**WARNING:** This product contains chemicals known to the State of California to cause cancer, or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHAT SO EVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

## **IMPORTANT NOTICE FOR THE UNITED KINGDOM**

### **Connecting the Plug and Cord**

**WARNING:** THIS APPARATUS MUST BE EARTHED

**IMPORTANT.** The wires in this mains lead are coloured in accordance with the following code:

GREEN-AND-YELLOW: EARTH

BLUE: NEUTRAL

BROWN: LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured GREEN and YELLOW must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol  or colored GREEN or colored GREEN and YELLOW.

The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or coloured BLACK.

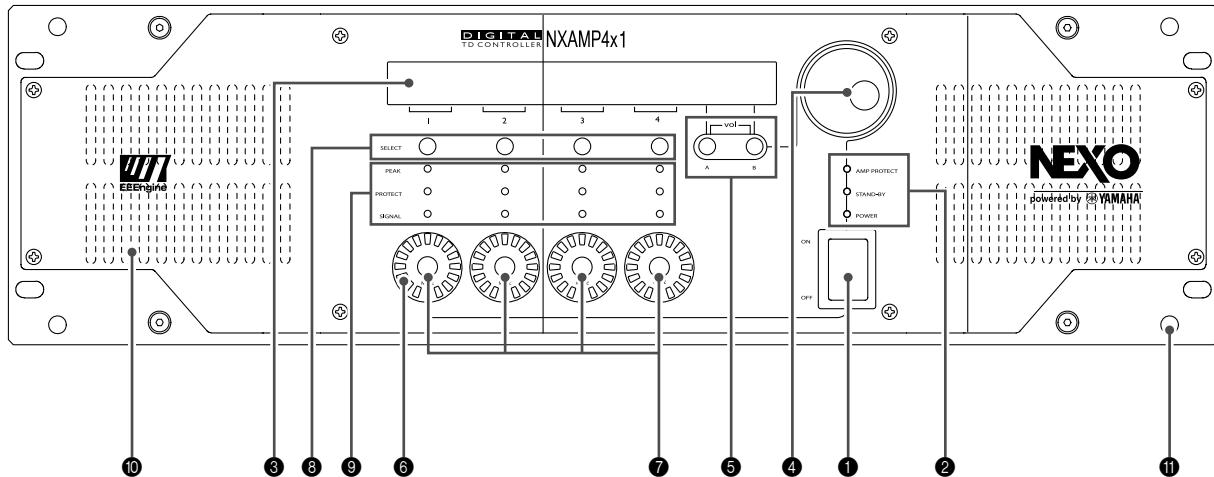

The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

## **■ WARNING**

Components having special characteristics are marked  and must be replaced with parts having specification equal to those originally installed.

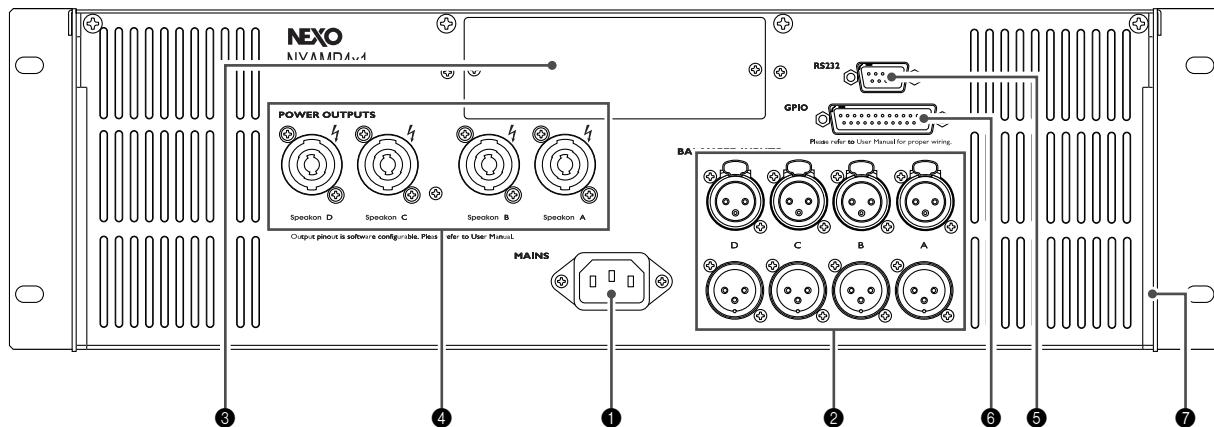

## ■ PANEL LAYOUT

- Front Panel

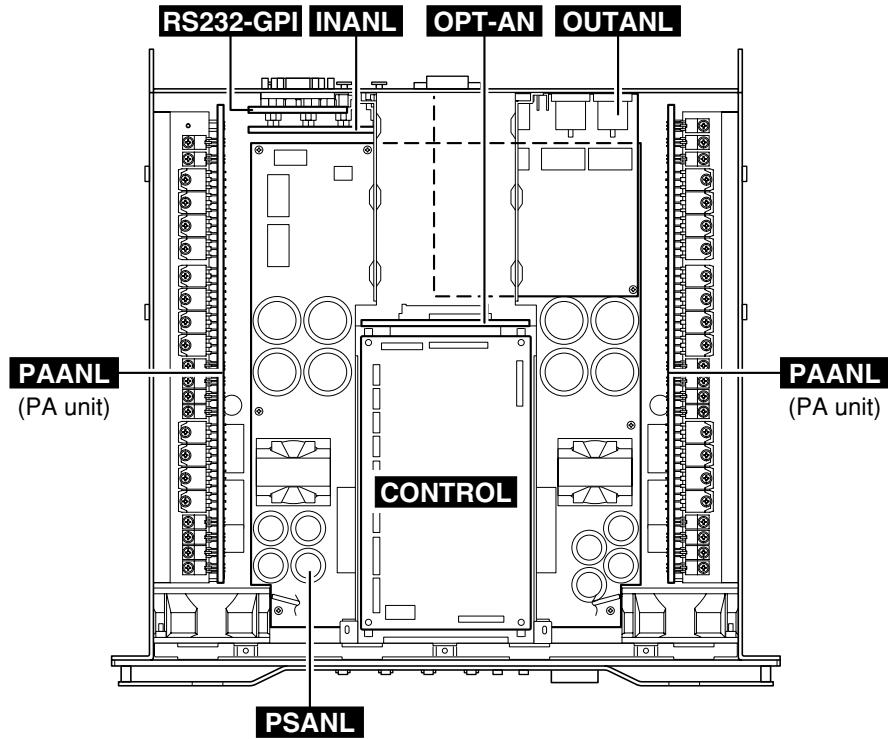

- |                              |                           |

Front Panel

## ■ SERVICE PRECAUTIONS

### Safety measures

- Some component parts on the PSANH circuit board maintain a high voltage even when the power is switched off. For this reason to avoid an electrical shock, do not touch the upper metallic part of the following capacitors until the remaining voltage has discharged.

Capacitors	Discharging point
C316, C317, C322, C323	① D305: + pin => D305: - pin
C318, C319, C324, C325	② D306: + pin => D306: - pin
C344, C354	③ CN305 <=> CN316
C345, C355	④ CN307 <=> CN316
C347, C356	⑤ CN308 <=> CN309
C348, C357	⑥ CN310 <=> CN309
C205	⑦ R213: lead => C201

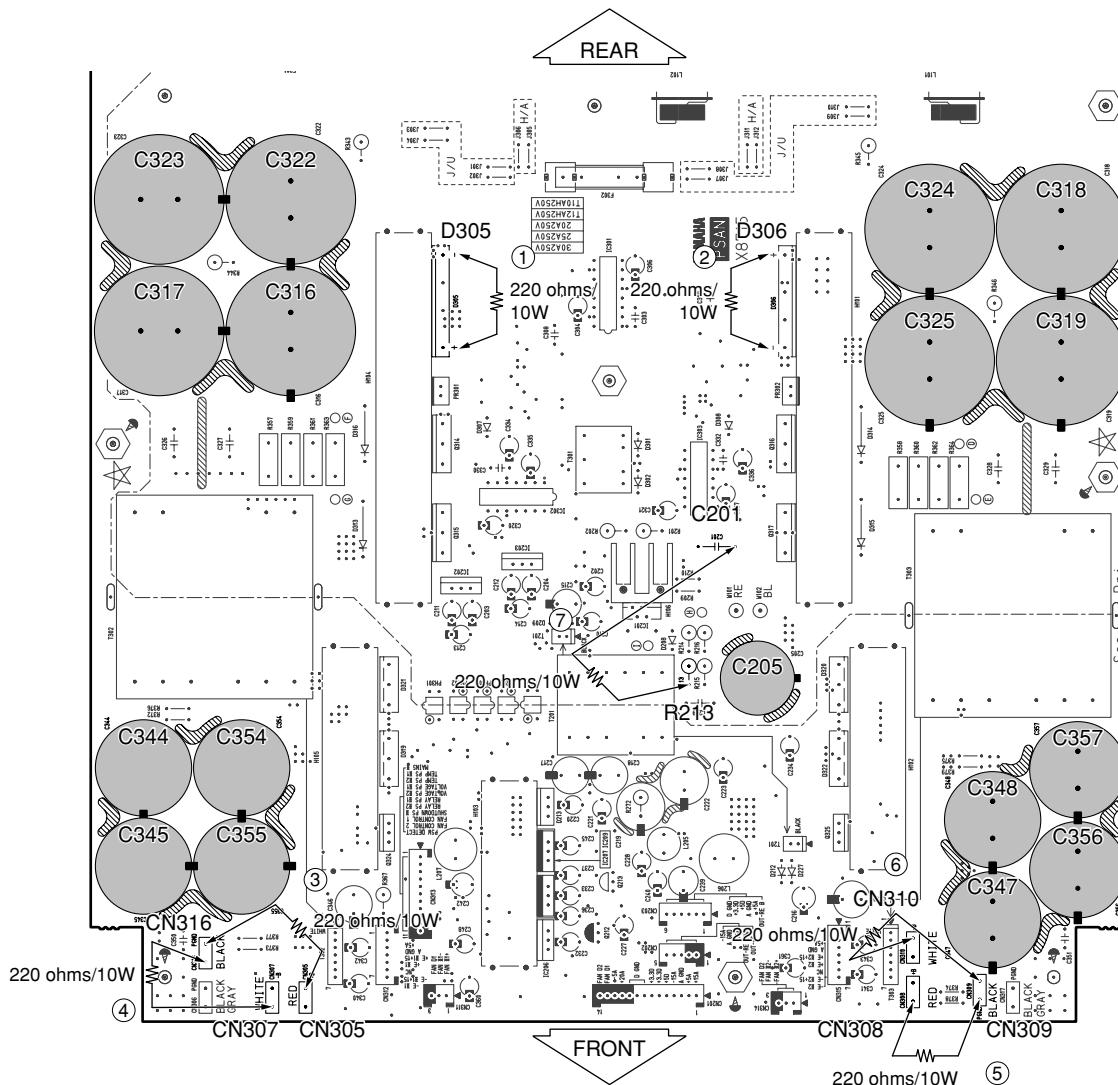

### [Discharging Method]

Before starting the service work, connect discharging resistors (220 ohms 10W) to the terminals indicated in the figure below to discharge electricity. (7 points)  
The required discharging time is about 10 seconds. Check that the DC voltage between the terminals measures close to 0 (zero) volts using a multi-meter to make sure that the discharge is completed.

