### OVERVIEW

The SRA-804 is a versatile 4-channel power amplifier capable of performing in a wide variety of applications.

- EIA-2U rack-mount.
- Delivers 25W (into 4 Ω) to each 4 channels.
- Drive a wide variety of speaker loads. (2 Ω or more)
- Features balanced input jacks. (1/4" stereo phone jack)
- Create a variety of configurations;
  - 2-channels amplifier in a BTL connection,
  - 4 inputs and 4 outputs amplifier,
  - 1 input and 4 outputs amplifier, etc.
- Natural air-cooling by a large heat sink.
- Twin transformer system which provides a stable power supply.
- Equipped with current controlling circuits, temperature control circuits and muting circuits as safeguards.

\* BTL is the abbreviation for "Balanced Transformerless".  
 BTL is a sort of amplifier's circuit method.  
 The load (speaker) is connected between outputs of two SEPP OTL circuits. These two circuits are operated with contrary phase each other, like a balanced system.  
 So, BTL-connected-output-power is four times of SEPP OTL output power at same load value.  
 SEPP OTL (Single-Ended-Push-Pull Output-Transformerless) is a basic and ordinary amp circuit.

They are used for each 4 channels power IC in SRA-804.

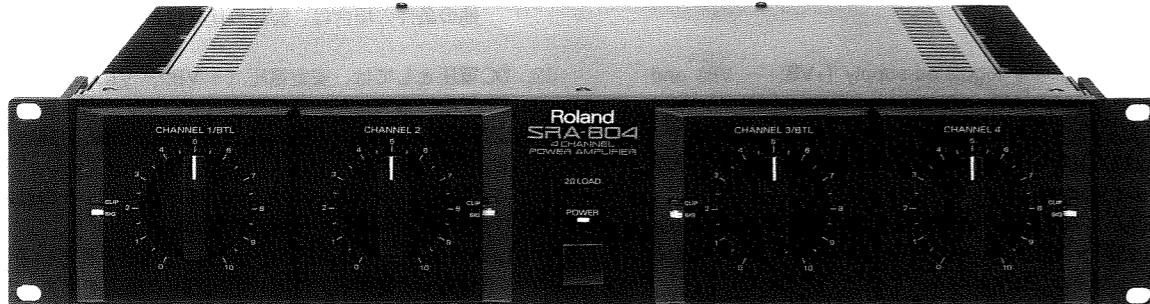

### 概要

SRA-804は、用途に合わせて幅広く対応させることのできる、4チャネルの多目的パワー・アンプです。

- EIA2U ラックサイズ。
- 最大出力25W(4オーム負荷)で4チャネル同時駆動。
- さまざまな負荷のスピーカーを接続可能。(最小2オーム)
- バランス型入力を装備。(ステレオ・フォーン・ジャック)
- さまざまな構成で使用可能;
  - BTL接続による2チャネルアンプ構成、  
4入力/4出力構成、  
1入力/4出力構成、など。
  - 大型のヒートシンクによる、自然空冷。
  - ツイン・トランス方式を採用し、安定した電源を供給。
  - 保護回路として、電流制限回路、温度制限回路、ミューティング回路を採用。

※BTLは、「Balanced Transformerless」の略で、増幅回路の一つの方式です。  
 負荷(スピーカー)は、2つのSEPP OTL回路の出力間に接続されます。これらの2つの回路は、バランス・システムのように、お互いに逆の位相で働きます。そのために、負荷が同じ場合は、BTL接続の出力はSEPP OTL出力の4倍になります。  
 SEPP OTL(Single-Ended-Push-Pull Output-Transformerless)は、基本的な普通に使われる増幅回路で、SRA-804の4つのチャンネルにパワーICとして使われています。

### GENERAL VIEW/概観図

## SPECIFICATIONS/仕様

<b>Rated Power Output/定格出力</b>	<b>Signal to Noise Ratio/信号対ノイズ比</b>
20W RMS into 8 Ω each channels / 4ch. operation (at SEPARATE mode, LOAD SW at "MIN 4")	Greater than 95dB below rated power (Input terminated with 150 Ω, IHFA-WTD)
25W RMS into 4 Ω each channels / 4ch. operation (at SEPARATE mode, LOAD SW at "MIN 4")	Greater than 85 (at 1 kHz into 8 Ω)
10W RMS into 2 Ω each channels / 4ch. operation (at SEPARATE mode, LOAD SW at "MIN 2")	Greater than 15V/micro-second (into 8 Ω)
50W RMS into 8 Ω each channels / 2ch. operation (at BTL mode, LOAD SW at "MIN 4")	AC 100V, AC117V, AC230V or AC240V
<b>Input Impedance/入力インピーダンス</b>	<b>Power Consumption/消費電力</b>
Greater than 10k Ω (Balanced or Unbalanced)	100W (AC100V), 140W (AC117V, 230V, 240V)
<b>Input Sensitivity/入力感度</b>	<b>Dimensions/外形寸法</b>
- 10dBm (0.25V RMS) for rated power output (Balanced or Unbalanced)	482(W) × 318(D) × 91.3(H) mm 19(W) × 12-9/16(D) × 3-5/8(H) inches
<b>Maximum Input/最大許容入力</b>	<b>Weight/重量</b>
+21.5dBm (9.2V RMS) for unclipped signal by head amp. (Balanced or Unbalanced)	7.7 Kg / 17 lbs
<b>Frequency Response/周波数特性</b>	<b>Accessories (Standard)/標準付属品</b>
10Hz to 75kHz (+1, -1dB, 1W into 8 Ω)	Owner's Manual Set (Part# 26035264)
<b>Power Band Width/出力帯域幅</b>	<b>Accessories (Optional)/別売品</b>
10Hz to 50kHz (at SEPARATE mode, 8 Ω, 10W, THD at 0.3% or less)	System Rack (SYR-Series) Hard Case (TB-Series)
<b>Total Harmonic Distortion/全高調波歪</b>	
Less than 0.07% (at SEPARATE mode, 1kHz, 10W into 8 Ω) Less than 0.03% (at BTL mode, 1kHz, 25W into 8 Ω)	

### NOTES:

1. Able to drive under following conditions:  
(You should not drive at the other conditions.)
- at SEPARATE mode, LOAD SW at "MIN 4", 4 Ω load or more
  - at SEPARATE mode, LOAD SW at "MIN 2", 2 Ω load or more
  - at BTL mode, LOAD SW at "MIN 4", 8 Ω load or more

2. "Rated Power Output" is not meant to continuous power.  
It means maximum rated power. If the output is over this, the output clipping will occurs gradually.

You should use this unit with about half of "Rated Power Output", if you use it continuously.

Output voltage occurred clip is as follows:

(Voltage between both terminal of loudspeaker.)

12.7V RMS(35.8V pp) into 8 Ω at SEPARATE mode

(This means 20W RMS into 8 Ω, rated power.)

10.0V RMS(28.3V pp) into 4 Ω at SEPARATE mode

(This means 25W RMS into 4 Ω, rated power.)

4.47V RMS(12.6V pp) into 2 Ω at SEPARATE mode

(This means 10W RMS into 2 Ω, rated power.)

20.0V RMS(56.6V pp) into 8 Ω at BTL mode

(This means 50W RMS into 8 Ω, rated power.)

3. All input are 1/4" stereo phone jacks, balanced system by op-amps active circuits.

Therefore, they are balanced system, if use 1/4" stereo phone plugs. They are, however, unbalanced system, if use 1/4" mono phone plugs.

4. "Input Sensitivity" is the lowest input level that will produce an output of "Rated Power Output".

5. "Maximum Input" is the highest input level that the head amp will produce an head amp output before signal clipping occurs.

<b>Signal to Noise Ratio/信号対ノイズ比</b>	<b>Relations of "dBm" and "V RMS"</b>
Greater than 95dB below rated power (Input terminated with 150 Ω, IHFA-WTD)	$Er[V RMS] = \sqrt{0.6 * 10 \exp(P[dBm]/20)}$
<b>Damping Factor/ダンピングファクター</b>	So, 0 [dBm] is referenced to 0.775 [V RMS]. (0 dBm is value produced 1 mW into 600 Ω load.)
Greater than 85 (at 1 kHz into 8 Ω)	Relations of "V RMS" and "V pp"
<b>Slew Rate/スルーレイト</b>	$Ep[V pp] = 2 * \sqrt{2} * Er[V RMS]$
Greater than 15V/micro-second (into 8 Ω)	So, 0.775 [V RMS] is referenced to 2.19 [V pp].
<b>Power Supply/電源</b>	
AC 100V, AC117V, AC230V or AC240V	
<b>Power Consumption/消費電力</b>	
100W (AC100V), 140W (AC117V, 230V, 240V)	
<b>Dimensions/外形寸法</b>	
482(W) × 318(D) × 91.3(H) mm 19(W) × 12-9/16(D) × 3-5/8(H) inches	
<b>Weight/重量</b>	
7.7 Kg / 17 lbs	
<b>Accessories (Standard)/標準付属品</b>	
Owner's Manual Set (Part# 26035264)	
<b>Accessories (Optional)/別売品</b>	
System Rack (SYR-Series) Hard Case (TB-Series)	

### 備考 :

1. 次の設定のもとに、使用できます。

- SEPARATE モード、LOAD スイッチを「MIN 4」に設定、4 Ω以上の負荷で使用。
- SEPARATE モード、LOAD スイッチを「MIN 2」に設定、2 Ω以上の負荷で使用。
- BTL モード、LOAD スイッチを「MIN 4」に設定、8 Ω以上の負荷で使用。

2. 「定格出力」とは、継続使用出力では無く最大定格出力です。  
出力がこの値を超えると、徐々にクリップして行きます。  
もし、継続使用する場合は、「定格出力」のおよそ半分の出力で使用して下さい。

クリップを始める出力電圧を次に示します。

(スピーカーの両端子間の電圧)

