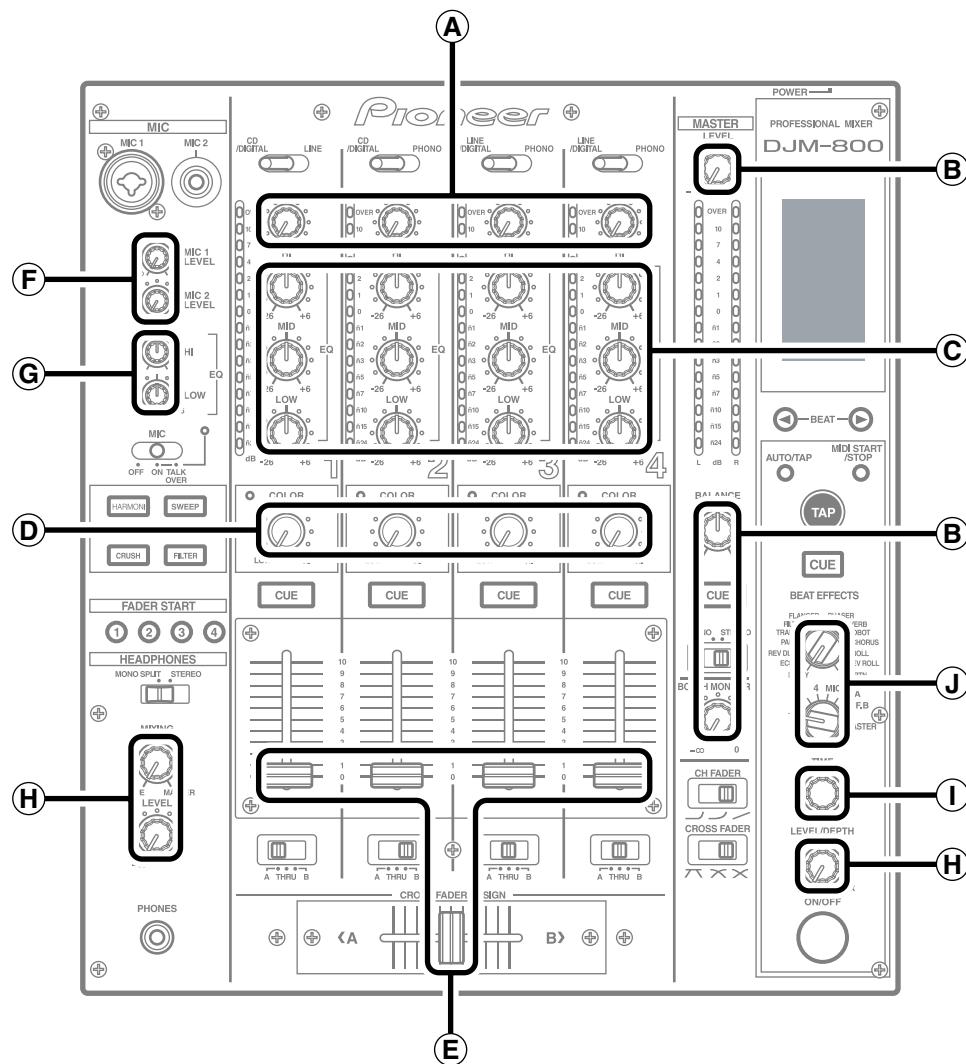

● Power ON Sequence

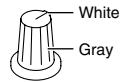

7.3 DISASSEMBLY

Note: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

Knobs and Volumes Location

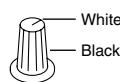

(A) Rotary SW knob S (C)
(DAA1204) ×4

(D) Rotary SW knob (HM)
(DAA1197) ×4

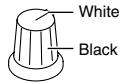

(G) Rotary SW knob S (A)
(DAA1177) ×2

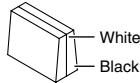

(J) Select knob
(DAA1179) ×2

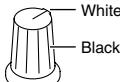

(B) Rotary SW knob (MA)
(DAA1198) ×3

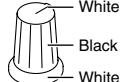

(E) Slider knob (L2)
(DAC2371) ×5

(H) Rotary SW knob (A)
(DAA1175) ×3

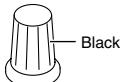

(C) Rotary SW knob (B)
(DAA1176) ×12

(F) Rotary SW knob S (B)
(DAA1178) ×2

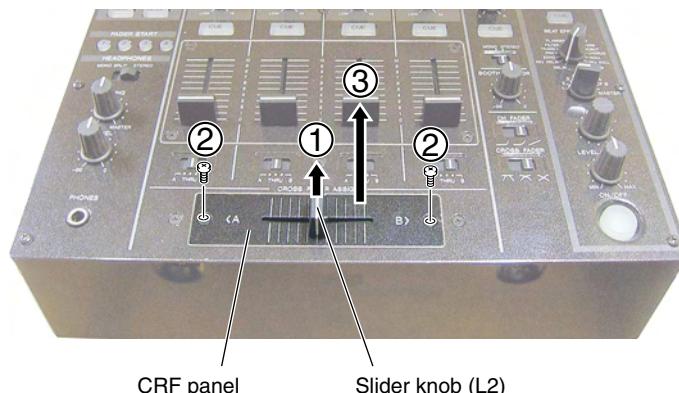

(I) Rotary SW knob (C)
(DAA1180) ×1

Disassembly

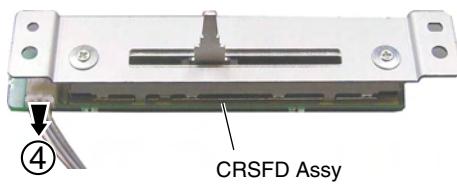

1 Cross Fader Section

- ① Remove the slider knob (L2).
- ② Remove the two screws.
- ③ Remove the CRSFD Assy with CRF panel.

