### **⚠ WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

# **Technics**

## **1. Warning**

To prevent the risk of fire, smoke, or electrical shock and to ensure safe operation, please be sure to follow the safety guidelines below.

1. At places where special caution is required, the necessary safety precautions are clearly labeled or printed, for example, on the cabinet, or on the part concerned. Please follow these safety precautions, and also those listed in the Owner's Manual.
2. Parts which have a  mark in the circuit diagram or in the parts list are essential for safety. When replacing these parts, be sure to use only the specified parts.
3. Use the specified types for internal wiring (double-insulated wiring, etc.).
4. When replacing parts on the AC primary side (power transformer, electric switch, electrical cord, noise-prevention condenser, etc.), wind the lead wire and secure it by soldering.
5. Do not let the wiring come into contact with heat-emitting devices (fuse resistor, radiator plate, etc.).
6. When replacing the wiring, make sure that it is not in contact with the unfinished or rough edge of a part.
7. When replacing the power cord (except for the plug-in type), tug it from various directions to confirm that it does not slip out of place.
8. Spacing  
If soldering was done on the AC primary circuit, confirm that the interval between the soldered terminals or between the terminal and surrounding metallic parts is at least the minimum required (between the primary circuit and the chassis: at least 6.5 mm; between primary circuit terminals: at least 4.0 mm; between primary circuit terminals and secondary circuit terminals: at least 6.5 mm.).

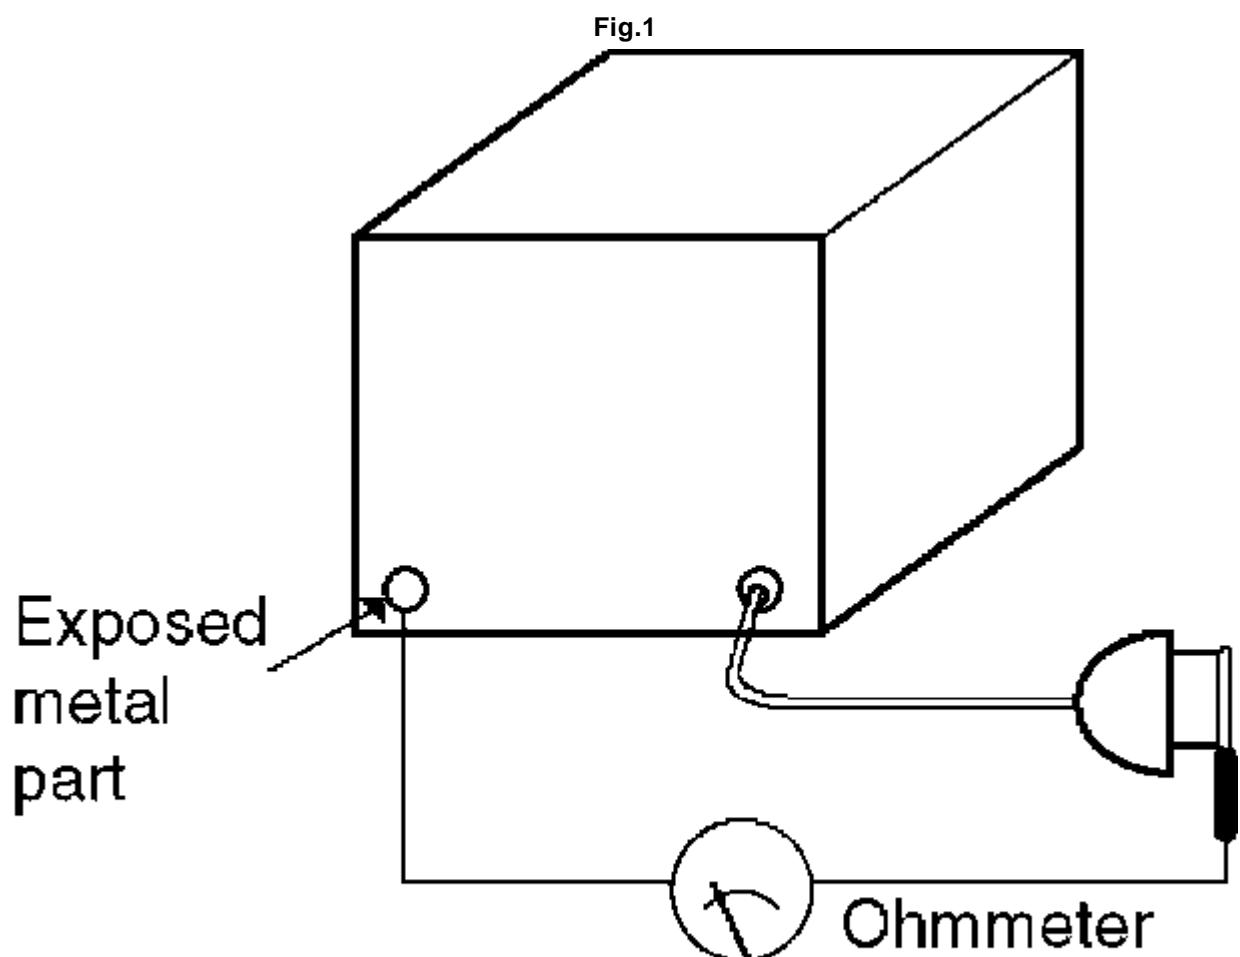

## 2. Safety Precaution

### 2.1. Safety Precaution

1. Before servicing, unplug the power cord to prevent an electric shock.
2. When replacing parts, use only the manufacturer's recommended components for safety.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to make the following insulation resistance test to prevent the customer from being exposed to a shock hazard.

## 2.2. Insulation Resistance Test

1. Unplug the power cord and short the prongs of the plug with a jumper wire.
2. Turn on the power switch.
3. Measure the resistance value with an ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as screw heads, connectors, control shafts, handle brackets, etc. Measurements should range from 4 M $\Omega$  to infinity for all exposed parts. (refer to [Fig.1](#))

$$\text{Resistance} = 4 \text{M}\Omega \text{ to } \infty$$

## 3. OWNERS MANUAL

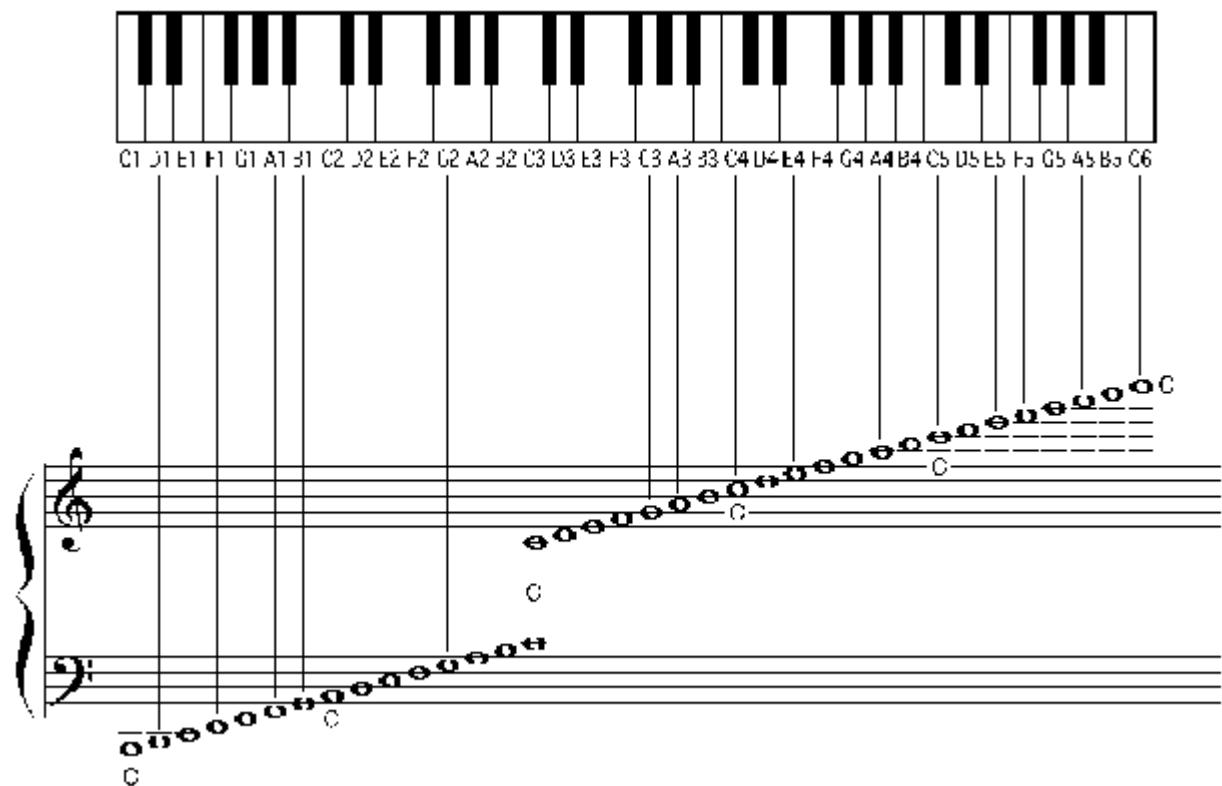

## 4. MIDI Implementation Chart

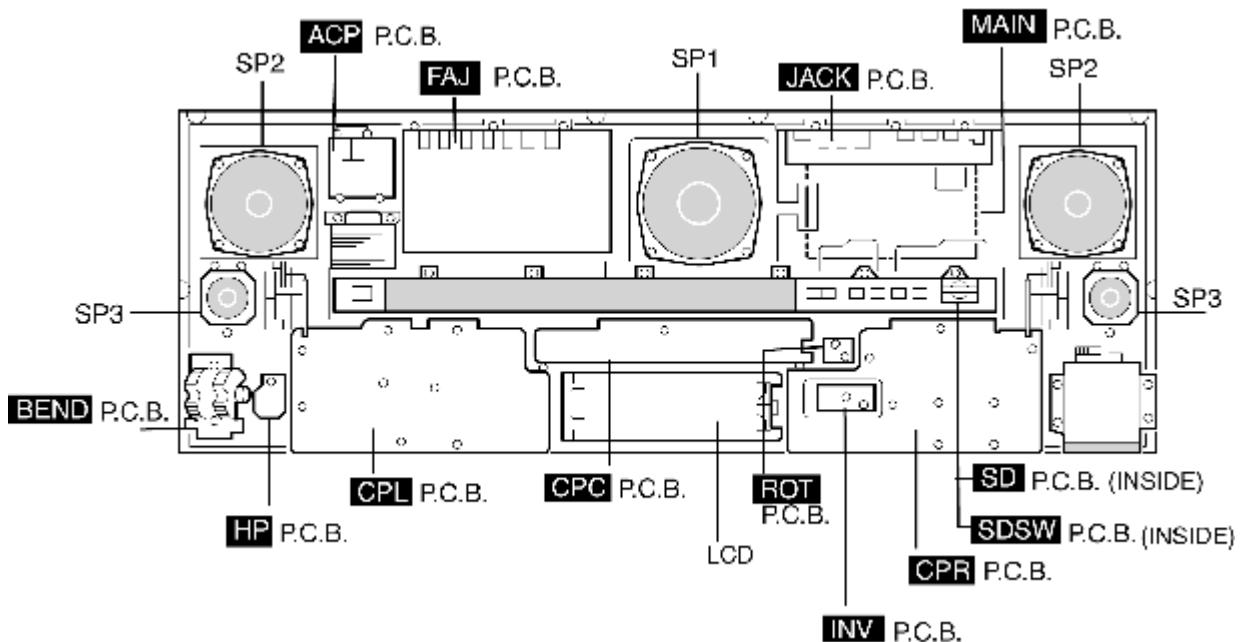

## 5. Keyboard Ranges

This keyboard features Touch Response, by which you control the volume by playing the keys harder or softer.

## 6. Parts Location

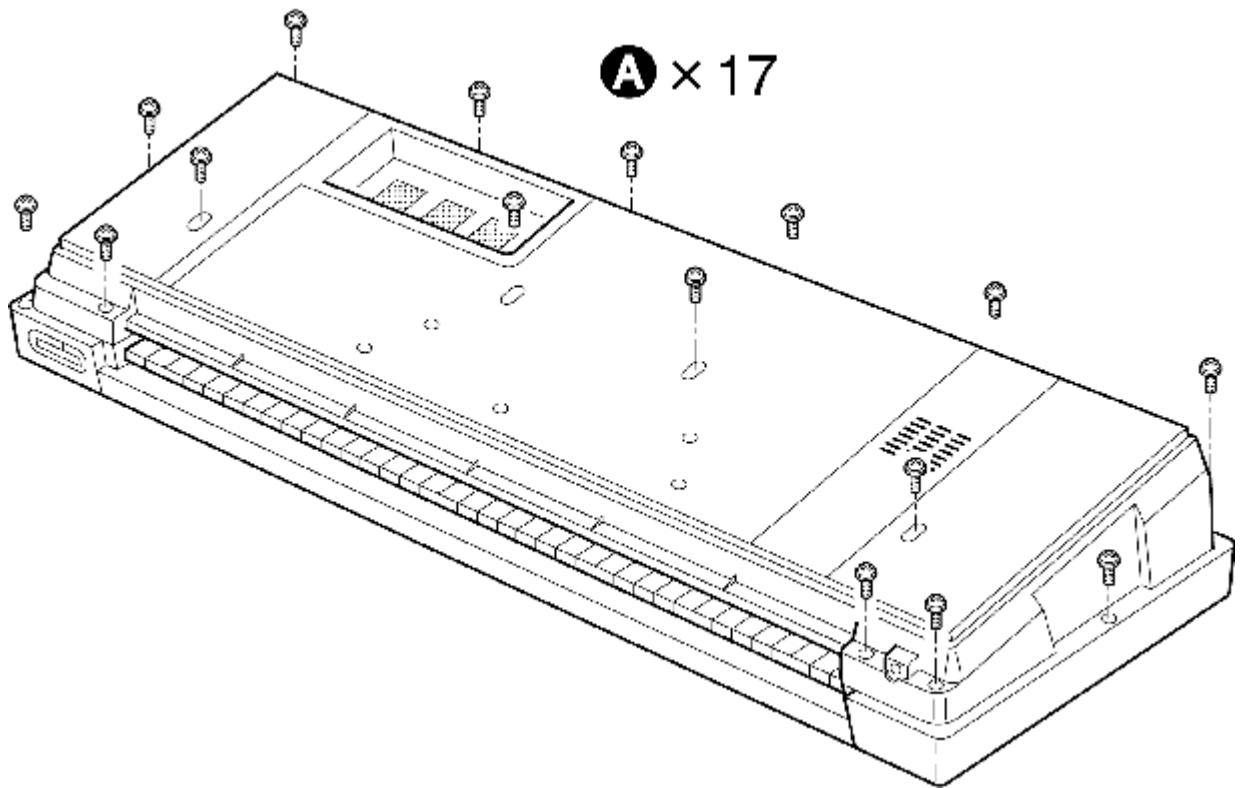

## 7. Disassembly Instructions

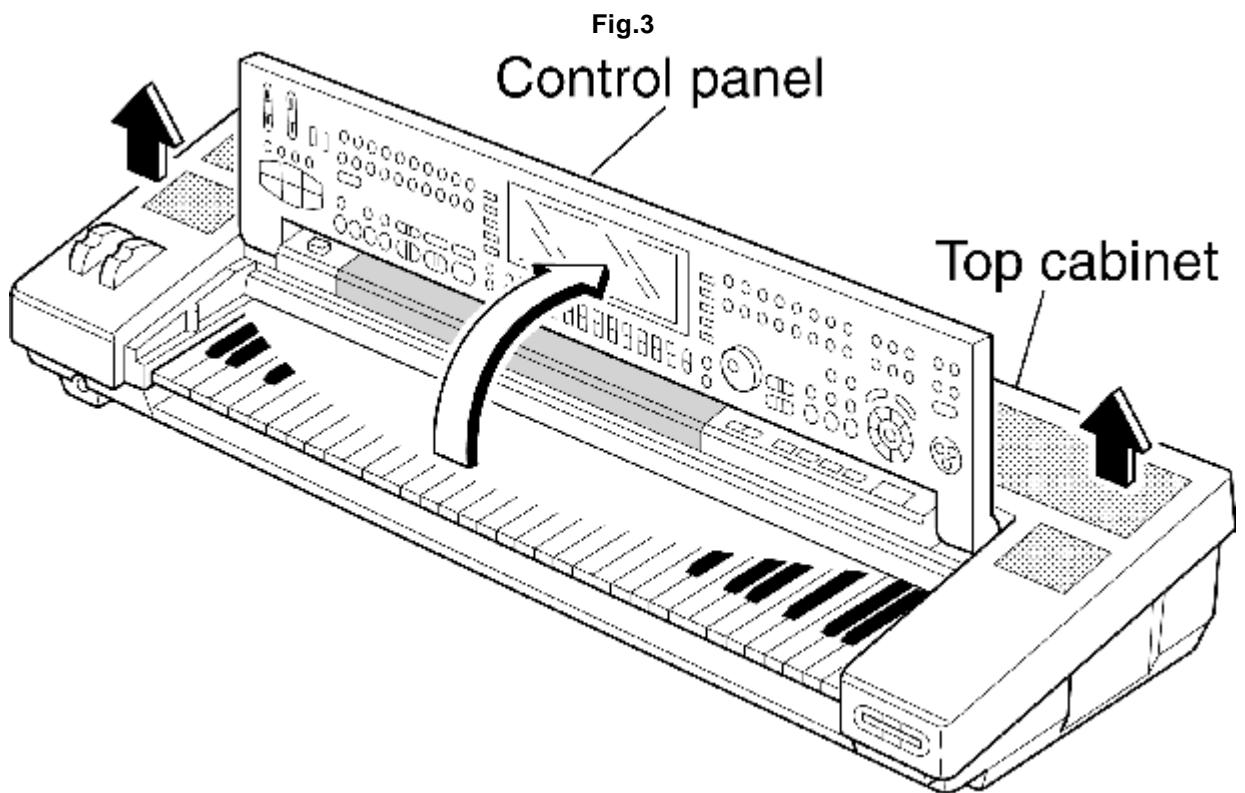

### 7.1. Removing the top cabinet

1. Turn the keyboard cabinet upside down, and remove the bottom screws (A 17 pcs.) as shown in [Fig.2](#) .
2. Place the keyboard bottomside down, and open the top cabinet .

**Fig.2**

- The control panel is set up, and remove the top cabinet as shown in [Fig.3](#) .