- 12.7V RMS(35.8V pp) into 8 Ω at SEPARATE mode  
(これは、20W RMS into 8 Ω の定格出力に相当)  
10.0V RMS(28.3V pp) into 4 Ω at SEPARATE mode  
(これは、25W RMS into 4 Ω の定格出力に相当)  
4.47V RMS(12.6V pp) into 2 Ω at SEPARATE mode  
(これは、10W RMS into 2 Ω の定格出力に相当)  
20.0V RMS(56.6V pp) into 8 Ω at BTL mode  
(これは、50W RMS into 8 Ω の定格出力に相当)

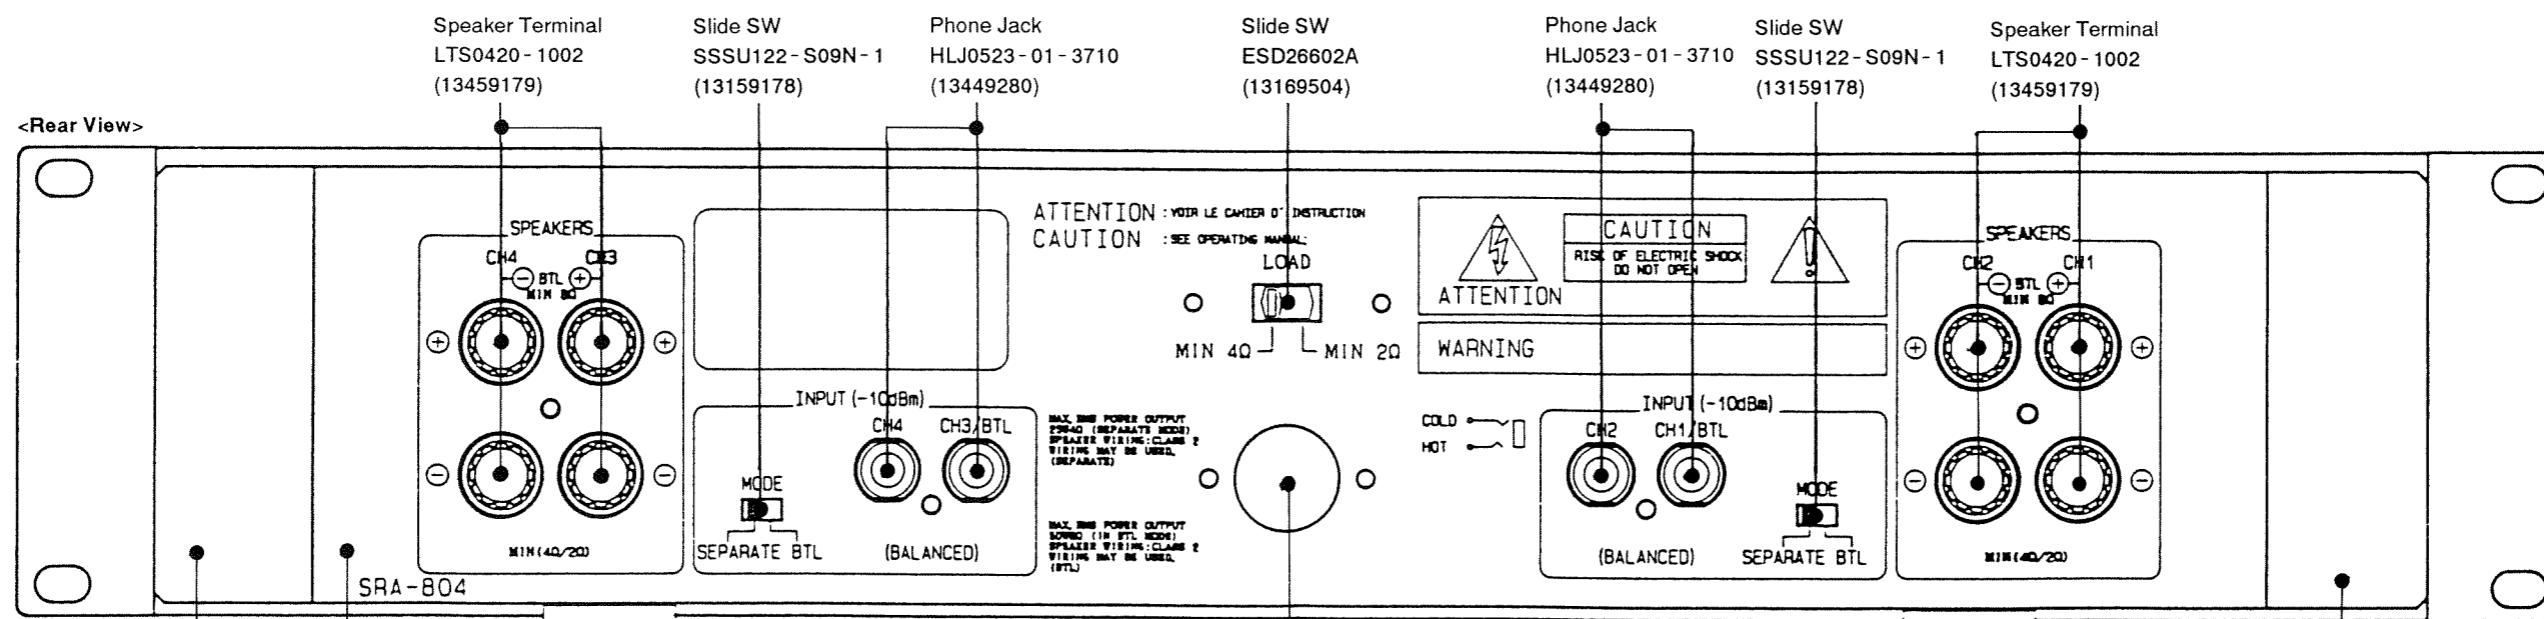

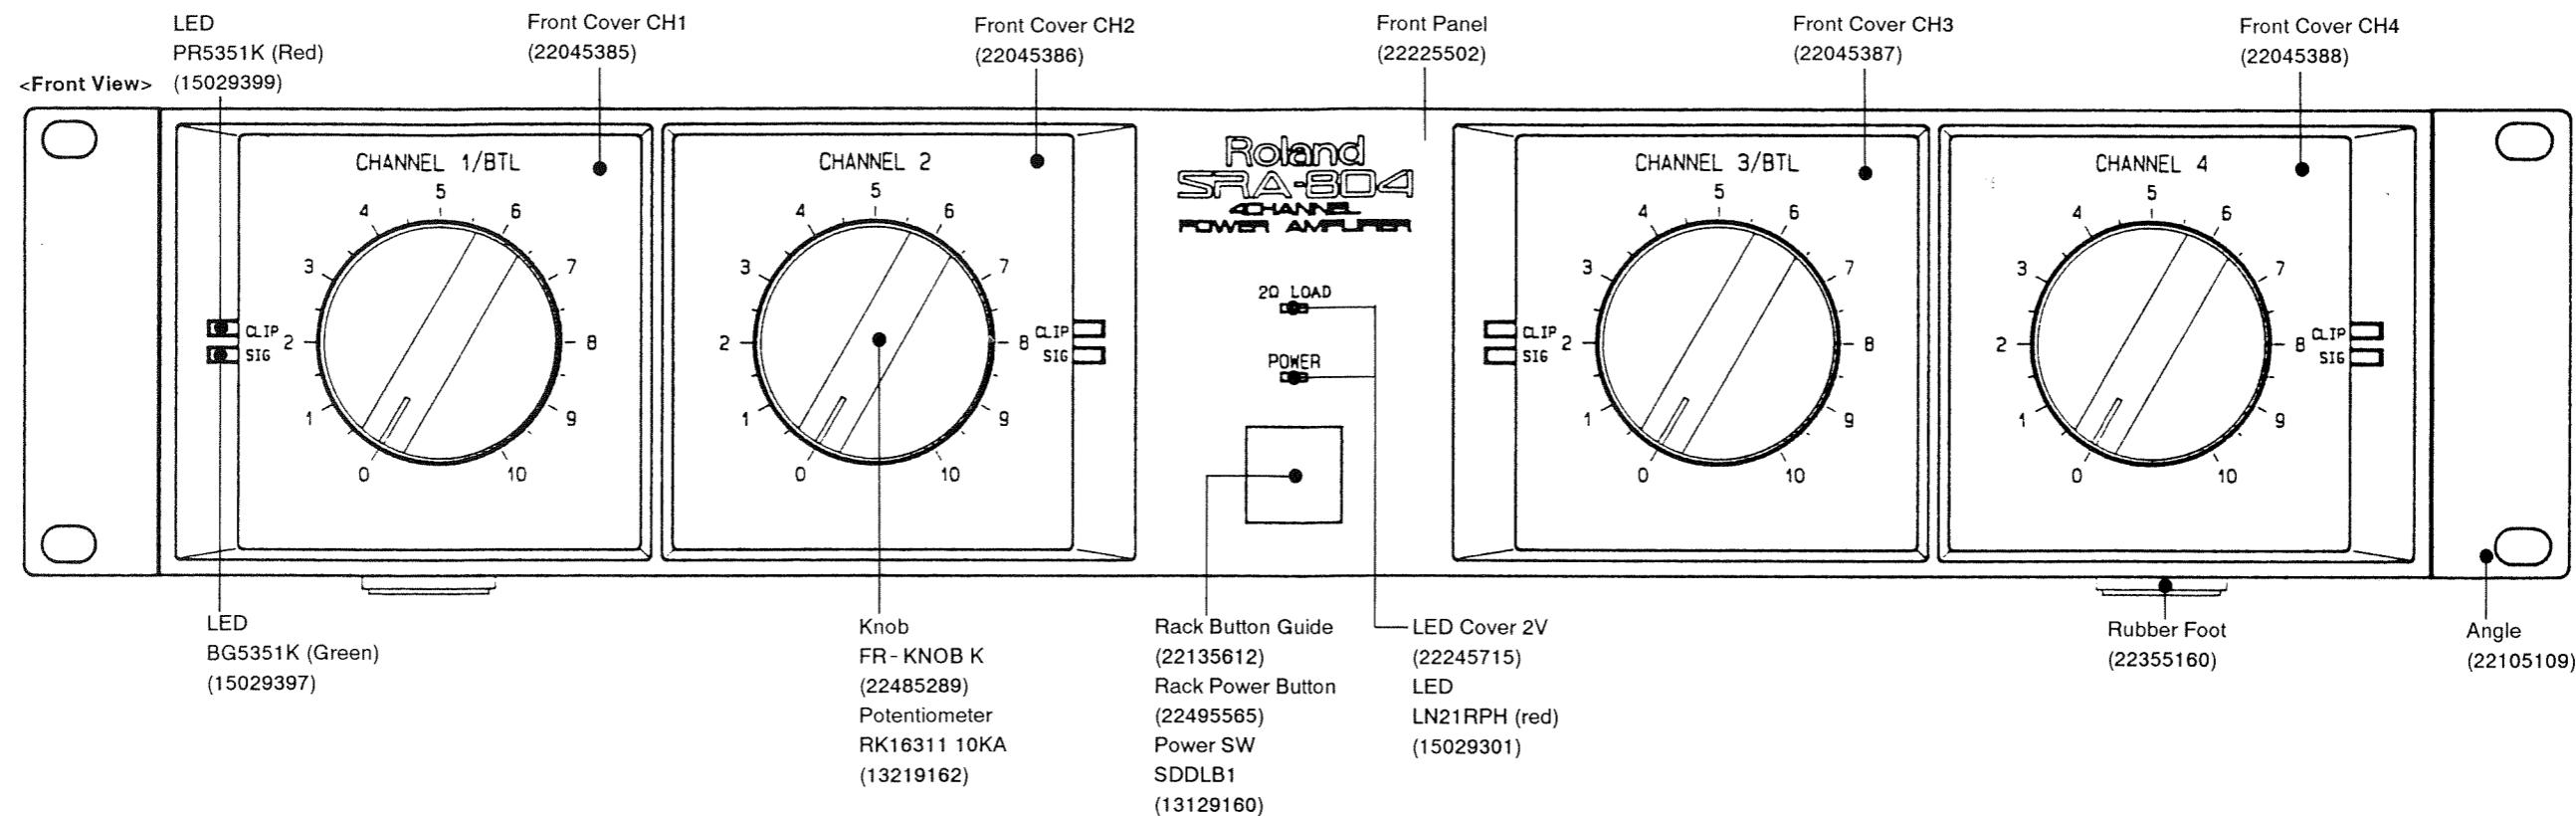

3. 入力は全て 1/4" ステレオ・フォーン・ジャックが使用され、OP アンプによる平衡回路によって構成されています。  
そのために、1/4" ステレオ・フォーン・プラグを挿入した場合は平衡システムとなり、1/4" モノ・フォーン・プラグを挿入した場合は、不平衡システムとなります。