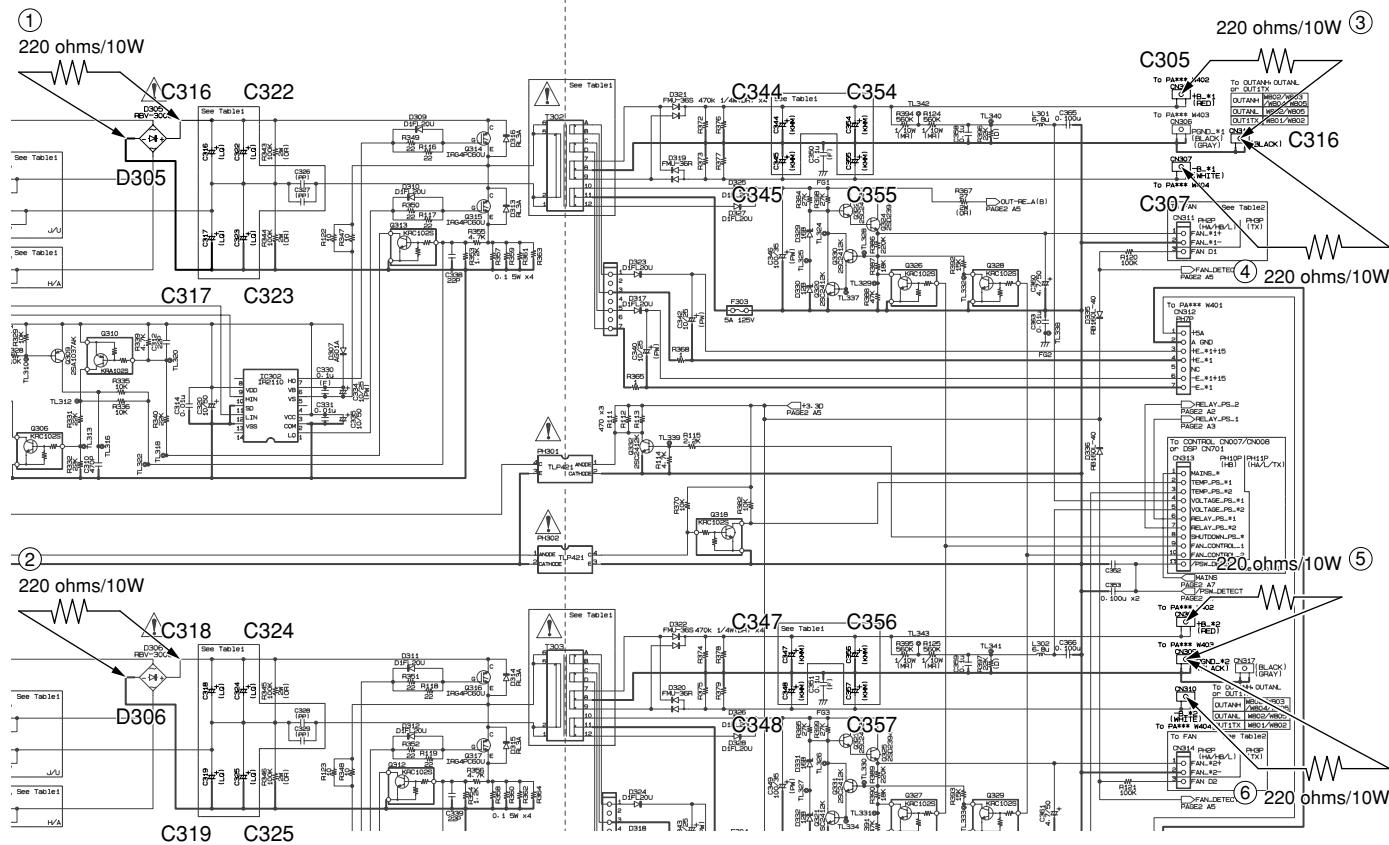

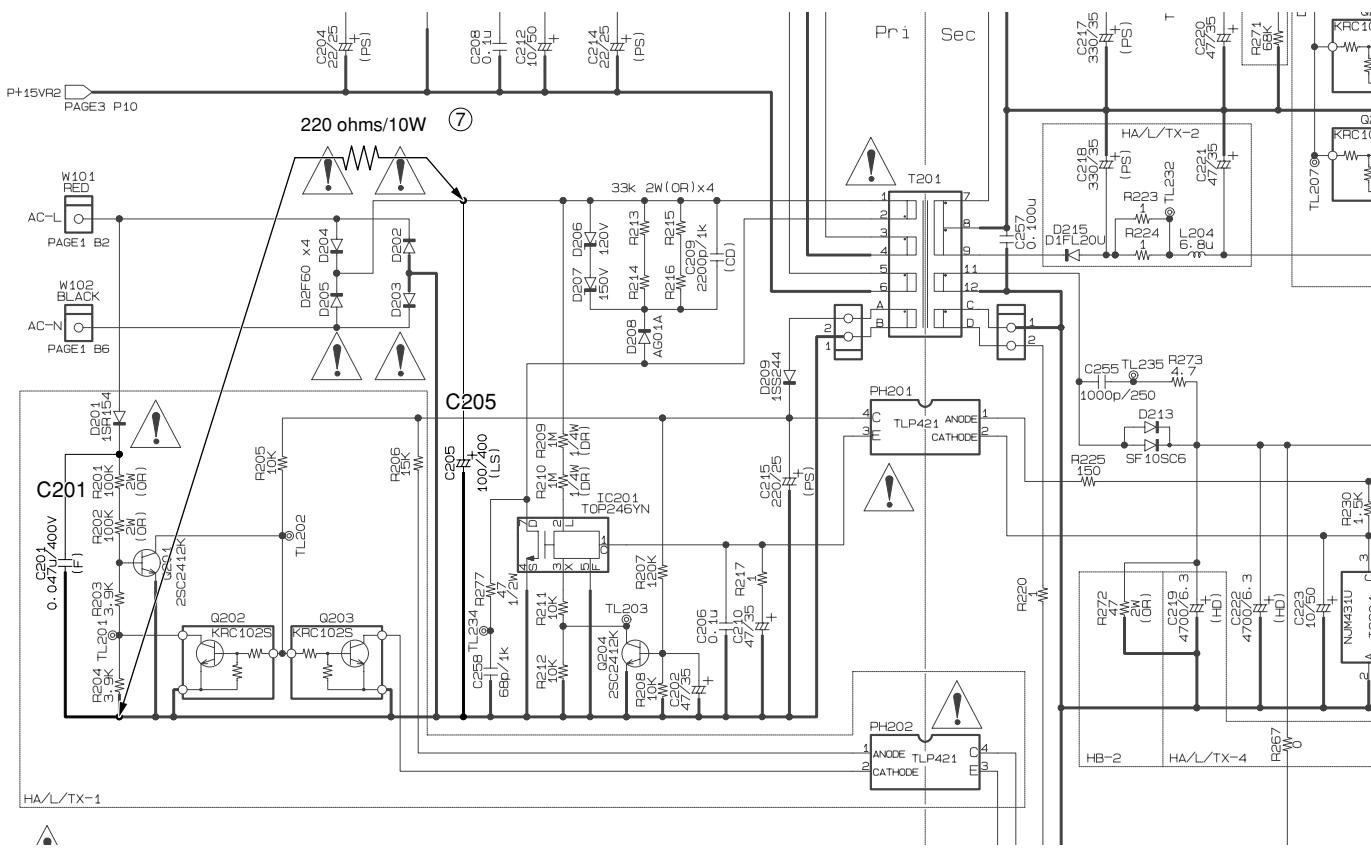

### Note:

Do not touch the IC201 and its heat sink before discharging the C205.

PSANL circuit board

## PSANL circuit diagram

## ■ OVERALL ASSEMBLY WIRING

This product has various cables (wires and connector assemblies) inside. To prevent touching component to the cables and/or connection mistake, perform the cable connection and fixing cables according to the following instructions referring the wiring diagram, P3 of the circuit diagram.

**Notice:** Since the following pictures are taken of the preproduction product, they may differ from the commodity products in detail. However, the wiring and so on is not so differ between them. So, refer only to wiring and so on.

### 1. Wiring of the PN-AN circuit board

- 1) Process the flat cable (WK02100). (Fig. 1)
- 2) Connect the flat cable (WK02100) to the PN-AN circuit board. (Fig. 2)
- 3) Install the PN-AN circuit board to the front panel. (Fig. 3)

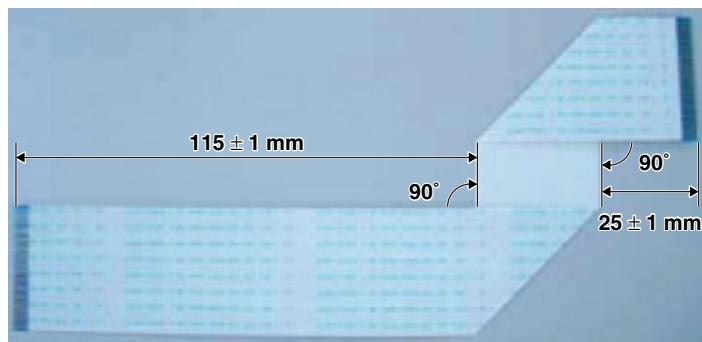

Fig. 1

Fig. 2

Fig. 3

### 2. Wiring of the power switch

- 1) Install the power switch to the front panel with its terminals set downward. (Fig. 4, 5)

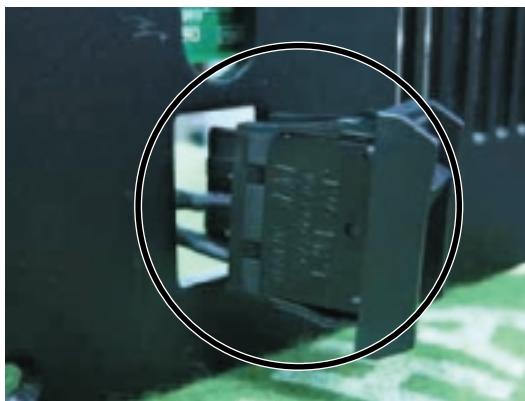

Fig. 4

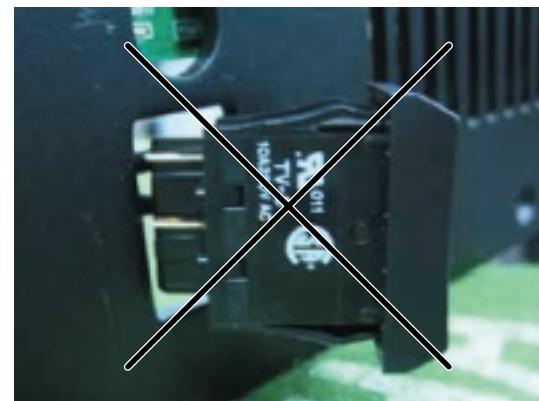

Fig. 5

- 2) Confirm that the power switch is set to the off position as shown in the figure 6. (Fig. 6)
- 3) Twist the wires of the power switch assembly more than three times.
- 4) Connect the connector of the power switch assembly to the connector (CN103). (Fig. 7)

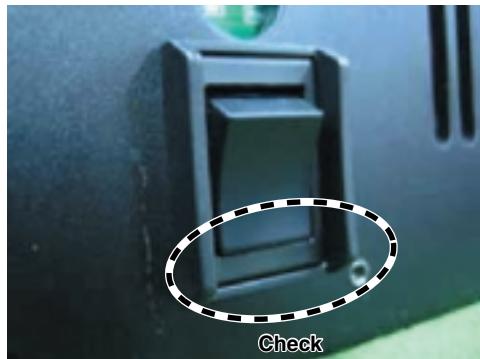

Fig. 6

Fig. 7

### 3. Wiring of the FAN

Connect the connector of the FAN to the each terminal. (Fig. 8)

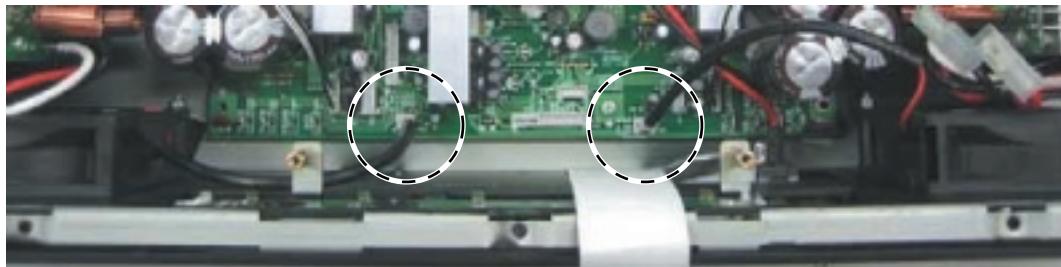

Fig. 8

### 4. Attaching of the support cushion

Attach the support cushion (WN15950) at the specified area on the pattern side of the CONTROL circuit board. (Fig. 9)

**Note:** Be sure to remove the oil and the dust, etc. on the attaching surface before attaching the support cushion.

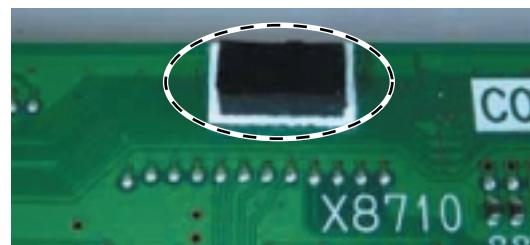

Fig. 9

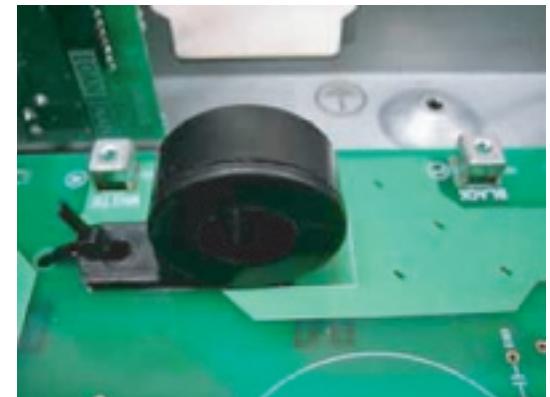

## 5. Wiring of the AC-INLET

- a) Set a cord holder before installing the PSAN circuit board on the enclosure. (Fig. 10)

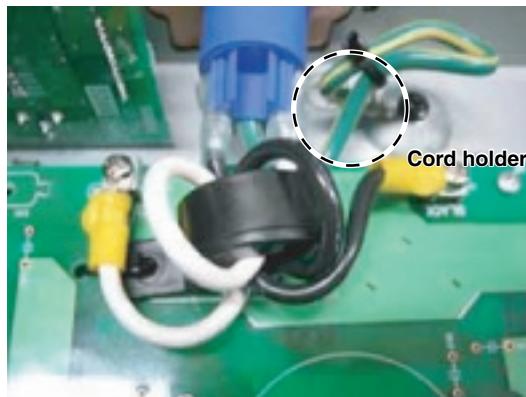

**Fig. 10**

- b) Set a ferrite-core at the specified area on the PSAN circuit board, and fasten the ferrite-core with the cord holder. (Fig. 11)

**Fig. 11**

- c) Pass the live and neutral wires of the AC-INLET through the ferrite core's hole twice and wind them to the ferrite core. Screw an each screw terminal to the specified terminal. (Fig. 12, 13)  
Fasten the GND wire with a cord holder. (U destination) (Fig. 12)  
Screwing torque: GND LINE 1.8N · m / L, N LINE 0.78 · m

**Fig. 12** (U.S.A. model)

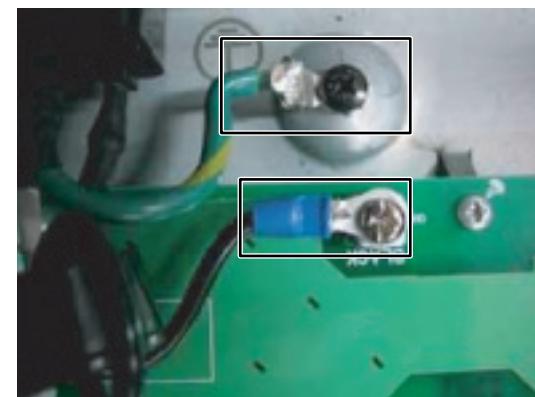

**Fig. 13** (Chinese model)

- d, e) Fix the wires to the terminal using the screws, and refer to the fig. 14 and fig. 15 for the direction of each terminal.