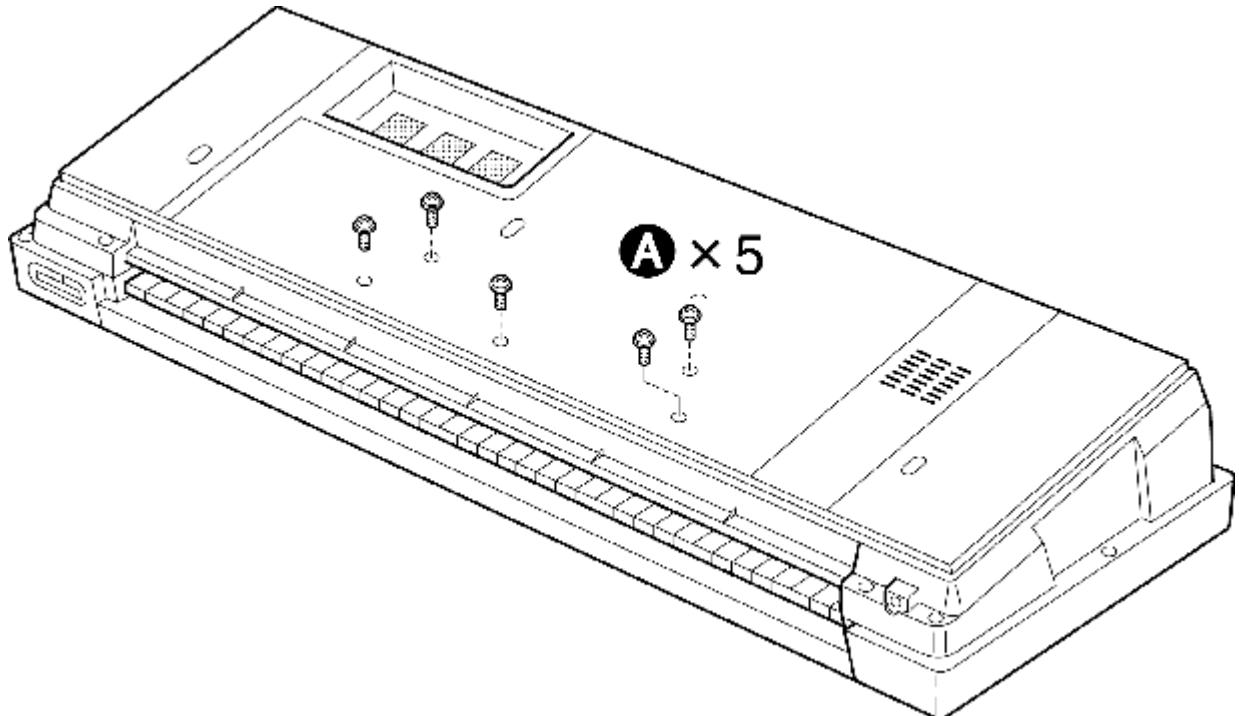

## 7.2. Removing the control panel, power SW panel, SD panel,

## net panel and keyboard unit

- Remove the top cabinet (see step “[Removing the top cabinet](#)”).
- Remove the bottom screws(**A**5pcs.) as shown in [Fig.4](#)

Fig.4

### Control panel

1. Place the keyboard bottomside down.
2. Remove the control panel holding screws (**B** 4pcs.) as shown in [Fig.7](#) .

### Power SW panel

- Remove the power SW panel holding screws (**C** 2pcs.) as shown in [Fig.7](#) .

### SD panel

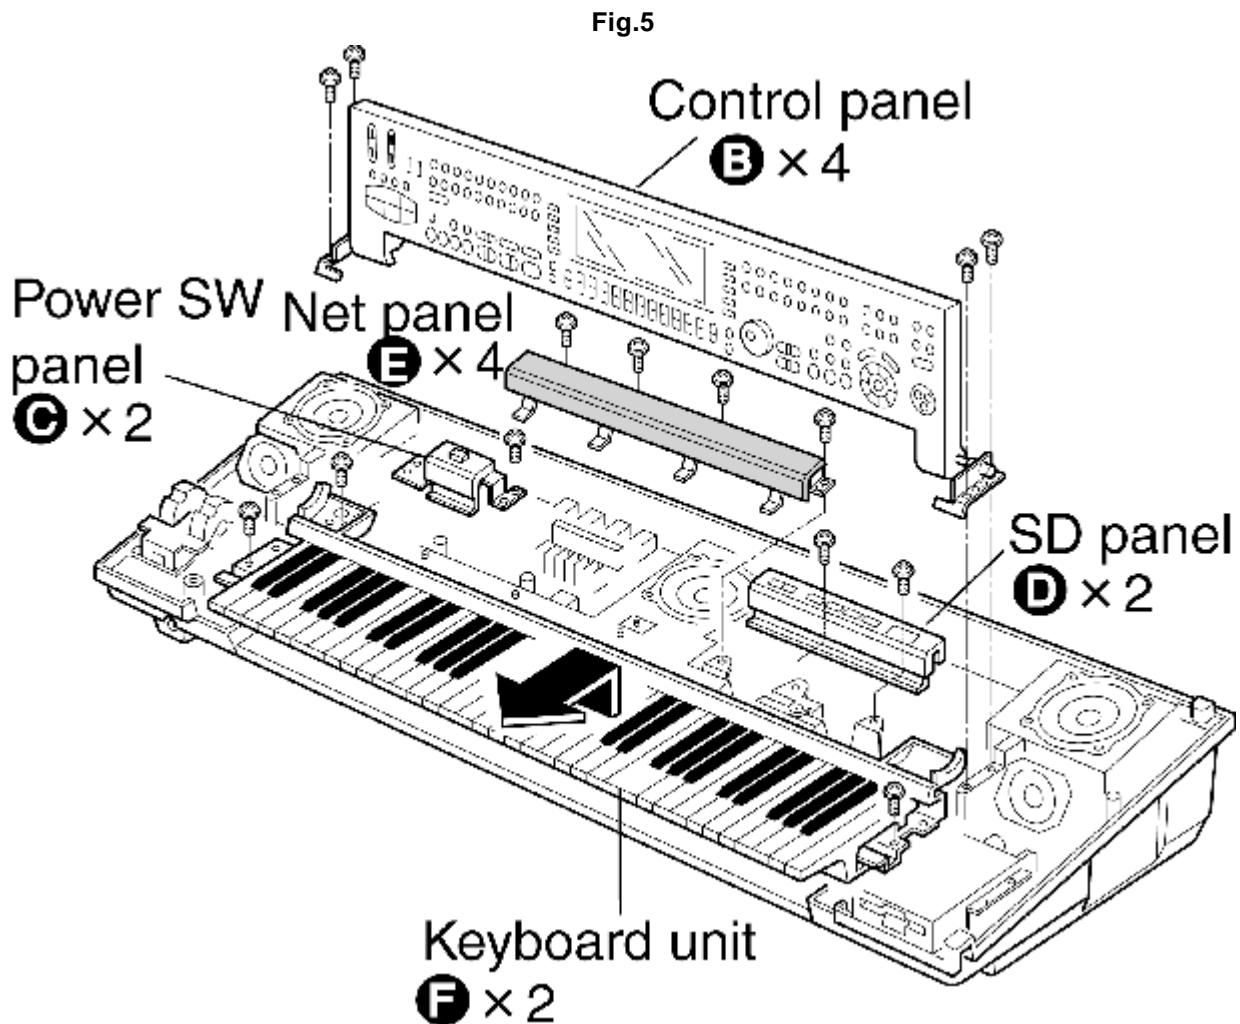

- Remove the SD panel holding screws (**D** 2pcs.) as shown in [Fig.7](#) .

### Net panel

- Remove the net panel holding screws (**E** 4pcs.) as shown in [Fig.7](#) .

### Keyboard unit

- Remove the keyboard unit holding screws (**F** 2pcs.) as shown in [Fig.7](#).

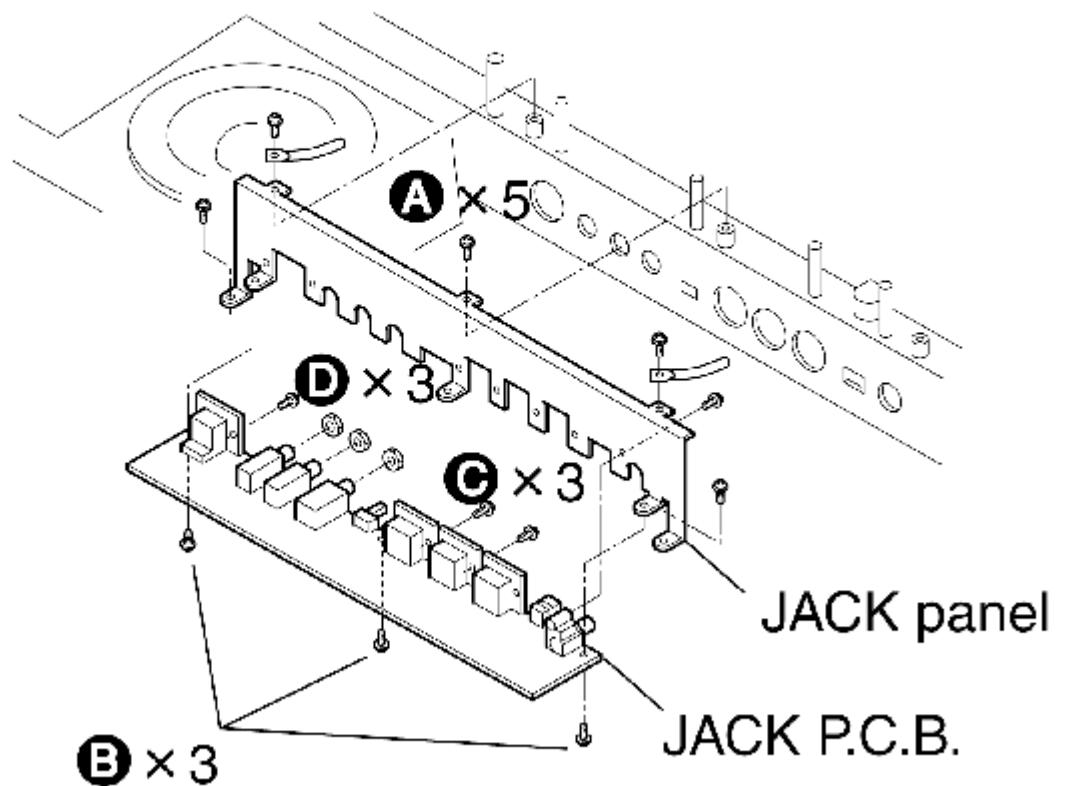

### 7.3. Removing the JACK and MAIN printed circuit boards

#### JACK P.C.B.

1. Remove the jack panel mounting screws (**A** 5pcs.) as shown in [Fig.6](#).
2. Remove the JACK P.C.B. mounting screws (**B** 3 pcs., **C** 3pcs, **D** 3pcs.) as shown in [Fig.6](#).

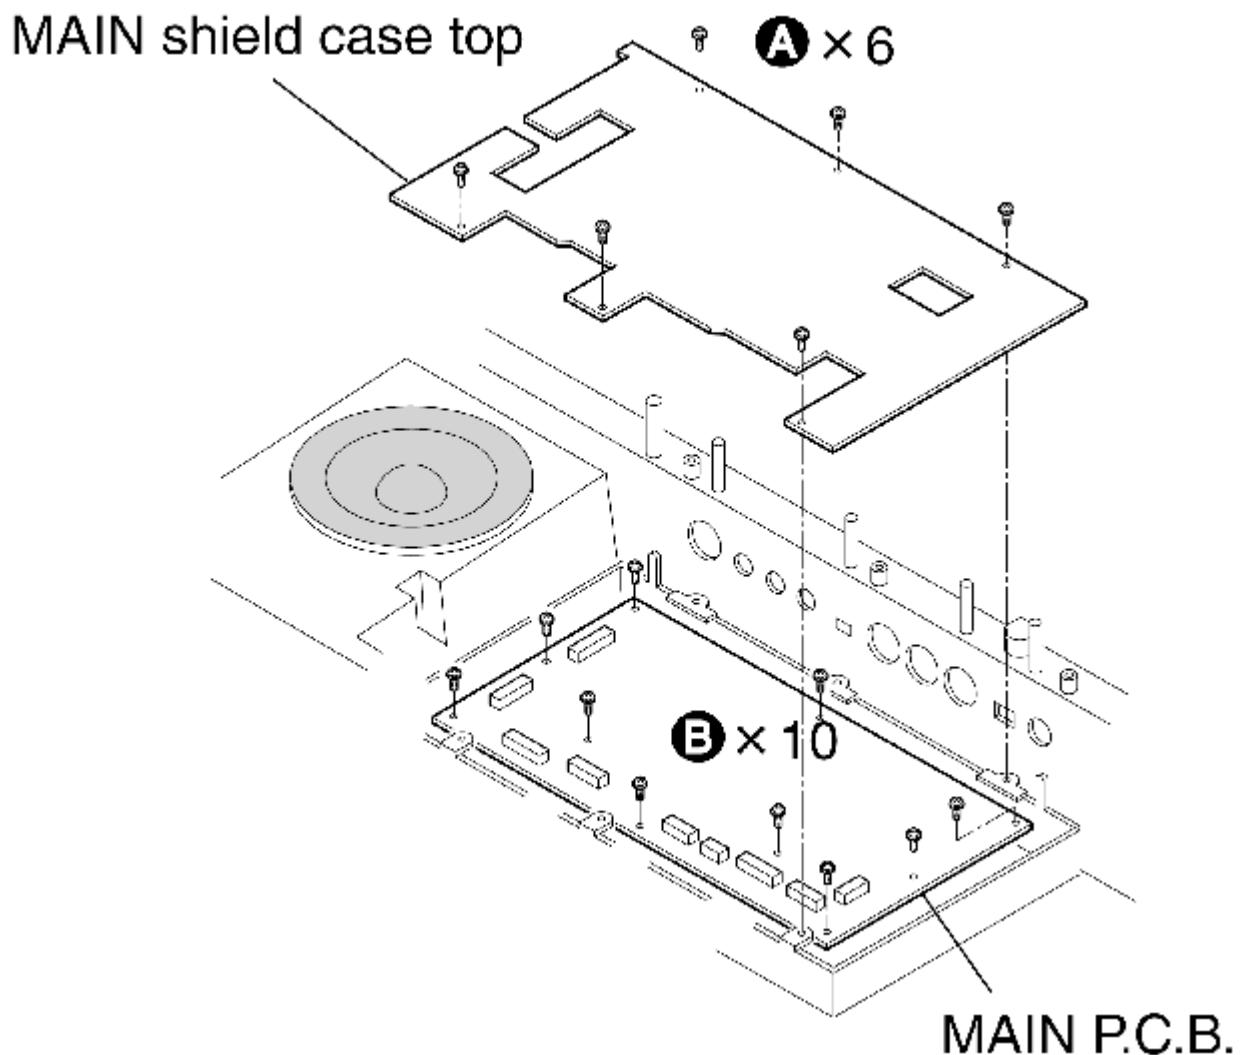

Fig.6

#### MAIN P.C.B.

1. Remove the main shield top case mounting screws (**A** 6 pcs.) as shown in [Fig.7](#).
2. Remove the MAIN P.C.B. mounting screws (**B** 10pcs.) as shown in [Fig.7](#).

Fig.7

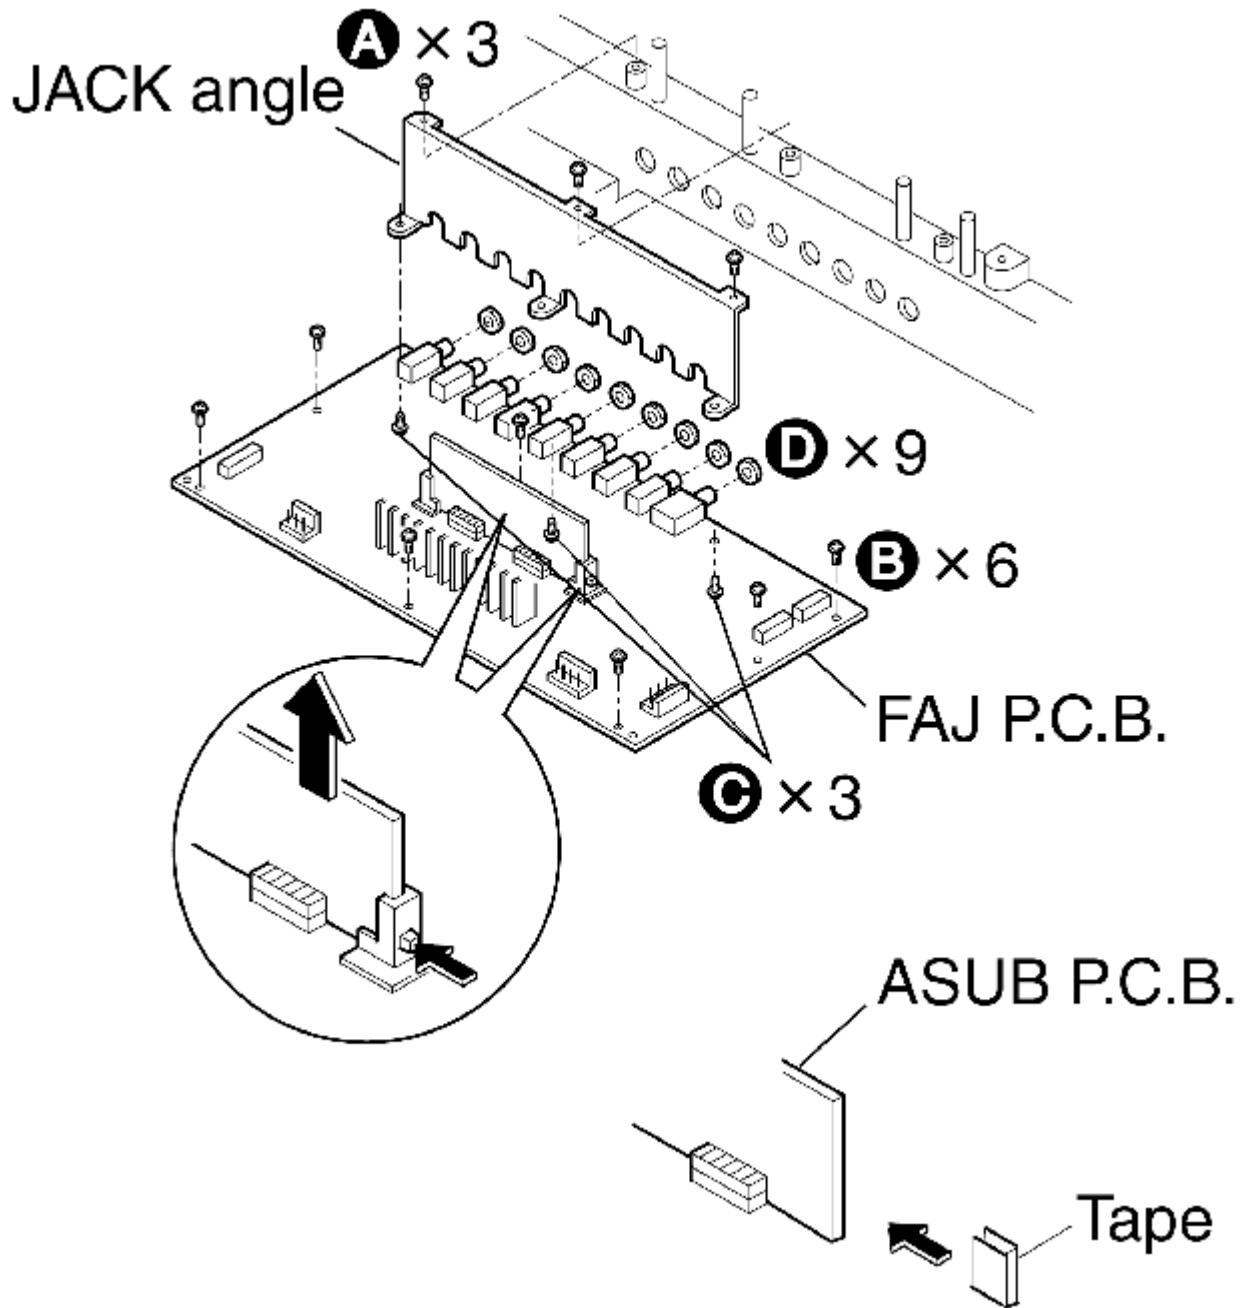

## 7.4. Removing the FAJ printed circuit board

### FAJ P.C.B.

1. Remove the FAJ angle mounting screws (**A** 3pcs.) as shown in [Fig.8](#) .
2. Remove the FAJ P.C.B. mounting screws (**B** 6pcs., **C** 3pcs, **D** 9pcs.)as shown in [Fig.8](#) .