4. 「入力感度」とは、「定格出力」を出力するための、入力信号の最小値です。

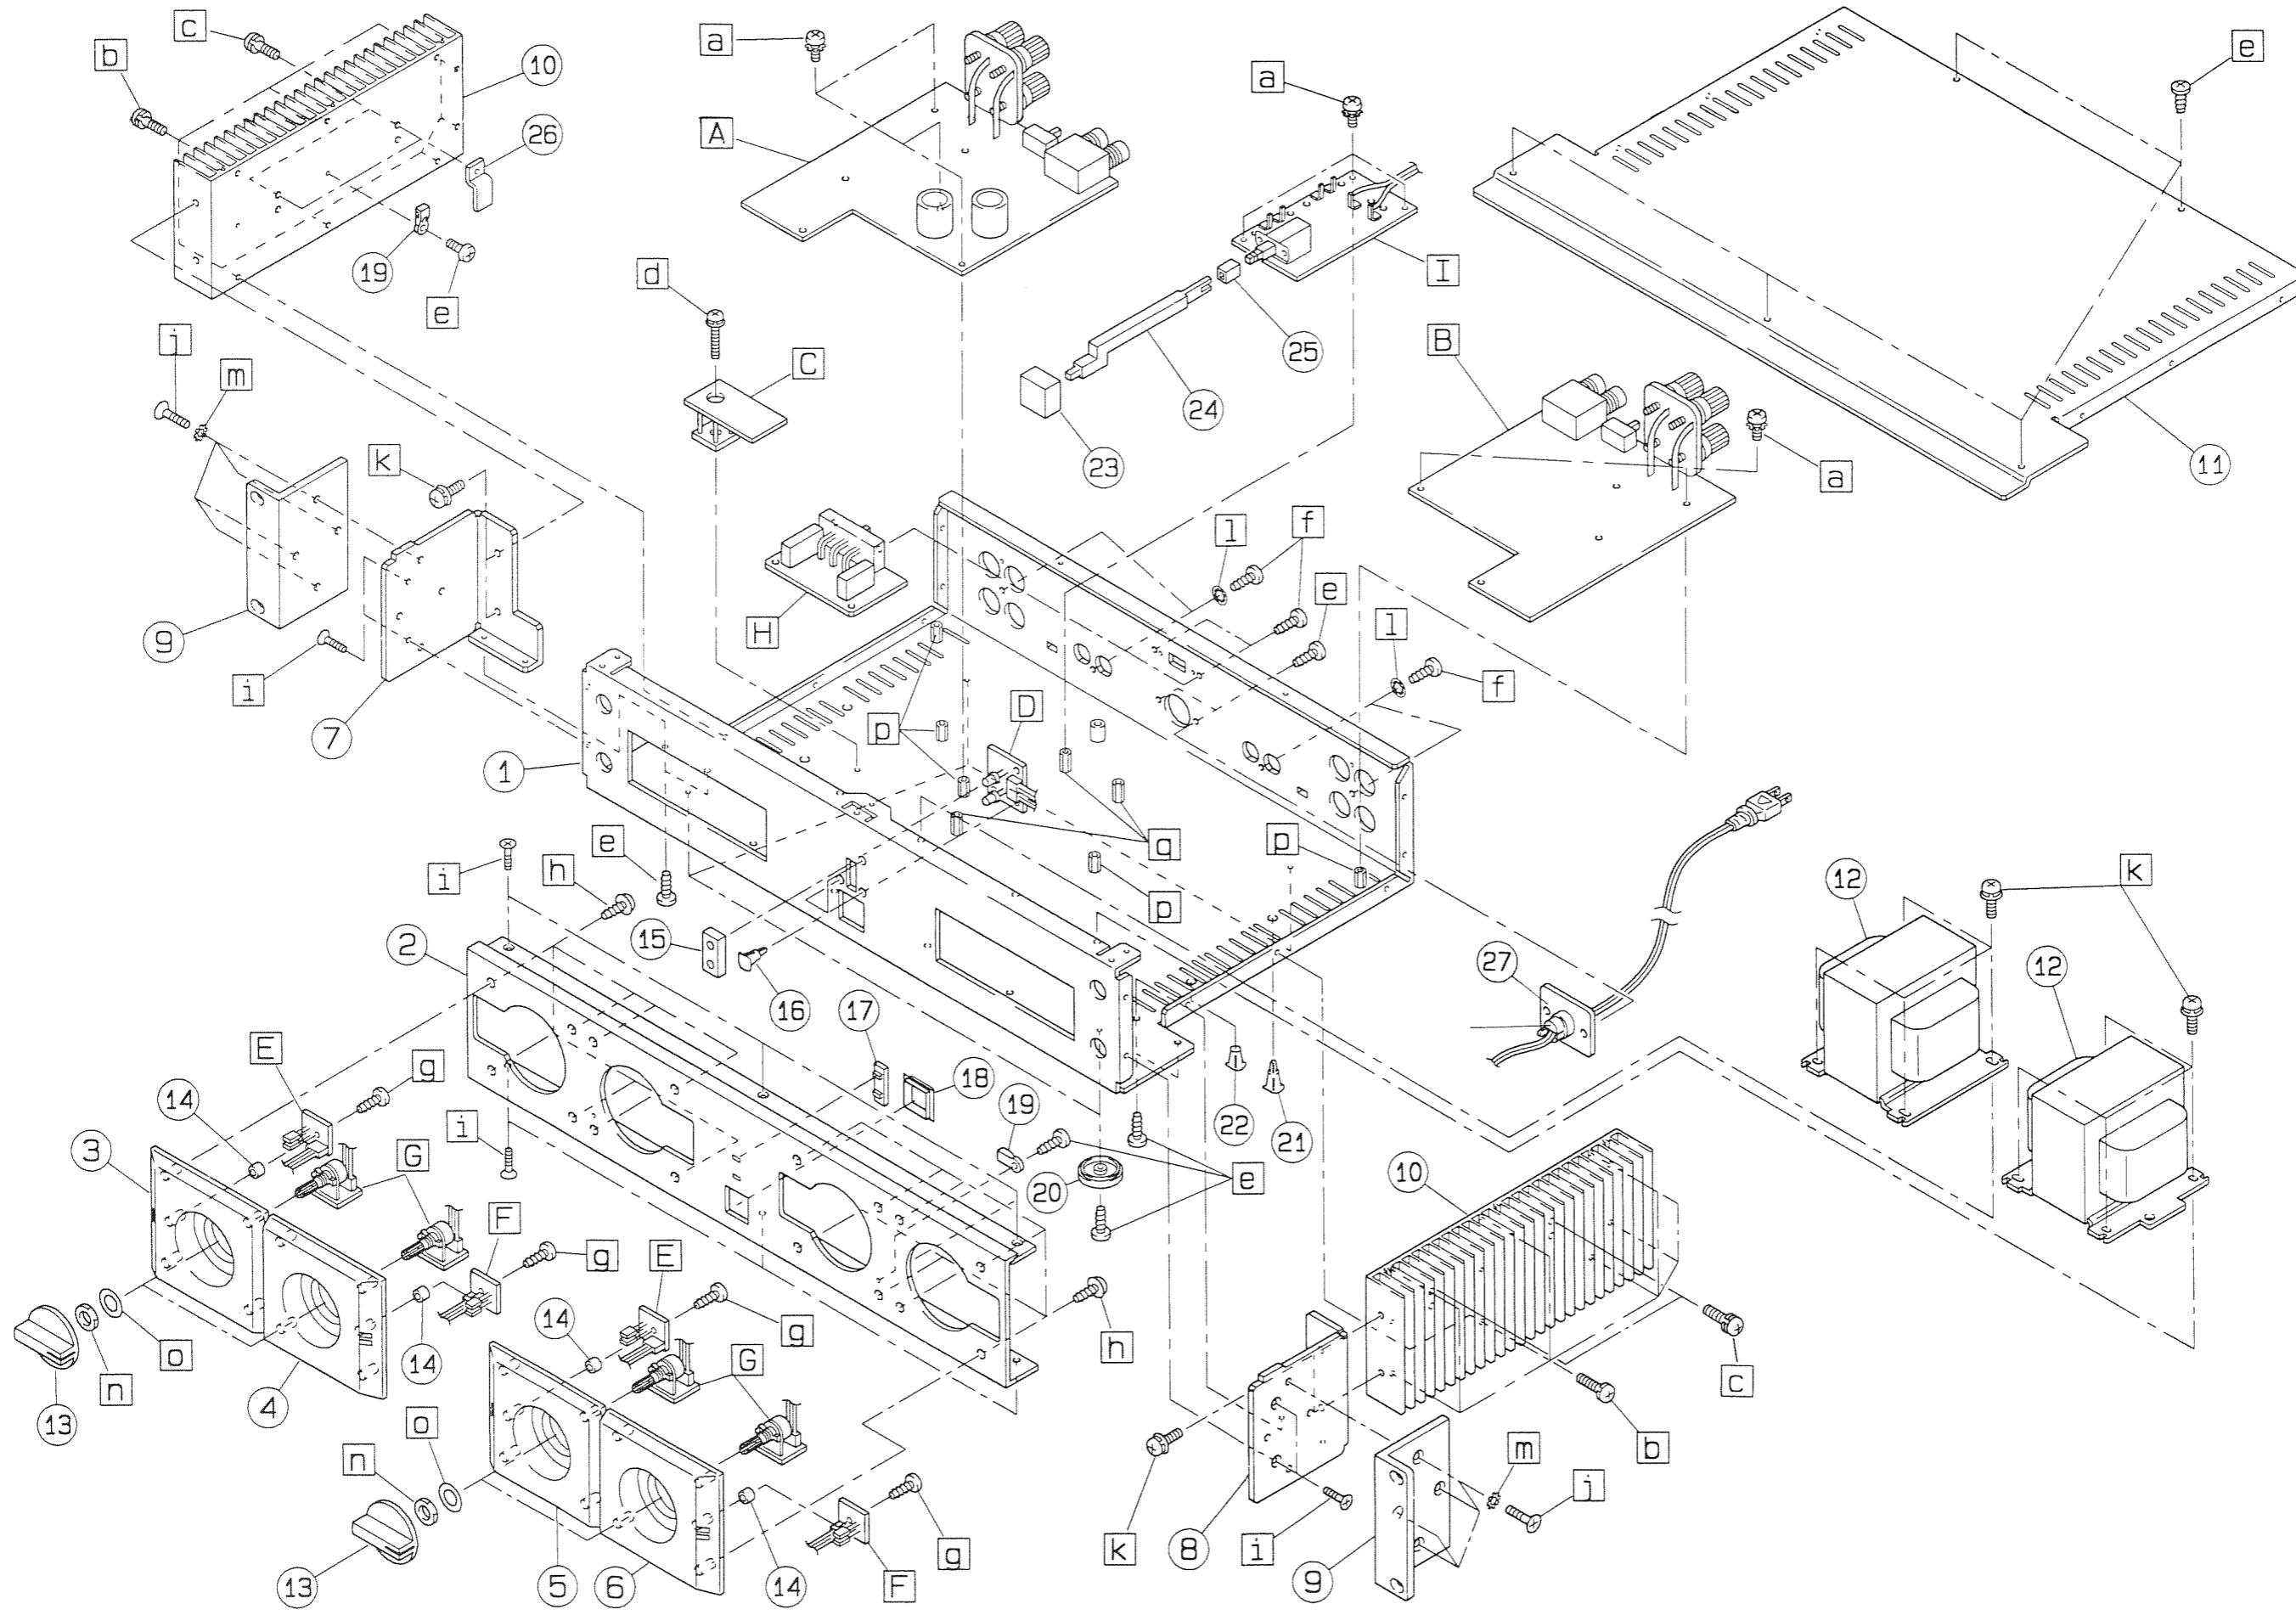

5. 「許容最大入力」とは、ヘッド・アンプ出力がクリップしない、入力信号の最大値です。

6. 「dBm」と「V RMS」との関係は、  
 $Er[V RMS] = \sqrt{0.6 * 10 \exp(P[dBm]/20)}$   
によって、0 [dBm] は 0.775 [V RMS] に相当する。  
(0 dBm は、600 Ωの負荷に 1 mW を与える時の値)  
「V RMS」と「Vpp」との関係は、  
 $Ep[V pp] = 2 * \sqrt{2} * Er[V RMS]$   
によって、0.775 [V RMS] は 2.19 [V pp] に相当する。
7. 自動的 thermal shutdown upon over-temperature conditions such as impedance mis-match or shorts.  
It's circuit included in power IC is set to 145 °C (but 170 °C for shutdown of first once).  
Unit will reset when temperature are safe.
8. Overload protection limits the output current, if connect a load below specific impedance.  
This circuits included in power IC will active with power amp output currents above 4 Ampere.
9. To prevent loudspeaker damage, muting (time delay) circuits short the input of final amp during power-up (about 3 second).
10. SIG(Signal) indicators light when the output is greater than 0.2W into 8 Ω at SEPARATE mode.  
It light in response to the output voltage.  
In other words, it light when the output voltage is greater than 1.26V RMS (3.56Vpp) into any load.  
Therefore, it light under following conditions.  
Greater than 0.2W RMS into 8 Ω at SEPARATE mode  
Greater than 0.4W RMS into 4 Ω at SEPARATE mode  
Greater than 0.8W RMS into 2 Ω at SEPARATE mode  
Greater than 0.8W RMS into 8 Ω at BTL mode
11. CLIP indicators light when the output is greater than 20W into 8 Ω at SEPARATE mode.  
It light in response to the output voltage.  
In other words, it light when the output voltage is greater than 12.7V RMS (35.8Vpp) into any load.  
Therefore, it light under following conditions.  
Greater than 20W RMS into 8 Ω at SEPARATE mode  
(Greater than 40W RMS into 4 Ω at SEPARATE mode)  
(Greater than 80W RMS into 2 Ω at SEPARATE mode)  
(Greater than 80W RMS into 8 Ω at BTL mode)  
As a result, CLIP indicator light only under SEPARATE mode at 8 Ω load. The other states is inexistence as out of specifications.
12. Using DC supply are regulated-supply (+VB, -VB) and unregulated-supply (+VA, -VA).  
Regulated, +VB, -VB voltage is +15V, -15V constant.  
Unregulated, +VA, -VA voltage is changed by LOAD switch position and load value.  