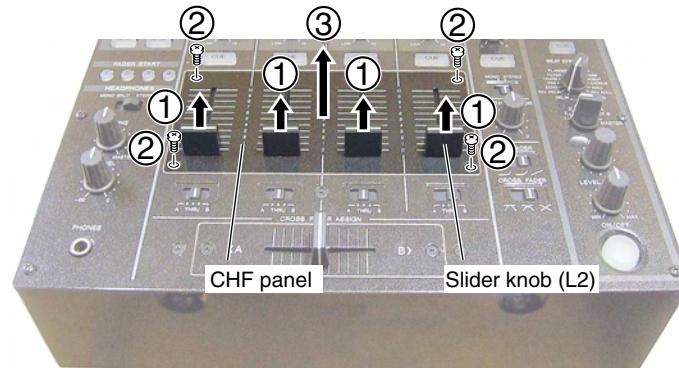

- ④ Disconnect the connector.

Exchange

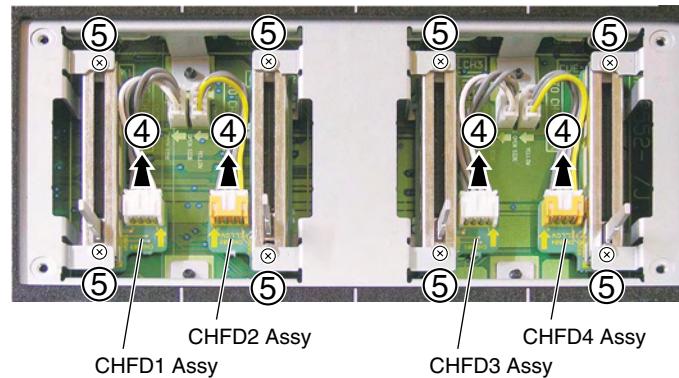

2 CH Fader Section

- ① Remove the four slider knob (L2)s.
- ② Remove the four screws.
- ③ Remove the CHF panel.

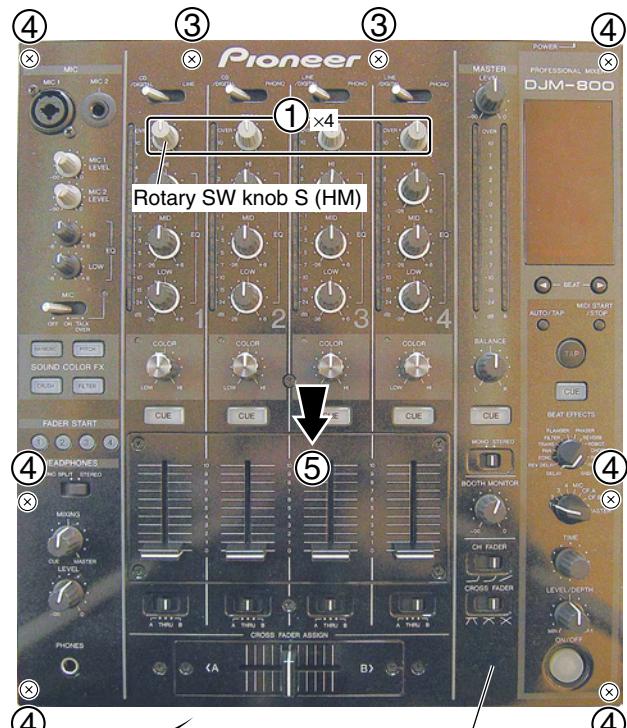

- ④ Disconnect the four connectors.
- ⑤ Remove the eight screws.

Exchange

3 Control Panel Section

- ① Remove the four Rotary SW knob S (HM)s.
- ② Remove the two screws.
- ③ Remove the two screws.
- ④ Remove the six screws.
- ⑤ Remove the control panel section.

HP JACK Assy

4 Bracket TRIM and Shield Case

● Bracket TRIM

- ① Remove the four extension shafts.
- ② Remove the four nuts M7.
- ③ Remove the bracket TRIM.