[Fig.8](#)

#### ASUB P.C.B. disasemble

- Push the board holder libs as shown in [Fig.8](#) .

#### ASUB P.C.B. asemble

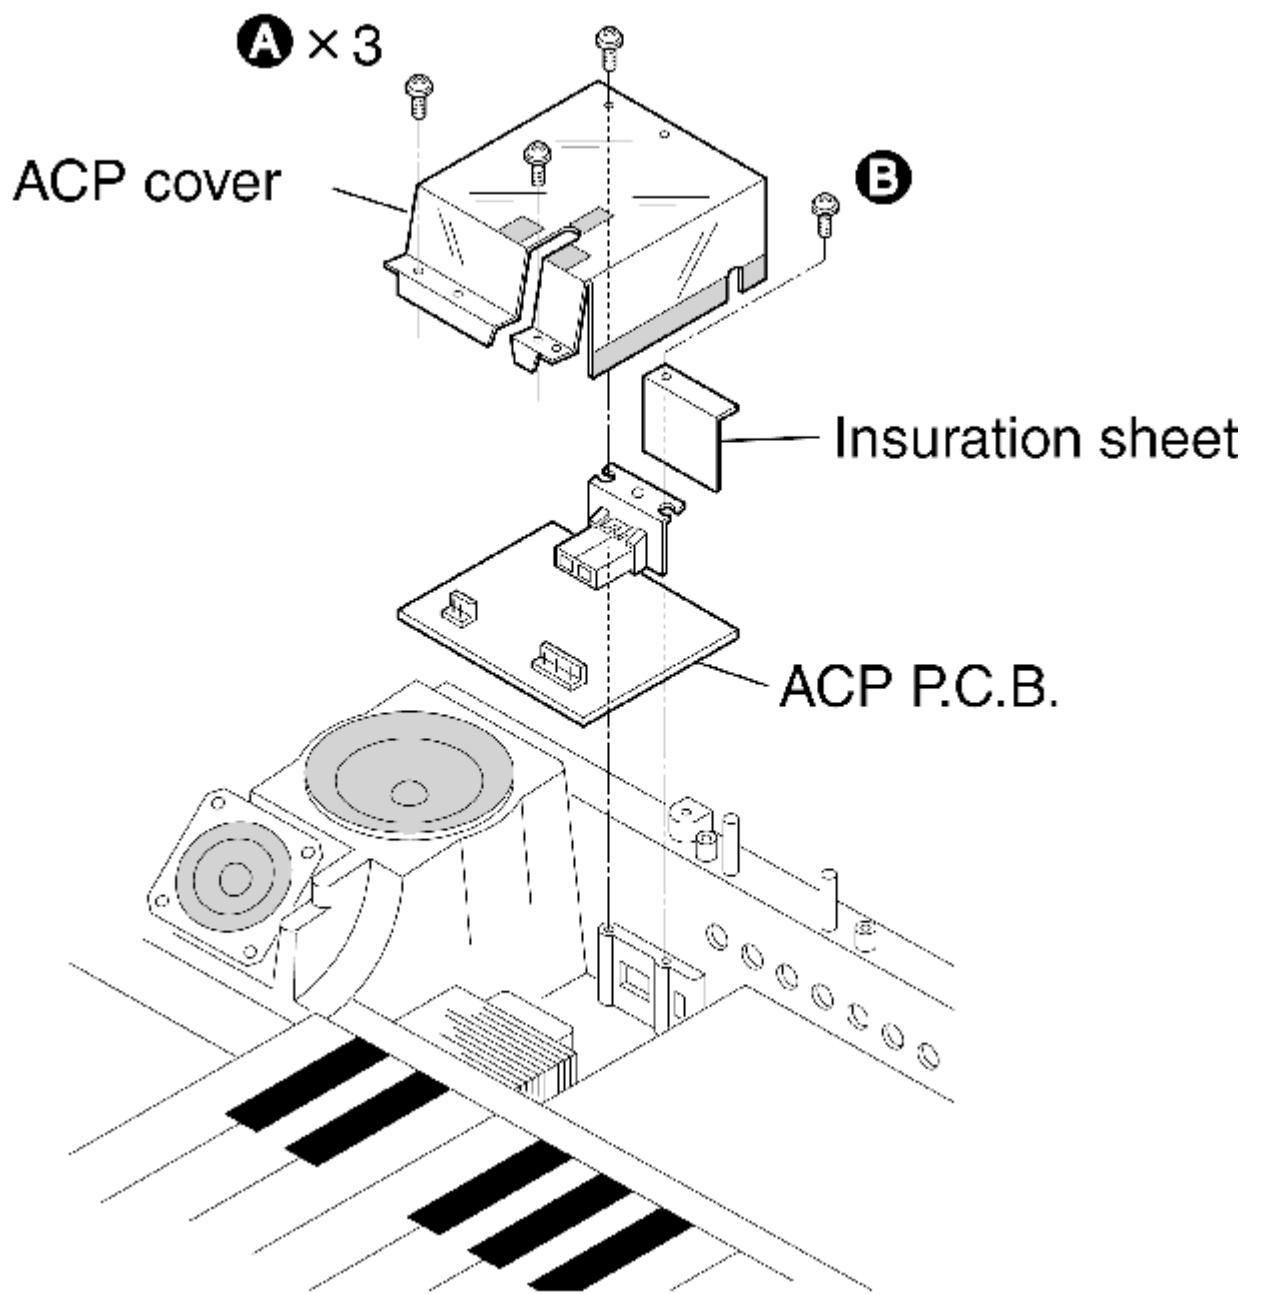

- Paste the tape as shown in [Fig.8](#)

## 7.5. Removing the ACP printed circuit board

ACP P.C.B.

1. Remove the ACP cover mounting screws (**A** 3pcs.) as shown in [Fig.9](#).
2. Remove the ACP P.C.B. and insulation sheet mounting screw (**B** pc.) as shown in [Fig.9](#).

**Fig.9**

## 7.6. Removing the LCD, CPL, CPC, CPR, ROT and INV printed circuit boards

- Remove the control panel (see step "[Removing the control panel, power SW panel, SD panel, net panel and keyboard unit](#)").
- Remove the control panel lid holding screws ( 10pcs.)as shown in [Fig.10](#) .

## LCD

1. Remove the LCD hinge holding screws (**A** 2pcs.) as shown in [Fig.10](#) .
2. Remove the LCD holding screws (**B** 2pcs.) as shown in [Fig.10](#) .

## CPL P.C.B.

1. Pull off the SLIDE VOLUME knob as shown in [Fig.10](#) .
2. Remove the CPL P.C.B. mounting screws (**C** 11 pcs.) as shown in [Fig.10](#) .

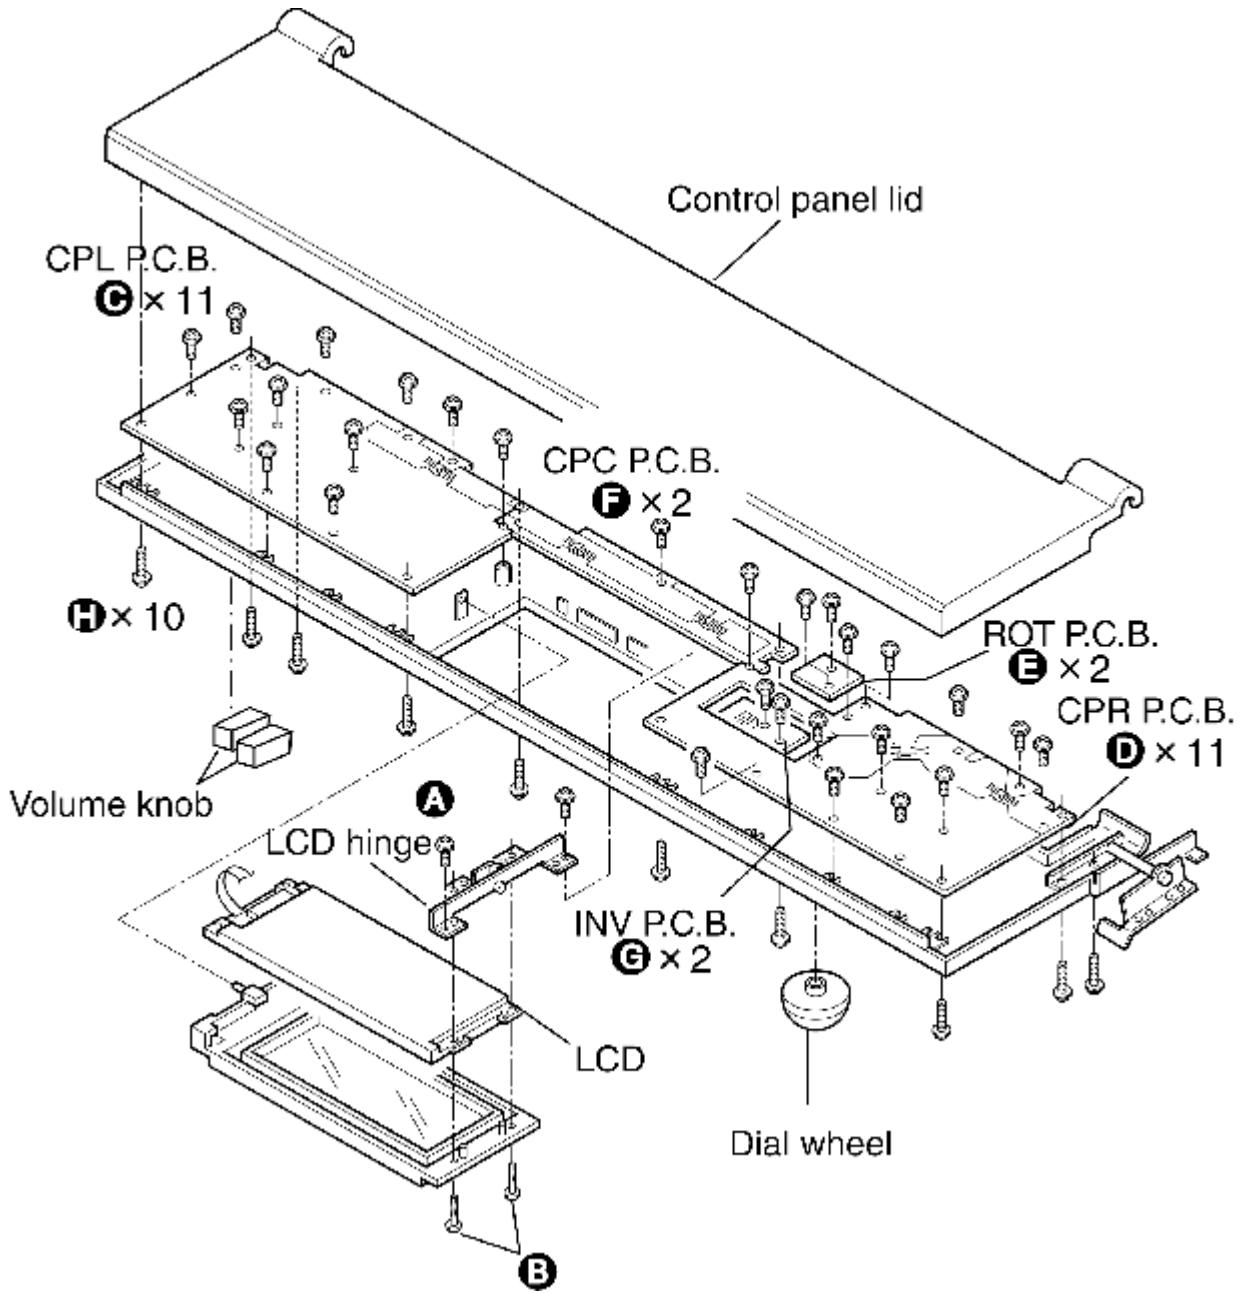

## CPR P.C.B.

- Remove the CPR P.C.B. mounting screws (**D** 11 pcs.) as shown in [Fig.10](#) .

## ROT P.C.B. , CPC P.C.B. and INV P.C.B.

1. Pull off the TEMPO/PROGRAM dial as shown in [Fig.10](#) .
2. Remove the ROT P.C.B. mounting screws (**E** 2 pcs.) as shown in [Fig.10](#) .
3. Remove the CPC P.C.B. mounting screws (**F** 2pcs.) as shown in [Fig.10](#) .
4. Remove the INV P.C.B. mounting screws (**G** 2 pcs.) as shown in [Fig.10](#) .

Fig.10

## 7.7. Removing the SD and SDSW printed circuit boards

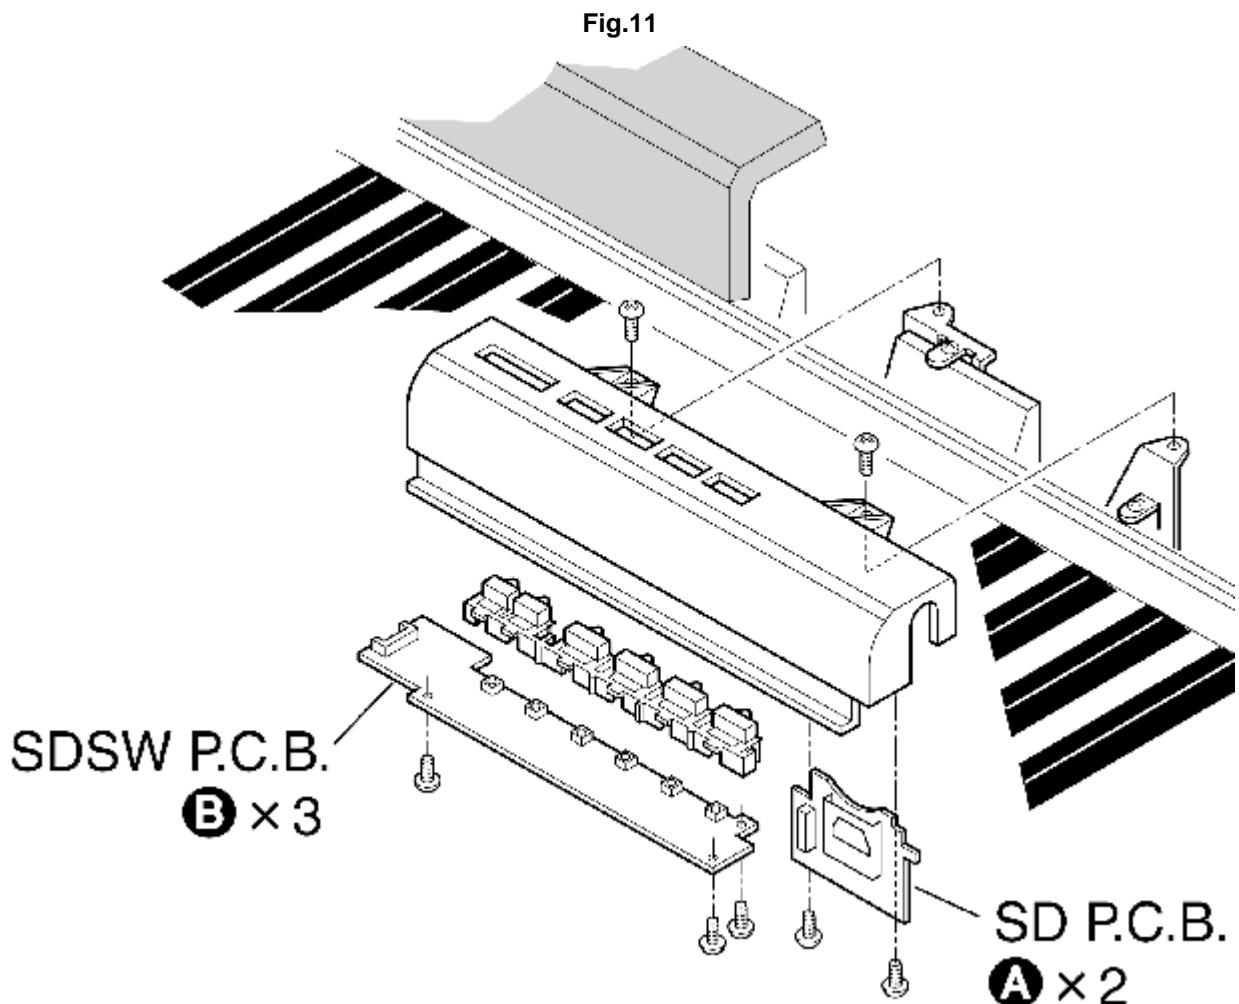

- Remove the SD panel (see step “[Removing the control panel, power SW panel, SD panel, net panel and keyboard unit](#)”).

### SD P.C.B.

- Remove the SD P.C.B. mounting screws (**A** 2pcs.) as shown in [Fig.11](#) .

### SDSW P.C.B.

- Remove the SDSW P.C.B. mounting screws (**B** 3 pcs.) as shown in [Fig.11](#) .

## 7.8. Removing the BEND and the HP P.C.B.

- Remove the top cabinet (see step “[Removing the top cabinet](#) ”).