When LOAD switch is set to "MIN 4 Ω" position, VA voltage is about 23 volt for rated-power-output use (25W into 4 Ω) and about 29 volt for no load.  
When LOAD switch is set to "MIN 2 Ω" position, VA voltage is about 11 volt for rated-power-output use (10W into 2 Ω) and about 14 volt for no load.

## DISASSEMBLY/分解手順

### ① Removing Top Cover

Remove the following screws:

- 5 screws in the top. ([e])
  - ..... 3 × 6mm Binding Head B-Tight FeBc
- 3 screws in the upper of right-hand side Heatsink. ([b])
  - ..... 3 × 6mm Sems FeBc
- 3 screws in the upper of left-hand side Heatsink. ([b])
  - ..... 3 × 6mm Sems FeBc

In this state, Top Cover comes off.

### ② Removing Front Panel

Beforehand, you make loose 8 screws on Angle (right and left hand). ([i])

Remove the following screws;

- 3 screws in the top. ([i])
  - ..... 3 × 6mm Flat Head FeBc
- 3 screws in the bottom. ([i])
  - ..... 3 × 6mm Flat Head FeBc

In this state, you will be able to draw out the Front Panel.

Then, you will be able to see all the part.

I wish you remove proper screws according to repaired point.

① トップカバーの取り外し。  
次に示すネジを外します。

- ・トップ側についている、5本のネジ。([e])
  - ..... 3 × 6mm Binding Head B-Tight FeBc
- ・右側ヒートシンクの上方についている3本のネジ。([b])
  - ..... 3 × 6mm Sems FeBc
- ・左側ヒートシンクの上方についている3本のネジ。([b])
  - ..... 3 × 6mm Sems FeBc

この状態で、トップカバーは外れます。

② フロントパネルの取り外し。

あらかじめ、アングル(左、右)を止めている8本のネジを、ゆるめておきます。([i])

- そして、次に示すネジを外します。
- ・トップ側の3本ネジ。([i])
  - ..... 3 × 6mm Flat Head FeBc
- ・底側の3本のネジ。([i])
  - ..... 3 × 6mm Flat Head FeBc

この状態で、フロントパネルを引き抜くことができます。

これで、全ての使用部品を見る事が出来ます。  
修理箇所に応じて、相当場所のネジを外し、部品を取り外して下さい。

## PARTS LIST/ パーツリスト

**SAFETY PRECAUTIONS:**  
The parts marked **△** have safety-related characteristics.  
Use only listed parts for replacement.

安全上の注意:  
△が付いている部品は、安全上特別な規格でつくられたものです。  
交換の際は、指定された部品番号以外の部品は使わないようにして下さい。

### CONSIDERATIONS ON PARTS ORDERING

When ordering any parts listed in the parts list, please specify the following items in the order sheet.

QTY	PART NUMBER	DESCRIPTION	MODEL NUMBER
Ex. 10	22575241	Sharp key	C-20/50
15	2247017300	Knob (orange)	DAC-15D

Failure to completely fill the above items with correct number and description will result in delayed or even undelivered replacement.