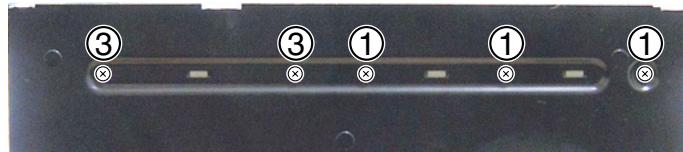

A

B

C

● Shield Case AC and Shield Case

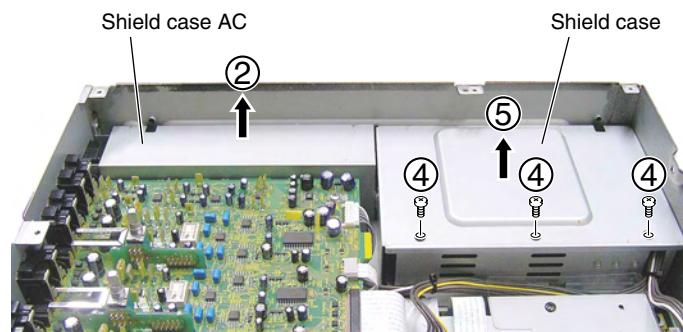

- ① Remove the three screws.
- ② Remove the shield case AC.
- ③ Remove the two screws.
- ④ Remove the three screws.
- ⑤ Remove the shield case.

D

E

F

5 INPUT Assy and Shield Case DSP

● INPUT Assy

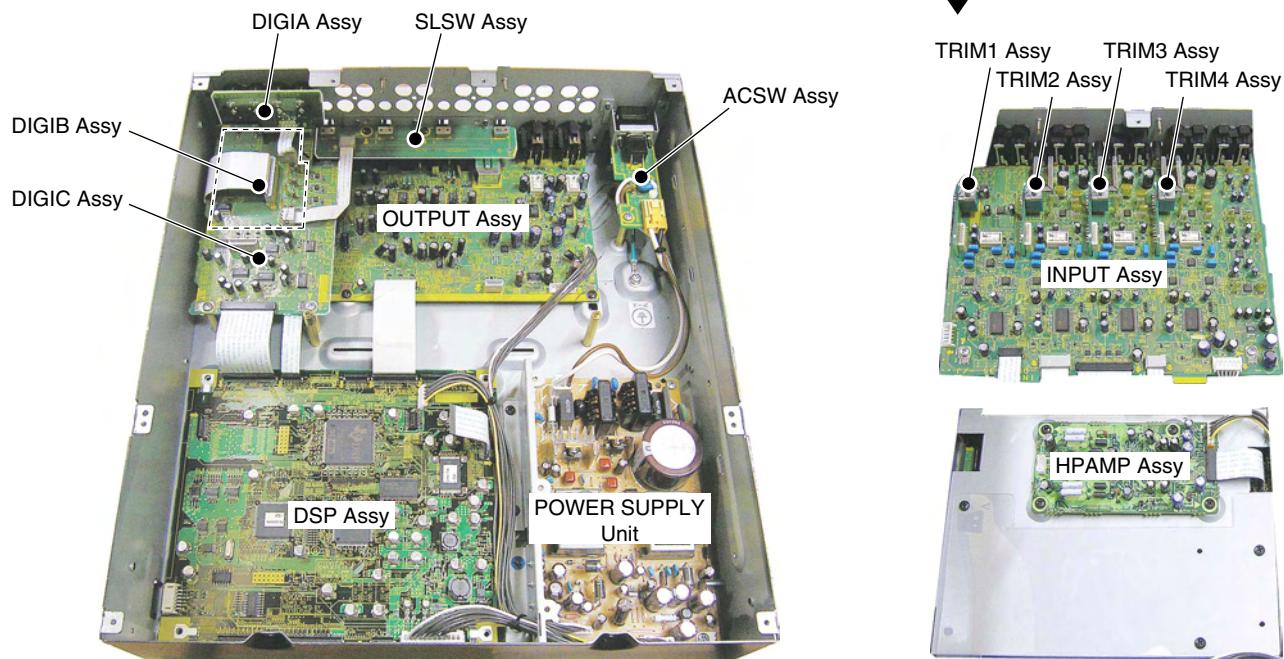

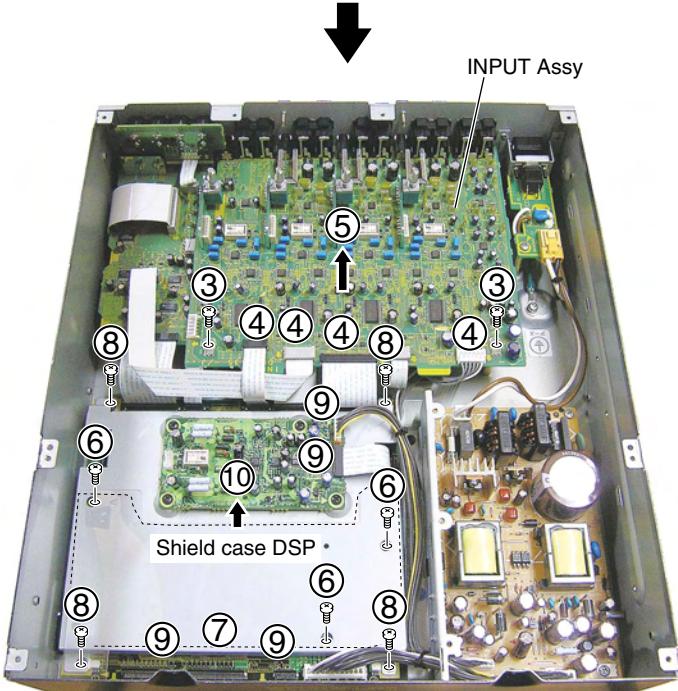

- ① Remove the six short pin plugs.
- ② Remove the five screws.

