## SERVICE MANUAL

---

# C-2X

Stereo Cassette Deck

---

# 1 SPECIFICATIONS AND SERVICE DATA

**Notes:**

- Improvements may result in changes in specifications and service data.
- 0 dB is referenced to 0.775 V in this manual unless otherwise specified.
- All the electrical numeral values are for STANDARD speed unless otherwise specified.

**SPECIFICATIONS**

**Track System** 4-track, 2-channel stereo

**Heads** 3: Erase, record and playback

**Type of Tape** Cassette tape, C-60 and C-90 (Philips type)

**Tape Speed** 4.75 cm/s (1-7/8 ips), 9.5 cm/s (3-3/4 ips)

**Input (level and impedance)**

**MIC:** Specified input level: -57 dB (1.09 mV)/10k ohms  
Minimum input level: -67 dB (346 μV)

**LINE IN:** Specified input level: -9 dB (275 mV)/50k ohms  
Minimum input level: -19 dB (86.9 mV)

**Output (level and impedance)**

**OUTPUT:** Maximum output level: +1 dB (1.12 V)/50k ohms  
Specified output level: -5 dB (436 mV)

**PHONES:** Specified output level: -15.8 dB (126 mV)/8 ohms

**Equalization**

	HIGH	STANDARD
METAL	3180 μs + 35 μs	3180 μs + 70 μs
Co(CrO <sub>2</sub> )	3180 μs + 35 μs	3180 μs + 70 μs
NORMAL	3180 μs + 50 μs	3180 μs + 120 μs

**Head Configuration**

1/2-track, 1-channel erase head

1/4-track, 2-channel record head and playback head in a single housing

**Motors** 1 DC servo capstan motor

1 DC reel motor

**Bias Frequency** 100 kHz ±5 kHz

**Operation Position** Horizontal

**Power Requirements**

100/117/220/240 V AC, 50/60 Hz, 36 W (General export model)

117 V AC, 60 Hz, 36 W (U.S.A./Canada model)

220 V AC, 50 Hz, 36 W (Europe model)

240 V AC, 50 Hz, 36 W (U.K./Australia model)

**Weight** 12 kg (26-7/16 lbs.) net

**Dimensions** See Fig. 3-3

dbx noise reduction system made under license from dbx, Incorporated. The word dbx and the Symbol are trademarks of dbx, Incorporated.

**SERVICE DATA**

**MECHANICAL**

**Tape Speed Deviation** 3,000 Hz ±45 Hz

**Tape Speed Drift** 30 Hz

**Wow and Flutter**

	HIGH	STANDARD
Playback	0.05% (WRMS)	0.07% (WRMS)
Record/playback	0.12% (RMS)	0.16% (RMS)

**Pinch Roller Pressure**

Right: 400 g ~ 500 g (14.1 oz ~ 17.6 oz)

Left: 300 g ~ 380 g (10.6 oz ~ 13.4 oz)

**Reel Torque (at STANDARD speed)**

Take-up: 45 to 65 g-cm (0.625 to 0.903 oz-inch)

Supply: 9 to 11 g-cm (0.125 to 0.153 oz-inch)

F.F. & REW: 90 to 160 g-cm (1.25 to 2.22 oz-inch)

**Fast Winding Time**

85 seconds for MTT-501 (C-60)

**ELECTRICAL**

**Frequency Response**

See Figs. 5-6 to 5-10.

**Signal-to-noise Ratio**

Playback	Better than:	
	HIGH	STANDARD
METAL, Co(CrO <sub>2</sub> )	55 dB	52 dB
NORMAL	52 dB	48 dB

Overall	Better than:	
	HIGH	STANDARD
METAL, Co(CrO <sub>2</sub> )	49 dB	48 dB
NORMAL	46 dB	45 dB

S/N is improved by 5 dB at 1 kHz and 10 dB above 5 kHz when Dolby NR\* is used.

**Erase Efficiency** 65 dB min. at 1 kHz (measured with input 10 dB higher than the specified input level)

**Channel Separation** 35 dB min. at 1 kHz

**Adjacent Track Crosstalk** 40 dB min. at 125 Hz

**Total Harmonic Distortion** 2.0% or less with NORMAL, Co(CrO<sub>2</sub>) and METAL tapes

**CAUTION**

△Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC Parts List and ensure exact replacement.