#### バーツ発注に関するお願い

オーダーシートには、必ず下記の4項目は正確に記入して下さい。(例外は除く)

必要数	バーツナンバー	品名	使用機種
例) 10	22575241	Sharp key	C-20/50
15	2247017300	Knob (orange)	DAC-15D

もし記入漏れ、誤記等がある場合、必要部品が発送できなかったり、大幅な遅れの原因になります。

御協力をお願いします。

### PCB ASSY/ 基板組立

7025830400 MAIN BOARD ASSY (pcb 22935271) 230/240V type

**NOTE** Replacement MAIN BOARD ASSY consists of the following 8 boards.  
**注意** 梯修用メイン基板組立は、下記の8基板から構成されます。

*****	Power Amp A Board (pcb 22935271 1/8)	for Ch 1, 3
*****	Power Amp B Board (pcb 22935271 2/8)	for Ch 1, 3
*****	DI Board (pcb 22935271 3/8)	for Ch 2, 4
*****	Power LED Board (pcb 22935271 4/8)	for Ch 2, 4
*****	Channel LED Board (pcb 22935271 5/8)	for Ch 1, 3
*****	Channel LED Board (pcb 22935271 6/8)	for Ch 1, 3
*****	Channel LED Board (pcb 22935271 7/8)	for Ch 2, 4
*****	Channel LED Board (pcb 22935271 8/8)	for Ch 2, 4

**NOTE** There are two types of MAIN BOARD ASSY for different line voltage being used.  
They are "100/117V" type and "230/240V" type.

Replacement ASSY which are available from the factory, however, is "230/240V" type only.

When repairing ASSY is "230/240V" type, you can use the replacement ASSY as it is.

But, if repairing ASSY is "100/117V" type, note the following.

Differences between two types are fuse rate, fuse label and marking on the BOARD. (Fuse is mounted on the "Power Amp B Board".)

You have to order separately the fuse and fuse label for "100/117V" type, and change for it.

You have to change the marking from "230/240V" to "100/117V".

	Fuse	Fuse Label
100/117V type	TSC630mA-N1 (12559396)	630mA/125V (41015111)
230/240V type	CEE-315mAT (12559562)	T315mA/250V (***** )

**注意** メイン基板組立には電圧仕様の異なる2種類があります。「100/117V」タイプと「230/240V」タイプです。  
しかしながら、補修用基板組立として供給されるのは、「230/240V」タイプだけです。

必要とする基板が「230/240V」タイプならば、補修用基板をそのまま使えますが、必要とする基板が「100/117V」タイプの基板の場合は、次の指示に従って下さい。

2つのタイプの違いは、ヒューズの値、ヒューズ・ラベルそして基板上のマーキングです。(ヒューズは、「Power Amp B Board」上に付けられています。)

「100/117V」タイプ用ヒューズおよびヒューズ・ラベルを別途発注し、付け換えて下さい。また、基板上のマーキングを、「230/240V」から、「100/117V」に付け換えて下さい。

	Fuse	Fuse Label
100/117V type	TSC630mA-N1 (12559396)	630mA/125V (41015111)
230/240V type	CEE-315mAT (12559562)	T315mA/250V (***** )

7025831400 SUB BOARD ASSY (pcb 22935285) 230/240V type

**NOTE** Replacement SUB BOARD ASSY consists of the following 6 boards.

**注意** 梯修用サブ基板組立は、下記の6基板から構成されます。

*****	PS-1 Board (pcb 22935285 1/6)	
*****	Switch Board (pcb 22935285 2/6)	
*****	VR Board (pcb 22935285 3/6)	for Ch 1,2,3,4
*****	VR Board (pcb 22935285 4/6)	for Ch 1,2,3,4
*****	VR Board (pcb 22935285 5/6)	for Ch 1,2,3,4
*****	VR Board (pcb 22935285 6/6)	for Ch 1,2,3,4

**NOTE** There are two types of SUB BOARD ASSY for different line voltage being used. They are "100/117V" type and "230/240V" type.

Replacement ASSY which are available from the factory, however, is "230/240V" type only.

When repairing ASSY is "230/240V" type, you can use the replacement ASSY as it is. But, if repairing ASSY is "100/117V" type, note the following.

Differences between two types are fuse rate, fuse label and marking on the BOARD. (Fuse is mounted on the "PS-1 Board".)

You have to order separately the fuse and fuse label for "100/117V" type, and change for it.

You have to change the marking from "230/240V" to "100/117V".

	Fuse	Fuse Label
100/117V type	TSC3.15A-N1 (12559403)	3.15A/125V (41015120)
230/240V type	CEE-2AT (12559570)	T2A/250V (***** )

**注意** サブ基板組立には電圧仕様の異なる2種類があります。「100/117V」タイプと、「230/240V」タイプです。

しかしながら、補修用基板組立として供給されるのは、「230/240V」タイプだけです。

必要とする基板が「230/240V」タイプならば、補修用基板をそのまま使えますが、必要とする基板が「100/117V」タイプの基板の場合は、次の指示に従って下さい。

2つのタイプの違いは、ヒューズの値、ヒューズ・ラベルそして基板上のマーキングです。(ヒューズは、「PS-1 Board」上に付けられています。)