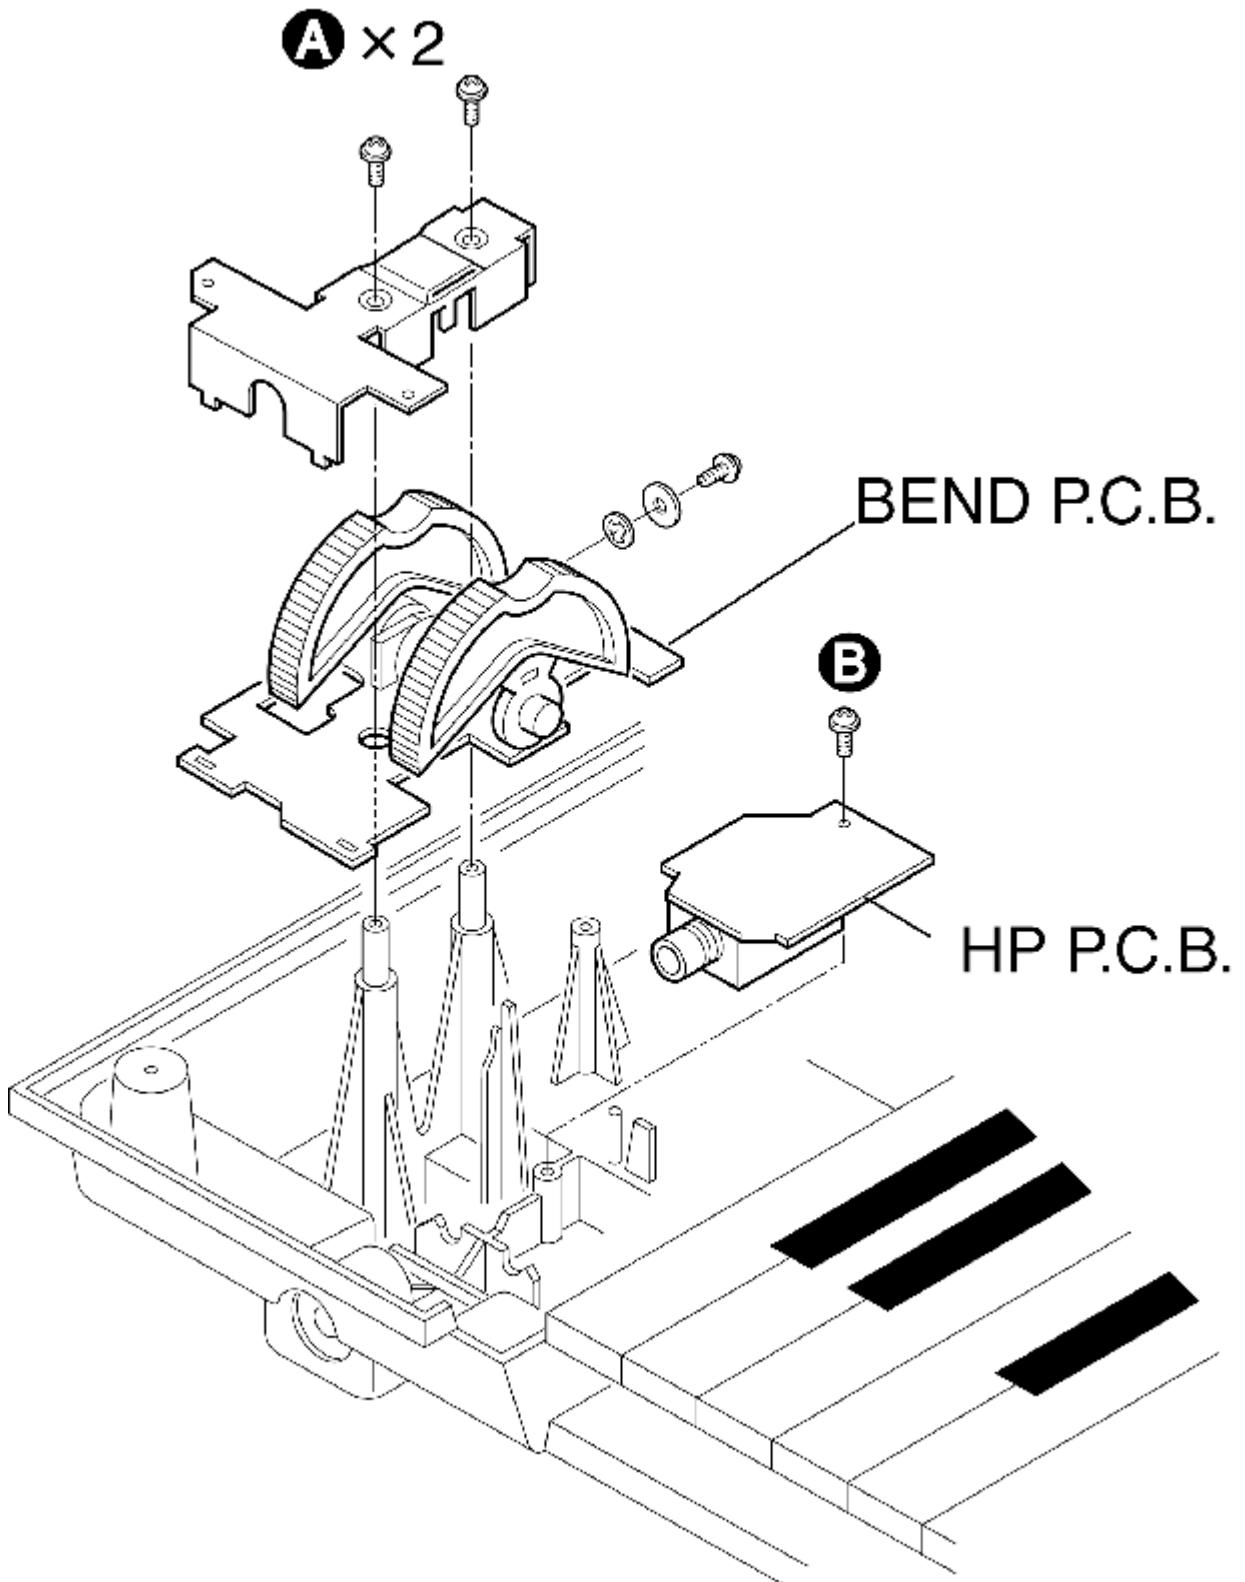

### BEND P.C.B.

- Remove the BEND P.C.B. mounting screws (**A** 2 pcs.) as shown in [Fig.12](#) .

### HP P.C.B.

- Remove the HP P.C.B. mounting screw(**B** ) as shown in [Fig.12](#) .

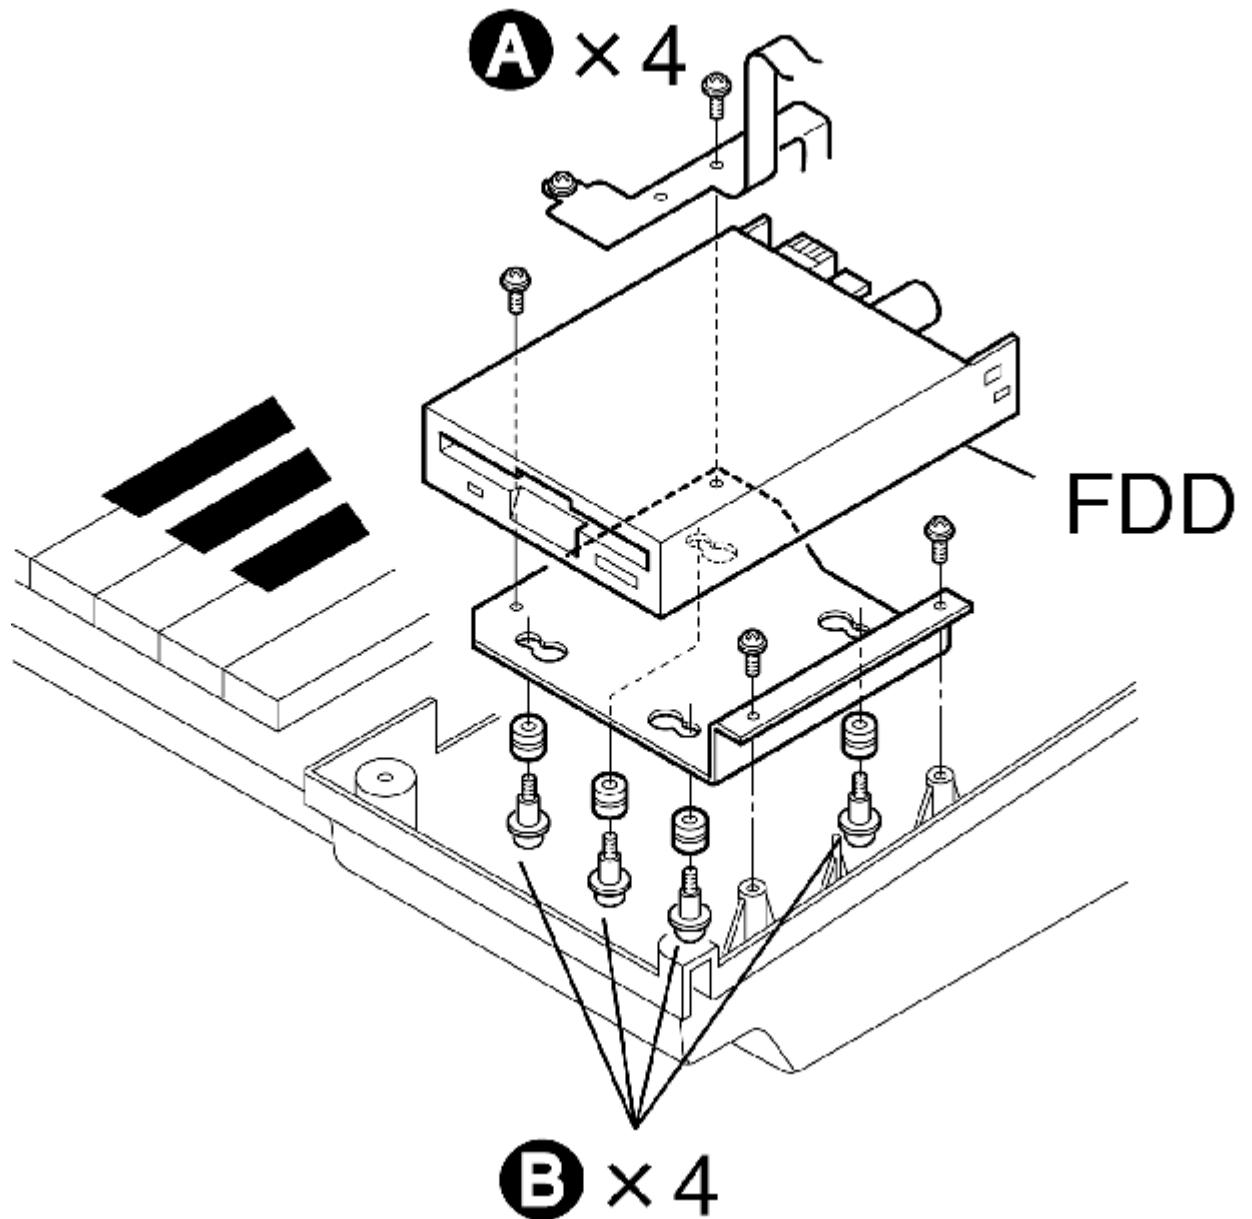

Fig.12

## 7.9. Removing the Disk Drive Unit

1. Remove the Disk Drive unit mounting screws (**A** 4 pcs.) as shown in [Fig.13](#) .
2. Remove the Disk Drive unit holding screws (**B** 4 pcs.) as shown in [Fig.13](#) .

Fig.13

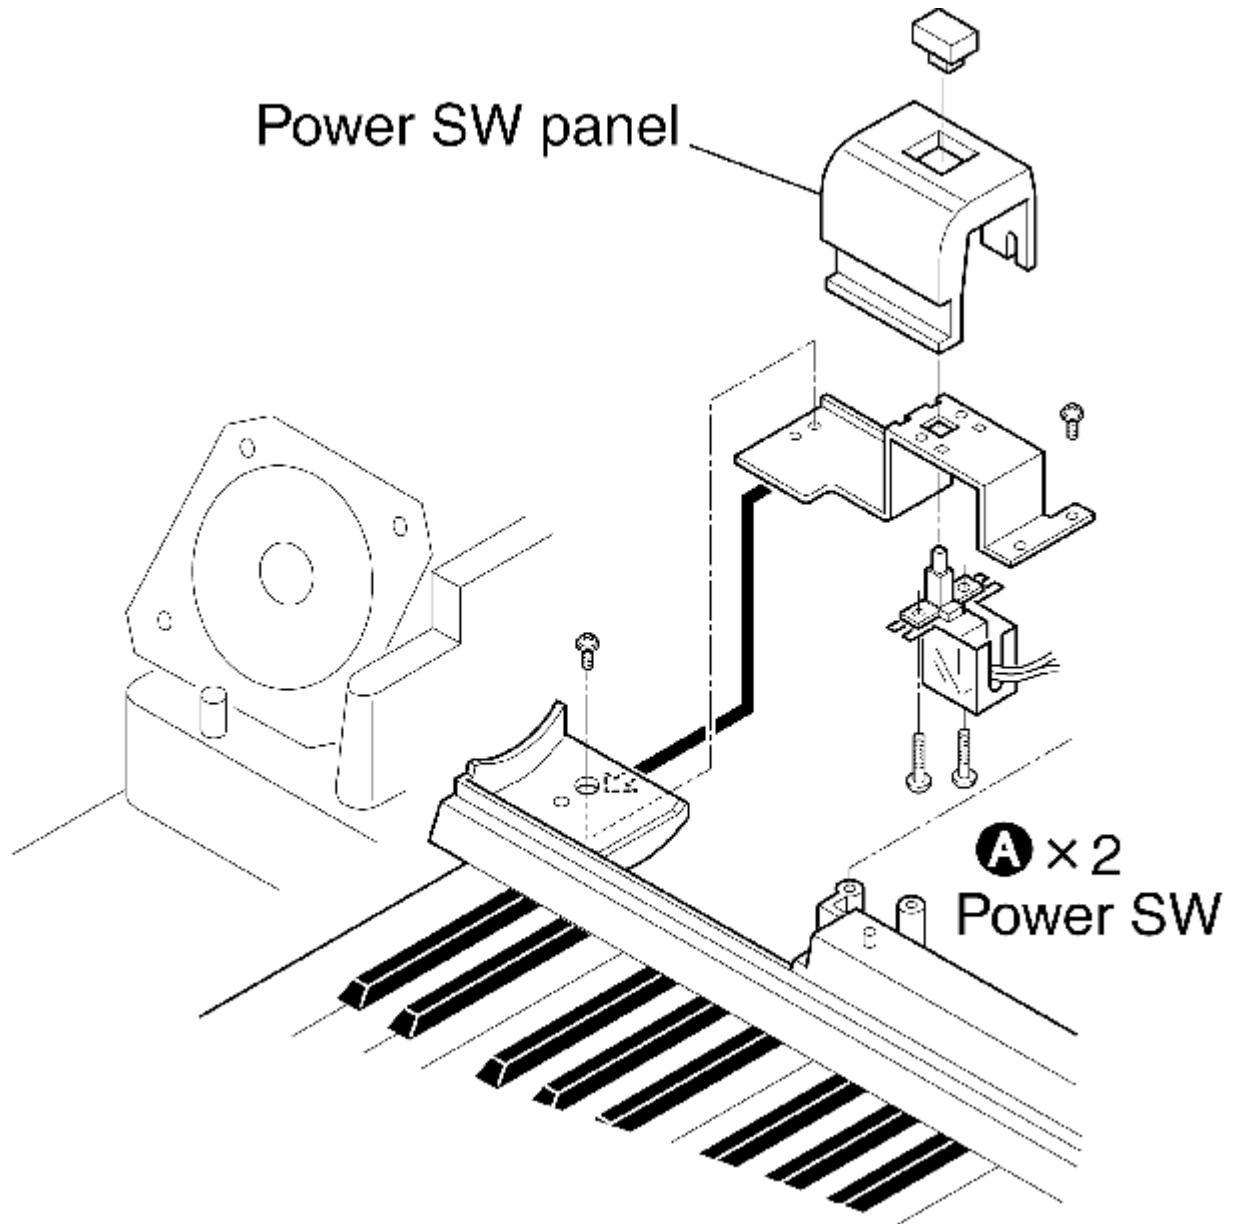

## 7.10. Removing the Power SW

1. Remove the Power SW panel (see step “[Removing the control panel, power SW panel, SD panel, net panel and keyboard unit](#) ”).

2. Remove the power SW mounting screws (A 2pcs.) as shown in [Fig.14](#) .

Fig.14

## 7.11. Removing the 14cm SP, 12cm SP and 6.5cm SP

- Remove the top cabinet (see step “[Removing the top cabinet](#) ”).

### 14 cm SP

- Remove the 14 cm SP@holding screws (A 4pcs.) as shown in [Fig.15](#) .

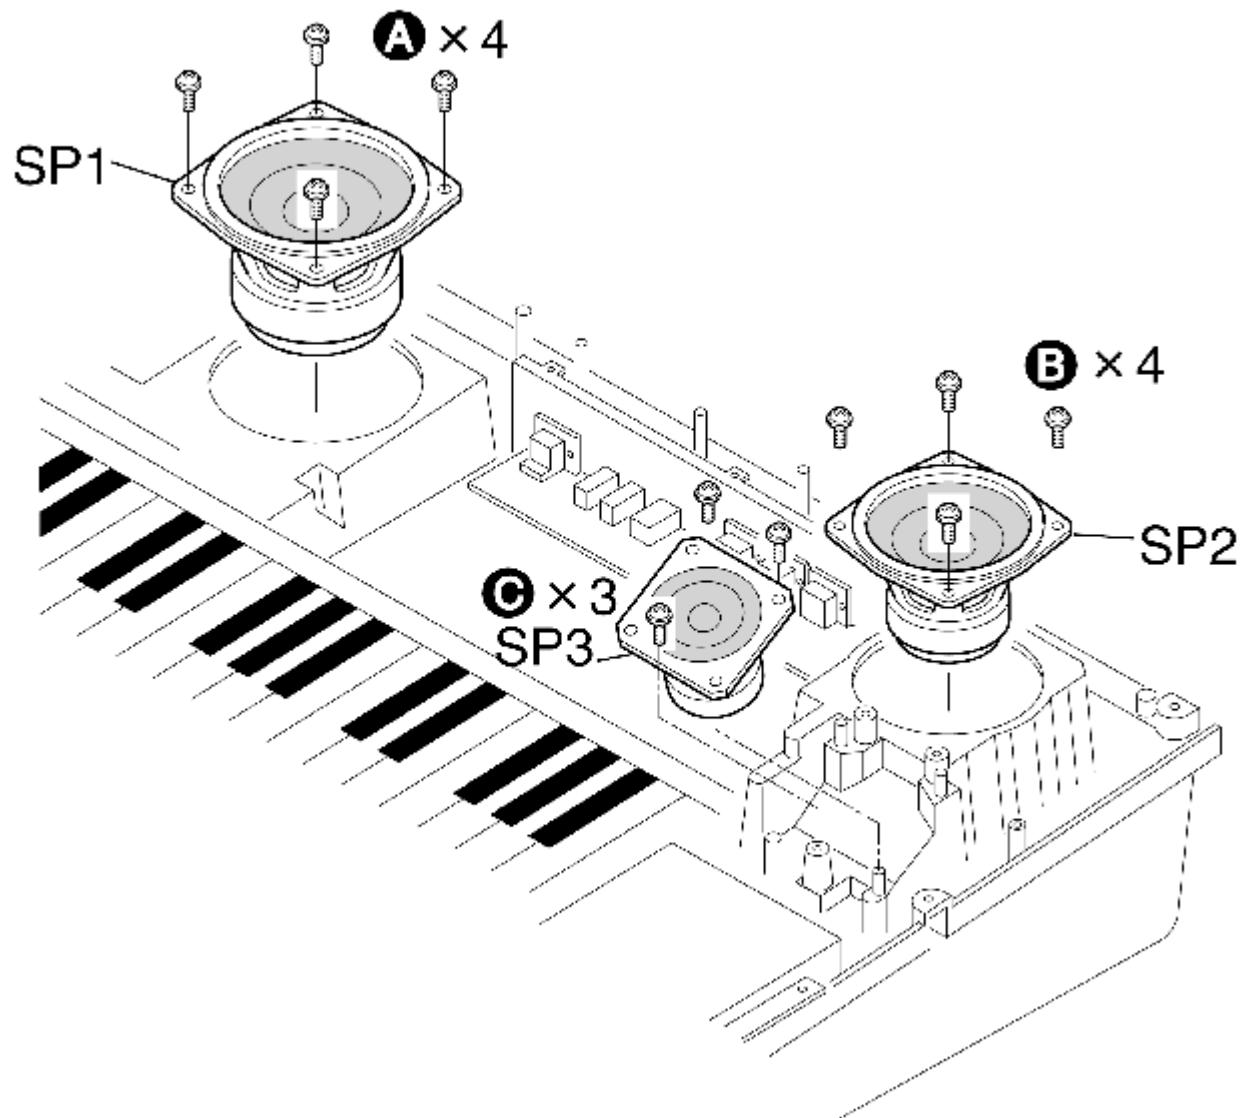

### 12 cm SP

- Remove the 12 cm SP holding screws ( **B** 4pcs.) as shown in [Fig.15](#) .

### 6.5 cm SP

- Remove the 6.5 cm SP holding screws ( **C** 4pcs.) as shown in [Fig.15](#) .