- ③ Remove the two screws.
- ④ Disconnect cables, as required.
- ⑤ Remove the INPUT Assy.

● Shield Case DSP

- ⑥ Remove the three screws.
- ⑦ Remove the styling sheet.
- ⑧ Remove the four screws.
- ⑨ Disconnect cables, as required.
- ⑩ Remove the shield case DSP.

7.4 IC INFORMATION

■ DYW1757(HD64F2377) : (DSP ASSY : IC 1)

- A • Microcomputer

• Pin Function

| No. | Mark | Pin Name | I/O | Pin Function |
|-----|---------|--------------|-----|--|
| 1 | MD2 | MD2 | I | Mode pin 2 NOR: Mode 4 At rewriting: Mode 3 |
| 2 | VSS | VSS | I | GND |
| 3 | P80 | MUTE | O | MUTE signal 0: Mute ON, 1: Mute OFF |
| 4 | VCC | VCC | I | Power supply |
| 5 | A0 | A0 | O | Address bus output A0 |
| 6 | A1 | A1 | O | Address bus output A1 |
| 7 | A2 | A2 | O | Address bus output A2 |

8. PANEL FACILITES

OPERATION PANEL

NAMES AND FUNCTIONS OF PARTS (OPERATION PANEL_1)

Microphone input control section

1. Microphone 1 input jack (MIC 1)

Use to connect a microphone with an XLR or phone plug.

2. Microphone 2 input jack (MIC 2)

Use to connect a microphone with a phone plug.

3. Microphone 1 level control dial (MIC 1 LEVEL)

Use to adjust the volume of microphone 1. (adjustable range $-\infty$ to 0 dB)

4. Microphone 2 level control dial (MIC 2 LEVEL)

Use to adjust the volume of microphone 2. (adjustable range $-\infty$ to 0 dB)

5. Microphone equalizer high-range control dial (HI)

Use to adjust the treble (high-range) frequencies of microphones 1 and 2. (adjustable range -12 dB to +6 dB)

6. Microphone equalizer low-range control dial (LOW)

Use to adjust the bass (low-range) frequencies of microphones 1 and 2. (adjustable range -12 dB to +6 dB)

7. Microphone function indicator

Lights when microphone is ON; flashes when TALK OVER is ON.

8. Microphone function selector switch (MIC)

OFF:

No microphone sound is output.

ON:

Microphone sound is output normally.

TALK OVER:

Microphone sound is output; when sound is input to a connected microphone, the TALK OVER function operates and all sound other than that from the microphone is attenuated by 20 dB.

Channel input control section

9. Channel 1 input selector switch

CD/DIGITAL:

Use to select CD input connectors (line level analog input) or DIGITAL input connectors.

LINE:

Use to select LINE input connectors.

10. Channel 2 to 4 input selector switches

CD/DIGITAL (channel 2) :

Use to select CD input connectors (line level analog input) or DIGITAL input connectors.

LINE/DIGITAL (channel 3 to 4):

Use to select LINE input connectors (line level analog input) or DIGITAL input connectors.

PHONO:

Use to select PHONO input connectors (analog turntable input).

A NAMES AND FUNCTIONS OF PARTS (OPERATION PANEL_2)

11. TRIM adjust dial

Use to adjust the input level for each channel. (adjustable range: $-\infty$ to +9 dB, mid-position is about 0 dB)

12. Channel equalizer high-range adjust dial (HI)

Use to adjust the treble (high-range) frequency sound for each channel. (adjustable range: -26 dB to +6 dB)

13. Channel equalizer mid-range adjust dial (MID)

Use to adjust the mid-range frequency sound for each channel. (adjustable range: -26 dB to +6 dB)

14. Channel equalizer low-range adjust dial (LOW)

Use to adjust the bass (low-range) frequency sound for each channel. (adjustable range: -26 dB to +6 dB)

15. Channel level indicator

Displays the current level for each channel, with two-second peak hold.

16. Headphone CUE buttons/indicators

These buttons are used to select from channel 1 to 4, MASTER, or effector, to allow you to monitor the desired source through headphones. If multiple buttons are pressed simultaneously, the selected audio sources are mixed. Press the button once more to cancel the selected source. Unselected buttons glow darkly, while selected source buttons light brightly.

C Fader control section

17. Fader start button/indicator (FADER START 1 to 4)

Enables the fader start/back cue function for the channel to which a DJ CD player is connected. The button lights when set to ON. When enabled, the operation differs depending on the setting of the CROSS FADER ASSIGN switch.

- When the CROSS FADER ASSIGN switch is set to the [A] or [B] position, fader start button operation is linked to the operation of the cross fader (and unlinked to channel fader).
- When the CROSS FADER ASSIGN switch is set to the [THRU] position, fader start button operation is linked to the operation of the channel fader (and unlinked to cross fader).

18. Channel fader lever

Use to adjust sound volumes for each channel. (adjustable range: $-\infty$ to 0 dB)

Output is in accordance with the channel fader curve selected with the CH FADER curve switch.