# MAIN BOARD ASSEMBLY / MAIN ボード組立

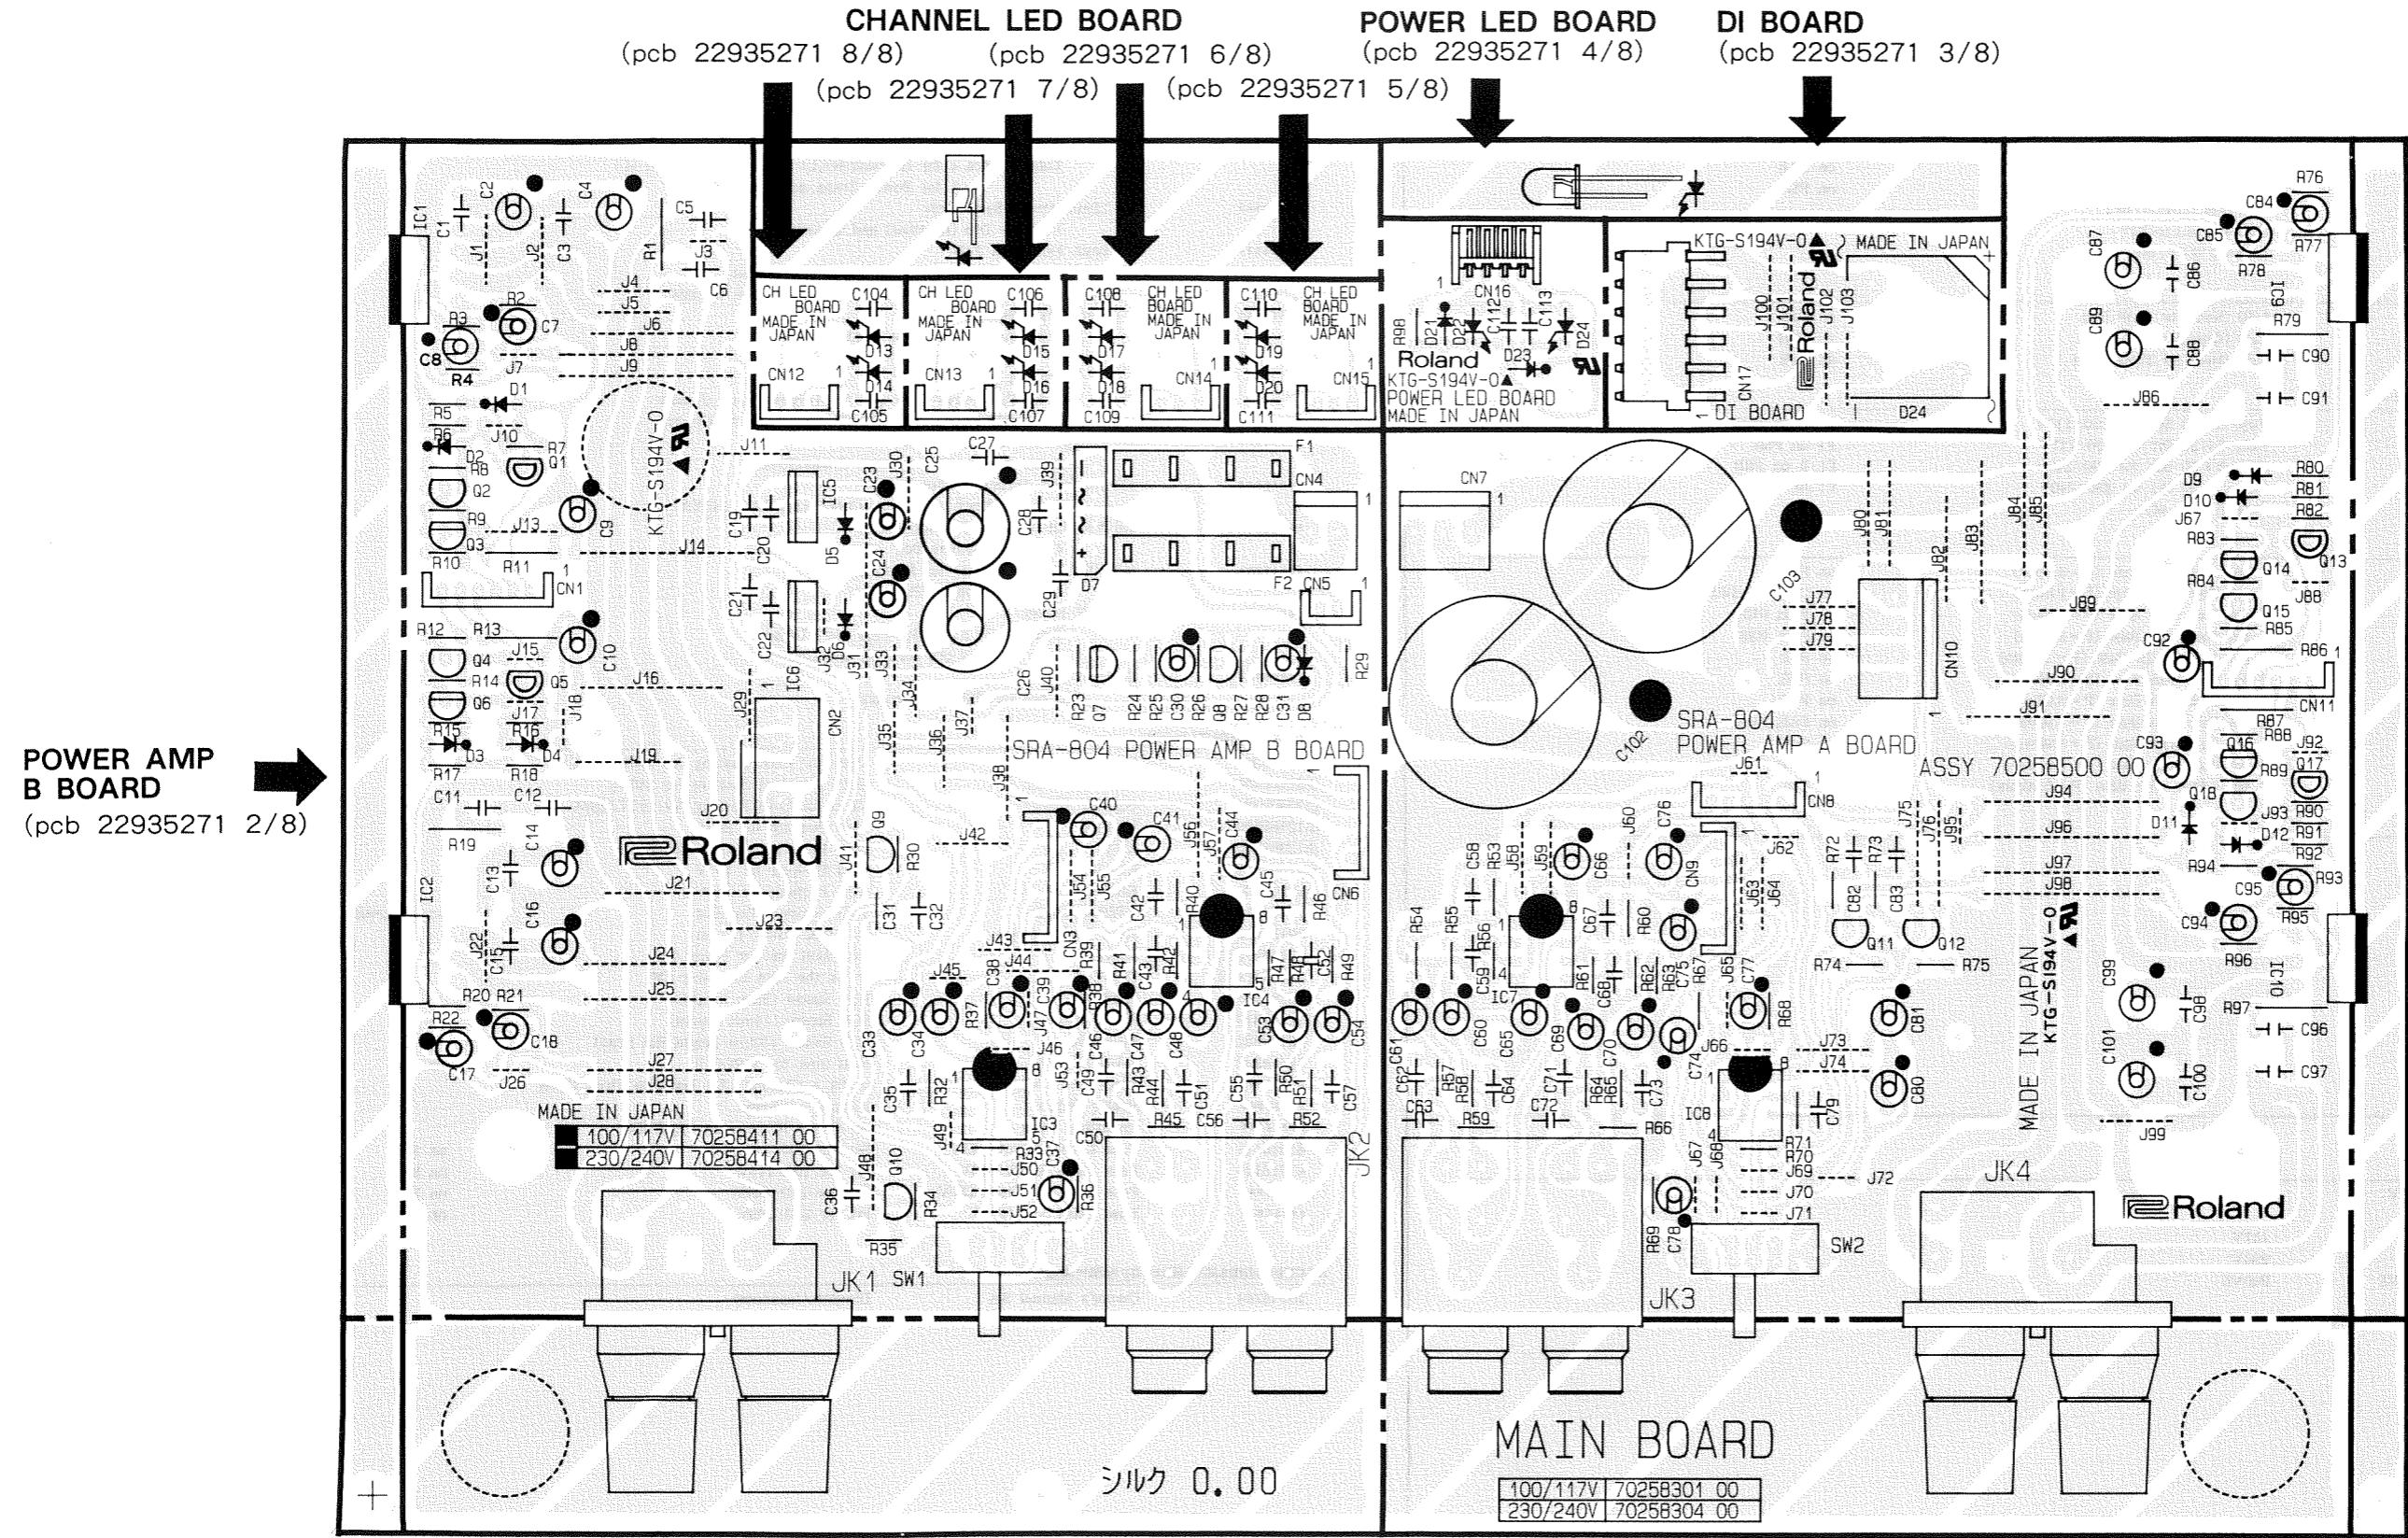

ASSY 7025830400  
(pcb 22935271)

## NOTE

1. Replacement MAIN BOARD ASSY includes POWER AMP A BOARD, POWER AMP B BOARD, DI BOARD, POWER LED BOARD, and four CHANNEL LED BOARDS.
2. There are two types of MAIN BOARD ASSY for different line voltage being used. They are "100/117V" type and "230/240V" type.
3. Silk-screen print on MAIN BOARD will be changed from SN-ZD80400 in order to correct. And fuse value sheets pasted on the BOARD will be changed to the fuse value print. The circuitry and the assy number do not change.

## 備考

1. 補修用の、メインボード組立には、パワーアンプAボード、パワーアンプBボード、DIボード、パワーLEDボード、そして4つのチャンネルLEDボードが含まれています。
2. メインボード組立には電圧仕様の異なる2種類があります。「100/117V」タイプと、「230/240V」タイプです。しかしながら、補修用基板組立として供給されるのは「230/240V」タイプだけです。必要とする基板が「230/240V」タイプならば、補修用基板をそのまま使えますが、必要とする基板が「100/117V」タイプの基板の場合は、次の指示に従って下さい。
- 2つのタイプの違いは、ヒューズの値、ヒューズ・ラベルそして基板上のマーキングです。(ヒューズは、「POWER AMP B BOARD」上に付けられています。) 「100/117V」タイプ用ヒューズおよびヒューズ・ラベルを別途発注し、付け換えて下さい。また、基板上のマーキングを、「230/240V」から、「100/117V」に付け換えて下さい。
3. 製造ナンバーSN-ZD80400より、シルク印刷の一部が修正されます。また、基板上に貼ってあるフューズ貼りマークが、シルク印刷に変わります。回路構成、およびアッセンブリー番号等には変更はありません。

# MAIN BOARD CIRCUIT DIAGRAM / MAIN ボード回路図

## NOTE

There are four CHANNEL LED BOARD ASSY on the MAIN BOARD ASSY.

CHANNEL LED BOARD ASSY (pcb 22935271 5/8) and (pcb 22935271 6/8) are just the same, and they are used for channel 1 and 3.