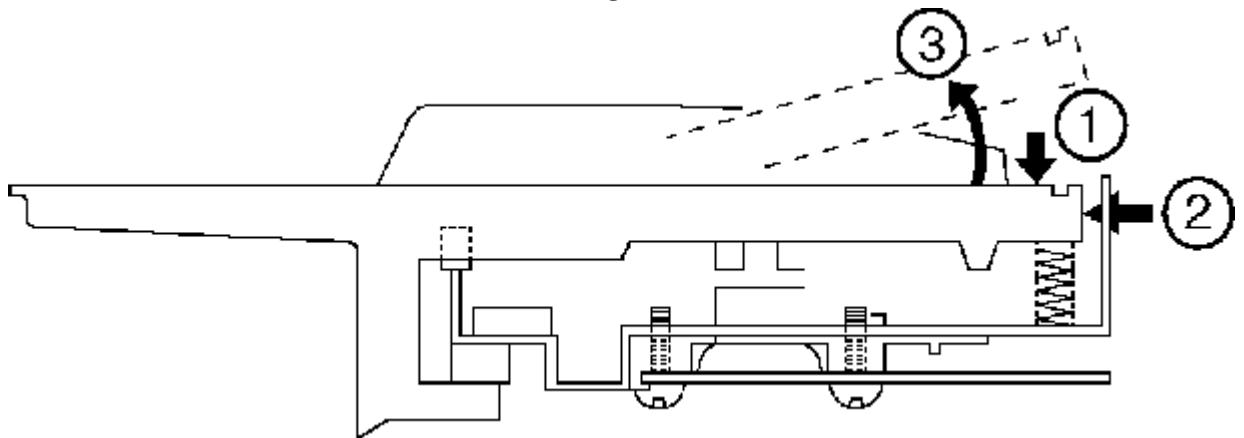

Fig.15

## 7.12. Removing the keys

- Remove the keyboard unit (see step “[Removing the control panel, power SW panel, SD panel, net panel and keyboard unit](#)”).
1. Press downward on the rear of the key as shown in [Fig.16](#).
  2. While pressing downward on the rear of the key, push the key forward and release it from the chassis.
  3. Lift the key and remove it from the chassis.

Fig.16

**NOTE:**

To remove a black key, the white key to either side of it should be removed first.

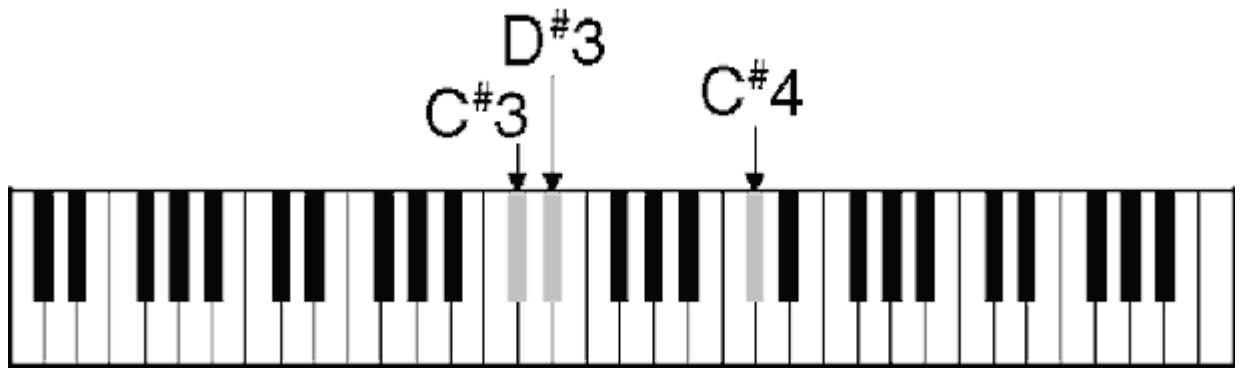

## 8. Service Diagnostic Function

The service diagnostic function makes it possible to determine whether the various test modes pass or fail. The test modes are completely independent of one another. Select a test mode as necessary, and run the test.

To set to the service diagnostic mode:

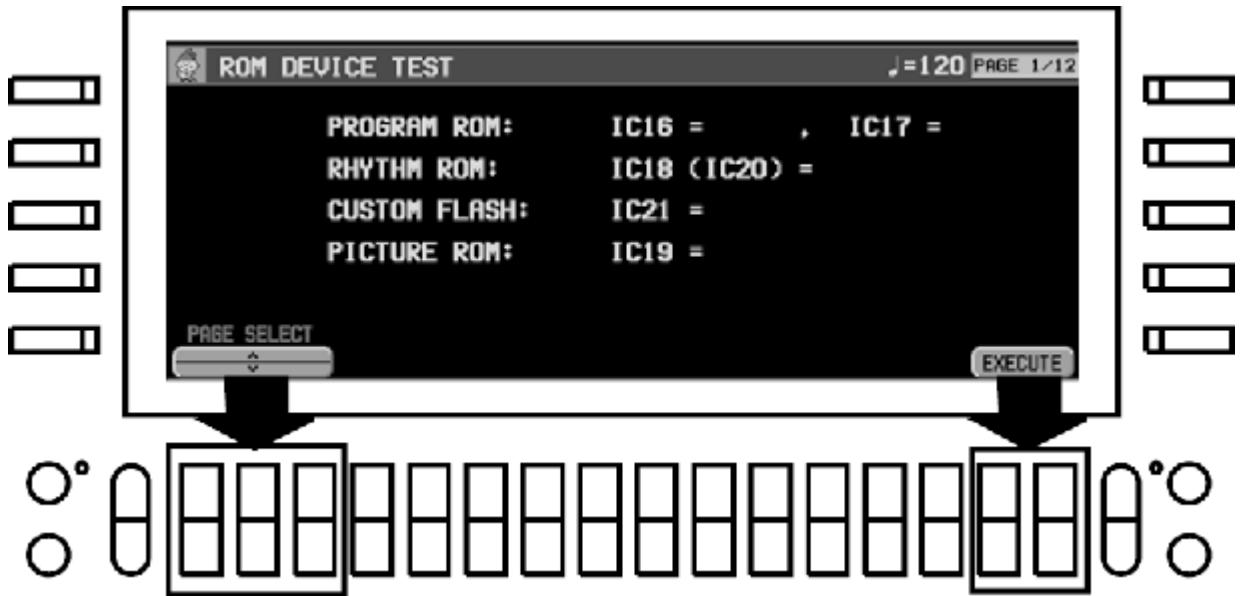

1. Press and hold the C#3, D#3, C#4 keys, and then turn on the power switch. (refer to [Fig.20](#) )

Fig.20

2. After the service diagnostic screen is displayed on the LCD, release the three keys.  
(refer to [Fig.21](#) )
3. Use the corresponding buttons below the “page select” display to select the respective test.

Fig.21

### 8.1. ROM device test

Fig.22

- Press the EXECUTE button to begin the test.
- The test result (OK or NG) is displayed within twenty seconds. If the test result is NG, not only the respective IC, but also a break or short circuit in the ADDRESS/DATA BUS as well as in any of the strobe signal lines may be the cause of the failure. (refer to [Fig.22](#))

## 8.2. RAM device test

Fig.23

- Press the EXECUTE button to begin the test.
- The test result (OK or NG) is displayed within a few seconds. If the test result is NG, not only the respective IC, but a break or short circuit in the ADDRESS/DATA BUS as well as in any of the strobe signal lines may be the cause of the failure. (refer to [Fig.23](#))

## 8.3. Other device test

Fig.24

- Press the EXECUTE button to begin the test.
- The test result (OK or NG) is displayed with in a few seconds. If the test result is NG, not only the respective IC, but also a break or short circuit in the ADDRESS/DATA BUS as well as in any of the strobe signal lines may be thecause of thefailure. (refer to [Fig.24](#) )

#### 8.4. Floppy Disk SAVE/LOAD test

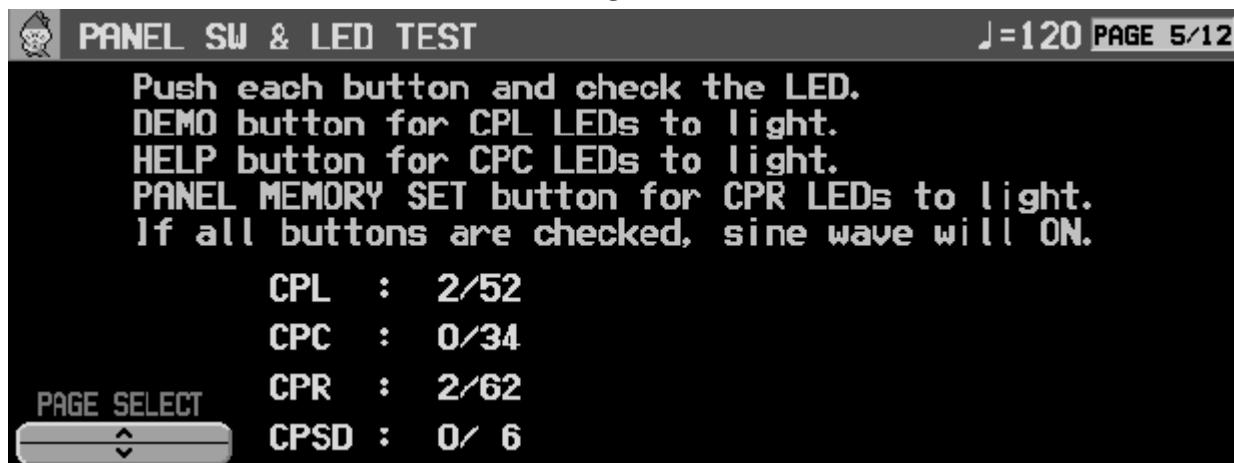

- Insert a formatted floppy disk into the Disk Drive. Press the START button to begin the test.
- The test is carried out repeatedly. Data is saved and loaded, and then the two data sets are compared. The number of times that the test results in OK or NG are counted and displayed on the LCD. To interrupt the test, press the STOP button.(referto [Fig.25](#) )
- Even when the Floppy Disk Drive is functioning properly, the test can result in NG. If this happens frequently, clean the magnetic heads of the Floppy Disk Drive with a

cleaning disk. Then, change the disk used in testing with another disk and reperform the test. If the trouble is not solved, it is likely that the Disk Drive unit or some other part of the hardware is broken.

## 8.5. Panel SW & LED test

Fig.26

- Press all the buttons on the Control Panel and confirm that the corresponding LED lights.
- If an LED fails to light, the cause may be a defective switch or a break in the surrounding circuit, etc.
- After all the buttons have been pressed, all the PANEL MEMORY LEDs light. If all switches are OK, "ALL DEVICE OK" is shown on the LCD. (If a switch is defective, nothing is shown.) (refer to [Fig.26](#))
- To light all the LEDs, press and hold the DEMO button. If an LED fails to light, the LED may be defective or there may be a break in the surrounding circuit.

## 8.6. LCD module test (LCD adjustment and confirmation)

Fig.27

- Press the RGBWB, CROSSTALK, SAMPLE, CONTRAST or VIDEO OUT button to begin the respective test. (refer to [Fig.27](#))

#### RGBWB:

All the dots light in red, green, blue, white, and finally black. The display can be held by pressing the DISPLAY HOLD button.

#### CROSSTALK:

An H pattern is shown. LCD crosstalk can be evaluated. To exit this test, press the EXIT button.

#### SAMPLE:

Several display patterns shown during normal use are shown. The display can be held by pressing the DISPLAY HOLD button.

#### CONTRAST:

The test pattern is shown. Adjust the contrast by the CONTRAST control on the right of the LCD. To exit this test, press the EXIT button.

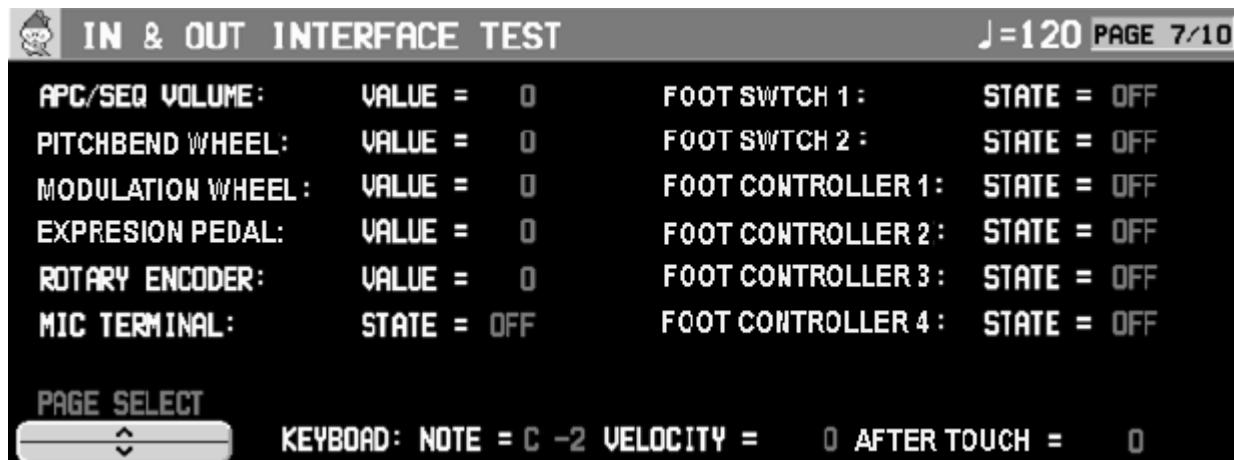

#### VIDEO OUT:

Check each display mode of PAL and NTSC. To exit this test, press the EXIT button.

- If the correct display is not shown during these tests, the LCD or LCD drive circuit may be defective.

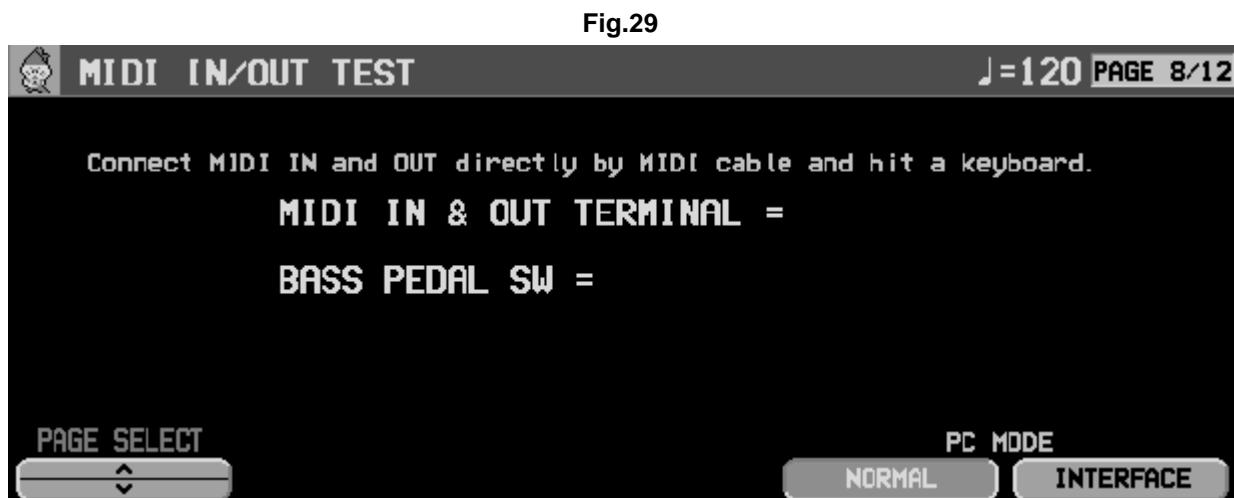

## 8.7. In & Out interface test

Fig.28

- The operation status of each input action part can be confirmed. If the part is operating properly, “OK” is shown, excluding the Expression Pedal. (refer to Fig.28 )
- When a keyboard key is pressed, the corresponding pitch and velocity aftertouch is displayed (only as long as the key is depressed).
- The respective statuses for other input action parts are displayed. (Analog parts are shown as numerical values from 0 to 255, and switches are shown as ON or OFF.)
- If the display fails to change when the part is operated, or if the change is abnormal, it may indicate a defective part.

## 8.8. MIDI IN/OUT test

- First, set the COMPUTER terminal switch to MIDI.
- Use a MIDI cable to directly connect the MIDI IN and MIDI OUT terminals.
- When a keyboard key is pressed, the transmitted and received data are compared

and the MIDI terminal operation is indicated as being OK or NG. (refer to [Fig.29](#))

- If NG is shown, check both the IN and OUT terminals, as well as the circuit.

## 8.9. WAVE ROM test

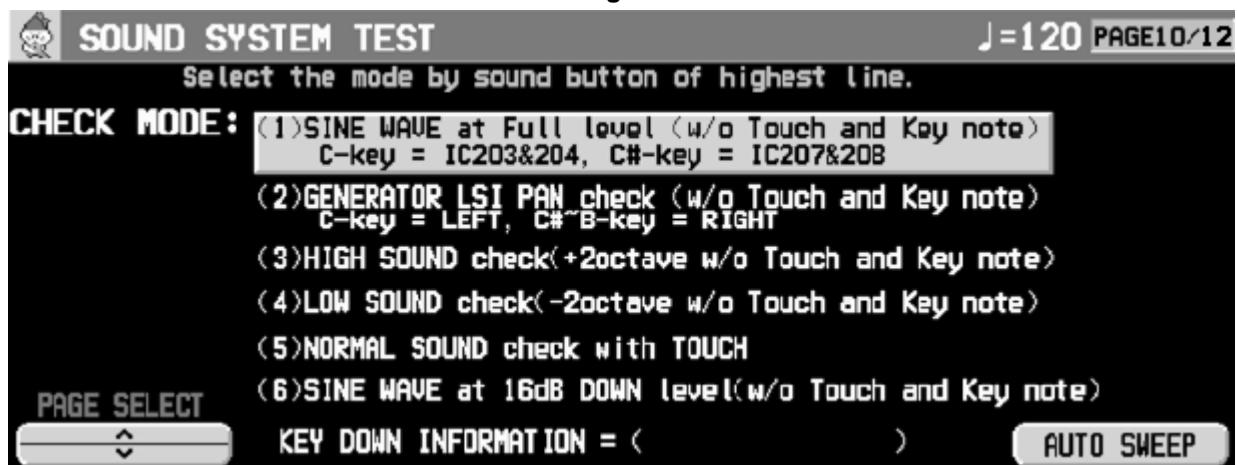

Fig.30

- Press the EXECUTE button to start the test.
- The test result (OK or NG) is displayed within thirty seconds. If the test result is NG, not only the respective IC, but also a break or short circuit in the ADDRESS/DATA BUS as well as in any of the strobe signal lines may be the cause of the failure. (refer to [Fig.30](#) )

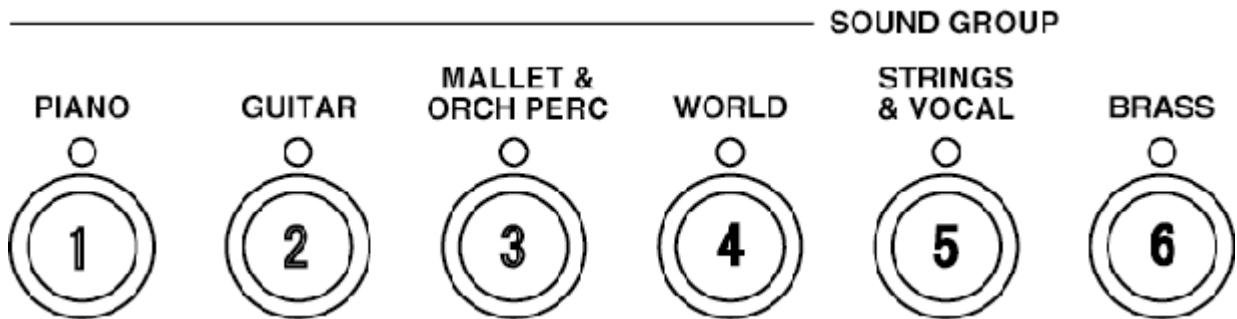

## 8.10. SOUND SYSTEM test

Fig.31

- Use the button in the SOUND GROUP to select an item from 1 to 6 (refer to [Fig.31](#) and [Fig.32](#) ). Press a keyboard key.