**Fig. 14**

**Fig. 15**

## 6. Wiring of the PA-UNIT

Connect the wires to the connectors (CN401, CN403). (Fig. 16, 17)

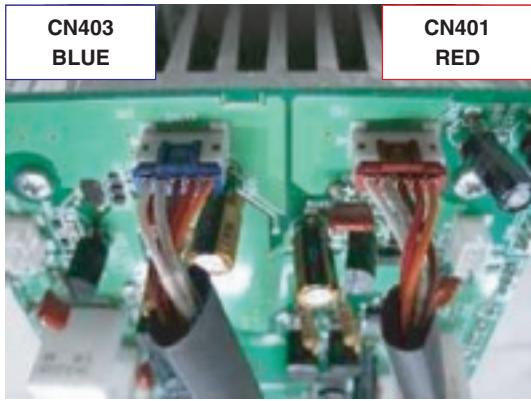

Fig. 16

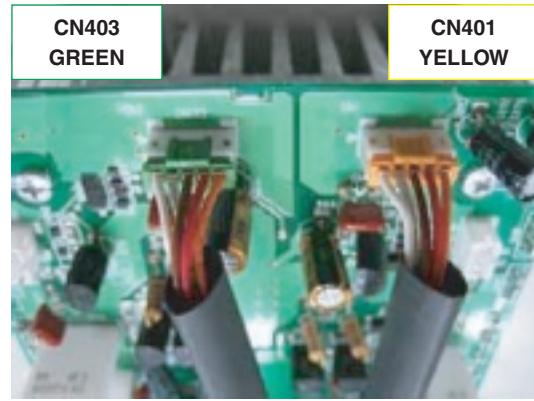

Fig. 17

**NOTE:** The followings are wires to be connected.

CN401: WK02080

CN403: WK90770

Install this PA-UNIT on the left side of enclosure.

Hereafter, this unit is called PA-UNIT of CH1, CH2.

**NOTE:** The followings are wires to be connected.

CN401: WK90790

CN403: WK17110

Install this PA-UNIT on the right side of enclosure.

Hereafter, this unit is called PA-UNIT of CH3, CH4.

\* The following figure describes a layout drawing of the PA-UNITS seen from the front panel. (Fig. 18)

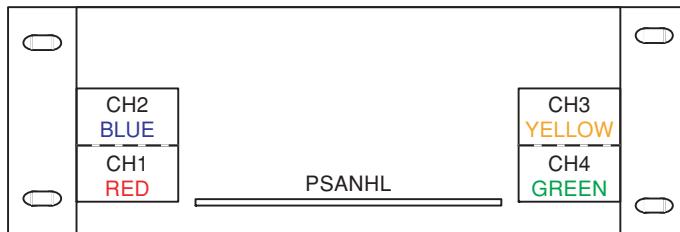

Fig. 18

## 7. Wiring of the flat cable and fastening wires

Connect the following wires at first.

CN313: WK68760

CN201: WK68770

a) Install the RS232-GPI circuit board on the enclosure after connecting the wire (WM15830) to it.

b) Connect the wires (WK16830, WN52530) from each PA UNIT to the FASTON terminals of the OUTANL circuit board.

PA-UNIT (CH1, CH2) : WN52530 (ORANGE) -> CN805

                          WK16830 (YELLOW) -> CN806

PA-UNIT (CH3, CH4) : WN52530 (ORANGE) -> CN807

                          WK16830 (YELLOW) -> CN808

Then fold the wires (WK16830, WF44430) at the center of them, and fasten them with a cord holder. (Fig. 19)

c) Connect the wires (WK16820 x2) to the connectors (CN306, CN317) of the PSAN circuit board.

Connect the wire (WK14200) to the connector (CN202) of the PSAN circuit board.

Fasten these wires with a cord holder at the position as shown in the figure. (Fig. 19)

d) Connect the wire (WK14210) of PA-UNIT (CH3, CH4) to the connector (CN315).

Fasten the wire (WK14210) and the wires (WK16820 x2, WK14200) with a cord holder at the position where the wire (WK14210) is vertically pulled from PA-UNIT. Before fastening, pull the wires (WK16820 x2, WK14200) toward the front panel side in advance.

- e) Connect the wire (WK14210) of PA-UNIT (CH1, CH2) to the connector (CN312).  
Fasten the wire (WK14210) and the wire (WK02090) with a cord holder at the position where the wire (WK14210) is vertically pulled from PA-UNIT. Before fastening, pull the wire (WK02090) toward the front panel side in advance.
- f) Twist the wires (white, red and black) of PA-UNIT more than two times, and connect them to the FASTON terminals according to the wire color displayed on the PSANL circuit board.  
Then bend these wires, and fasten them with a cord holder. (Fig. 20)

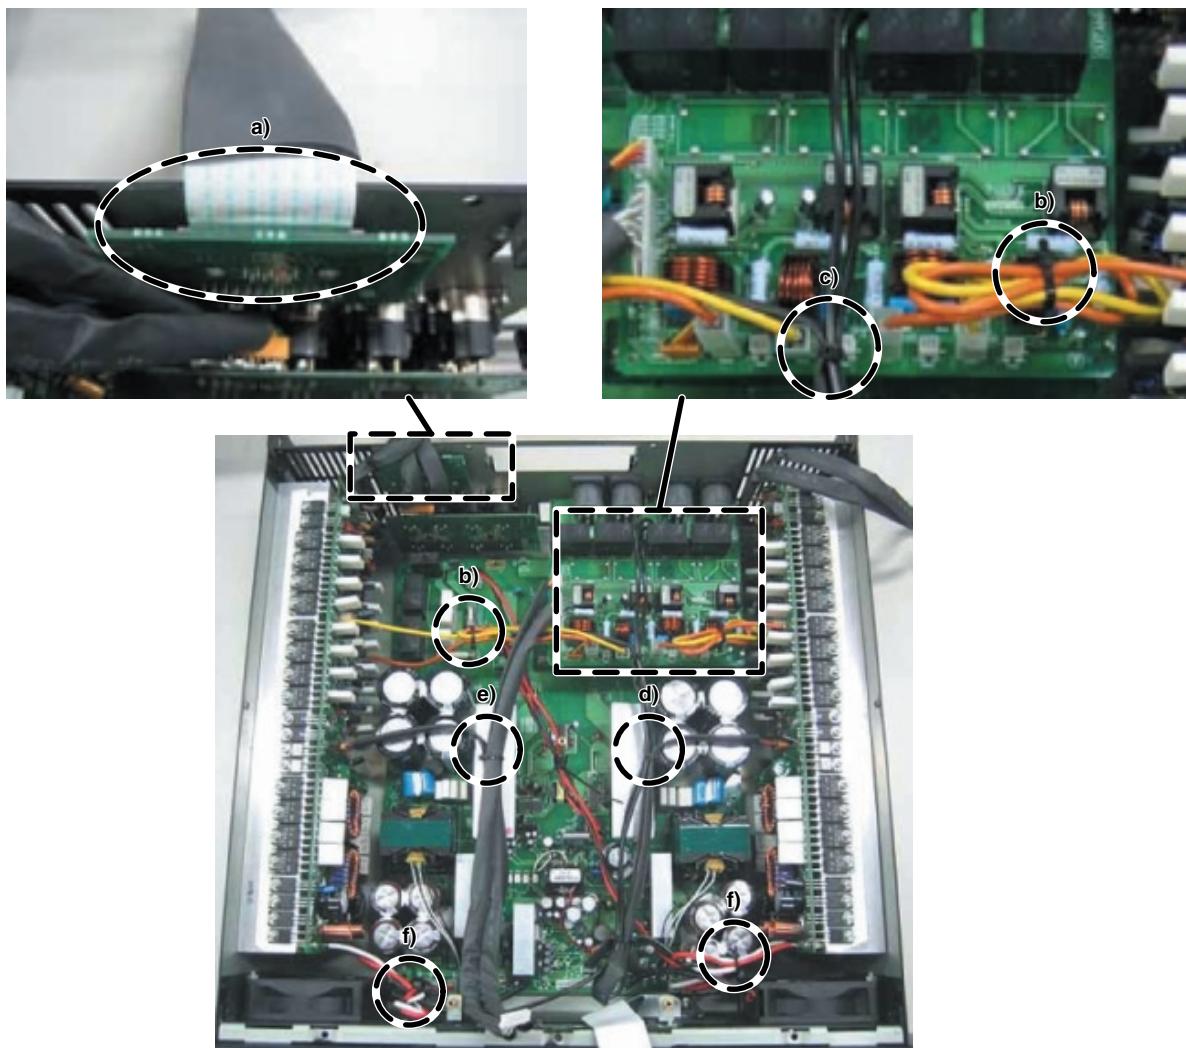

Fig. 19

Fig. 20

- g) Fasten these wires (WK17900, WK17910 and WK94710) with a cord holder to the hexagonal spacer. (Fig. 21)
- h) Bend the wire (WK14200) and wire (WK16820) connected to the connector (CN317), and fasten the wires (WK14210, WK16820 x 2 and WK14200) with a cord holder. (Fig. 21)

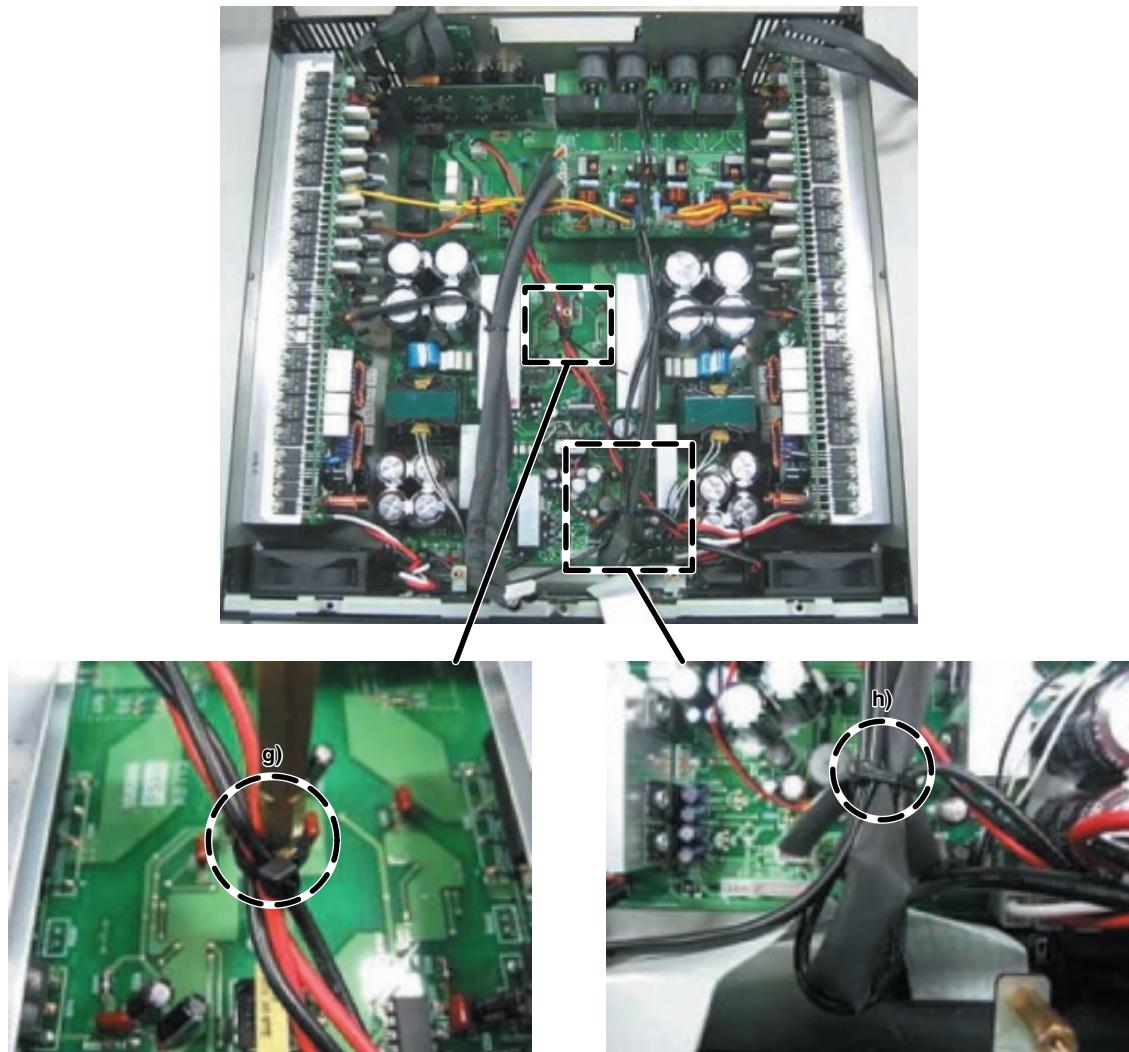

Fig. 21

**Note:** When connecting the connector assembly to the CONTROL circuit board, confirm that the connector housing pin number of the connector assembly is the same as the connector pin number of the circuit board.