## 2 PARTS LOCATION

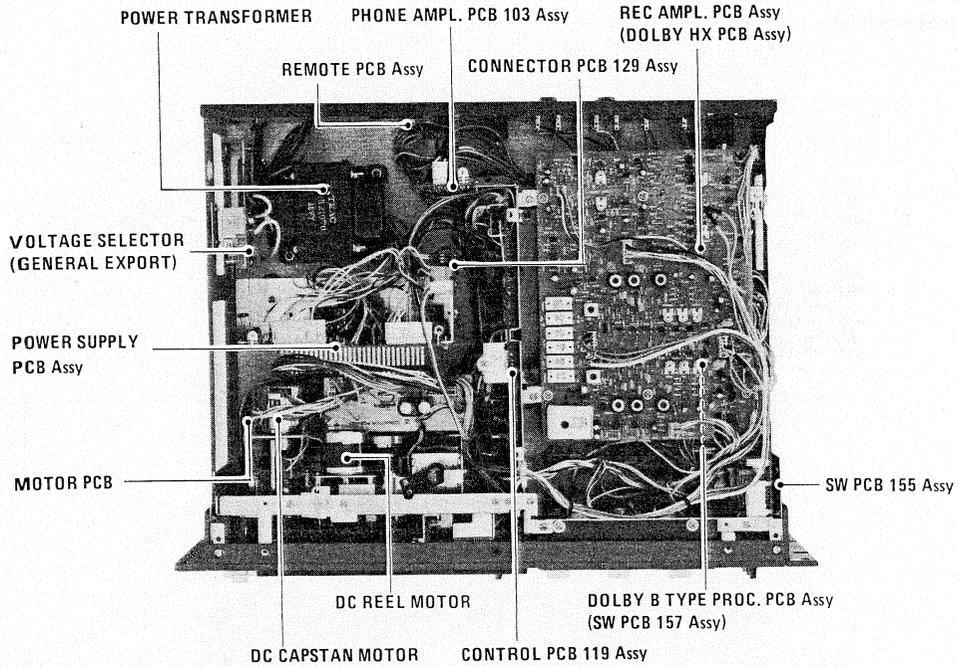

Fig. 2-1

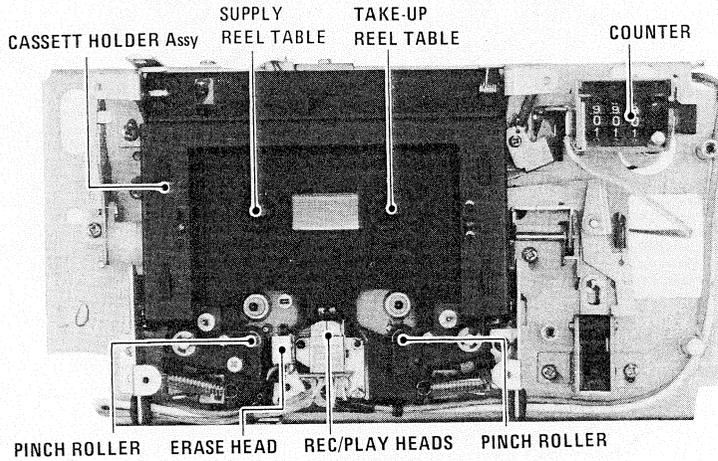

Fig. 2-2

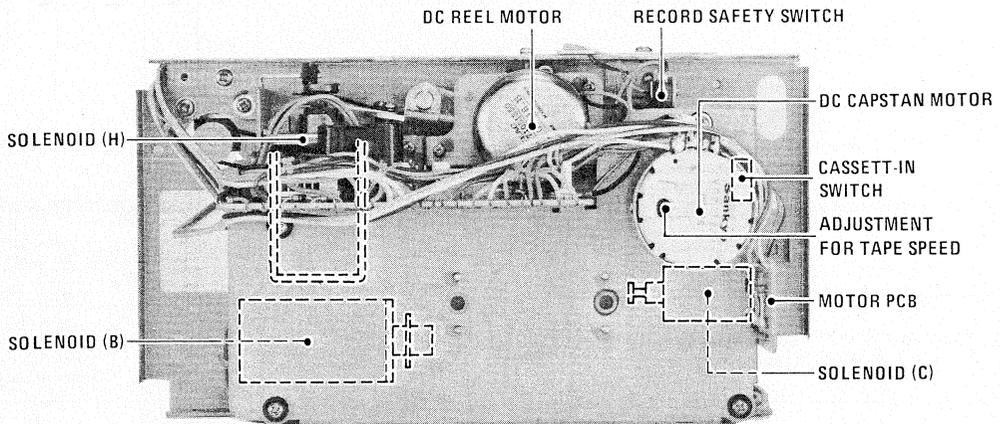

Fig. 2-3

### 3 CASE AND FRONT PANEL REMOVAL

Disassemble in number-order

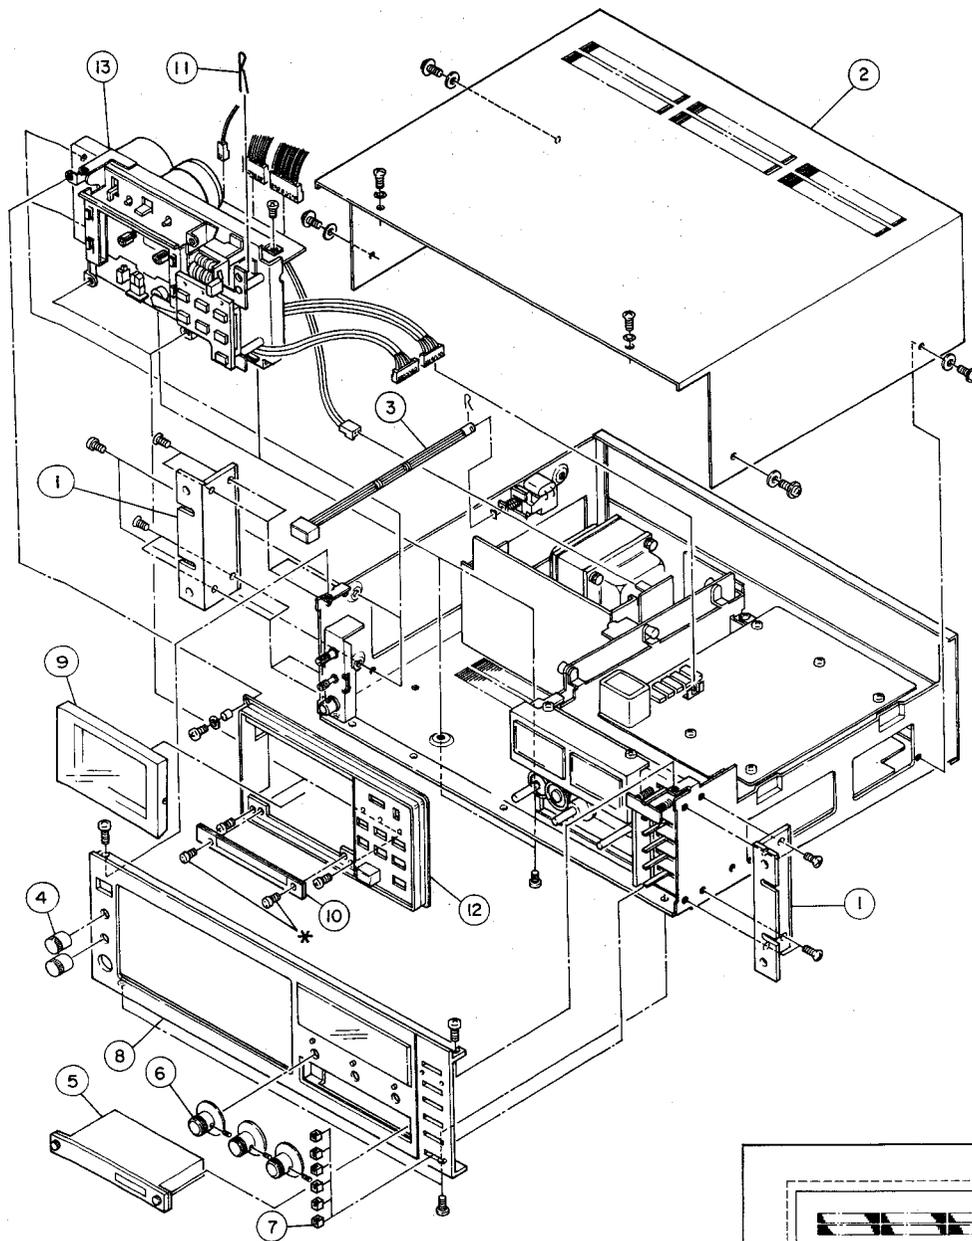

Fig. 3-1

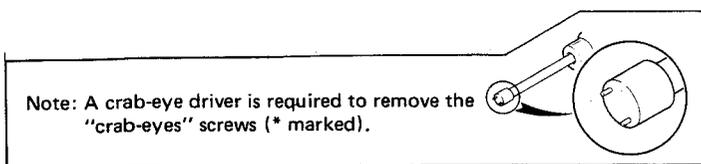

Fig. 3-2 Crab-eye driver

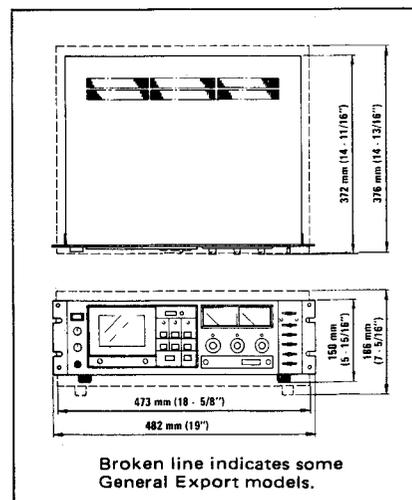

Fig. 3-3 Dimensions

## 4 MECHANICAL ADJUSTMENT AND CHECKS

**Note:** All checks and adjustments are made with the SPEED switch set to STANDARD, unless otherwise indicated.

### 4-1 ERASE HEAD POSITION

1. Load a mirror-type cassette\*.
  2. Set the deck in the play mode to raise the erase head so that it is brought into the erase head opening of the cassette shell.
  3. Check that even though the tape is forced to move by hand both to the left and to the right, the head does not touch either edge of the erase head opening.
  4. If it touches, adjust with the two screws as shown.
- \* Models made by TEAC are called "Compact Cassette Tape Path Checkers" and two types are available: MTT-901, a C-60, 30-meter tape, and MTT-902, a C-90, 45-meter tape.

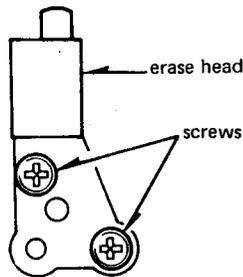

Fig. 4-1

### 4-2 TAPE PATH ALIGNMENT

1. Open the cassette holder.
2. Insert the check base plate jig very carefully with the two bosses installed outwards. When doing this, hold the jig in place until its bottom edge sits on the stopper at the bottom of the cassette holder.
3. Having closed the cassette holder, firmly press down the plate jig.
4. Set the deck in the play mode.
5. Position the guide height check jig in reference to the front surface of the record/play head as shown.