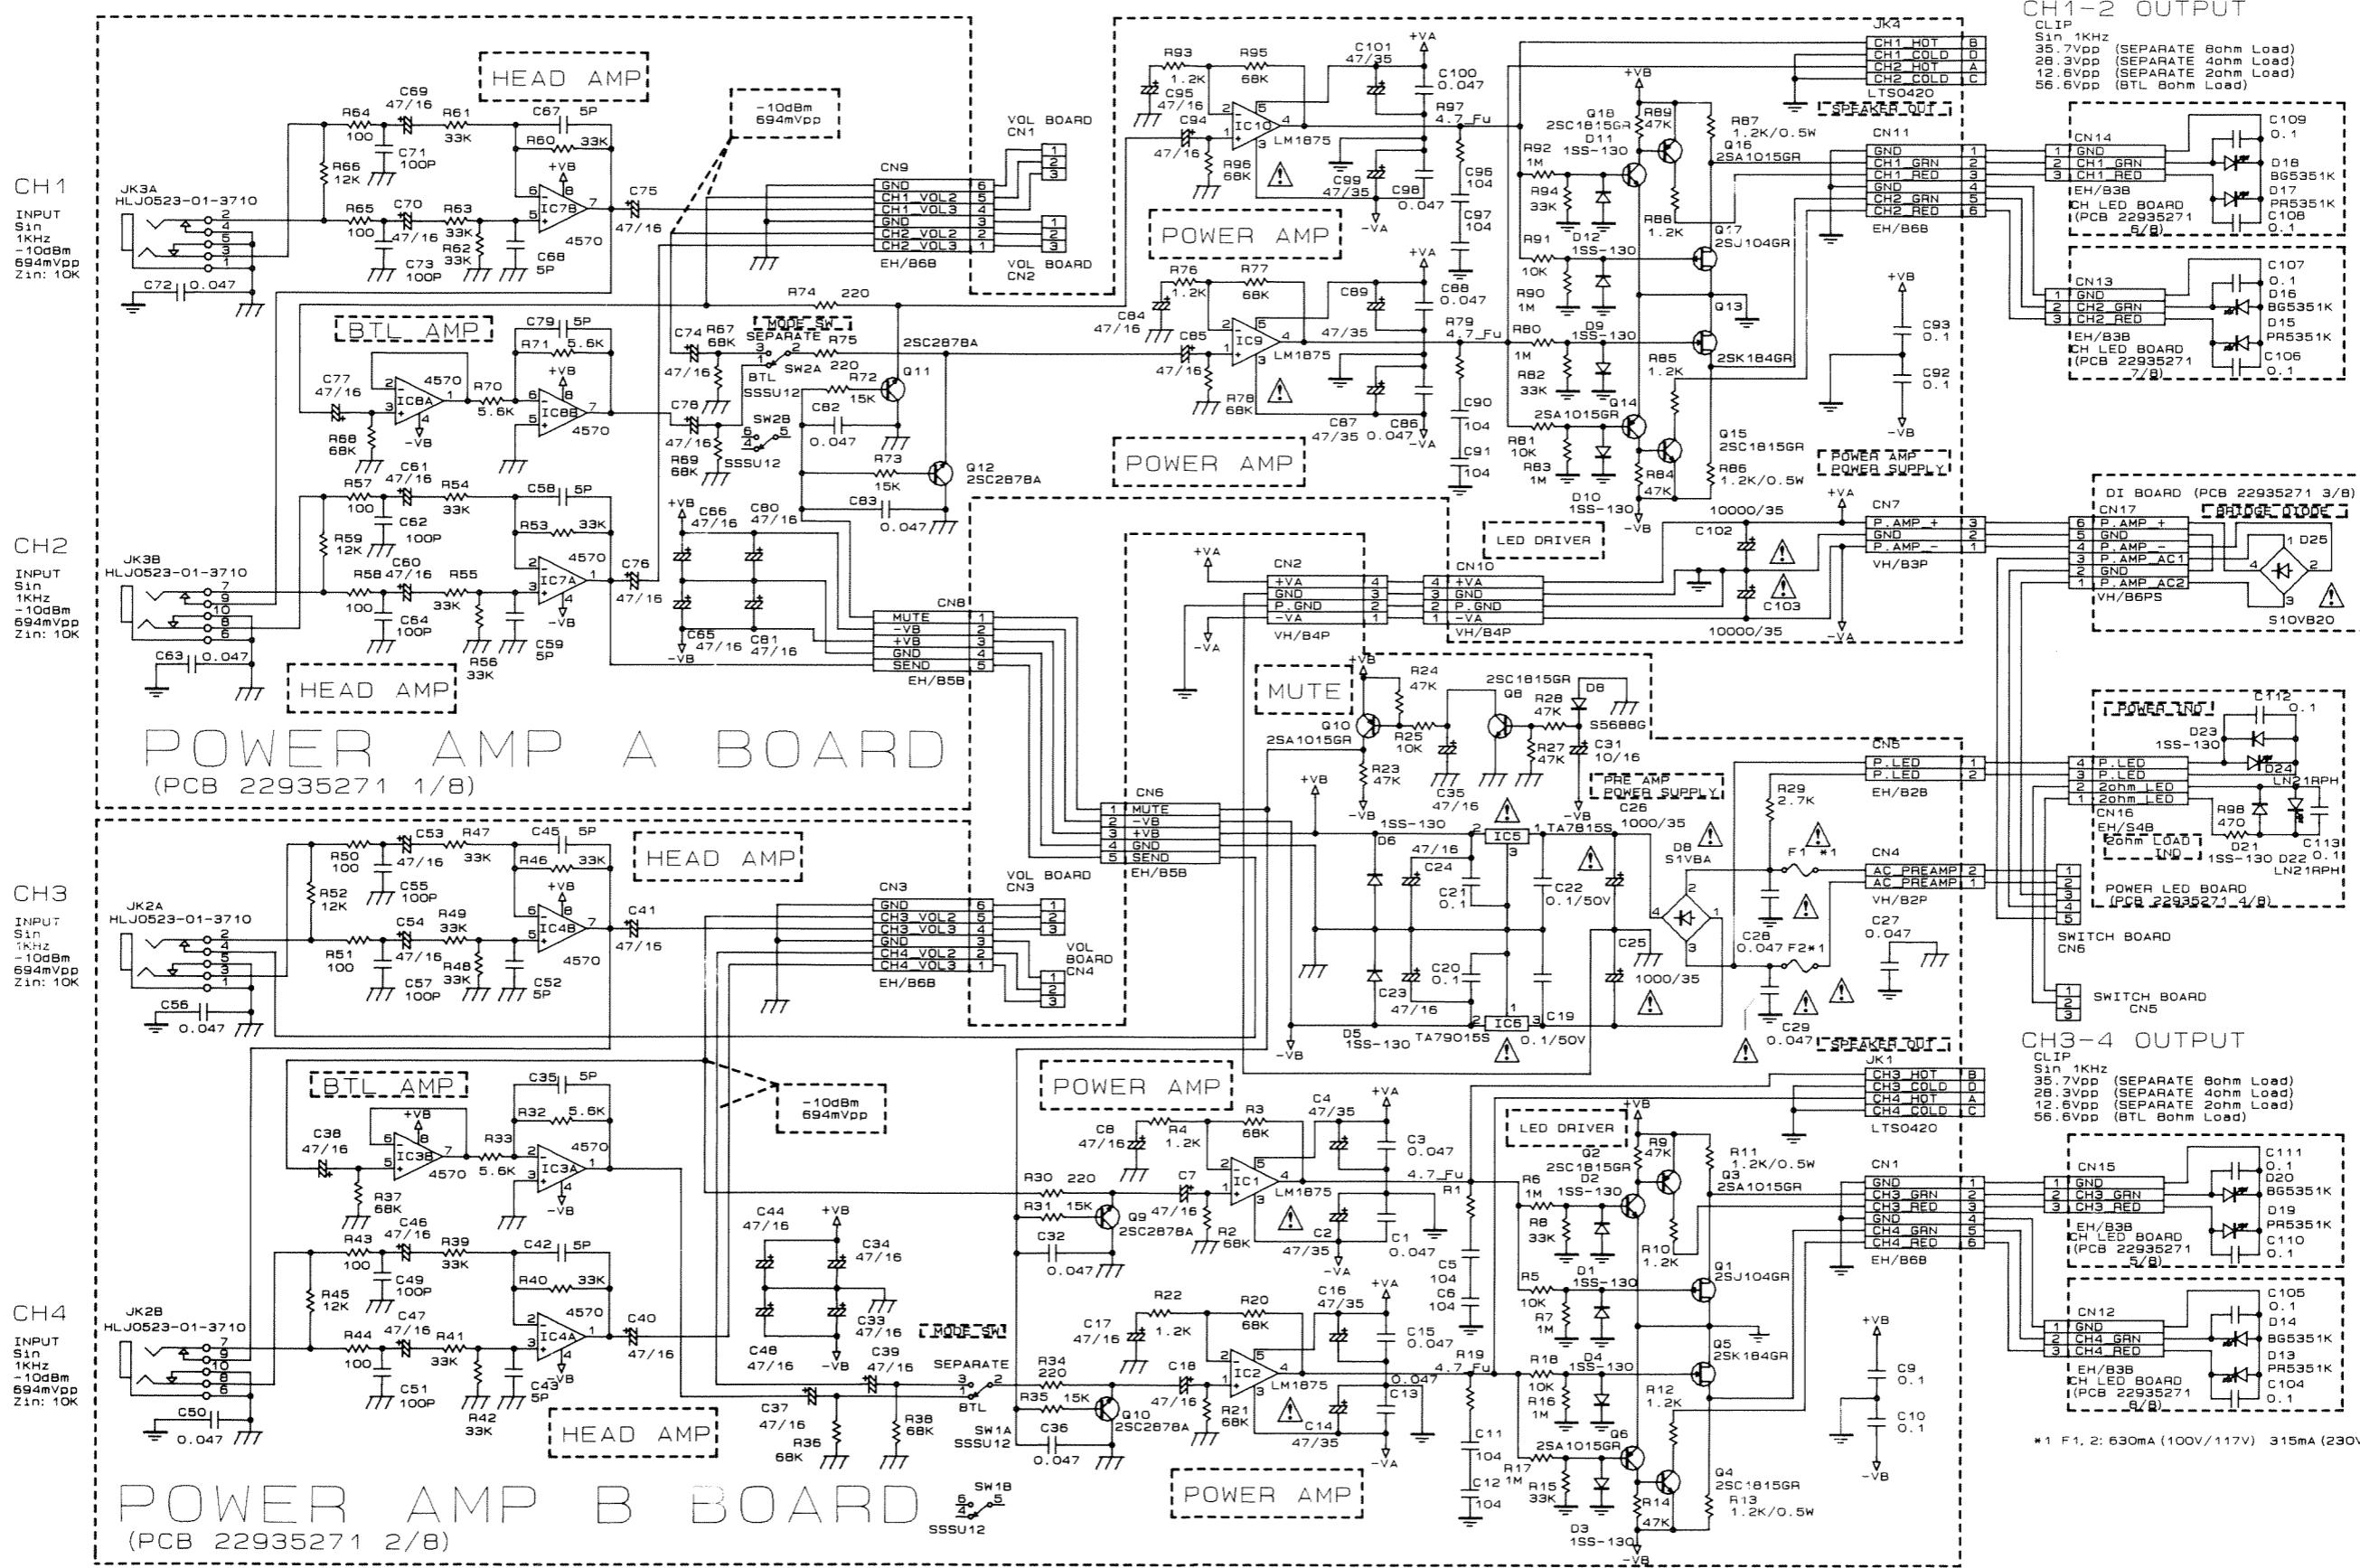

CHANNEL LED BOARD ASSY (pcb 22935271 7/8) and (pcb 22935271 8/8) are just the same, and they are used for channel 2 and 4.