- i) Fasten the wires (WK02080, WK90770) with a cord holder at the hole of the RS232-GPI circuit board. (Fig. 22)
- j) Fasten the wires (WK02080, WK90770 and WK02070) with a cord holder at the hole of the enclosure.  
Fasten the wires (WK90790, WK17110) with a cord holder at the hole of the enclosure. (Fig. 22)
- k) Fasten the wires (WK90790, WK17110) with a cord holder at the hole of the OPT-AN circuit board. Then connect the flat cable (WK02120). (Fig. 22)
- l) Fasten the wires (WK02080, WK90770, WK90790, WK17110 and WK02070) with a cord holder at the position close to the OPT-AN circuit board. (Fig. 22)
- m) Bend the wire (WK02090), and fasten the wires (WK02090, WK68760 and WK68770) with a cord holder. (Fig. 22).
- n) Bend the flat cable as shown in the figure. (Fig. 22)

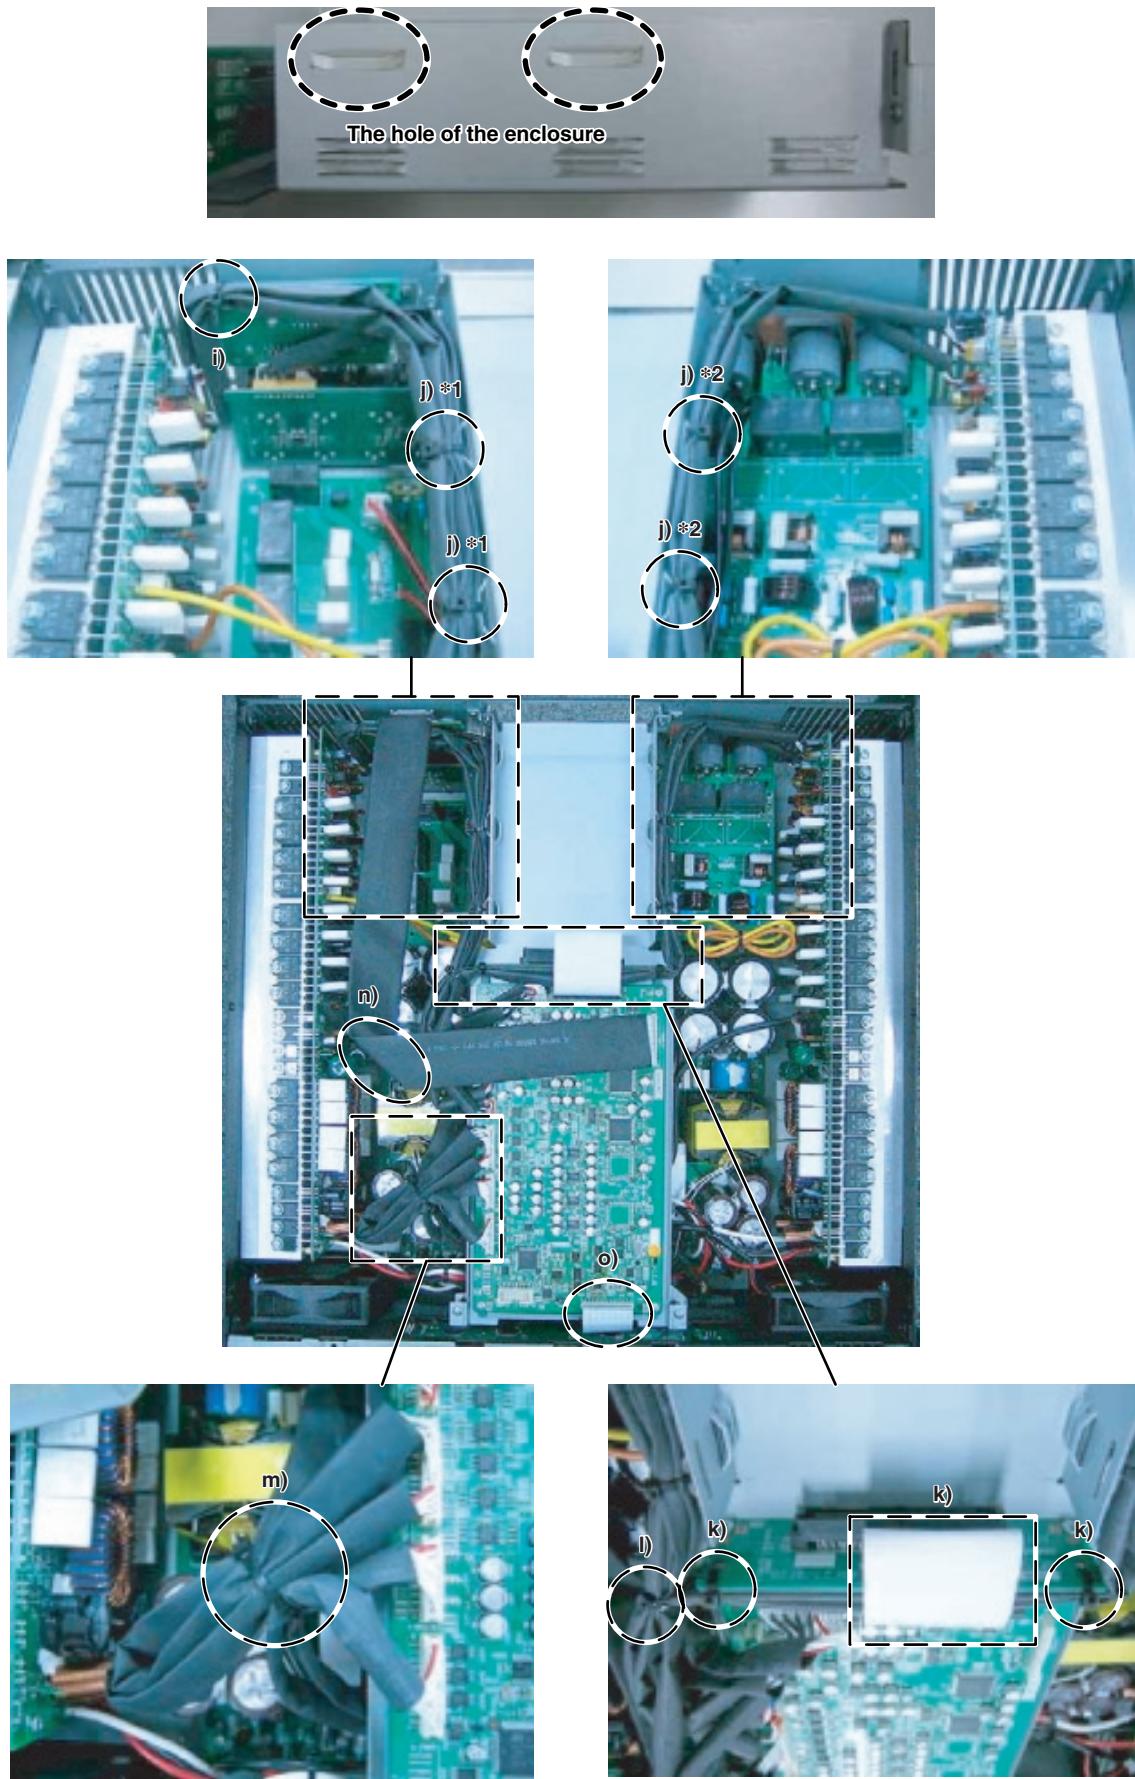

Fig. 22

- o) Bend the flat cable to avoid touching the top cover. (Fig. 23, 24)

Fig. 23

Fig. 24

## 8. Color of the connectors connected to the connector CN012-CN015

Connect the connector assembly from the PA unit to the CONTROL circuit board as shown in the figure below. (Fig. 25)

Fig. 25

## 9. Change of the destination

Set the knob position of the switch SW001 on the CONTROL circuit board as shown in the figure below. (Fig. 26, 27)

U destination

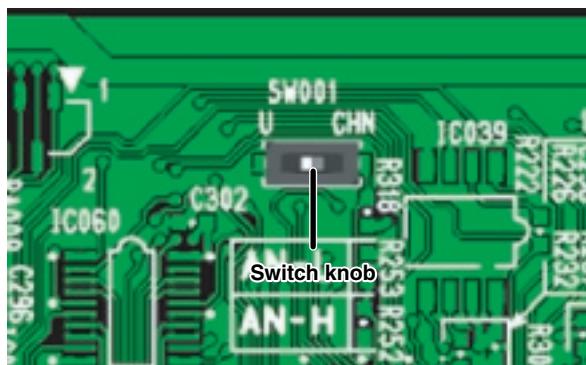

Fig. 26

CHN destination

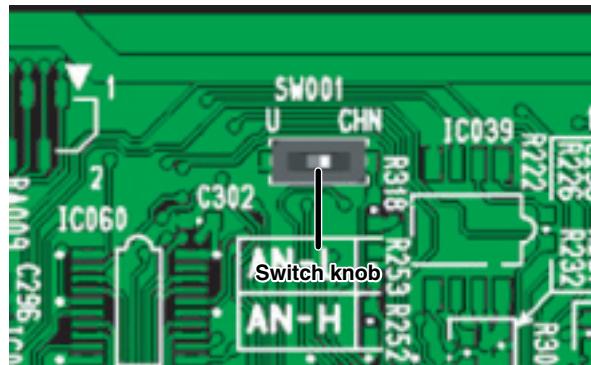

Fig. 27

## 10. Insulation distance between WK17110 and primary side capacitor

Perform wiring the connector assembly WK17110 with care so that its uncovered portion with the SUMI tube does not touch the capacitor C316 on primary side of the PSANL circuit board. (Fig. 28, 29)

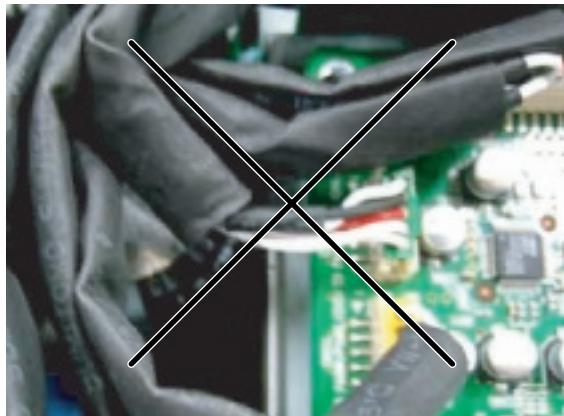

Fig. 28

Fig. 29

## 11. Insulation distance between WK14210 and primary side capacitor

Perform wiring the connector assembly WK14210 with care so that its uncovered portion with the SUMI tube does not touch the capacitors C317 and C319 on primary side of the PSANL circuit board. (Fig. 30, 31)