6. Adjust so that the tip of the jig just fits under the tape guide of the head by turning the height adjusting nut. When doing this, be sure that the final turn of the nut is in the clockwise direction. This is important and should be done whenever any screw or nut is adjusted.
7. Turn the azimuth adjusting nut the same amount as the height adjusting nut so that the head core is parallel to the head mounting plate assembly.
8. Move the jig and attach it under the pinch roller guide (S), keeping a reasonable distance from the capstan shaft to avoid scratching the shaft.
9. Using this jig, adjust the height of the guide by turning the height adjusting screw.
10. Load a C-90 mirror-type cassette (refer to #4-1).

11. Set the deck in the play mode and check that the tape travel is normal.
12. If curling is observed at the tape guide of the record/play head, correct the guide height by turning the height adjusting nut until the tape travel smooths out.
13. If, by carefully observing the tape travel between the capstan and pinch roller, curling is detected between the tape guide of the left pinch roller and the erase head, adjust the height of the pinch roller guide by turning the height adjusting screw within a quarter turn either clockwise or counterclockwise from the preset position until the tape travel smooths out.
14. Check that the tape travel is correct when the joint of the leader tape and the magnetic tape passes through the tape path.

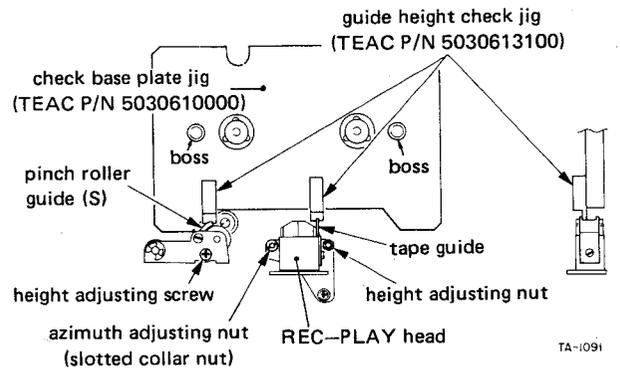

Fig. 4-2

### 4-3 SOLENOID (H) POSITION

**Note:** For solenoid location, refer to Fig. 2-3.

1. Manually push the head base plate ass'y upwards until it touches the base plate stopper.
2. In the above condition, adjust the solenoid position so that the plunger projects from the solenoid housing as shown.