Fig.32

1. Generate a full amplitude sine wave in the pitch of each key. (No touch, fixed stereo center).  
If no sound is generated or if the sound is distorted, the sound generator ROM corresponding to the key position is defective.
2. For confirming the output pathway from the sound generator. (Fixed scale, no touch)  
The Lch and Rch sound outputs are confirmed separately.
3. Generate a full amplitude sine wave in the pitch of each key +2 octaves. (No touch, fixed stereo center)  
By generating a sound frequency outside the normal keyboard zone, you can confirm whether or not there is an abnormality in the sound output frequency zone.
4. Generates a full amplitude sine wave in the pitch of each key -2 octaves. (No touch, fixed stereo center)  
By generating a sound frequency outside the normal keyboard zone, you can confirm whether or not there is an abnormality in the sound output frequency zone.
5. Generate a sine wave in the pitch of each key with touch.  
You can confirm if the volume changes depending on the touch.
6. Generate a full amplitude sine wave in the pitch of each key at a -16 dB volume. (No touch, fixed stereo center)  
You can confirm the same sound output as in 1, at a lower volume.

## 8.11. SD test

Fig.33

#### Load/save test

- Insert the SD card. Press the START button to begin the test.
- The test is carried out repeatedly. Data is saved and loaded, and then the two data sets are compared. The number of times that the test results in OK or NG are counted and displayed on the LCD. To interrupt the test, press the STOP button.(referto [Fig.25](#) )

#### Audio test

- Insert the SD card. Press the START button to begin the test.

## 8.12. WAVE EXPANSION BOARD test

Fig.34

- Insert the SY-EW01,EW02,,EW03 or EW04 board.

- Press the EXECUTE button to start the test.
- The test result (OK or NG) is displayed . If the test result is NG, not only the respective IC, but also a break or short circuit in the ADDRESS/DATA BUS as well as in any of the strobe signal lines may be the causeof the failure. (referto [Fig.30](#) )

## 9. Precautions before Servicing the Main Circuit

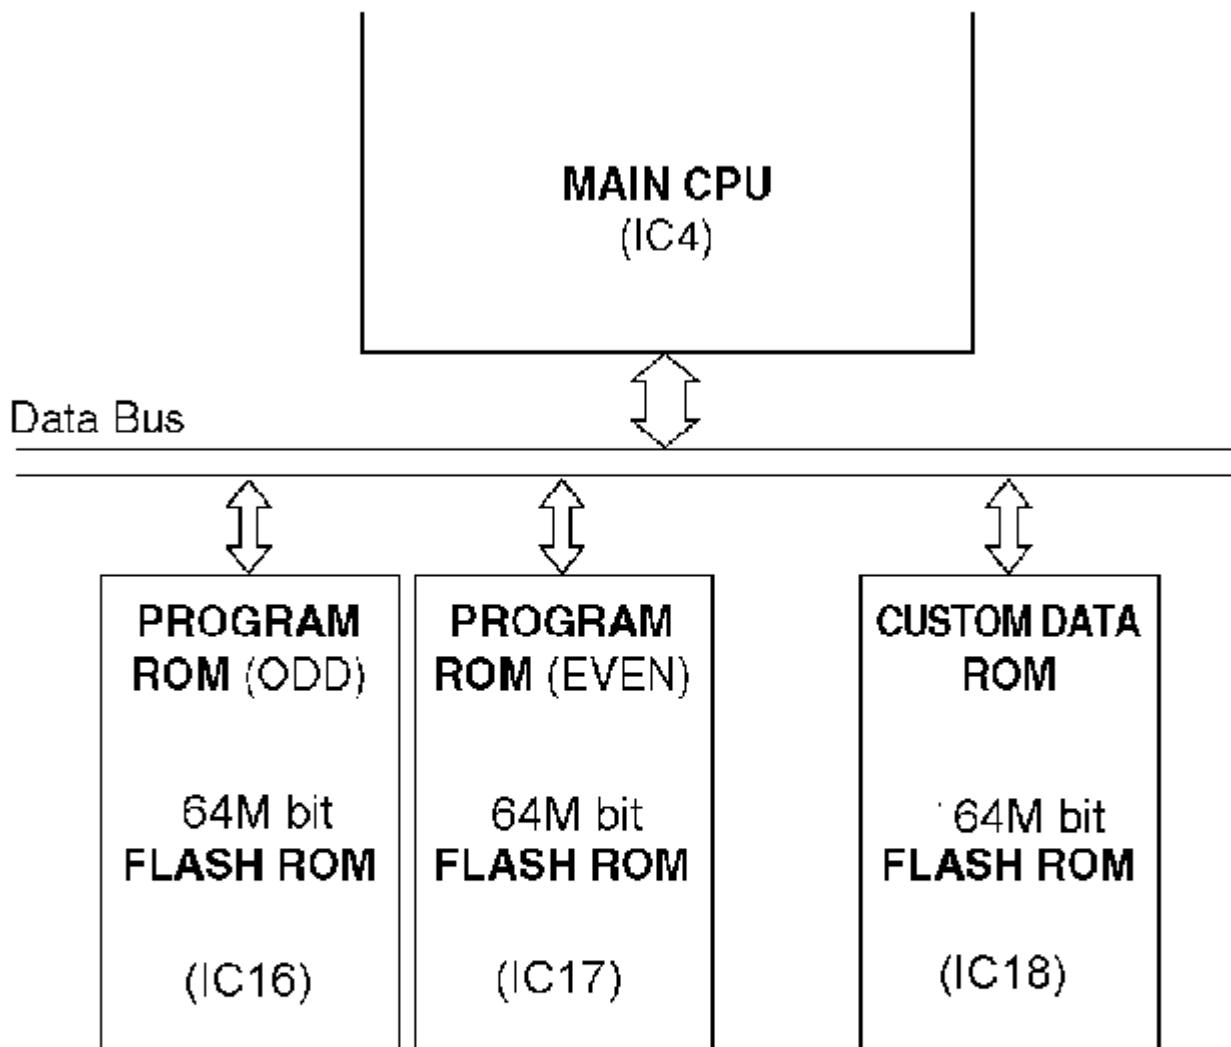

This model employs a FLASH ROM (EEPROM) for the PROGRAM ROMs and the CUSTOM DATA ROM. If changing any of these ICs, service the MAIN CIRCUIT as explained here following.

### 9.1. About the FLASH ROM

The FLASH ROM can be electrically erased and rewritten. This model is designed so that the repair technician can easily write and change programs and data in the FLASH ROM, by using a floppy disk. (refer to [Fig.33](#) )

Fig.33

## Block Diagram of MAIN CIRCUIT CPU and peripheral ICs

\* FLASH ROM contents

IC16: MAIN CPU program (ODD)

IC17: MAIN CPU program (EVEN)

IC18: RHYTHM & ACCOMP data for the RHYTHM GROUP/CUSTOM function

### 9.2. Notes on replacing FLASH ROMs

The replacement parts include a FLASH ROM with a available memory and the PROGRAM DISKS which contains the program to be written into the PROGRAM ROMs. After replacing the PROGRAM ROM, always write the program into it from the

PROGRAM DISKS included in the replacement parts. For details on programming, see “[After replacing the PROGRAM ROM \(IC16/IC17\)](#)”.

The CUSTOM DATA ROM stores RHYTHM & ACCOMP data for the RHYTHM GROUP/CUSTOM function. The initial RHYTHM & ACCOMP data is factory-set in the CUSTOM DATA ROM at the time of shipping. The CUSTOM DATA ROM can also store COMPOSER data that the user creates. However, user-data is lost when the CUSTOM DATA ROM is replaced. After replacing the CUSTOM DATA ROM, default the data in it with the INITIAL DATA DISK attached to this product. For details on defaulting, see “[After replacing the CUSTOM DATA ROM \(IC18\)](#)”.

### 9.3. About the replacement parts

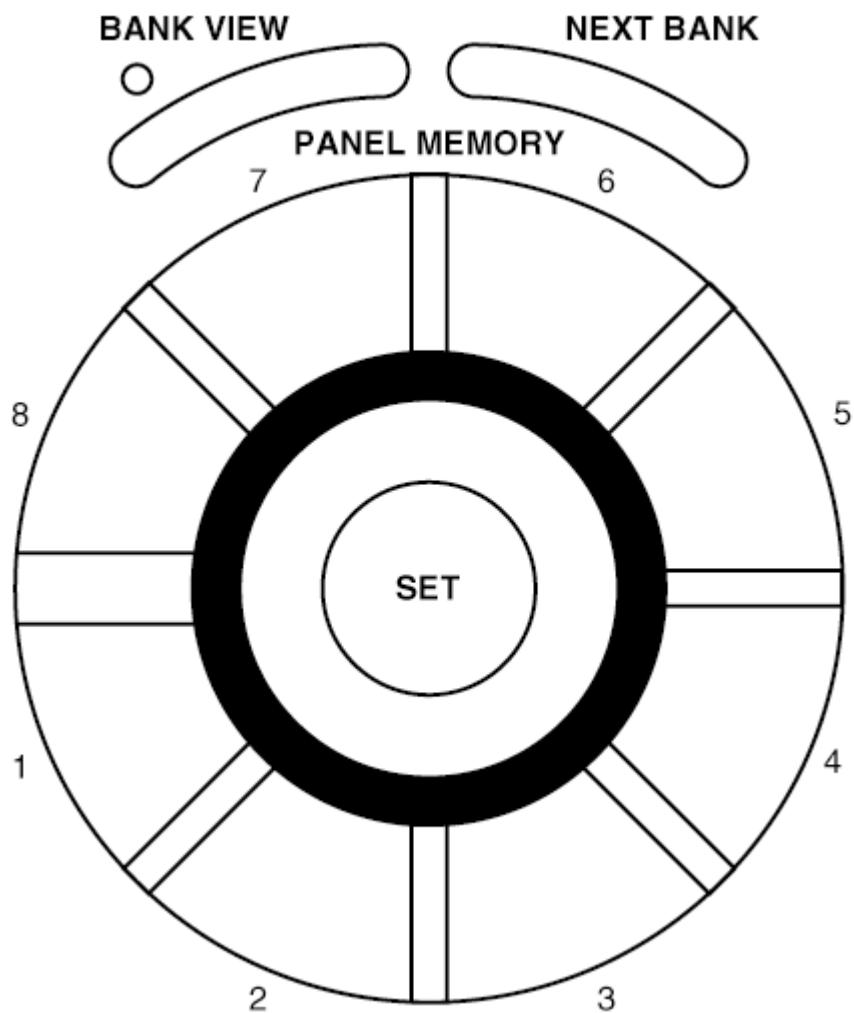

The same FLASH ROM with available memory can be used for the PROGRAM ROMs (IC16/IC17). Moreover, the included PROGRAM DISKS contains all programs. Therefore, the replacement parts can be used for IC16 and IC17.

### 9.4. How to write program/data into FLASH ROMs

#### 9.4.1. After replacing the PROGRAM ROM (IC16/IC17)

1. Set the PROGRAM DISK 1 included in the replacement parts into the Floppy Disk Drive.
2. Hold down the PANEL MEMORY buttons 1, 2, 3 and 4. And turn on the power switch. (refer to [Fig.34](#))

Fig.34

3. Check “Flash Memory Update” is displayed on the LCD, and release the PANEL MEMORY buttons.  
The program will be written into the FLASH ROM automatically. Replace the floppy disk when instructed.
4. When the operation is complete, “Completed!!” will be displayed on the LCD.
5. Turn the power switch off and then turn it on again. Check the instrument is functioning properly.

#### **9.4.2. After replacing the CUSTOM DATA ROM (IC18)**

1. With the normal display displayed on the LCD, set the INITIAL DATA DISK included with the model into the Floppy Disk Drive.  
The normal display automatically changes to the DISK MENU display.
2. Select “LOAD” to change to the file select display.
3. Move the highlighting cursor to “CTMINI” in “No. 01” and select “LOAD”.  
“PLEASE WAIT...” will appear on the LCD and the model will start defaulting data in the CUSTOM DATA ROM.

4. When the operation is complete, “Completed!!” will be displayed on the LCD.
5. Turn the power switch off and then back on again. Check the instrument is functioning properly.

## 10. Measurements and Adjustments

ADJUSTMENT	MEASURING CONDITIONS	EQUIPMENT	ADJUSTMENT P.C.B.	ADJ. POINT	CONNECT METER TO	METER READII
TER TOUCH SENSOR nsitivity	any position	Oscilloscope	MKB3 P.C.B.	VR1	CN11-3pin	5.0V

1. Press one of the any keys hardly and check the CN11-3 pin voltage.  
The voltage will increase and become steady.  
2. Adjust the voltage to 5.0V with VR1 at that time.

## 11. Precautions before Servicing

### 11.1. Precautions for measuring of the output waveforms

1. The waveform was measured with a “National Digital Storage Oscilloscope VP-5730A”. Therefore the waveforms of musical tone signals shown may differ somewhat due to the difference in the timing of triggering.
2. Since the 1/10 test probe is used, the indicated voltage value on the bottom part of each waveform illustration is 1/10 of the actual value (e.g. 0.2 V/cm should be 2.0 V/cm).
3. To measure the waveforms, first set this unit to the service diagnostic mode (refer to “[WAVE ROM test](#)”). The WAVE ROM output will then be output as a sine wave to facilitate the servicingcheck.

### 11.2. Important safety notice

- Components identified by a  mark have special characteristics important for safety.
- When replacing any of these components, use only manufacturer's specified parts.

### 11.3. Symbolic Marks

The symbolic marks for resistors and capacitors which used in this circuits are classified as following [Table-1](#) and [Table-2](#).

#### 11.3.1. RESISTORS

- Resistors without symbolic mark are **FIXED CARBON FILM RESISTORS (ERD-type)**.
- All resistors are **1/4 WATT, ±5 % TOLERANCE** unless otherwise designated in schematic diagrams.

**Table-1**

SYMBOL	SPECIFICATION
(F)	Fixed Carbon Film Resistors “FLAME-PROOF” (ERD—F—type)
(F)	Fixed Wire Wound Resistors “FLAME-PROOF” (ERF—type)
(F)	Fixed Metal Oxide Film Resistors “FLAME-PROOF” (ERG—type)
(F)	Fixed Metal Film Resistors “FLAME-PROOF” (ERX—type)
(G)	Fixed Metal Film Resistors (Precision and High Stability) (ERO—type)
(F)	Fuse Type Fixed Metal Oxide Film Resistors “FLAME-PROOF” (ERQ—type)
(F)	Fuse Type Fixed Carbon Film Resistors “FLAME-PROOF” (ERD2FC—type)

### 11.3.2. CAPACITORS

- Capacitors without symbolic mark are **POLYESTER CAPACITORS. (ECQM-type, ECQG-type, ±10% Tolerance)**
- Polarized capacitors without symbolic mark are **Aluminum Electrolytic Capacitors. (ECEA-type, ±20% Tolerance)**

**Table-2**

SYMBOL	SPECIFICATION	TYPE
(N)	Non-Polarized Electrolytic Capacitors	ECEA_KN_type
(Y)	Non-Polarized Electrolytic (for Network system)	ECEA_Y_type
(T)	Tantalum Solid Electrolytic Capacitors	ECS_type
(TF)	Metalized Plastic Film Capacitors (TF Series)	ECQV_type
	Temperature Compensating Ceramic Capacitors	ECC_type
	High-Dielectric Constant Ceramic Capacitors	ECK_type ECR_type
	Axial Lead Ceramic Capacitors	ECB_type
	Metalized Polyester Film Capacitors for Across the Line	ECQ_EW_type
	Aluminum Electrolytic Capacitors for Smoothing Circuit	ECES_type
	Multilayer Ceramic Chip Capacitors	ECUV_type

## 12. MEASURING CONDITION

## ■ Printed Circuit Board and Schematic Diagram

### ■ Measuring Condition of MAIN P.C.B.

#### Check Point ① - ②

Set to the self-diagnostic mode following.

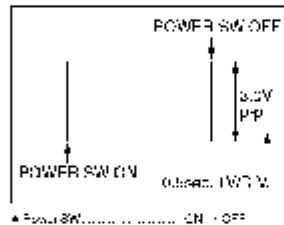

- While pressing two E keys (E1+E2) simultaneously turn on the power switch.
- SOJN2 ..... BASS
- Main Volume ..... MAX
- Keyboard ..... C1 (C2)

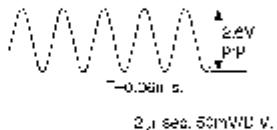

#### Check Point ③

Set to the initial setting mode (Refer to '1. Initialize' )

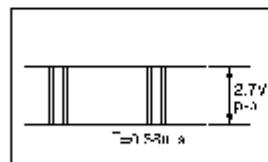

#### ① RESET

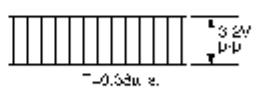

#### ② TG CLOCK

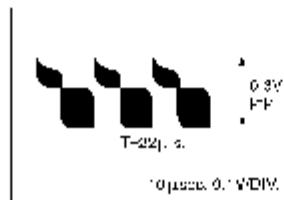

#### ③

#### ④

#### ⑤

### ■ Measuring Condition of FAJ P.C.B.

#### Check Point ① ②

Set to the self diagnostic mode following:

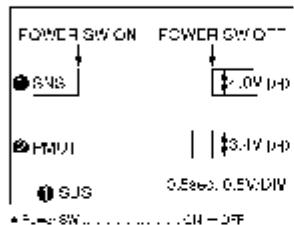

- While pressing both E keys (Q) simultaneously, turn on the power switch.
- ACCUNDI H-PASS
- Main Volume MAX
- Keyboard Cx (D)

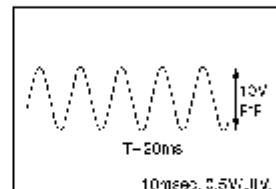

#### Check Point ③ ④

Set the initial setting mode (Refer to page T-6).

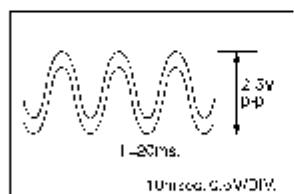

#### ⑤ SNS, ⑥ PMUT

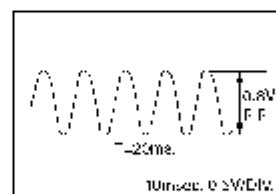

#### ⑦ HPL, ⑧ HPR

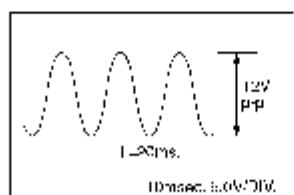

#### ⑨ SPL, ⑩ SPR

#### ⑪ SUML, ⑫ SUMR

#### ⑬ SPW

## 13. SCHEMATIC DIAGRAM

## 14. Printed Circuit Board

## 15. Block Diagram

## 16. Wiring Connection Diagram

## 17. Replacement Parts List

### Notes:

#### \*Important safety notice:

Components identified by mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise(resistors), etc. are used.

When replacing any of components, be sure to use only manufacture's specified parts shown in the parts list.

\*Warning: This product uses a laser diode. Refer to caution statements.