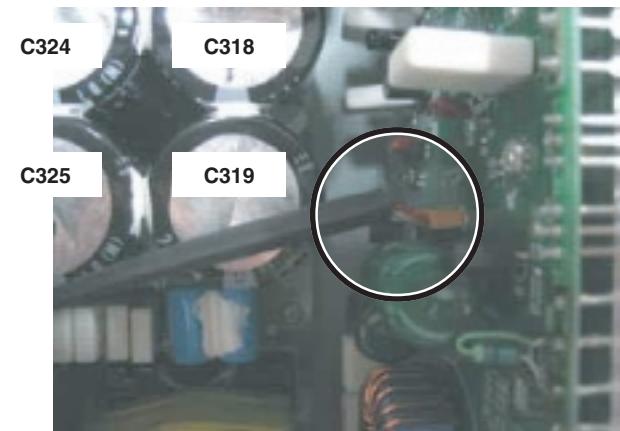

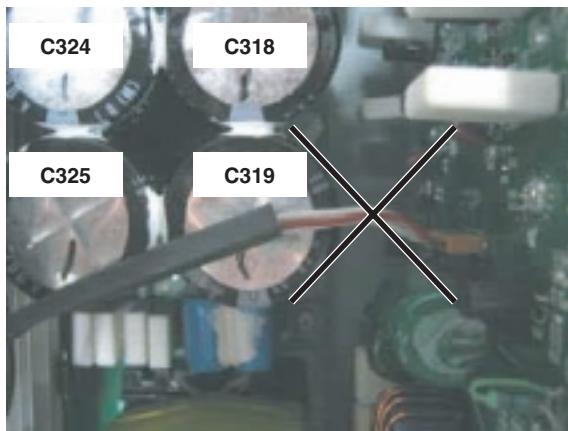

Fig. 30

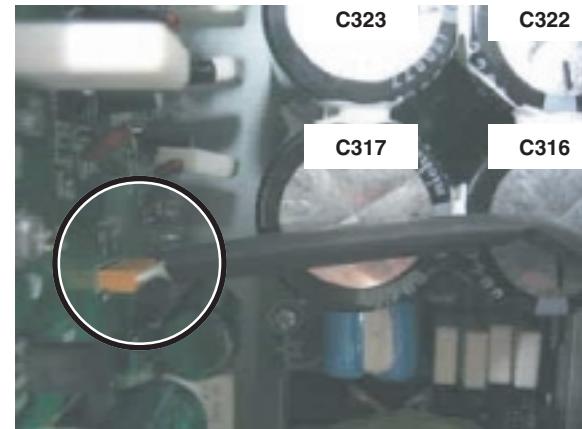

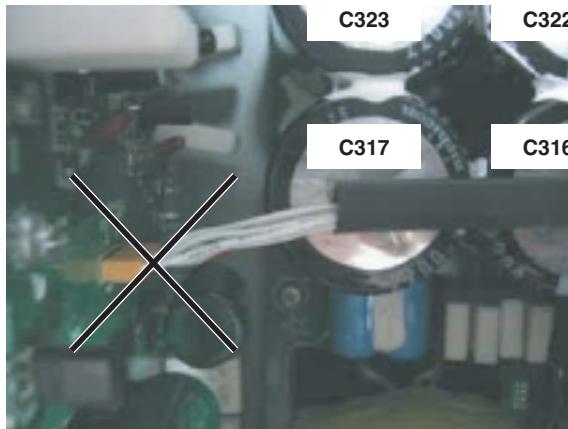

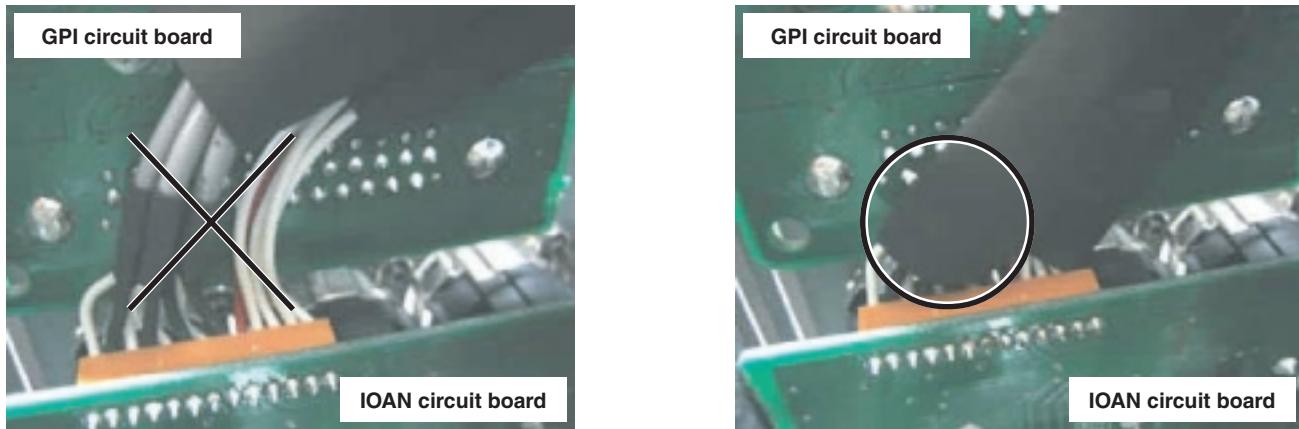

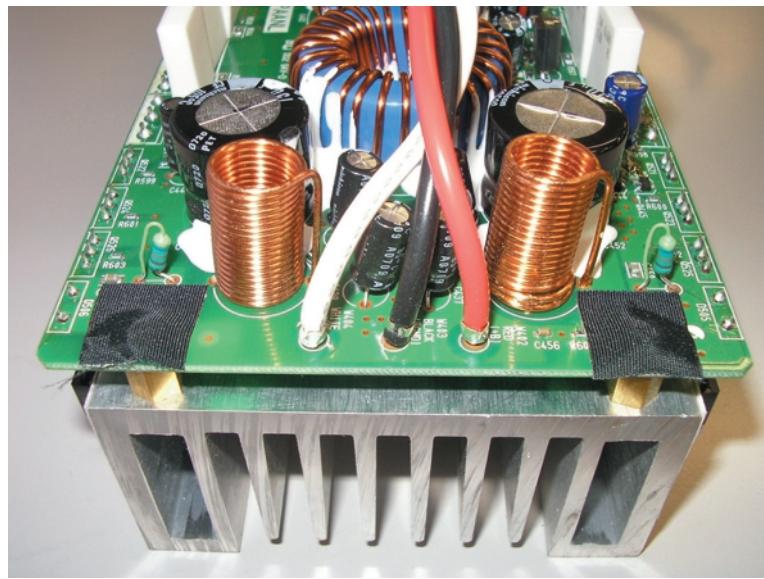

Fig. 31

**12. Prevention of touching WK02070 to connector terminal**

Perform wiring the connector assembly WK02070 with care so that its uncovered portion with the SUMI tube does not touch the bare terminal of the connector CN203 of the RS232-GPI circuit board. (Fig. 32)

**Fig. 32****13. Adhesive cloth tape**

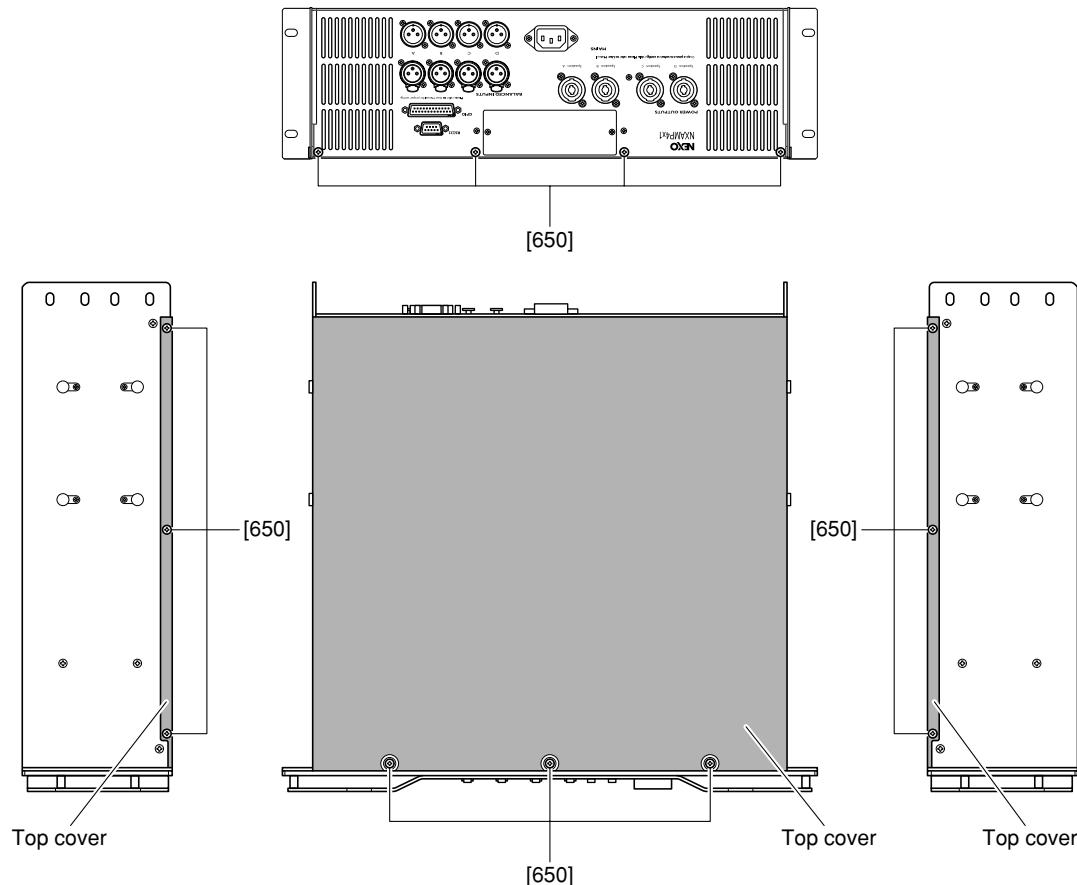

Cover the two screws near R587 and R588 in each PA unit (190 and 230) with adhesive cloth tape (185 and 225) as shown in the figure below. (Fig. 33)

**Fig. 33**

## ■ DISASSEMBLY PROCEDURES

### 1. Top Cover (Time required: about 3 minutes)

- 1-1. Remove the thirteen (13) screws marked [650]. (Fig. 1)
- 1-2. The top cover can then be removed. (Fig. 1)

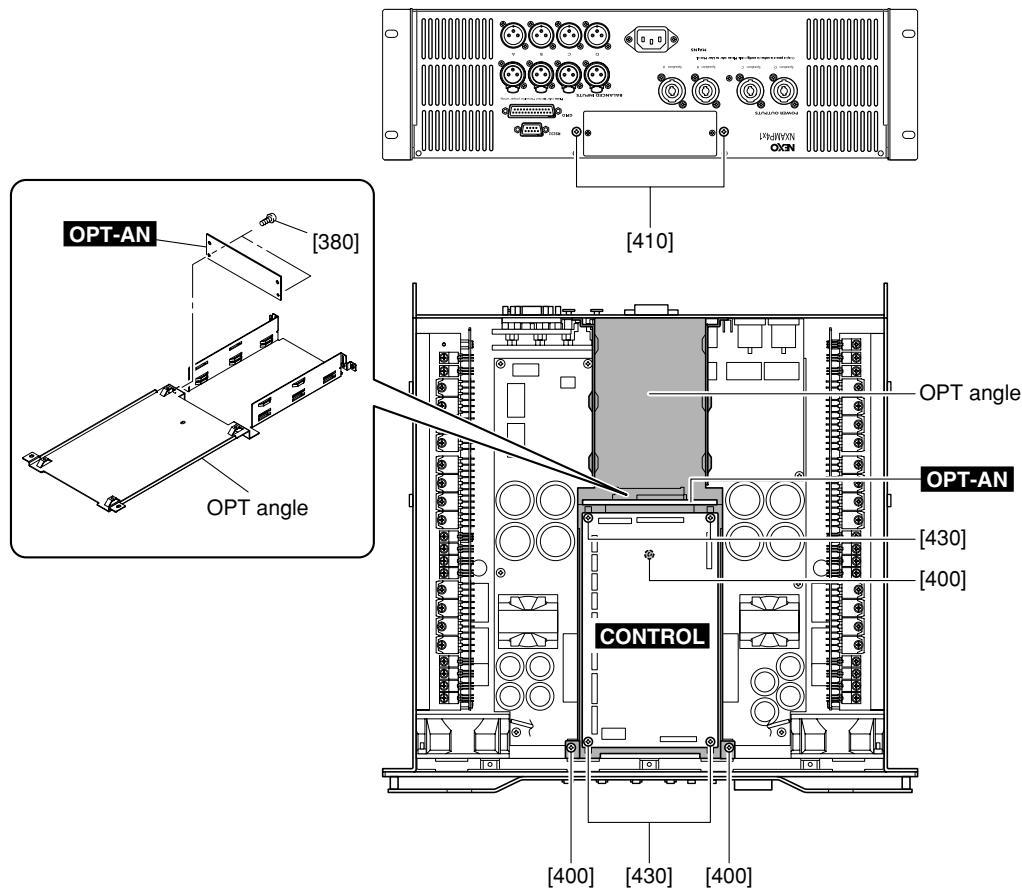

[650]: Bind Head Screw 4x8 MFZN2B3 (–)

(Fig. 1)

## 2. CONTROL Circuit Board, OPT angle and OPT-AN Circuit Board

(Time required: about 10 minutes)

- 2-1. Remove the top cover. (See procedure 1.)
- 2-2. Remove the four (4) screws marked [430]. (Fig. 2)
- 2-3. Disconnect the connector assemblies from other units connected to the CONTROL circuit board. (Fig. 2)
- 2-4. The CONTROL circuit board can then be removed. (Fig. 2)
- 2-5. Remove the three (3) screws marked [400] and the two (2) screws marked [410]. (Fig. 2)
- 2-6. Remove the OPT angle with the OPT-AN circuit board. (Fig. 2)
- 2-7. Remove the two (2) screws marked [380]. (Fig. 2)
- 2-8. The OPT-AN circuit board can then be removed. (Fig. 2)