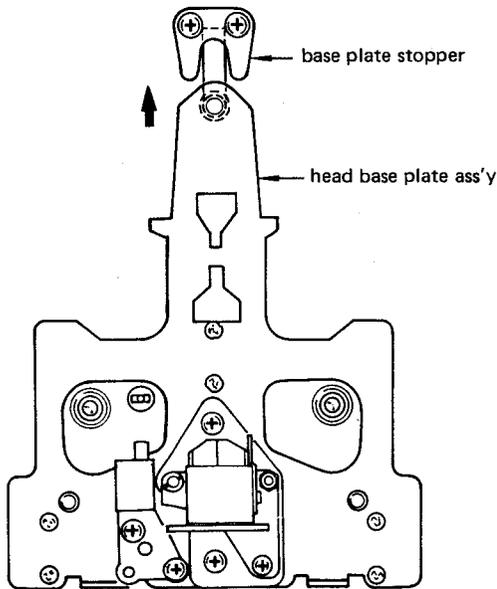

Fig. 4-3

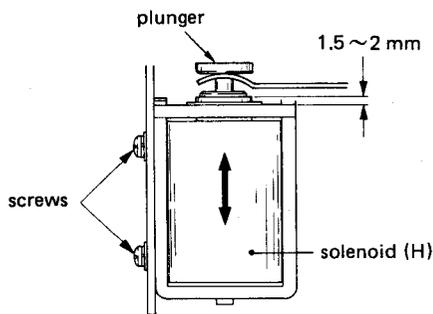

Fig. 4-4

### 4-4 SOLENOID (B) POSITION

**Note:** For solenoid location, refer to Fig. 2-3.

1. Adjust the solenoid position as follows:
  - a. When in the play mode, clearance (A) should be obtained at both the left and right pinch roller sides.
  - b. When in the pause mode, the clearance between the right pinch roller and right capstan shaft should be 0.3 mm ~ 0.5 mm.
2. Set the deck in the pause mode to check that the clearance between the capstan and the left pinch roller is wider than between the capstan and the right pinch roller.

Figure shows left pinch roller ass'y.

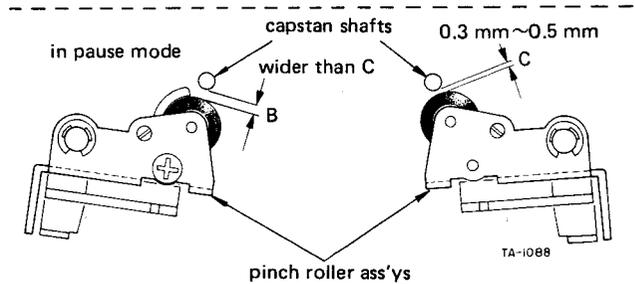

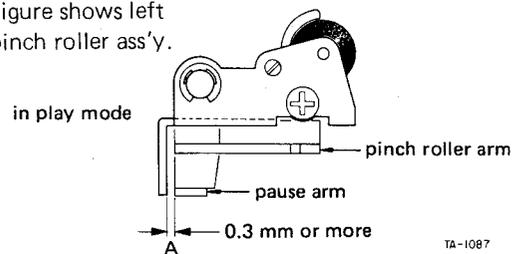

Fig. 4-5

### 4-5 SOLENOID (C) POSITION

**Note:** For solenoid location, refer to Fig. 2-3.

1. Manually push the brake shoe to make contact with the left reel table assembly. This partly depresses the plunger into the solenoid housing. In this condition, check that the plunger can be manually pushed in an additional 1 to 1.5 mm. If not, adjust the solenoid position accordingly. Refer to Fig. 4-6 (A) and (B).

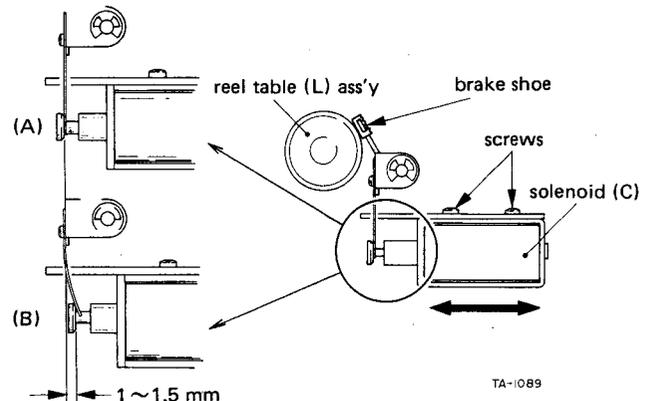

Fig. 4-6

#### 4-6 CASSETTE-IN SWITCH POSITION

**Note:** For switch location, refer to Fig. 2-3.

1. Be sure that when inserting a cassette tape in the cassette holder and closing it, the cassette-in switch is engaged so that the capstan motor is enabled.
2. If the capstan motor does not turn, adjust the switch position as shown by the arrow until the proper operation is obtained.

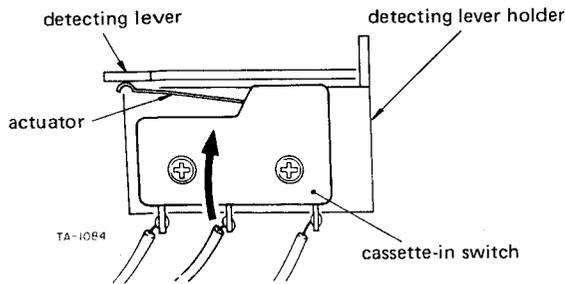

Fig. 4-7

#### 4-7 RECORD SAFETY SWITCH POSITION

**Note:** For switch location, refer to Fig. 2-3.

1. Load a blank cassette tape.
2. Check that when depressing the RECORD button together with the play button, the deck is set in the record mode.
3. If not, adjust the record safety switch position for proper activation of the switch.
4. Remove the tape. Load a cassette tape with the appropriate record protect tab removed.
5. Check that the record preventing lever enters the tab hole of the cassette to inhibit recording.