19. CROSS FADER ASSIGN switch

This switch assigns each channel's output to either right or left side of the cross fader (if multiple channels are assigned to the same side, the result will be the combined sum of the channels).

A:

The selected channel is assigned to the cross fader's A (left) side.

THRU:

The channel fader's output is sent as is to the master output, without being passed through the cross fader.

B:

The selected channel is assigned to the cross fader's B (right) side.

20. Channel fader curve switch (CH FADER)

This switch allows the user to select from three types of channel fader curve response. This setting is applied equally to channels 1 to 4.

- At the left setting, the curve operates to produce a rapid rise as the channel fader approaches its distant position.
- At the right setting, the curve operates to produce an even, neutral rise throughout the channel fader's movement.
- At the middle setting, an intermediate curve is produced, midway between the two curves noted above.

21. Cross fader curve switch (CROSS FADER)

This switch allows the user to select from three types of cross fader curve response.

- At the left setting, the curve produces a rapid signal rise. (As soon as the cross fader lever leaves the [A] side, the [B] channel sound is produced.)
- At the right setting, the curve operates to produce an even, neutral rise throughout the cross fader's movement.
- At the middle setting, an intermediate curve is produced, midway between the two curves noted above.

22. Cross fader lever

Outputs sound assigned to [A] and [B] sides in accordance with setting of the CROSS FADER ASSIGN switch, and subject to the cross fader curve selected with the CROSS FADER curve switch.

D Master output control section

23. Master output level dial (MASTER LEVEL)

Use to adjust the master output level. (adjustable range: $-\infty$ to 0 dB)

The master output is the sum combination of the sound from channels set to [THRU] with the CROSS FADER ASSIGN switch; the signal passed through the cross fader; and the signals from microphone 1 and microphone 2 (if the effect selector is set to [SND/RTN], the RETURN input is also added).

24. Master level indicator (MASTER L, R)

These segment indicators display the output level from L and R channels. The indicators have a two-second peak hold.

25. Master balance dial (BALANCE)

Use to adjust the L/R channel balance for master output, booth monitor output, recording output, and digital output.

26. Master output STEREO/MONO selector switch

When set to [MONO], the master output becomes a monaural combination of L+R.

E Booth monitor control section

27. BOOTH MONITOR level control dial

This dial is used to adjust the booth monitor output volume. The volume can be adjusted independently of the master output level. (adjustable range: $-\infty$ to 0 dB)

F Headphones output section

28. Headphones output switch (MONO SPLIT/STEREO)

MONO SPLIT:

The audio source selected with the headphone CUE button is output to the L channel, and the master audio is output to the R channel (only when headphone CUE button is used to select [MASTER]).

STEREO:

The audio source selected with the headphone CUE button is output in stereo.

29. Headphones mixing dial (MIXING)

When rotated clockwise (toward [MASTER]), the master output audio is produced at the headphones (only when [MASTER] has been selected with the headphones CUE button); when rotated counterclockwise (toward [CUE]), the headphones output becomes the mixture of the effect monitor and the channel selected with the headphone CUE button.

NAMES AND FUNCTIONS OF PARTS (OPERATION PANEL_3)

A

30. Headphones level adjust dial (LEVEL)

Adjusts the output level of the headphones jack. (adjustable range: -∞ to 0 dB)

31. Headphones jack (PHONES)

BPM counter section

32. Beat select buttons (BEAT)

(Beat up): Doubles the calculated BPM.
(Beat down): Halves the calculated BPM.

- Some effects can be set for "3/4".

33. MIDI start/stop button (MIDI START/STOP)

Use to alternate the MIDI control function between start and stop.

When this control is enabled, the [MIDI START (STOP)] message appears for two seconds on the display.

MIDI SNAP SHOT:

When the **MIDI START/STOP** button is held depressed, a snapshot is sent to the external MIDI component.

34. BPM measuring mode button (AUTO/TAP)

Each time the button is pressed, the BPM measuring mode alternates between [AUTO] and [TAP].

AUTO:

The display's [AUTO] indicator lights, and the BPM is automatically calculated.

TAP:

The display's [TAP] indicator lights, and the BPM is calculated manually by TAP button input.

35. TAP button

The BPM is calculated from the intervals at which the **TAP** button is struck. If the **TAP** button is pressed in the AUTO mode, the mode automatically switches to the TAP mode (manual input).

Beat effect section

36. Effect selector (DELAY, ECHO, REV DLY

(REVERSE DELAY), PAN, TRANS, FILTER,
FLANGER, PHASER, REVERB, ROBOT (ROBOT
VOCODER), CHORUS, ROLL, REV ROLL
(REVERSE ROLL), SND/RTN (SEND/RETURN))

Use to select desired type of effect.

When using an external effector connected to the **SEND** and **RETURN** connectors, set to the [**SND/RTN**] position.

37. Effect channel selector (1, 2, 3, 4, MIC, CF.A, CF.B, MASTER)

Use to select the channel to which effects are applied.

When **[MIC]** is selected, effects are applied to both microphone 1 and microphone 2.

38. Effect parameter 1 dial [TIME (PARAMETER 1)]

Adjusts time parameter for selected effect.

If the **TIME** dial is rotated while depressing the **TAP** button, direct BPM can be set manually.