\*ACHTUNG: Die Lasereinheit nicht zerlegen. Die Lasereinheit darf nur gegen eine vom Hersteller spezifizierte Einheit ausgetauscht werden.

\*Capacity values are in microfarads (uF) unless specified otherwise, P=Pico-farads (pF) F=Farads (F)

\*Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM), 1M=1,000K (OHM)

\*The marking <RTL> indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, it will no longer be available.

\*Since SW consists of buttons and P.C.B.'s, we do not supply it as an individual part (refer to "[Manual Keyboard Parts and Control Panel Parts Location](#)".).

\*[SPC] in Remarks columns parts that are supplied by SPC..

\*\*<IA>"-“<IG>”, marks in Remarks indicate languages of instruction manuals. [<IA> : English, <IB> : French, <IC> : Germany, <ID> :Spanish, <IE> : Danish, <IF> : Netherlands, <IG> : Italian, ]

# Controls and functions

## MUSIC STYLIST

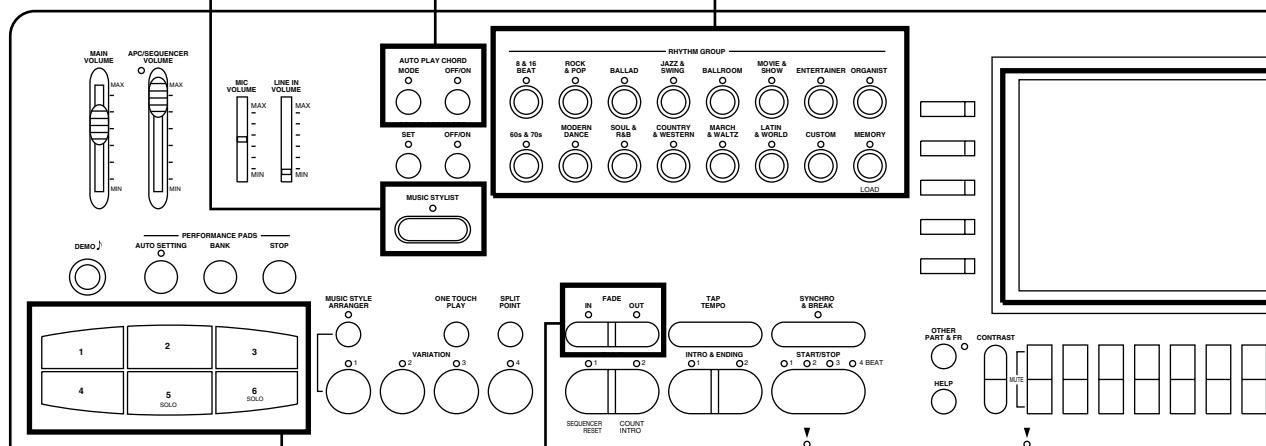

You can choose to have all the settings of this instrument automatically set.

## AUTO PLAY CHORD

Add an automatic accompaniment to your selected rhythm.

## RHYTHM GROUP

Various rhythm patterns are available for each rhythm group.

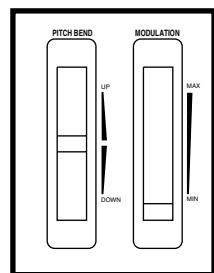

## FADE IN/OUT

Begin your song with a slowly increasing volume, or end it by having the sound slowly fade away.

## PERFORMANCE PADS

Add various phrases to your performance with the pad buttons.

## PITCH BEND/MODULATION

The **PITCH BEND** wheel allows a "sliding" change in the pitch.

The **MODULATION** wheel is used to add vibrato to the sound.

## DISPLAY

Displays performance information, function settings and other messages.

- Adjust the readability with the **CONTRAST** buttons at the lower left side of the display.

## SOUND GROUP

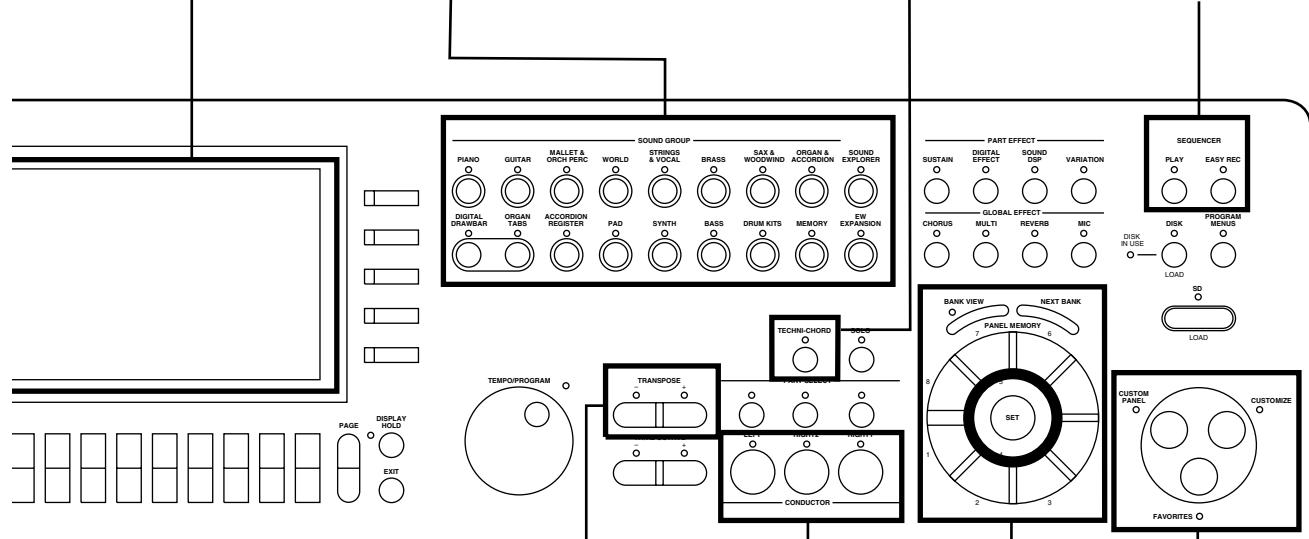

Various sounds are available for each sound group.

## TECHNI-CHORD

Block chords are automatically added to the melody.

## SEQUENCER

Record and play back your performance.

## TRANSPOSE

Raise or lower the key of the entire keyboard.

## CONDUCTOR

Assign a different sound to each part, then assign the desired parts to sections of the keyboard.

## FAVORITES

You can record four different special displays of your favorite sounds and rhythms, functions, etc.

## PANEL MEMORY

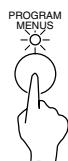

Store the panel settings, then recall them instantaneously just by pressing a button or two.

# Initialize

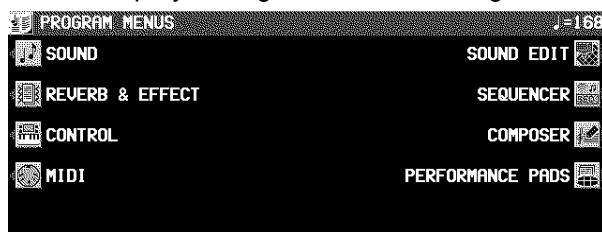

This Keyboard has many settable functions and storables memories. However, you can return the settings and memory to the factory-preset status.

## INITIAL

1. Press the **PROGRAM MENUS** button to turn it on.

- The display changes to the following.

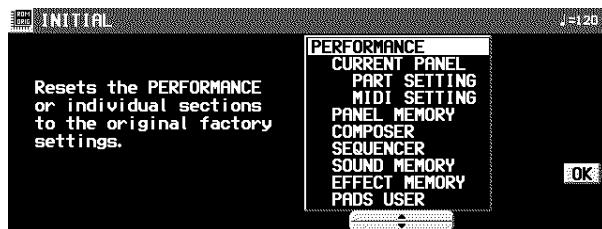

2. Select CONTROL.

- The display looks similar to the following.

3. Select INITIAL.

- This display changes to the following.

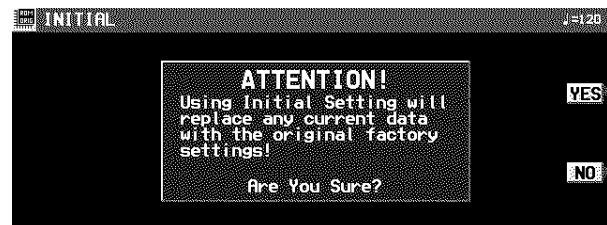

4. Use the ▲ and ▼ buttons to select the desired type of initialization.

- PERFORMANCE includes all the items which are listed below it.

5. Press the OK button.

- The display changes to the confirmation display. Press the YES button if you wish to execute the initialization. Press the NO button if you wish to cancel the procedure.

- Initialization begins. When initialization is completed, "COMPLETED!" is shown on the display and the Keyboard returns to the normal performance mode.
- The USER MIDI, FAVORITES, HOME PAGE settings and CUSTOM styles are not initialized by this procedure.

You can also reset all the PERFORMANCE items with the following procedure:  
Turn off the power to this instrument once.  
Then, while pressing the three lower left buttons in the **RHYTHM GROUP** section (**60's & 70's**, **MODERN DANCE** and **SOUL & R&B**) at the same time, turn the power on again.

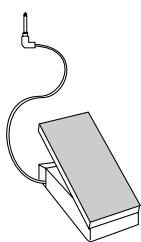

# About the backup memory and performance data

When the power to this instrument is turned off, the various settings and memory contents of this instrument are maintained in the backup memory as follows:

PERFORM- ANCE	CURRENT PANEL settings	about one week
	PANEL MEMORY	
	SEQUENCER	about 80 minutes
	COMPOSER (MEMORY contents)	
	PERFORMANCE PADS (USER memories)	about one week
	SOUND MEMORY	
BACKUP	EFFECT MEMORY	indefinitely
	USER MIDI (USER memories for the MIDI PRESETS)	
	FAVORITES	
	HOME PAGE	
	ALL CUSTOM STYLE	

- If you wish to retain the settings and stored memory contents for recall at a later time, store the desired data on a disk/SD card.
- The backup memory does not function for the stored contents until the power has been on for about 10 minutes.
- Data from previous Technics models may be limited to PERFORMANCE data.

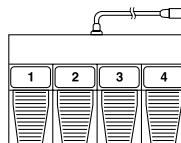

## Separately sold options

**SZ-E2**  
Expression Pedal

**SZ-P1**  
Foot Switch

**SZ-FC2**  
Foot Controller

- Be sure to turn off the power before connecting the Foot Controller.

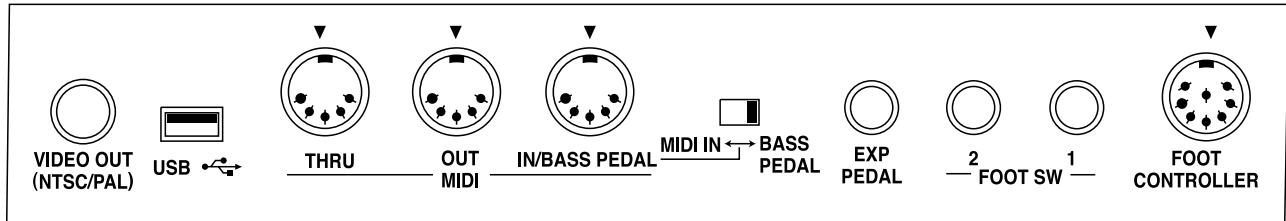

### PLUG-IN feature

This model is compatible with third-party extension plug-in software for the **KN7000**. See plug-in documentation for information about software features and operation.

# Terminals

## Back panel terminals

(Left side)

### VIDEO OUT

The display images or lyrics when playing songs, and the image of the display are output through this terminal.

- The output mode (**NTSC/PAL**) can be selected.

### USB

This terminal allows connection to a personal computer with a USB cable (commercially available type AB cable).

Used with the applications on the included CD-ROM, you can record this instrument's audio sound or manage the instrument data with your PC.

- **Applications**

- Audio Recorder:**

Application for Recording this instrument's sounds and for saving recorded digital audio files in WAV, WMA (Windows Audio Format) and MP3 formats.

- Song Manager:**

Application for managing this instrument's data on your PC by means of a USB cable.

### MIDI

These terminals are for connection to another MIDI instrument.

#### MIDI IN/BASS PEDAL

Set this switch to **BASS PEDAL** to connect a commercially available MIDI pedal unit. The MIDI input signal from the MIDI pedal unit is received by the **BASS PEDAL** part regardless of the part setting on the pedal (OMNI ON), and the instrument generates the sound assigned for that part.

- When the switch is set to **BASS PEDAL**, this instrument's MIDI input settings are not effective. If MIDI input settings are necessary, turn off the power, set this switch to **MIDI IN**, and turn the power on again.
- For more information concerning the sound setting for the **BASS PEDAL** part .

#### EXP PEDAL

The optional SZ-E2 Expression Pedal (sold separately) can be connected to this terminal to control the volume.

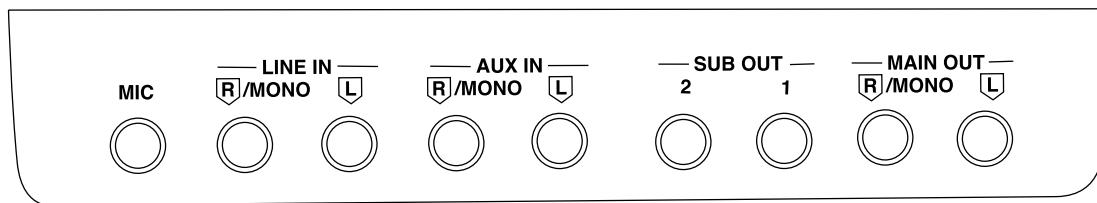

#### FOOT SW 1, 2

An optional SZ-P1 Foot Switch (sold separately) can be connected to each terminal to control various functions.

#### FOOT CONTROLLER

An optional SZ-FC2 Foot Controller (sold separately) can be connected to this terminal to control various functions.

(Right side)

### MIC

A microphone can be connected to this terminal.

### LINE IN

This terminal receives input signals from an external instrument. To receive a monaural signal, connect to the **R/MONO** terminal.

- The input signal volume can be adjusted using the **LINE IN VOLUME** controller on the control panel unit.

### AUX IN

This terminal receives input signals from an external instrument. To receive a monaural signal, connect to the **R/MONO** terminal.

- The input signal volume is not affected by the instrument's **MAIN VOLUME** setting.

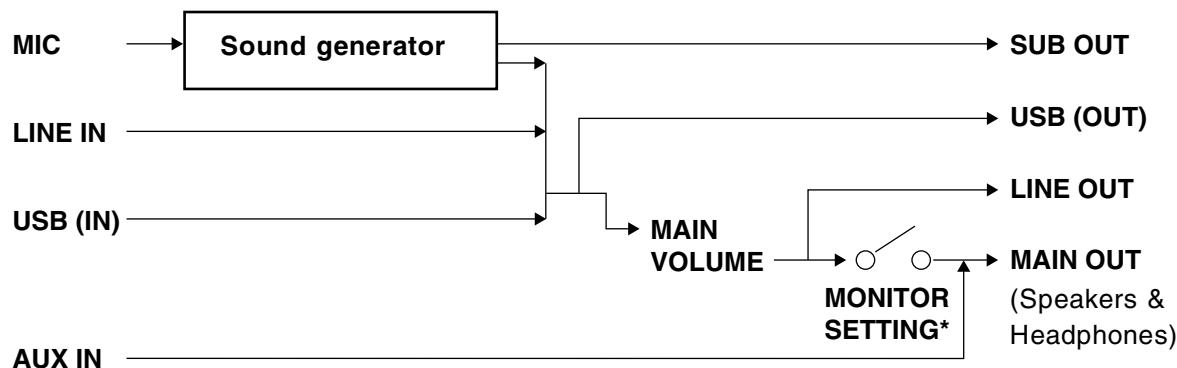

### SUB OUT

The sounds from desired parts can be output independently from those terminals.

### MAIN OUT

The total sound of this instrument can be output from this terminal.

## ■ Block diagram

\* MONITOR SETTING

# Symptoms which appear to be signs of trouble

The following changes in performance may occur in the Technics Keyboard but do not indicate trouble.

	Phenomenon	Remedy
Sounds and effects	The buttons, keys, etc. malfunction.	<ul style="list-style-type: none"> <li>▪ Turn off the <b>POWER</b> button once, then turn it on again. If this procedure is not successful, turn off the <b>POWER</b> button once. Then, while pressing the three lower left buttons in the <b>RHYTHM GROUP</b> section (<b>60's &amp; 70's</b>, <b>MODERN DANCE</b> and <b>SOUL &amp; R&amp;B</b>) at the same time, turn the <b>POWER</b> button on again. (Note that, in this case, all programmable settings, functions and memories return to their factory-preset status.)</li> </ul>
	No sound is produced when the keys are pressed.	<ul style="list-style-type: none"> <li>▪ The <b>MAIN VOLUME</b> is at the minimum setting. Adjust the volume with the <b>MAIN VOLUME</b> control.</li> <li>▪ The volumes for the selected parts are set to the minimum levels. Use the balance buttons to set the volumes of the relevant parts to appropriate levels.</li> <li>▪ The part is muted.</li> <li>▪ The LOCAL CONTROL for a part performed on the keyboard is set to OFF. Set the LOCAL CONTROL to ON.</li> </ul>
	Only percussive instrument sounds are produced when the keyboard is played.	<ul style="list-style-type: none"> <li>▪ In the <b>SOUND GROUP</b> section, the <b>DRUM KITS</b> button is on.</li> </ul>
	The volume is very low when the keyboard is played.	<ul style="list-style-type: none"> <li>▪ The volume setting in the <b>SEQUENCER</b> contents is very low. Follow the INITIAL procedure to reset the settings.</li> </ul>
	The sound you hear is different from the sound you selected.	<ul style="list-style-type: none"> <li>▪ This sometimes occurs when you play back <b>SEQUENCER</b> or <b>COMPOSER</b> data which was created on a different model, or when MIDI data is received from a connected instrument. Select the desired sounds again.</li> </ul>
Rhythm	The rhythm does not start.	<ul style="list-style-type: none"> <li>▪ The <b>DRUMS</b> volume is set to the minimum level. Use the balance buttons to set the <b>DRUMS</b> volume to an appropriate level.</li> <li>▪ A <b>SEQUENCER PLAY</b> button is on. When you are not playing back the <b>SEQUENCER</b> performance, turn off the <b>SEQUENCER PLAY</b> button.</li> <li>▪ CLOCK is set to MIDI. Set CLOCK to INTERNAL.</li> </ul>
AUTO PLAY CHORD	No sound is produced for the automatic accompaniment, or only the sounds of some parts are produced.	<ul style="list-style-type: none"> <li>▪ An <b>ACCOMP</b> part does not sound if its corresponding volume is set to the minimum level. Use the respective balance buttons to set the <b>ACCOMP 1-5</b> volumes to appropriate levels.</li> </ul>
SEQUENCER	Storage is not possible.	<ul style="list-style-type: none"> <li>▪ The remaining memory capacity of the <b>SEQUENCER</b> is 0. Follow the SONG CLEAR or TRACK CLEAR procedure to erase the memory.</li> </ul>
	The playback measure indication is different from when the performance was recorded.	<ul style="list-style-type: none"> <li>▪ The number of measures corresponds to the time signature of the rhythm selected at the start of recording. To change the rhythm in the middle of the song, record the rhythm change in the RHYTHM part.</li> </ul>

Phenomenon		Remedy
COMPOSER	Storage is not possible.	▪ The remaining memory capacity of the <b>COMPOSER</b> is 0.
	Setting the time signature is not possible.	▪ The time signature cannot be changed for a pattern which is currently recorded in the <b>COMPOSER</b> . If you wish to change the time signature, first follow the procedure to clear the memory.
	The playback timing of the rhythm pattern is different from the timing with which it was recorded.	▪ The QUANTIZE function was on when the pattern was recorded and the timing was automatically corrected. Set the quantize level to a smaller note unit or to OFF when recording.
Disk\SD card	The Disk Drive produces a noise during recording or playback.	▪ This occurs when the Disk Drive is reading a disk. It does not indicate a problem.
	When the procedure to load from a disk\SD card is performed, the contents of the keyboard memory are erased.	▪ When performing the load operation from a disk\SD card, the keyboard memory changes to that of the data loaded from the disk. If you wish to preserve a song which is stored in the keyboard memory, save it on a disk\SD card before performing the load procedure.
MIDI	Data cannot be exchanged through MIDI terminals.	▪ Match the channels on the transmitting side and the receiving side.
	The sound quavers or is distorted.	▪ When the <b>USB</b> terminal or both the <b>MIDI IN</b> and <b>OUT</b> terminals are connected to a computer, depending on the computer software the received data may be sent back to the instrument just as it is. Because of this the sound generated from the keys and the sound generated from the returned data are both produced, causing undesirable effects, such as the sounds canceling each other out, for example. In this case, either change the software settings to prevent received data from being returned, or set the <b>MIDI LOCAL CONTROL</b> to off.
Other	Noise from a radio or TV can be heard.	▪ This sometimes occurs when electrical equipment such as a radio or TV is used near the instrument. Try moving such electrical equipment further away from the instrument. ▪ The sound may be coming from a nearby broadcast station or amateur radio station. If the sound is bothersome, consult your dealer or service center.
	The cabinet becomes warm during use.	▪ This instrument has a built-in power source that heats the cabinet to some degree. This is not an indication of trouble.