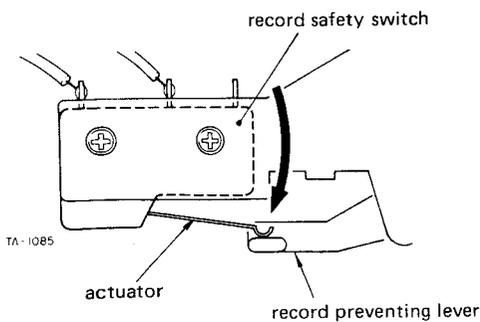

Fig. 4-8

#### 4-8 PINCH ROLLER PRESSURE

**Note:** The explanation below applies to both left and right pinch rollers.

1. Press and hold in the cassette-load pin (shown in Fig. 4-9) and place the deck in play mode with no tape loaded.
2. Attach a spring scale to the pinch roller shaft.
3. Draw the pinch roller away from the capstan shaft in the direction shown by the arrow until the capstan shaft and the pinch roller are separated.
4. Ease pressure on the scale until the pinch roller just begins to rotate. The scale should read as follows:  
 Right side: 400 g ~ 500 g (14.1 oz ~ 17.6 oz)  
 Left side: 300 g ~ 380 g (10.6 oz ~ 13.4 oz)
5. If the reading is not within specification, replace the pinch roller ass'y or the pinch roller spring.

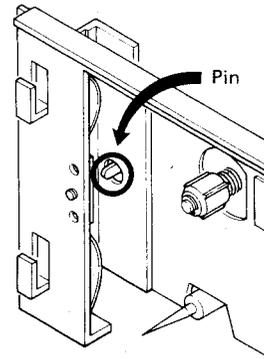

Fig. 4-9

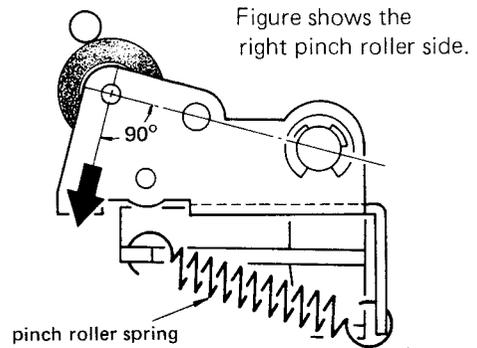

Fig. 4-10

## 4-9 REEL TORQUE

1. Load a cassette torque meter and read the pointer indication on the dial scale for each tape transport operation.

### Specifications:

Take up: 45 ~ 65 g.cm (0.625 ~ 0.903 oz.inch)

Supply: 9 ~ 11 g.cm (0.125 ~ 0.153 oz.inch)  
(adjustable)

Fast Forward: 90 ~ 160 g.cm (1.25 ~ 2.22 oz.inch)

Rewind: 90 ~ 160 g.cm (1.25 ~ 2.22 oz.inch)

2. If supply torque adjustment is required, adjust by positioning the B.T. plate bracket while in play mode.

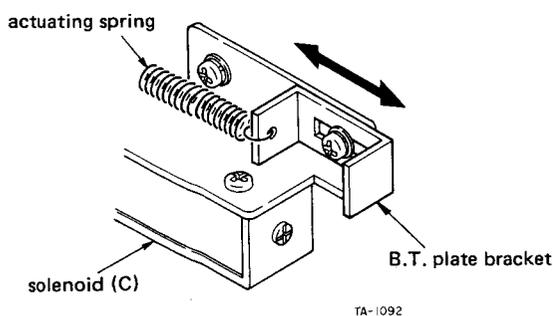

Fig. 4-11

## 4-10 LUBRICATION

Lubrication is only required when parts are replaced. For this purpose, use the oil and grease specified below.

Oil: TEAC Spindle Oil (from TEAC TZ-255 oil kit),  
Mobil D.T.E. Oil Light, or equivalent

Grease: ORE-LUBE G1/3 or equivalent

1. Apply a drop of oil with an oil applicator to a point about 1/3 the way down the shaft (from the free end) of the flywheels, then insert the shafts into the capstan housings.
2. Apply a suitable amount of light grease to the well of the flywheel bearings.

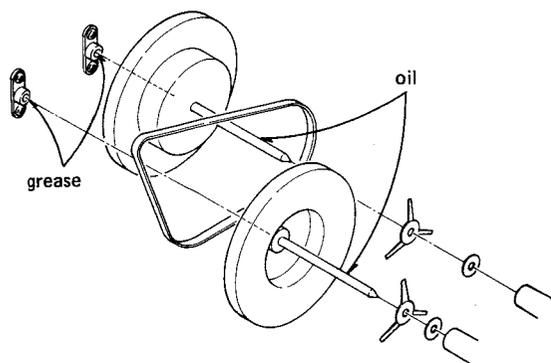

Fig. 4-12

## 4-11 VOLTAGE CONVERSION (FOR GENERAL EXPORT MODELS)

1. Always disconnect the power line cord before making these adjustments.
2. Remove the top and side cover panel by removing the two screws on each side and the two screws on the top.
3. Locate the voltage selector, shown in the illustration, to the left of the power transformer.
4. Loosen the two screws in the jumper bar and move the bar so that it jumpers the terminals marked with the required voltage (100, 117, 220 or 240).
5. Retighten the screws.
6. Replace the top and side cover panel.

**Note:** For cassette deck models with DC capstan and reel motors, no modification is required to change the power line frequency from 60 Hz to 50 Hz and vice versa.