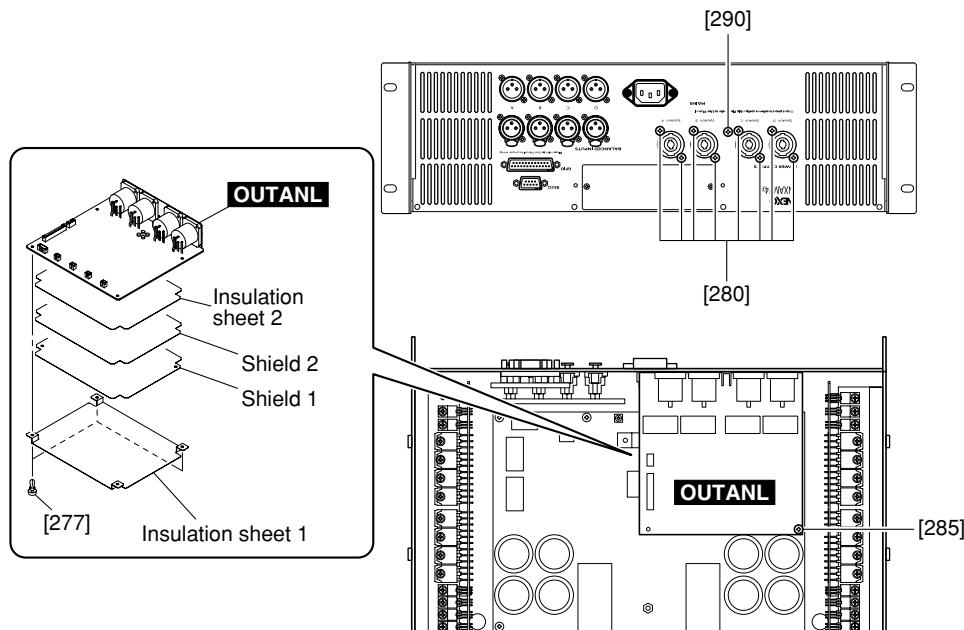

- [380]: Bind Head Tapping Screw-S 3x6 MFZN2W3 (–)
- [400]: Bind Head Tapping Screw-S 3x6 MFZN2W3 (–)
- [410]: Bind Head Tapping Screw-S 3x6 MFZN2B3 (–)
- [430]: Bind Head Tapping Screw-S 3x6 MFZN2W3 (–)

(Fig. 2)

### 3. OUTANL Circuit Board (Time required: about 15 minutes)

- 3-1. Remove the top cover. (See procedure 1.)
- 3-2. Remove the CONTROL circuit board and the OPT angle. (See procedure 2.)
- 3-3. Remove the eight (8) screws marked [280], the one (1) screw marked [290] and the one (1) screw marked [285]. (Fig. 3)
- 3-4. Disconnect the connector assemblies from other units connected to the OUTANL circuit board. (Fig. 3)
- 3-5. The OUTANL circuit board with the two (2) insulation sheets and the two (2) shields can then be removed. (Fig. 3)
- 3-6. Remove the three (3) plastic rivets marked [277]. (Fig. 3)
- 3-7. Remove the insulation sheet 1, the shield 1, the shield 2 and the insulation sheet 2 from the OUTANL circuit board. (Fig. 3)

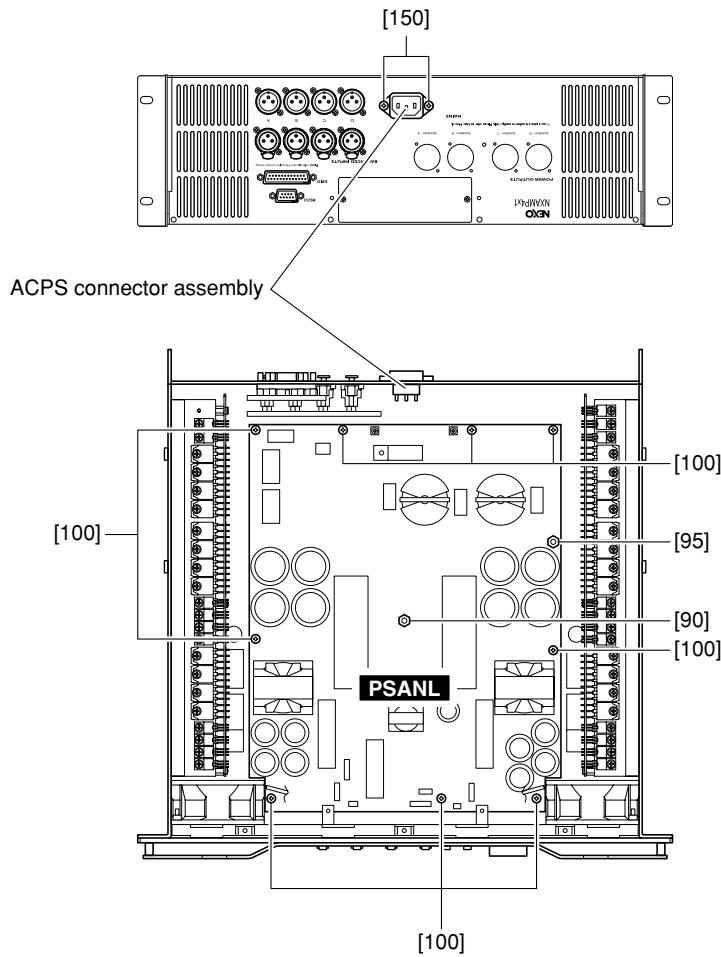

- [277]: Plastic Rivet NRP-345 (--)
- [280]: Flat Head Tapping Screw-B 3x8 MFZN2B3 (--)
- [285]: Bind Head Tapping Screw-S 3x6 MFZN2W3 (--)
- [290]: Bind Head Tapping Screw-B 3x8 MFZN2B3 (--)

(Fig. 3)

#### 4. PSANL Circuit Board (Time required: about 20 minutes)

- 4-1. Remove the top cover. (See procedure 1.)
- 4-2. Remove the CONTROL circuit Board and the OPT angle. (See procedure 2.)
- 4-3. Remove the OUTANL Circuit Board. (See procedure 3.)
- 4-5. Remove the two (2) screws marked [150], and remove the ACPS connector assembly. (Fig. 4)
- 4-6. Remove the nine (9) screws marked [100], the one (1) hexagonal spacers marked [90] and the one (1) hexagonal spacer marked [95]. (Fig. 4)
- 4-7. Disconnect the connector assemblies from other units connected to the PSANL circuit board. (Fig. 4)
- 4-8. The PSANL circuit board can then be removed. (Fig. 4)

- [90]: Hexagonal Spacer H=89 B=5.5 (--)
- [95]: Hexagonal Spacer H=41 B=5.5 (--)
- [100]: Bind Head Tapping Screw-S 3x6 MFZN2W3 (--)
- [150]: Flat Head Tapping Screw-B 3x8 MFZN2B3 (--) (U destination)
- [150]: Bind Head Tapping Screw-B 3x8 MFZN2B3 (--) (O destination)

(Fig. 4)

## 5. INANL Circuit Board

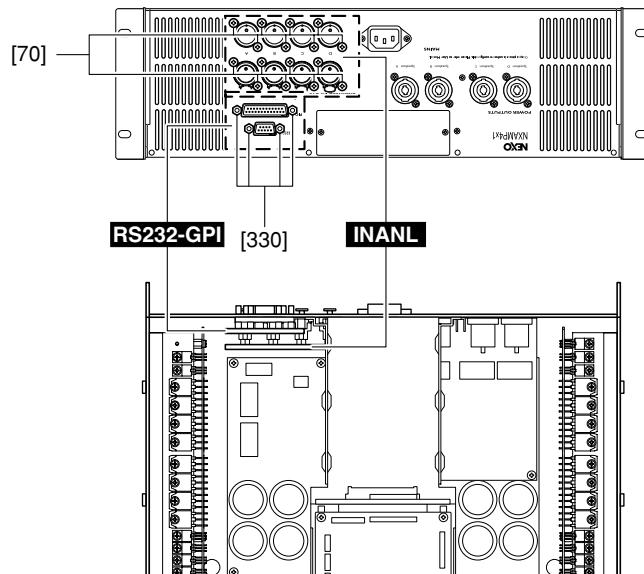

(Time required: about 7 minutes)

- 5-1. Remove the top cover. (See procedure 1.)
- 5-2. Remove the sixteen (16) screws marked [70]. (Fig. 5)
- 5-3. Disconnect the connector assembly from other unit connected to the INANL circuit board. (Fig. 5)
- 5-4. The INANL circuit board can then be removed. (Fig. 5)

## 6. RS232-GPI Circuit Board

(Time required: about 7 minutes)

- 6-1. Remove the top cover. (See procedure 1.)
- 6-2. Remove the four (4) hexagonal lock screws marked [330]. (Fig. 5)
- 6-3. Disconnect the flat cable from other unit connected to the RS232-GPI circuit board. (Fig. 5)
- 6-4. The RS232-GPI circuit board can then be removed. (Fig. 5)

[70]: Bind Head Tapping Screw-B 2.6x8 MFZN2B3 (-)

[330]: Hexagonal Lock Screw (-)

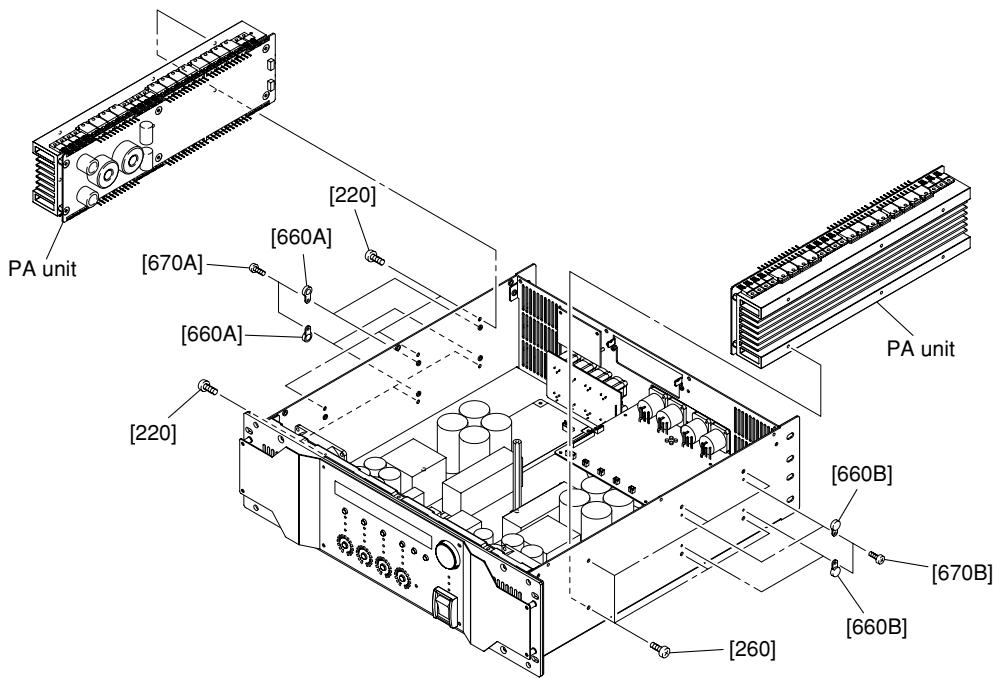

(Fig. 5)

**7. Left (CH1, CH2) PA unit****(Time required: about 15 minutes)**

- 7-1. Remove the top cover. (See procedure 1.)
- 7-2. Remove the CONTROL circuit board and the OPT angle. (See procedure 2.)
- 7-3. Remove the four (4) screws marked [670A], and remove the four (4) screw covers marked [660A]. (Fig. 6)
- 7-4. Remove the six (6) screws marked [220]. (Fig. 6)
- 7-5. Disconnect the connector assemblies that connects the left PA unit and other units. (Fig. 6)
- 7-6. The left PA unit can then be removed. (Fig. 6)

**8. Right (CH3, CH4) PA unit****(Time required: about 15 minutes)**

- 8-1. Remove the top cover. (See procedure 1.)
- 8-2. Remove the CONTROL circuit board and the OPT angle. (See procedure 2.)
- 8-3. Remove the four (4) screws marked [670B], and remove the four (4) screw covers marked [660B]. (Fig. 6)
- 8-4. Remove the six (6) screws marked [260]. (Fig. 6)
- 8-5. Disconnect the connector assemblies that connects the right PA unit and other units. (Fig. 6)
- 8-6. The right PA unit can then be removed. (Fig. 6)

[220]: Bind Head Screw 4x8 MFZN2B3 (--)

[260]: Bind Head Screw 4x8 MFZN2B3 (--)

[660A]: Screw Cover T5N (--)

[660B]: Screw Cover T5N (--)

[670A]: Bind Head Tapping Screw-B 3x8 MFZN2B3 (--)

[670B]: Bind Head Tapping Screw-B 3x8 MFZN2B3 (--)

(Fig. 6)