# Error messages

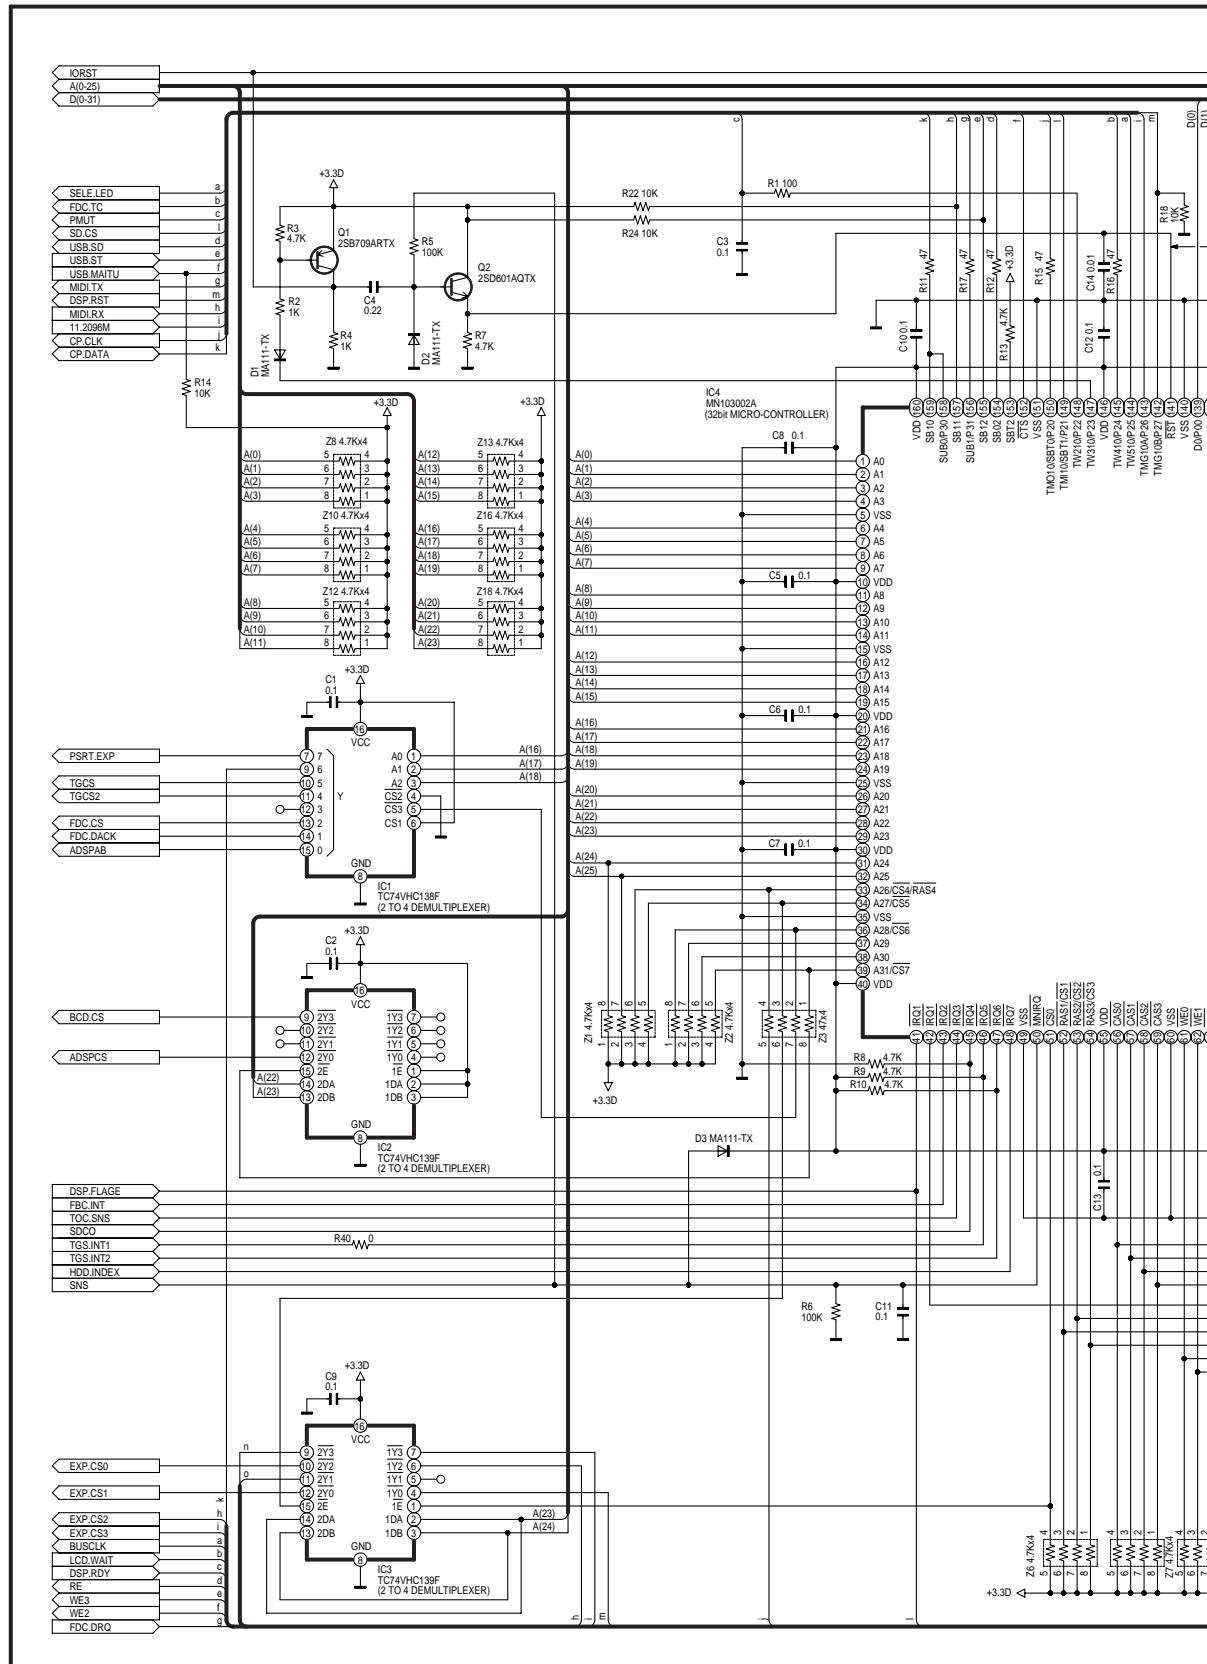

No.	Contents
00	The data on the disk that you are using is for a different product.
01	An error has occurred while the disk was loading. Please try again!
02	There is no disk in the Disk Drive.
03	The file that you tried to load is empty.
05	An error has occurred while the disk was saving. Please try again!
06	The disk that you are using is write protected. Please remove the write protection and try again.
07	The disk that you are using is full. Please use another disk.
08	An error has occurred while the disk was formatting. The disk that you are using may be faulty. Please try formatting another disk.
10	The data is already copy protected.
15	The song you are trying to save is empty.
16	This STANDARD MIDI FILE is incompatible with this instrument and cannot be loaded.
17	This is not a STANDARD MIDI FILE.
18	The timebase (PPQ resolution) that you tried to load is not 24/48/96/192/288/384 PPQ.
20	A problem has occurred with your <b>SEQUENCER</b> Data. This might be due to a damaged or faulty disk.
21	Memory full
22	It is necessary to press REC STOP to complete this procedure.
23	It is impossible to change the time signature because it has already been set in the existing tracks.
24	A rhythm track already exists. It is impossible to assign two tracks to rhythm.
25	It is only possible to change the velocity on a melody track.

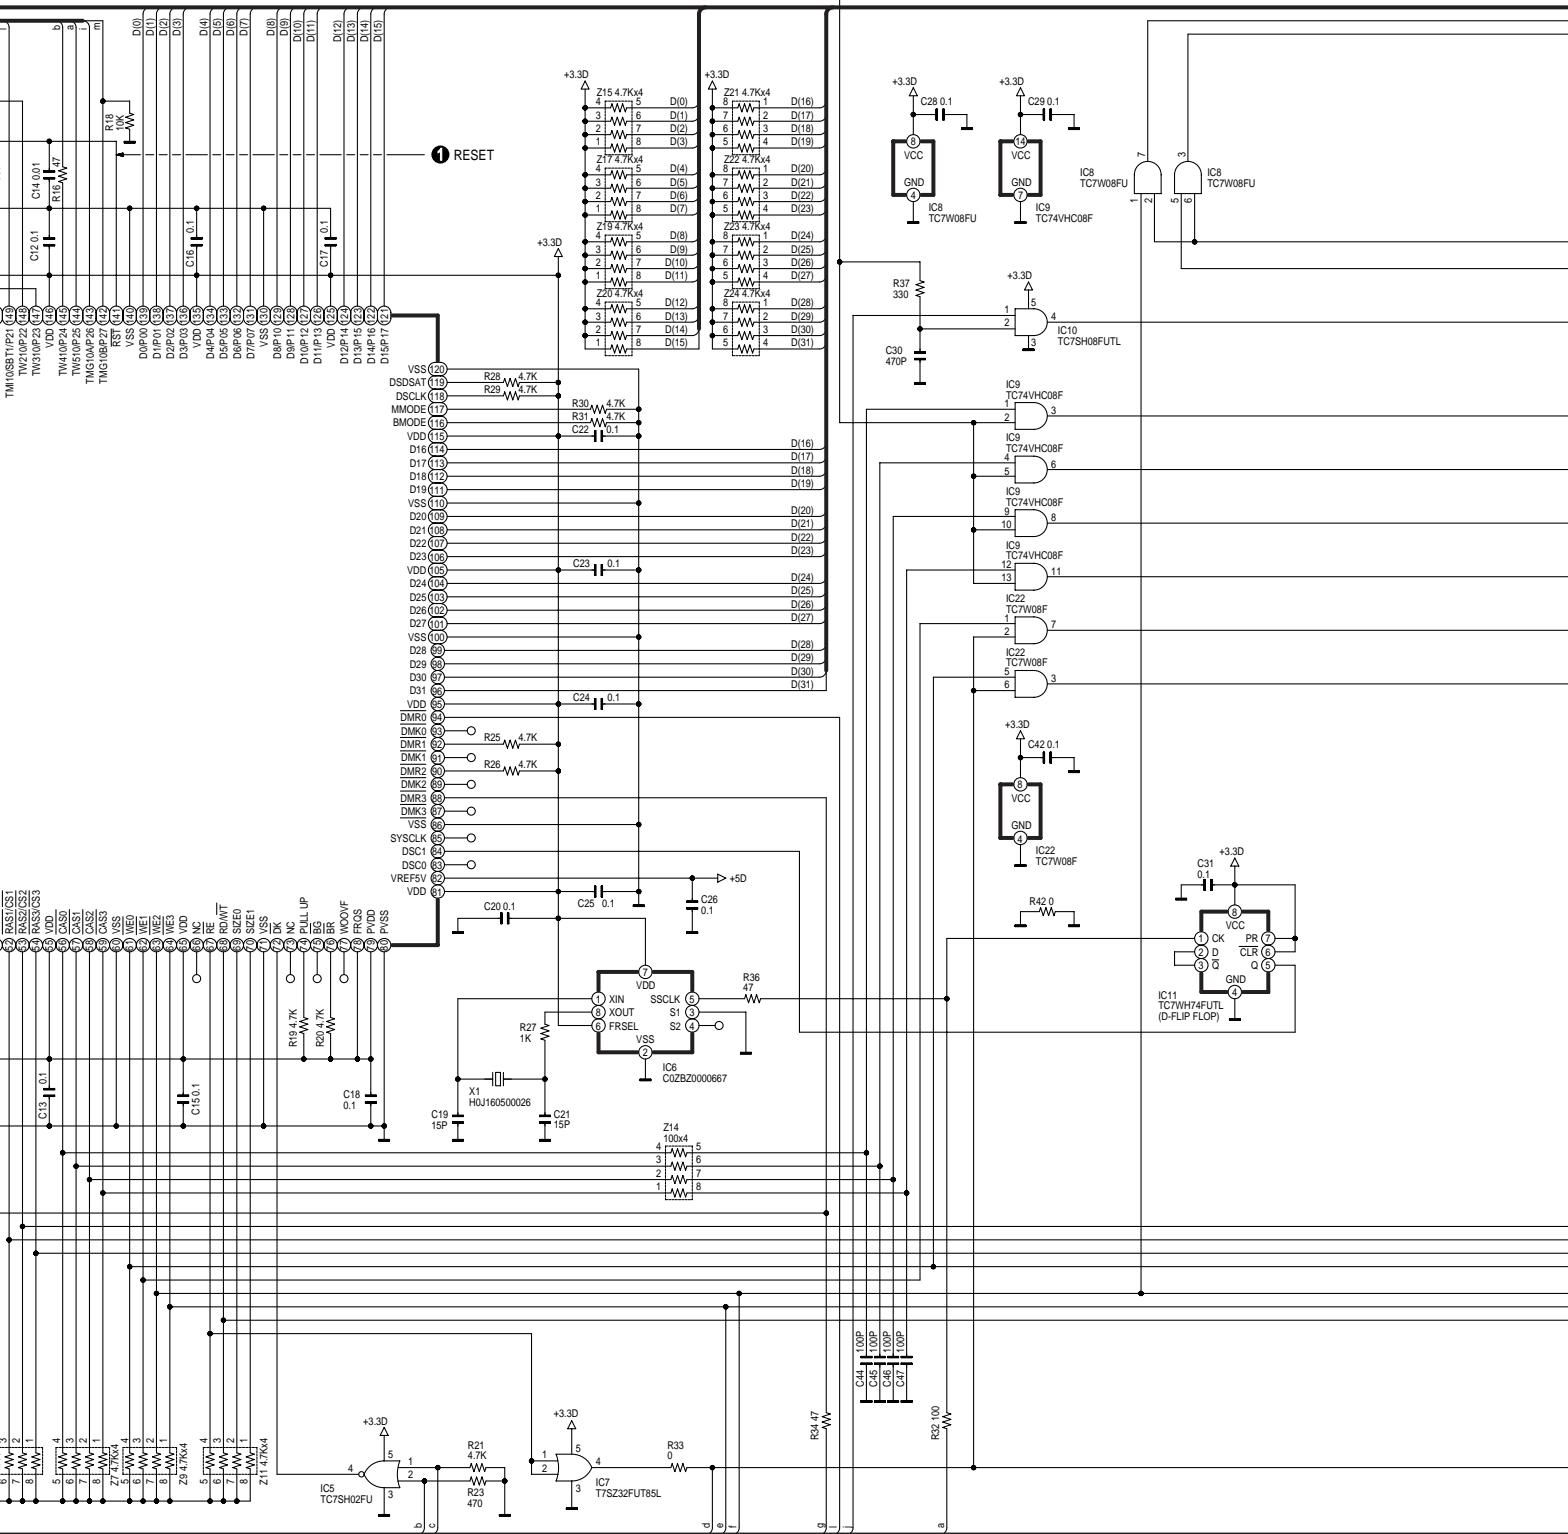

No.	Contents
26	It is only possible to merge melody tracks. Tracks such as rhythm, chord and control cannot be merged.
27	It is only possible to copy melody tracks. Tracks such as rhythm, chord and control cannot be copied.
28	This song is too long to be saved as a MIDI file.
29	The MIDI file that you have tried to load exceeds the memory capacity of this instrument and cannot be played. The <b>SEQUENCER</b> memory has been cleared.
30	It is not possible to change the time signature of a <b>COMPOSER</b> pattern after it has been recorded. If you want to proceed, you must first clear the entire <b>COMPOSER</b> pattern.
31	The time signature of the pattern from which you are copying is different from the <b>COMPOSER</b> memory that you are using. Either: Change the time signature of the <b>COMPOSER</b> memory or: Copy from a pattern that has the same time signature
32	Memory full
33	Select a Track before setting parameters for AUTO PUNCH RECORD.
43	The file that you are trying to load was saved on a previous KN keyboard. It is only possible to load using the "PERFORMANCE" option.
44	It is impossible to edit a Drum Kit. Please select a different sound from any group except Keyboard Percussion.
46	It is only possible to insert MELODY Tracks. Tracks such as RHYTHM, CHORD and CONTROL cannot be inserted.
47	This procedure is not possible with a composer pattern or the metronome. Please select a preset rhythm pattern.
54	It is not possible to record using preset banks, compile banks, or control banks. Please select one of the user banks.

No.	Contents
55	Special tracks such as CHORD (APC), RHY and CTL exist in the song from which you are copying and are incompatible with the destination song because it is in the GM mode.
56	AUTO PUNCH recording has been unsuccessful because SEQUENCER operation was interrupted before the PUNCH OUT measure was reached.
58	The song that you have tried to load exceeds this instrument's available memory and cannot be loaded. The selected song memory has been cleared.
62	The computer connection is not active because the computer port switch is set to MIDI. Please turn the power off, set the switch to the desired setting and turn the power back on.
63	This Bitmap is in the wrong format for the KN and cannot be loaded. See the Owners Manual for more details.
64	Please select the Panel Memory that you want to name.
65	It is not possible to use the CHORD FINDER in this mode. Please select CHORD FINDER from HOME page or CHORD STEP RECORD page.
66	SOLO pads are special pads which include Chord information. Please use SOLO pads when the rhythm and accompaniment is playing.
67	There are no APC or CHORD tracks. Select and APC track or CHORD track, and try again.
68	It is not possible to record directly into the SOLO pads. Record on the SEQUENCER and Copy the melody and chord information into a SOLO pad.
69	It is not possible to delete all measures.
70	It is not possible to insert over 16 measures in a PATTERN.
71	It is not possible to set the start measure to the measures you set to copy.