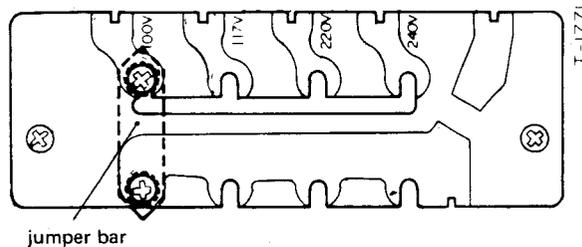

Fig. 4-13

**4-12 TAPE SPEED**

**STANDARD Speed**

1. Connect a frequency counter to the deck as shown in Fig. 4-14.
2. Play a tape for about five minutes to warm up the deck, then load a TEAC MTT-111 test tape containing a 3000-Hz test tone and play the test tape from the beginning.
3. While the tape is playing, use a common slotted screwdriver with the handle completely insulated from the blade, and adjust the control on the MOTOR PCB (as far as possible) for a reading of 3000 Hz ( $\pm 5$  Hz) on the frequency counter.
4. Play the tape at the beginning and at the end, and check that the speed deviation is within the prescribed limits by observing that the reading on the frequency counter never deviates more than  $\pm 45$  Hz from 3000 Hz, nor drifts more than 30 Hz at any given time.

**HIGH Speed**

5. Set the deck to HIGH speed and follow all the procedures described above. Since the speed is doubled, all the values described in the preceding steps are also doubled to be compatible.
6. If the tape speed is not within the prescribed specifications, check the pinch roller pressure and the tape transport mechanism for any abnormality, and make sure the tape path is clean.

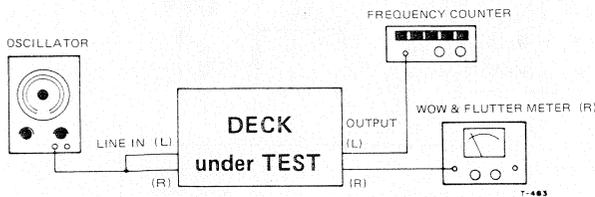

Fig. 4-14

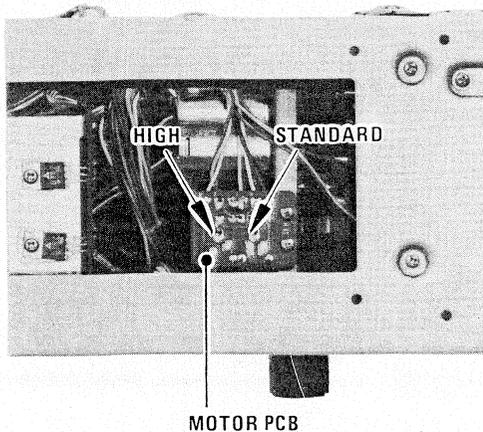

Fig. 4-15 Tape speed adjustment location

**4-13 WOW AND FLUTTER**

**Note:** These measurements should be made at the beginning, middle, and the end of the tape.

**1) PLAYBACK**

**STANDARD Speed**

1. Connect a wow-and-flutter meter to the deck as shown in Fig. 4-14.
2. Load and play a TEAC MTT-111 test tape.
3. Check that the reading on the wow-and-flutter meter is within 0.07% (WRMS).

**2) SIMULTANEOUS RECORD/PLAYBACK METHOD**

**STANDARD Speed**

4. Load a TEAC MTT-501 test tape (blank) and record a 3000 Hz signal.
5. With the MONITOR switch in the TAPE OUTPUT position, note the reading on the wow-and-flutter meter, it should not be more than 0.16% (RMS).

**HIGH Speed**

6. Repeat the above procedures with the deck set to HIGH speed. The wow and flutter should not be more than 0.12% (RMS).

**3) NON-SIMULTANEOUS RECORD/PLAYBACK METHOD**

**STANDARD Speed**

7. Rewind the tape to the beginning of the recorded section previously made in step 4, and play it at STANDARD speed.
8. The wow and flutter should not be more than 0.16% (RMS).

**HIGH Speed**

9. Rewind the tape to the beginning of the portion previously recorded in step 6 and play it at HIGH speed. The wow and flutter should not be more than 0.12% (RMS).

## 5 ELECTRICAL ADJUSTMENT AND CHECKS

### PRECAUTIONS

1. Before beginning any checks or adjustments, clean and demagnetize the entire tape path.
2. Make sure the deck is properly set for the voltage in your locality.
3. In general, adjustments and checks are done in the order of L-ch then R-ch. Double REF. NOs. and test point designations indicate L-ch/R-ch.  
(Example: R11/R21)
4. For this deck, 0 dB is referenced to 0.775 V. If you are using an AC voltmeter which references 0 dB to 1 V, appropriate compensation should be made.
5. The AC voltmeter used in the procedures must have an input impedance of 1M ohms or more.
6. Note the "Deck settings" at the top of each chart. These settings must be used for all the checks in each chart unless explicitly stated otherwise.
7. All the checks in the charts are described assuming that the BIAS/EQ card (REFERENCE) is plugged into the front panel.

### -70 dB or more . . . What does it mean?

In reference to some specifications, you may come across an expression like: "-70 dB or more". This means that the lower the value of this specification, the greater the absolute value of the specification and the better the performance of the deck. For instance, a noise floor of -76 dB is better than -70 dB, because this means that the level of noise is lower. So in this case, "-70 dB or more" means at least as good a value as -70 dB and maybe even better, i.e., -71 dB.

### 5-1 POWER SUPPLY PCB ADJUSTMENT

1. Connect a DC voltmeter to terminal 4 or 5 (ground) of connector P32 on the power supply PC board, and at the same time, alternately connect the voltmeter to terminals 7, 8, and 9 of connector P32. Adjust R82 so that +23 V  $\pm$ 0.5 VDC is obtained at each of the terminals.
2. With a voltmeter connected to a ground position on the deck and to TP15 on the REC AMPL PC board, adjust R81 so that +25 V  $\pm$ 0.5 VDC is obtained at TP15.

### 6 EXPLODED VIEWS AND PARTS LIST

#### ASSEMBLING HARDWARE CODING LIST

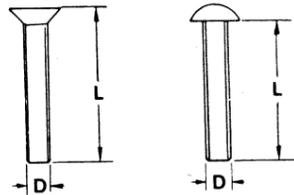

All screws conform to ISO standards, and have crossrecessed heads, unless otherwise noted. ISO screws have the head inscribed with a point as in the figure to the right.