## 9. Front Panel Assembly

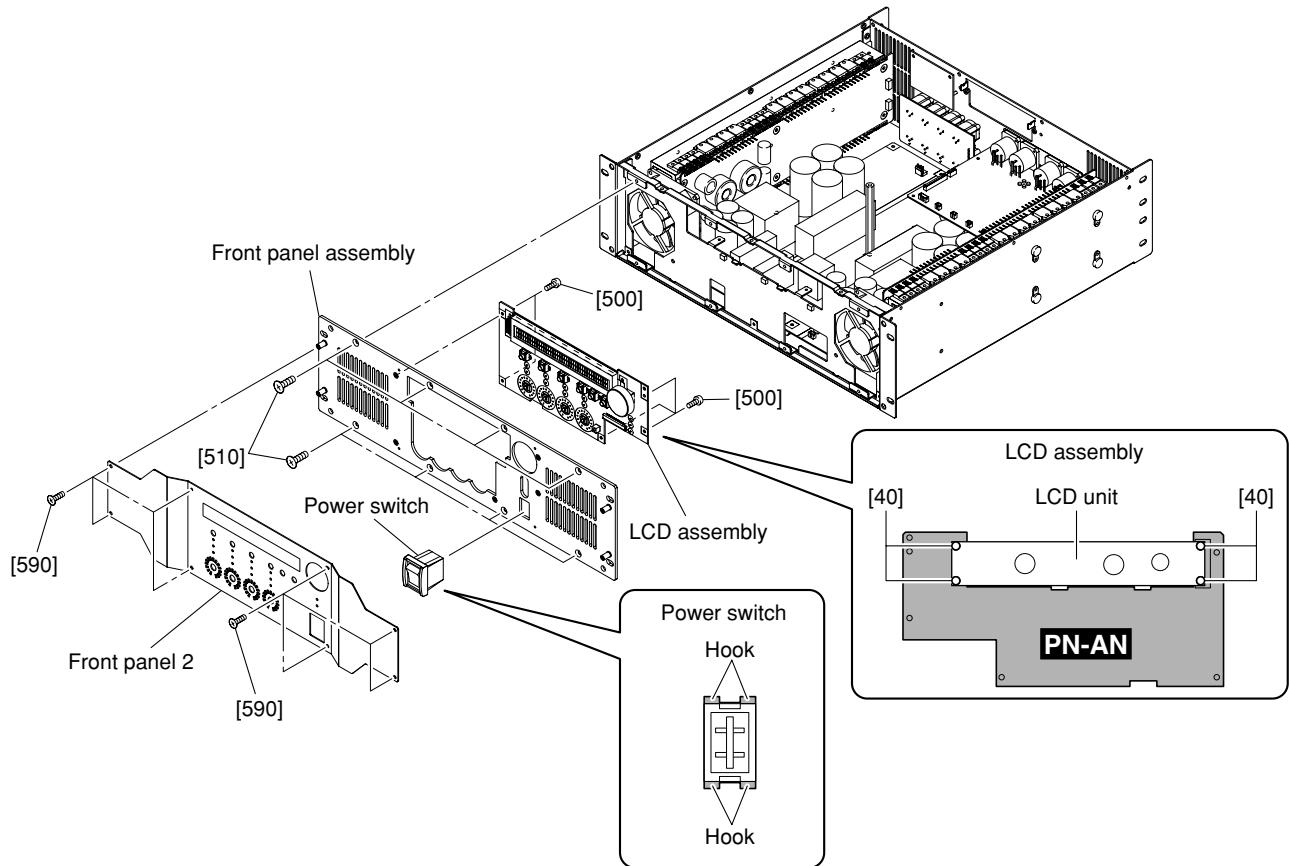

(Time required: about 6 minutes)

- 9-1. Remove the top cover. (See procedure 1.)
- 9-2. Remove the CONTROL circuit Board and the OPT angle. (See procedure 2.)
- 9-3. Remove the eight (8) screws marked [590]. (Fig. 7)
- 9-4. Remove the front panel 2. (Fig. 7)
- 9-5. Disconnect the connector of the power switch assembly connected to the PSANL circuit board. (Fig. 7)
- 9-6. Remove the eight (8) screws marked [510]. (Fig. 7)
- 9-7. Disconnect the flat cable from other unit connected to the PN-AN circuit board. (Fig. 7)
- 9-8. The front panel assembly can be removed. (Fig. 7)

## 10. PN-AN Circuit Board

(Time required: about 10 minutes)

- 10-1. Remove the top cover. (See procedure 1.)
- 10-2. Remove the front panel assembly. (See procedure 9.)
- 10-3. Remove the five (5) screws marked [500]. (Fig. 7)
- 10-4. Remove the LCD assembly. (Fig. 7)
- 10-5. Remove the four (4) nylon rivets [40]. (Fig. 7)
- 10-6. The PN-AN circuit board and the LCD unit can then be separated. (Fig. 7)

[40]: Nylon Rivet (–)

[500]: Bind Head Screw 3x4 MFZN2B3 (–)

[510]: Flat Head Screw 4x8 MFZN2B3 (–)

[590]: Bind Head Tapping Screw-S 3x6 MFZN2B3 (–)

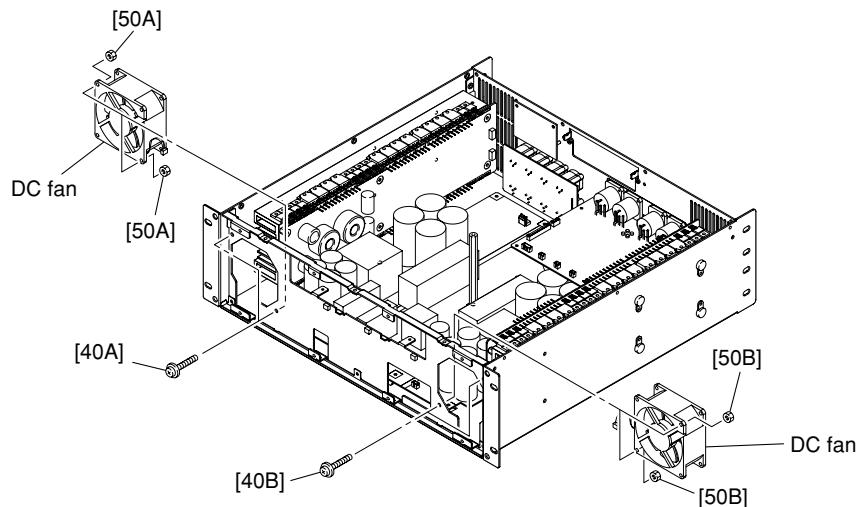

(Fig. 7)

**11. Left DC Fan (Time required: about 15 minutes)**

- 11-1. Remove the top cover. (See procedure 1.)
- 11-2. Remove the CONTROL circuit board and the OPT angle. (See procedure 2.)
- 11-3. Remove the front panel assembly. (See procedure 9.)
- 11-4. Remove the two (2) screws marked [40A] and the two (2) hexagonal nuts marked [50A]. (Fig. 8)
- 11-5. Disconnect the connector of the left DC fan connected to the PSANL circuit board. (Fig. 8)
- 11-6. The left DC fan can then be removed. (Fig. 8)

**12. Right DC fan (Time required: about 15 minutes)**

- 12-1. Remove the top cover. (See procedure 1.)
- 12-2. Remove the CONTROL circuit board and the OPT angle. (See procedure 2.)
- 12-3. Remove the front panel assembly. (See procedure 9.)
- 12-4. Remove the two (2) screws marked [40B] and the two (2) hexagonal nuts marked [50B]. (Fig. 8)
- 12-5. Disconnect the connector of the right DC fan connected to the PSANL circuit board. (Fig. 8)
- 12-6. The right DC fan can then be removed. (Fig. 8)

[40A]: Bind Head Screw 4x35 MFZN2W3 SP (--)

[40B]: Bind Head Screw 4x35 MFZN2W3 SP (--)

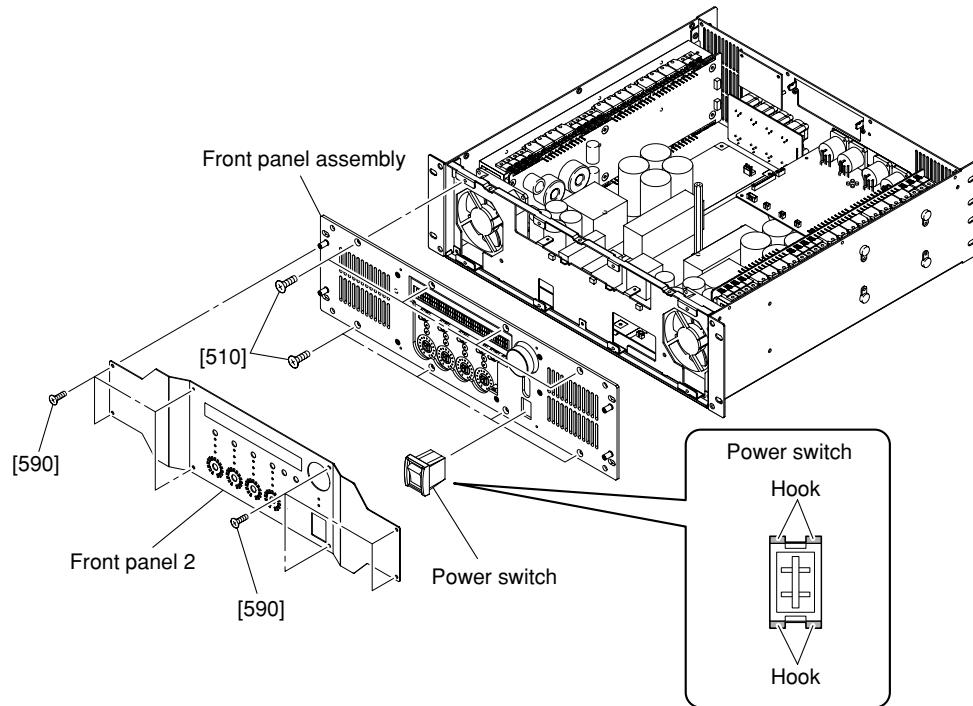

[50A]: Hexagonal Nut M4 #1 (--)

[50B]: Hexagonal Nut M4 #1 (--)

(Fig. 8)

**13. Power switch (Time required: about 15 minutes)**

- 13-1. Remove the top cover. (See procedure 1.)
- 13-2. Remove the CONTROL circuit Board and the OPT angle. (See procedure 2.)
- 13-3. Disconnect the connector of the power switch assembly connected to the PSANL circuit board. (Fig. 9)
- 13-4. Remove the front panel assembly. (See procedure 9.)
- 13-5. Release the four (4) hooks of the power switch, and remove the power switch from the front panel assembly. (Fig. 9)

[510]: Flat Head Screw 4x8 MFZN2B3 (--)

[590]: Bind Head Tapping Screw-S 3x6 MFZN2B3 (--)

(Fig. 9)

## ■ LSI PIN DESCRIPTION

### • PCM1803ADBR (X7357B0) A/D CONVERTER

CONTROL: IC035, IC036, IC037, IC038

PIN NO.	NAME	I/O	FUNCTION
1	VINL	I	Analog input, L-channel
2	VINR	I	Analog input, R-channel
3	VREF1	-	Reference voltage 1 decoupling capacitor
4	VREF2	-	Reference voltage 2 decoupling capacitor
5	Vcc	-	Analog power supply, 5 V
6	AGND	-	Analog GND
7	PDWN	I	Power-down control, active-low (2)
8	BYPAS	I	HPF bypass control / LOW: Normal mode (dc reject); HIGH: Bypass mode (through) (2)
9	TEST	I	Test, must be connected to DGND (2)
10	LRCK	I/O	Audio data latch enable input/output (1)
11	BCK	I/O	Audio data bit clock input/output (1)
12	DOUT	O	Audio data digital output
13	DGND	-	Digital GND
14	VDD	-	Digital power supply, 3.3 V
15	SCKI	I	System clock input: 256 fs, 384 fs, 512 fs or 768 fs (3)
16	OSR	I	Oversampling ratio select input / LOW: x 64 fs, HIGH: x 128 fs (2)
17	FMT0	I	Audio data format select input 0 / See data format section (2)
18	FMT1	I	Audio data format select input 1 / See data format section (2)
19	MODE0	I	Mode select input 0 / See data format section (2)
20	MODE1	I	Mode select input 1 / See data format section (2)

(1) Schmitt trigger input

(2) Schmitt trigger input with internal pulldown (50 kΩ, typically), 5 V tolerant

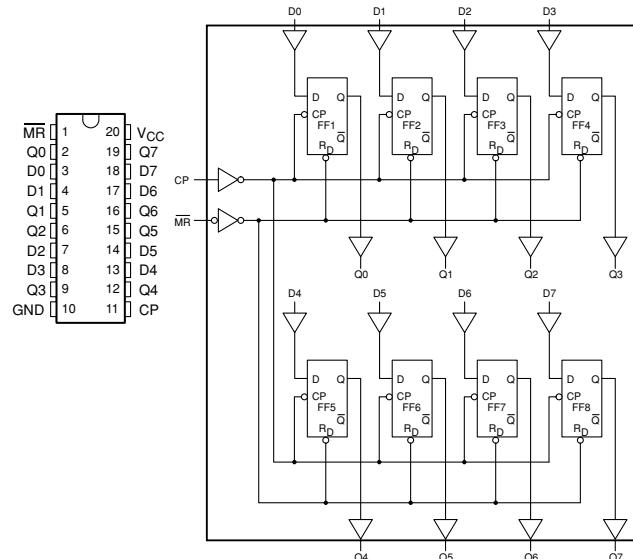

(3) Schmitt trigger input, 5 V tolerant

## ■ TEST PROGRAM

### 1. Required items

Computer	: DOS/V computer x1 (Pentium 200MHz or more, Windows XP, USB Port)
Software	: Software for version up (JTAG Programmer)
Cable	: RLINK-ST (USB-JTAG adapter)
Measuring equipment	: Power consumption meter
Tools	: RS-232C jig x1, GPI jig x1, SLOT jig x1

### 2. Test connection image

### 3. Operation

#### 3-1. Entry of the test program

While holding down the [SELECT4], [MUTE4] and [A] buttons simultaneously, turn the power switch on. The start up screen appears on the LCD.

Start Up Screen

Boot 1.00
WAIT...

Then release your fingers from the buttons.