## 備考

MAIN 基板組立には、4つのCHANNEL LED 基板組立が有ります。

CHANNEL LED 基板組立 (pcb 22935271 5/8) と (pcb 22935271 6/8) とは全く同じもので、チャンネル1および3用に使われます。

CHANNEL LED 基板組立 (pcb 22935271 7/8) と (pcb 22935271 8/8) とは全く同じもので、チャンネル2および4用に使われます。

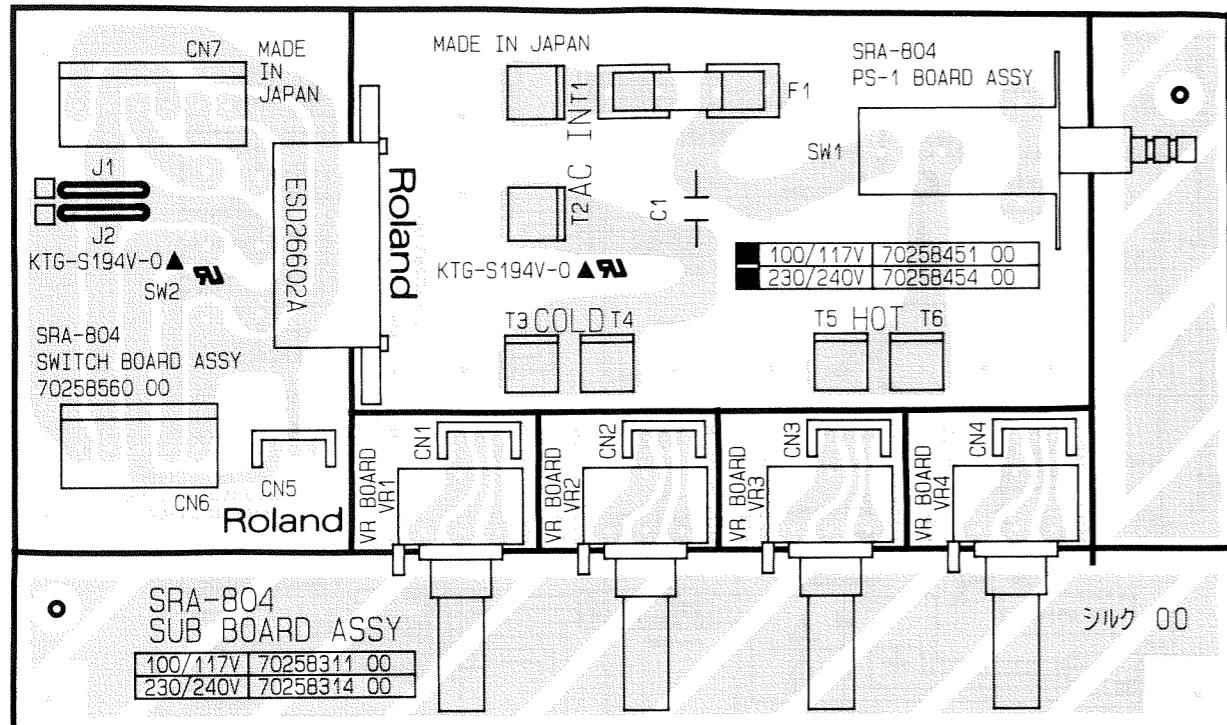

## SUB BOARD ASSEMBLY / SUB ボード組立

**PS-1 BOARD**  
(pcb 22935285 1/6)

View from component side.

**VR BOARD**  
(pcb 22935285 3/6)

**VR BOARD**  
(pcb 22935285 5/6)

**VR BOARD**  
(pcb 22935285 4/6)

**VR BOARD**  
(pcb 22935285 6/6)

## SUB BOARD CIRCUIT DIAGRAM / SUB ボード回路図

**NOTE**  
There are four VR BOARD ASSY on the SUB BOARD ASSY.  
All VR BOARD ASSYs (pcb 22935285 3/6 to 6/6) are just the same.  
Don't care that any VR BOARD ASSY will be used for any channels.

**SAFETY PRECAUTIONS:**  
The parts marked  $\Delta$  have safety-related characteristics.  
Use only listed parts for replacement.  
安全上の注意:  
 $\Delta$ が付いている部品は、安全上特別な規格でつくられたものです。  
交換の際は、指定された部品番号以外の部品は使わないようにして下さい。

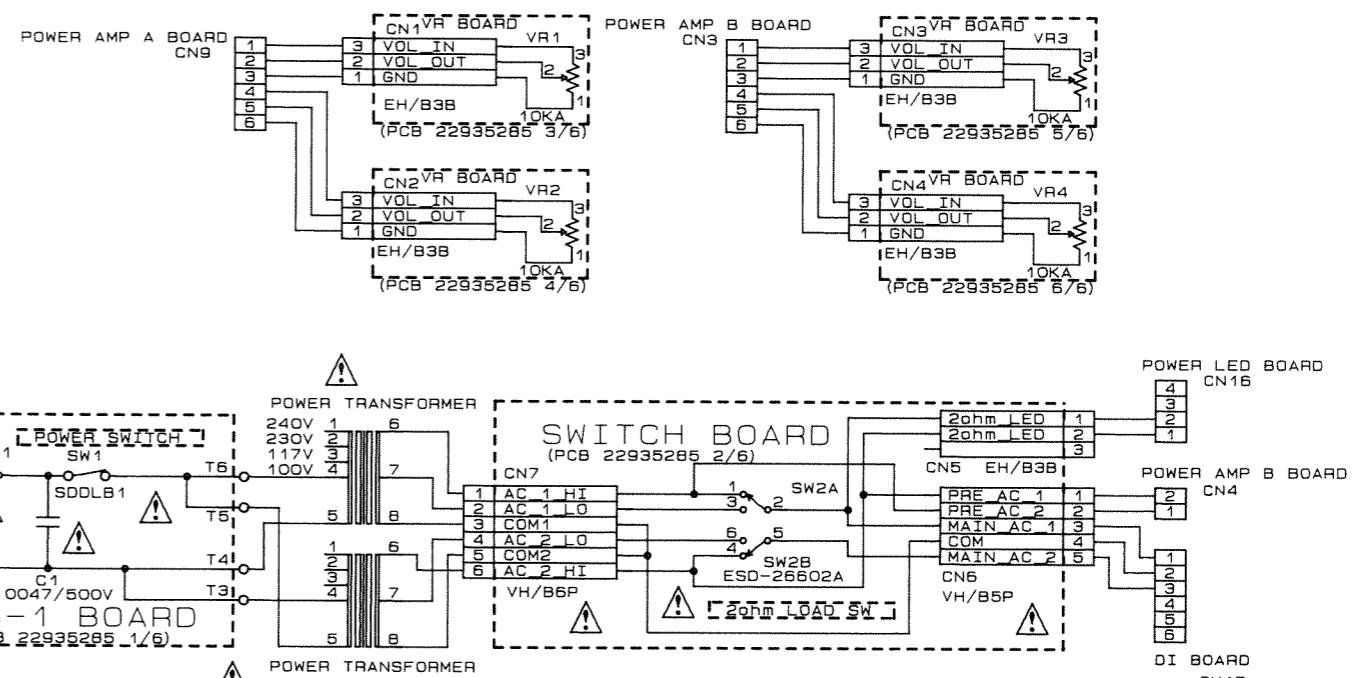

**備考**  
SUB基板組立には、4つのVR基板組立があります。  
VR基板組立は4つ共に、全く共通です。  
どのVR基板組立が、どのチャンネルに使われても構いません。

### NOTE

1. Replacement SUB BOARD ASSY includes PS-1 BOARD, SWITCH BOARD and four VR BOARDS.
2. There are two types of SUB BOARD ASSY for different line voltage being used. They are "100/117V" type and "230/240V" type.  
Replacement ASSY which are available from the factory, however, is "230/240V" type only. When repairing ASSY is "230/240V" type, you can use the replacement ASSY as it is. But, if repairing ASSY is "100/117V" type, note the following. Differences between two types are fuse rate, fuse label and marking on the BOARD. (Fuse is mounted on the "PS-1 Board".)  
You have to order separately the fuse and fuse label for "100/117V" type, and change for it. You have to change the marking from "230/240V" to "100/117V".
3. Silk-screen-print on SUB BOARD will be changed from SN-ZD80400 in order to correct. And fuse value sheets pasted on the BOARD will be changed to the fuse value print.  
The circuitry and the assy number do not change.

### 備考

1. 補修用の、サブ基板組立には、PS-1 ボード、スイッチボード、そして4つのVR ボードが含まれています。
2. サブ基板組立には電圧仕様の異なる2種類があります。「100/117V」タイプと、「230/240V」タイプです。しかしながら、補修用基板組立として供給されるのは「230/240V」タイプだけです。必要とする基板が「230/240V」タイプならば、補修用基板をそのまま使えますが、必要とする基板が「100/117V」タイプの基板の場合は、次の指示に従って下さい。  
2つのタイプの違いは、ヒューズの値、ヒューズ・ラベルそして基板上のマーキングです。(ヒューズは、「PS-1 BOARD」上に付けられています)。「100/117V」タイプ用ヒューズおよびヒューズ・ラベルを別途発注し、付け換えて下さい。また、基板上のマーキングを、「230/240V」から「100/117V」に付け換えて下さい。
3. 製造ナンバー SN-ZD80400 より、シルク印刷の一部が修正されます。  
また、基板上に貼ってあるヒューズ貼りマークが、シルク印刷に変わります。  
回路構成、およびアッセンブリー番号等には変更はありません。