If the **TIME** dial is rotated while holding the **TAP** button and **AUTO/TAP** buttons depressed, the BPM can be set in 0.1 units.

39. Effect parameter 2 dial

[LEVEL/DEPTH (PARAMETER 2)]

Adjusts quantitative parameters for selected effect.

40. Effect button/indicator (ON/OFF)

Sets selected effect ON/OFF. Whenever power is first turned ON, effects default to OFF and the button is lighted.

When effects are enabled (ON), the button flashes.

Sound-color effects section

41. Sound-color effect select buttons/indicators (HARMONIC, SWEEP, FILTER, CRUSH)

Use to select and enable/disable sound-color effects.

The button for the selected function will flash, and the effect will be applied equally to channels 1 to 4. When the flashing button is pressed, it lights steadily and the effect turns OFF. When power is first turned on, all effects default to OFF (indicators are lighted).

42. Harmonic Indicators

When **[HARMONIC]** is turned ON, these indicators light and the color of the indicator changes in accord with the status of the effect.

43. Sound-color effect parameter dial (COLOR)

Used to adjust quantitative parameters for the effect selected with the sound-color effect selector buttons.

44. Display

B

C

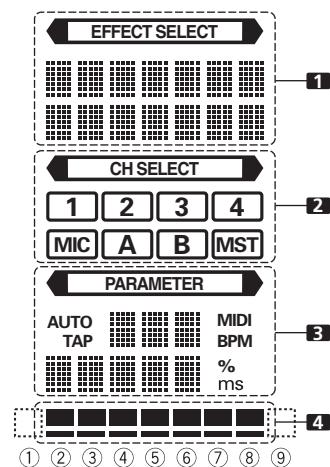

D

E

F

NAMES AND FUNCTIONS OF PARTS (DISPLAY SECTION)

A DISPLAY SECTION

B

1. Effects display section

The <EFFECT SELECT> indicator lights constantly, and the alpha-numeric display (seven characters in two lines) indicates the name of the effect as shown below. Also, when one of the change operations is performed as noted in the table, the corresponding characters are displayed for two seconds, after which the display returns to the original effect name.

| Switching Operation | Upper/
Lower Row | Display |
|---------------------|---------------------|---------|
| At MIDI start | Upper | MIDI |
| | Lower | START |
| At MIDI stop | Upper | MIDI |
| | Lower | STOP |
| MIDI snapshot | Upper | SNAP |
| | Lower | SHOT |

C

D

2. Channel select display section

The <CH SELECT> indicator lights constantly, and a red frame lights around the number position corresponding to the chosen effect channel selector.

3. Parameter display section

<PARAMETER>:

The <PARAMETER> indicator lights constantly.

AUTO/TAP:

[AUTO] lights when the BPM measuring mode is set to AUTO, and [TAP] lights when the BPM measuring mode is set to manual (TAP).

BPM counter display (3 digits):

In AUTO mode, displays the automatically detected BPM value. If the BPM count cannot be detected automatically, the display will flash at the previously detected value. In manual (TAP) mode, displays the BPM value designated by TAP input, etc.

BPM:

Lights constantly.

MIDI:

Displays the MIDI start/stop status.

Indicator lights after MIDI start command has been sent.

Indicator goes out after MIDI stop command has been sent.

Parameter 1 display (5 digits):

Displays parameters designated for each effect. When the beat select buttons (BEAT ▲, ▼) are pressed, the corresponding beat multiple change is displayed for one second. If the beat select buttons (BEAT ▲, ▼) are used to designate a value outside the parameter range, the current number will flash but will not change.

Unit Display (%/ms):

Lights in accordance with the unit used for each effect.

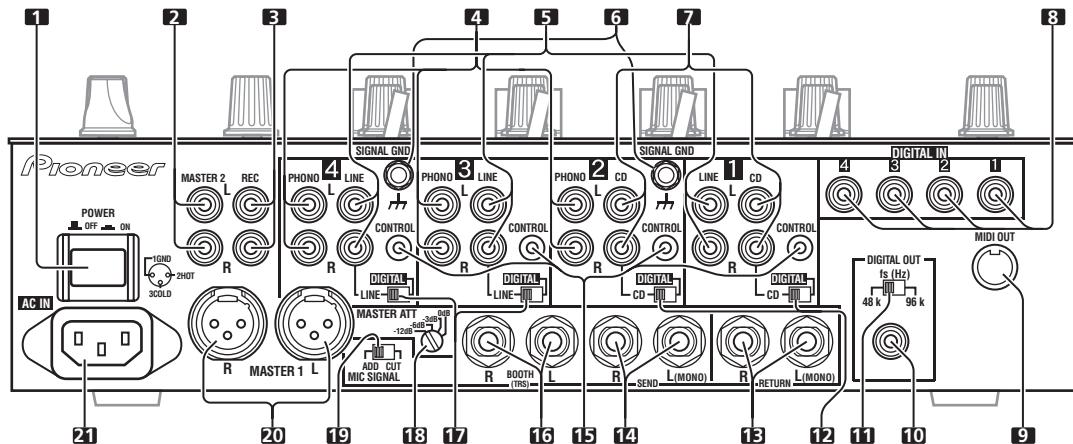

4. Beat display section

Displays the location of parameter 1 relative to BPM (1/1 beat). The lower row is lighted constantly. When the parameter 1 location approaches a threshold value, the corresponding indicator is lighted. When the parameter 1 is between threshold values, the indicator flashes. Although the display includes seven actual indicators, the two ends can also be considered to act as indicators, with the result that a theoretical nine positions can be postulated. When the values are at the two ends, no indicators light.