FOR EXAMPLE:

B M 3 x 6

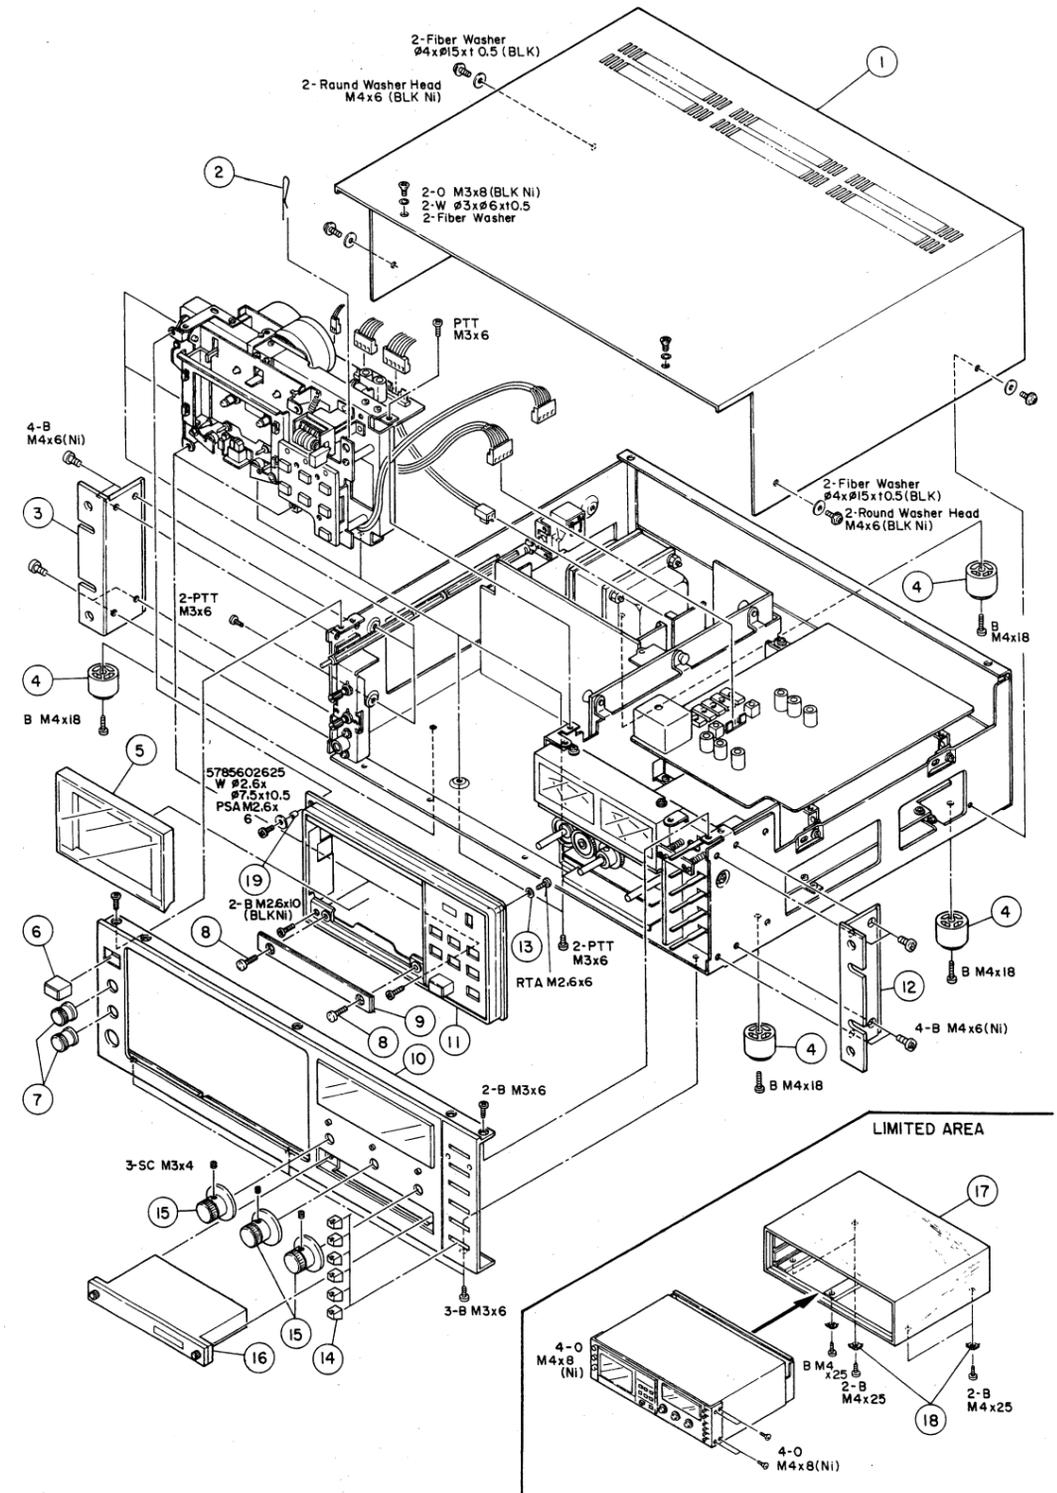

- Length in mm (L)
- Diameter in mm (D) \*
- Metric System
- Nomenclature

\* Inner dia. for washers and nuts

SW PCB 155 ASSY

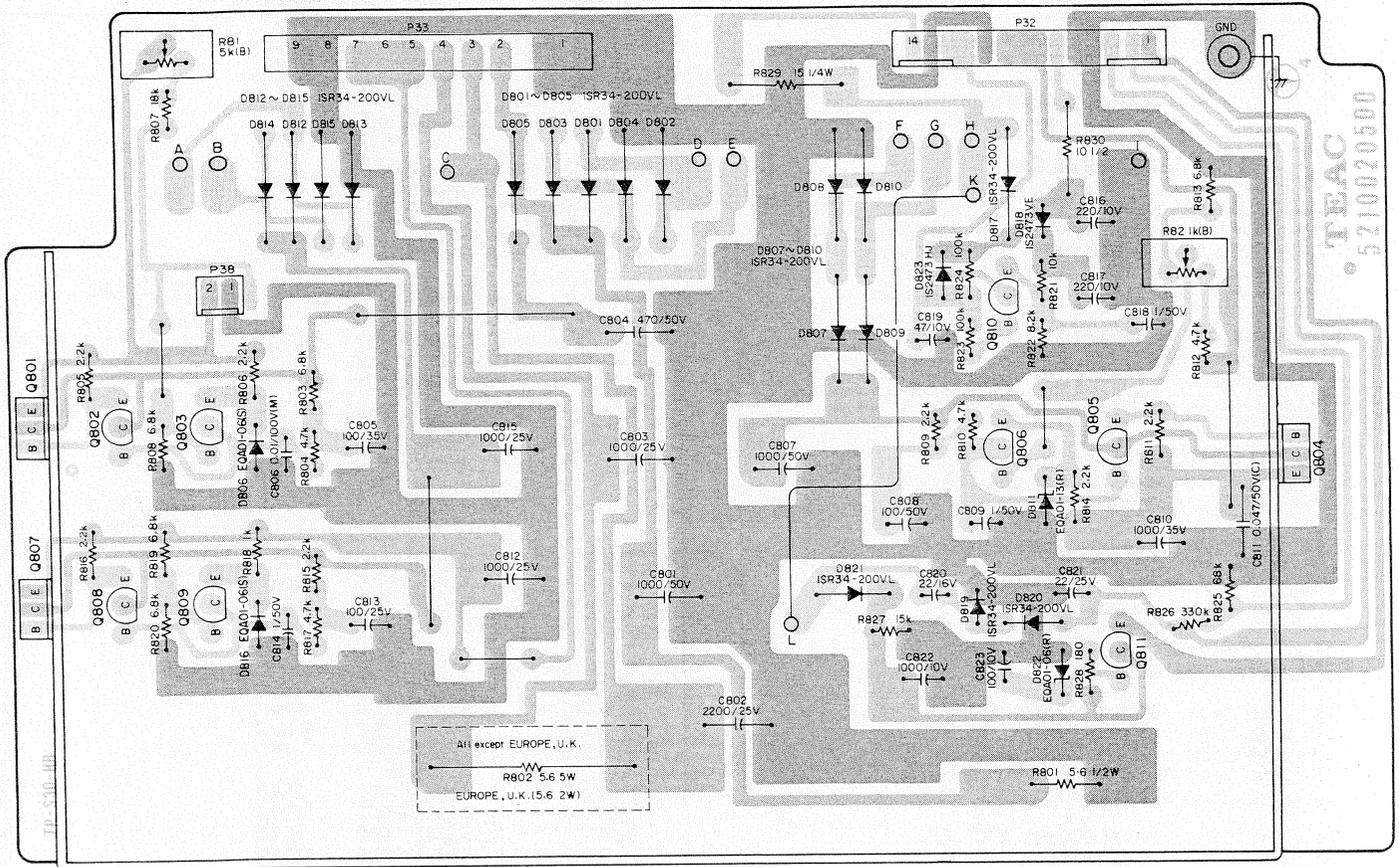

SW PCB 157 ASSY

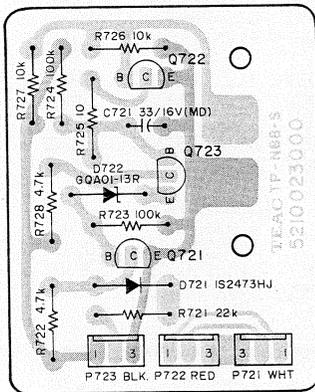

CONTROL PCB 119 ASSY

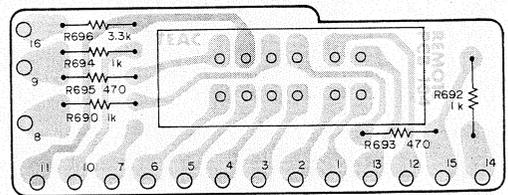

POWER SUPPLY PCB 125 ASSY

CONTROL PCB 129 ASSY

REMOTE PCB ASSY

NOTES

- The colors used on the PCB illustrations have the following significance:
  - : +B power supply circuit
  - : -B power supply circuit
  - : GND
  - : Other
- Resistor values are in ohms (k = 1,000 ohms).
- All capacitor values are in microfarads (p = picofarads)..

**REC/PLAY AMPL. PCB ASSY**

**NOTES**

1. Schematic diagram shown for left channel except for components. Numbers in parentheses indicate right channel terminal.
2. Resistor values are in ohms (k = 1,000 ohms).
3. All capacitor values are in microfarads (p = picofarads) (MD) = Electrolytic capacitor MD series (DM) = Dip. Mica (CE) = Ceramic (PC) = Polystyrene. All non-polarized capacitors are ±5% mylar unless otherwise noted. ! Parts marked with this sign are safety critical components. They must always be replaced with identical components from the TEAC parts list and ensure exact replacement.
4. Voltage and level values are for reference only. 0dB = 0.775V. Indicated values are those existing when the peak level is 0 dB.
5. : front panel indication
6. : rear panel indication
7. : + B power supply circuit
8. : - B power supply circuit

**NOTES**

- Schematic diagram shown for left channel except for some of the components.  
 Numbers in parentheses indicate right channel terminals.  
 Resistor values are in ohms (k = 1,000 ohms).
- All capacitor values are in microfarads (p = picofarads).  
 (MD) = Electrolytic capacitor MD series  
 (DM) = Dip. Mica  
 (CE) = Ceramic  
 (PC) = Polystyrene  
 All non-polarized capacitors are ±5% mylar unless otherwise specified.
- † Parts marked with this sign are safety critical components.  
 They must always be replaced with identical components - refer to the TEAC parts list and ensure exact replacement.
- Voltage and level values are for reference only.  
 0dB = 0.775V  
 Indicated values are those existing when the peak level meter indicates 0 dB.