| Effect selector | Effect display | | Parameter display | | | | Beat display | | | | | | | | |
|-----------------|-----------------|-------------|-------------------|---------------|---------|------|--------------|------|-----|-----|-----|-----|------|------|------|
| | Upper/
Lower | Effect name | Minimum value | Maximum value | Default | Unit | 1/8 | 1/4 | 1/2 | 3/4 | 1/1 | 2/1 | 4/1 | 8/1 | 16/1 |
| DELAY | Upper | DELAY | 1 | 4 000 | 500 | ms | 1/8 | 1/4 | 1/2 | 3/4 | 1/1 | 2/1 | 4/1 | 8/1 | 16/1 |
| | Lower | | | | | | | | | | | | | | |
| ECHO | Upper | ECHO | 1 | 4 000 | 500 | ms | 1/8 | 1/4 | 1/2 | 3/4 | 1/1 | 2/1 | 4/1 | 8/1 | 16/1 |
| | Lower | | | | | | | | | | | | | | |
| REV DLY | Upper | REVERSE | 10 | 4 000 | 500 | ms | 1/8 | 1/4 | 1/2 | 3/4 | 1/1 | 2/1 | 4/1 | 8/1 | 16/1 |
| | Lower | DELAY | | | | | | | | | | | | | |

Shaded items [] are not displayed.

CONNECTION PANEL

1. POWER switch

2. MASTER 2 output connectors

RCA type unbalanced output.

3. Recording output connectors (REC)

RCA type output connectors for recording.

4. PHONO input connectors

RCA type phono level (MM cartridge) input connectors.
Do not use for inputting line level signals.

5. LINE input connectors

RCA type line level input connectors.

Use to connect a cassette deck or other line level output component.

6. Signal grounding terminals (SIGNAL GND)

Use to connect ground wires from analog players.

This is not a safety grounding terminal.

7. CD input connectors

RCA type line level input connectors.

Use to connect a DJ CD player or other line level output component.

8. DIGITAL IN connectors

RCA type digital coaxial input connectors.

Use to connect to DJ CD player or other digital coaxial output connectors.

9. MIDI OUT connector

DIN type output connector.

Use to connect to other MIDI component.

10. DIGITAL OUT connector

RCA type digital coaxial output connector.

Master audio digital output.

11. Sampling frequency selector switch (fs 48 k/96 k)

Use to set the sampling frequency of the digital output to 96 kHz/24-bit or 48 kHz/24-bit.

12. DIGITAL/CD input selector switches

Use to select either analog input (CD) or digital input (DIGITAL IN).

13. RETURN connectors

Ø6.3 mm phone-type input connectors.

Use to connect to the output connectors of external effectors or similar components.

When the L channel only is connected, the L channel input is simultaneously input to the R channel.

14. SEND output connectors

Ø6.3 mm phone-type output connectors.

Use to connect to the input connectors of external effectors or other similar components. When the L channel only is connected, a L+R monaural signal is output.

15. CONTROL connectors

Ø3.5 mm mini-connector. Use to connect to the control connector of a Pioneer DJ CD player.

When the connectors are connected, the DJM-800's fader can be used to perform start/stop on the DJ CD player.

16. BOOTH monitor output connectors

Ø6.3 mm phone-type booth monitor output connectors.

The sound level from these connectors is controlled independently by the **BOOTH MONITOR** level dial, regardless of the position of the **MASTER LEVEL** dial. (These connectors are TRS output, so they support both balanced and unbalanced outputs.)

17. DIGITAL/LINE input selector switches

Use to select either analog input (LINE) or digital input (DIGITAL IN).

18. Master output attenuator switch (MASTER ATT)

Use to attenuate the level of the master 1 and master 2 outputs. Selectable values are 0 dB, -3 dB, -6 dB and -12 dB.

19. Microphone signal switch (MIC SIGNAL ADD/CUT)

When set to the [ADD] position, the sounds from microphone 1 and microphone 2 are output to the **BOOTH** monitor output connectors.

When set to the [CUT] position, the sounds from microphone 1 and microphone 2 are not output to the **BOOTH** monitor output connectors.

20. MASTER 1 output connectors

XLR type (male) balanced output.

- When using a cord with RCA-type plug, users are recommended to connect the plug directly to the **MASTER 2** connectors without using an XLR/RCA converter plug.

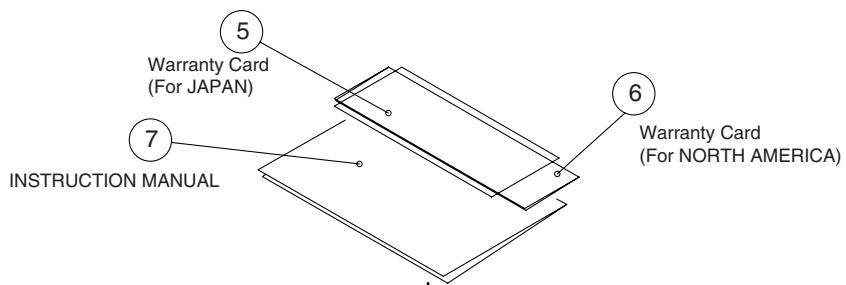

21. Power inlet (AC IN)

Use the accessory power cord to connect to an AC power outlet of the proper voltage.

9.3 SCHEMATIC DIAGRAM

A D JC-800RV/ZXJ/WL5

Note: Although the ref. numbers for the CH1/CH3 FADER Assys are different, they are identical, and their functions in the circuitry are the same. You can connect to either of them.

Note: Although the ref. numbers for the CH2/CH4 FADER Assys are different, they are identical, and their functions in the circuitry are the same. You can connect to either of them.

9.4 DISASSEMBLY

WARNING

Do not attempt to install this kit by your-self!

This kit requires professional expertise and must be installed by a specially trained technician.

For details, inquire at your nearest authorized Pioneer service center. (Consult your retail dealer for more information regarding authorized Pioneer service centers.)

NOTE:

Installation of this kit requires specialized professional training and expertise. Consult your nearest authorized Pioneer service center for installation(installation fee must be paid by user).

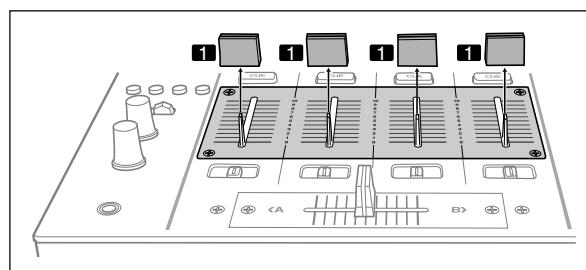

Attempting to install this kit by yourself can be very dangerous, and may result not only in damage to the unit, but fire or electrical shock. Pioneer can accept no liability for injuries or damages resulting from installations or modifications performed by the customer.

To the Installing Service Personnel

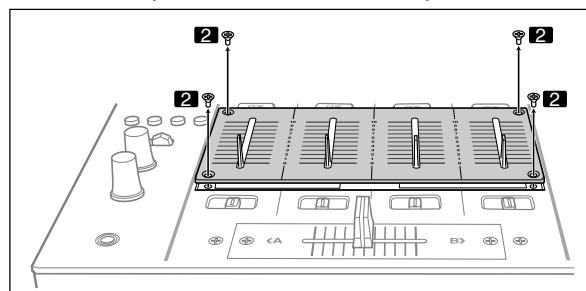

Install this panel unit as depicted in the accompanying illustrations and instructions.

- Before beginning work, be sure to disconnect the power cord from its supply outlet.

1. Pull off the 4 fader slider knobs.

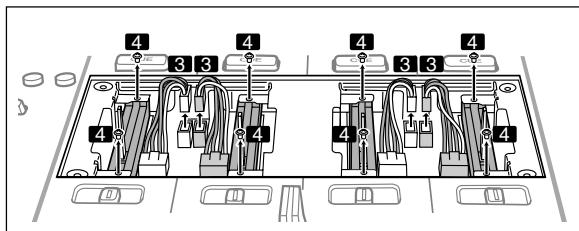

2. Remove the 4 screws at the four corners of the fader panel, and remove the panel.

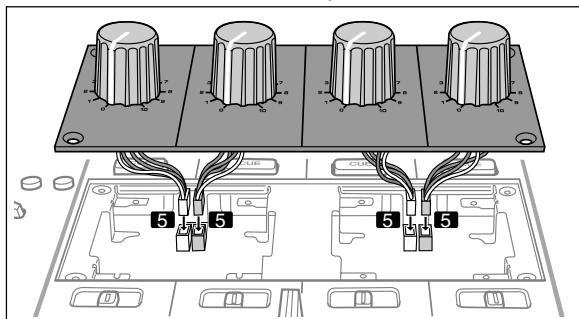

3. Disconnect the 4 cable connectors.

4. Remove the 2 mounting screws for each slide volume (total 8 screws), and remove the 4 slide volumes.

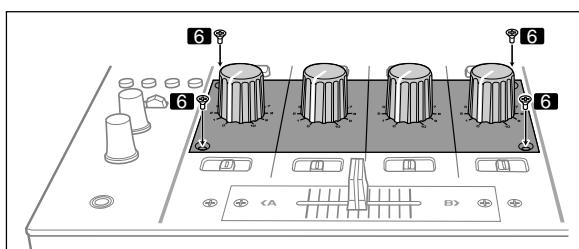

5. Connect the 4 cable connectors for the fader units to be installed (total 4).

- Insert the connectors securely, taking care not to mistake the order in which the connectors are attached (connectors for odd-numbered channels are white, while connectors for even-numbered channels are yellow. Attach connectors of the same color together).

6. Insert the Fader panel and fasten with the four corner screws (total 4).

- Take care not to allow any wiring to be caught under the panel.

- Carefully store all removed parts (lever knobs (4), panel (1), slide volumes (4), and mounting screws (8)).

■ Jigs list