The test program starts and the test menu screen appears on the LCD.

Test Menu Screen

00 CHOOSE TEST < >
01 SWITCH

#### 3-2. Executing the test and judgment display

Select the desired test item from the table below using the rotary encoder, and press the [B] button to start the test.

Test Program List

01 SWITCH	11 FLASH
02 ENCODER	12 FAN
03 LED	13 SLOT
04 LCD	14 ATTENUATION
05 RS232	15 ANALOG
06 GPI	16 BRIDGE
07 PORT (no use)	17 CALIBRATION
08 DSP	18 STANDBY
09 WORD CLOCK	19 QUIT
10 12C	

After executing the test, the display returns to the test menu screen if the test result is OK. If an error occurs, "ERROR" appears on the LCD and the test program is stopped. In this case, turn the power switch off and on again as was done above in 3-1.

### 4. Outline of tests

#### 4-1. SWITCH test

00 CHOOSE TEST < >
01 SWITCH

Press the [B] button to start the test. The LCD shows one by one the switch name to be tested as shown below.

01 SWITCH
HIT SELECT CH1

Press the switch displayed on the LCD as instructed. If all instructed switches are OK, the display automatically returns to the test menu screen.

#### 4-2. ENCODER test

00 CHOOSE TEST < >
02 ENCODER

Press the [B] button to start the test, and the following display appears.

02 ENCODER
TURN RIGHT 0

Turn the ENCODER knob clockwise. The 2nd line on the display changes as shown below.

TURN RIGHT 0 → ·····→ TURN RIGHT 19

The following display appears after the 2nd line on the display reaches TURN RIGHT 19.

02 ENCODER
TURN LEFT 0

Turn the ENCODER knob counterclockwise. The 2nd line on the display changes as shown below.

TURN LEFT 0 → ·····→ TURN LEFT 19

The display returns to the test menu screen after the 2nd line on the display reaches TURN LEFT 19.

#### 4-3. LED test

00 CHOOSE TEST < >
03 LED

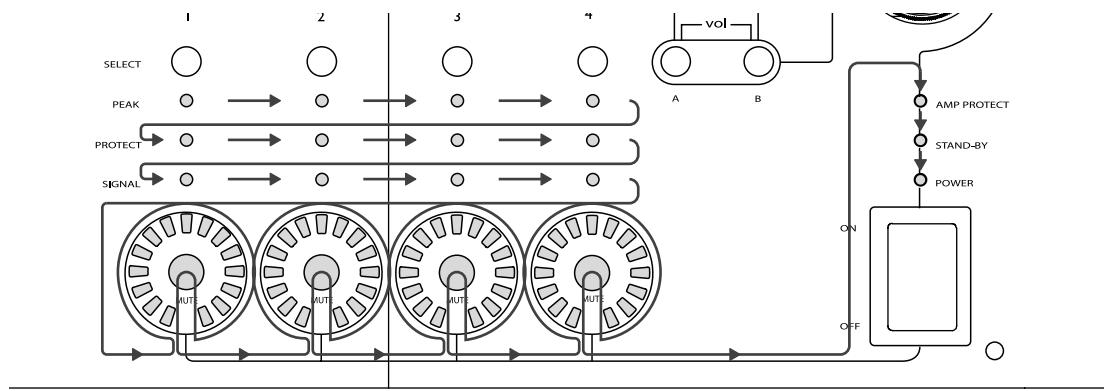

Press the [B] button to start the test, and the following display appears.

03 LED
--------

The LEDs automatically light up one by one in a specific order as shown on the next page.

All LEDs will light at the same time after each LED individually has been tested. Confirm that each LED is lit normally. If OK, press the [B] button to return the display to the test menu screen.

## Lighting order

## 4-4. LCD test

```
00 CHOOSE TEST < >
04 LCD
```

Press the [B] button to start the test.  
First the following display appears.

```
04 LCD
```

All the dots of the LCD go on and off two times. Finally, all the dots of the LCD are lit. Confirm that all the dots of the LCD have lit normally. If OK, press the [B] button to return the display to the test menu screen.

## 4-5. RS-232C test

```
00 CHOOSE TEST < >
05 RS-232C
```

Connect the RS-232C jig to the R232C port of the NXAMP4x1.

Then press the [B] button to start the test, and the following display appears.

```
05 RS-232C
RS-232C OK ?
```

Press the [B] button to continue the test. The test executes automatically.

After executing the test, the following display appears.  
(When an error occurs, the "ERROR" appears and the test program is stopped.)

```
05 RS-232C
RELEASE RS-232C
```

Disconnect the RS-232C jig from the RC232C port. Press the [B] button to return the display to the test menu screen.

## 4-6. GPI test

```
00 CHOOSE TEST < >
06 GPI
```

Connect the GPI jig to the GPIO port of the NXAMP4x1.  
Then press the [B] button to start the test, and the following display appears.

```
06 GPI
GPO[0:4] TEST OK ?
```

Switch the GPI jig to the GPO [0:4] position and press the [B] button to continue the test.

The test executes automatically.

If normal, the following display appears. (If an error occurs, "ERROR" appears and the test program is stopped.)

```
06 GPI
GPO[5:7] TEST OK ?
```

Switch the GPI jig to the GPO [5:7] position. Press the [B] button to continue the test.

The test executes automatically. If the test result is OK, the display automatically returns to the test menu screen. (If an error occurs, "ERROR" appears and the test program is stopped.)

Disconnect the GPI jig from the GPIO port.

#### 4-7. PORT test

Test for factory inspection only.

#### 4-8. DSP test

00 CHOOSE TEST < >
08 DSP

Press the [B] button to start test. The following display appears.

08 DSP
CPU to DSP TEST OK ?

Press the [B] button to continue the test. The test executes automatically.

If normal, the following display appears.

08 DSP
DSP to DSP TEST OK ?

Press the [B] button to continue the test. The test executes automatically.

If the test result is OK, the display automatically returns to the test menu screen.

(If an error occurs, "ERROR" appears and the test program is stopped.)

#### 4-9. WORD CLOCK test

00 CHOOSE TEST < >
09 WORD CLOCK

Press the [B] button to start the test. The following display appears.

09 WORD CLOCK
LRCK 48k TEST OK ?

Press the [B] button to continue the test. The test is executed automatically.

If normal, the following display appears.

09 WORD CLOCK
LRCK 96k TEST OK ?

Press the [B] button to continue the test. The test is executed automatically.

If the test result is OK, the display automatically returns to the test menu screen.

(If an error occurs, "ERROR" appears and the test program is stopped.)

#### 4-10. 12C test

00 CHOOSE TEST < >
10 12C

Press the [B] button to start the test. The following display appears.

10 12C
12C TEST OK ?

Press the [B] button to continue the test. The test executes automatically.

If the test result is OK, the display automatically returns to the test menu screen.

(If an error occurs, "ERROR" appears and the test program is stopped.)

**4-11. FLASH test**

```
00 CHOOSE TEST < >
11 FLASH
```

Press the [B] button to start the test. The following display appears.

```
11 FLASH
FLASH TEST OK ?
```

Press the [B] button to continue the test. The test executes automatically.

If the test result is OK, the display automatically returns to the test menu screen.

(If an error occurs, "ERROR" appears and the test program is stopped.)

**4-12. FAN test**

```
00 CHOOSE TEST < >
12 FAN
```

Press the [B] button to start the test. The following display appears.

The FAN starts rotating at low speed.

```
12 FAN
LOW
```

Check that the FAN rotates at low speed, and press the [B] button to continue the test. The following display appears, and the FAN rotates at middle speed.

```
12 FAN
MIDD
```

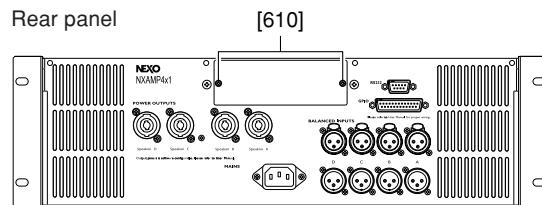

Check that the FAN rotates at middle speed, and press the [B] button to continue the test. The following display appears, and the FAN rotates at high speed.

```
12 FAN
HIGH
```

Check that the FAN rotates at high speed, and press the [B] button to return the display to the test menu screen.

**4-13. SLOT test**

```
00 CHOOSE TEST < >
13 SLOT
```

(Remove the [610] plate on the rear panel of the NXAMP4x1, and insert the SLOT jig into the expansion slot.)

Press the [B] button to start the test. The test executes automatically.

If every signal is normal, the following display appears and the LED of the SLOT jig lights.

(If an error occurs, "ERROR" appears and the test program is stopped.)

```
13 SLOT
ANALOG TEST OK ?
```

Input the 1 kHz,  $-10 \pm 1$  dBu sine wave to the channel 1 input terminal and confirm that the output voltage obtained at the channel 1 output terminal is  $+19.1 \pm 2.0$  dBu.

If OK, press the [B] button to return the display to the test menu screen.

**4-14. ATTENUATION test**

```
00 CHOOSE TEST < >
14 ATTENUATION
```

Press the [B] button to enter the attenuation test mode. The following display appears.

```
14 ATTENUATION
NOISE TEST OK ?
```

Perform the test according to the "Inspection with attenuation test mode". (See page 60).

If OK, press the [B] button to return the display to the test menu screen.

#### 4-15. ANALOG test

```
00 CHOOSE TEST < >
15 ANALOG
```

Press the [B] button to enter the analog test mode. The following display appears.

```
15 ANALOG
ANALOG TEST OK ?
```

Perform the test according to the "Inspection with analog test mode". (See page 61, 62).

Press the [B] button. The following display appears.

```
15 ANALOG
MUTE TEST OK ?
```

If OK, press the [B] button to return the display to the test menu screen.

#### 4-16. BRIDGE test

```
00 CHOOSE TEST < >
16 BRIDGE
```

Press the [B] button to enter the bridge test mode. The following display appears.

```
16 BRIDGE
ANALOG TEST OK ?
```

Perform the test according to the "Inspection with BRIDGE mode". (See page 63).

If OK, press the [B] button to return the display to the test menu screen.

#### 4-17. CALIBRATION

```
00 CHOOSE TEST < >
17 CALIBRATION
```

Press the [B] button to start the calibration. The following display appears.

```
17 CALIBRATION
CH1 INPUT SIGNAL OK ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 1 input terminal, and press the [B] button. The analog input level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH2 INPUT SIGNAL OK ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 2 input terminal, and press the [B] button. The analog input level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH3 INPUT SIGNAL OK ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 3 input terminal, and press the [B] button. The analog input level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH4 INPUT SIGNAL OK ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 4 input terminal, and press the [B] button. The analog input level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH1 SET TO 39.1 dBu ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 1 input terminal.

Adjust the ENCODER so that the output voltage obtained at the channel 1 output terminal is +39.1 dBu, and press the [B] button.

The analog output level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH2 SET TO 39.1 dBu ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 2 input terminal.

Adjust the ENCODER so that the output voltage obtained at the channel 2 output terminal is +39.1 dBu, and press the [B] button.

The analog output level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH3 SET TO 39.1 dBu ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 3 input terminal.

Adjust the ENCODER so that the output voltage obtained at the channel 3 output terminal is +39.1 dBu, and press the [B] button.

The analog output level is automatically calibrated, and the following display appears.

```
17 CALIBRATION
CH4 SET TO 39.1 dBu ?
```

Input the 1 kHz, +10 dBu sine wave to the channel 4 input terminal.

Adjust the ENCODER so that the output voltage obtained at the channel 4 output terminal is +39.1 dBu, and press the [B] button.

The analog output level is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH1 OUTPUT SIGNAL OK ?

Adjust the input signal voltage so that the output voltage obtained at the channel 1 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output voltage monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH2 OUTPUT SIGNAL OK ?

Adjust the input signal voltage so that the output voltage obtained at the channel 2 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output voltage monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH3 OUTPUT SIGNAL OK ?

Adjust the input signal voltage so that the output voltage obtained at the channel 3 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output voltage monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH4 OUTPUT SIGNAL OK ?

Adjust the input signal voltage so that the output voltage obtained at the channel 4 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output voltage monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH1 CONNECT 8 OHM LOAD

Connect the 8 ohms resistor to the channel 1 output terminal.

Adjust the input signal voltage so that the output voltage obtained at the channel 1 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output current monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH2 CONNECT 8 OHM LOAD

Connect the 8 ohms resistor to the channel 2 output terminal.

Adjust the input signal voltage so that the output voltage obtained at the channel 2 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output current monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH3 CONNECT 8 OHM LOAD

Connect the 8 ohms resistor to the channel 3 output terminal.

Adjust the input signal voltage so that the output voltage obtained at the channel 3 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output current monitor is automatically calibrated, and the following display appears.

17 CALIBRATION  
CH4 CONNECT 8 OHM LOAD

Connect the 8 ohms resistor to the channel 4 output terminal.

Adjust the input signal voltage so that the output voltage obtained at the channel 4 output terminal is 24 Vrms (= +29.8 dBu), and press the [B] button.

The output current monitor is automatically calibrated, and the display returns to the test menu screen.

(If an error occurs, "ERROR" appears and the test program is stopped.)

#### 4-18. STANDBY test

00 CHOOSE TEST < >  
18 STANDBY

Press the [B] button to enter the standby mode, and the following display appears.

18 STANDBY

Measure the primary power consumption, and check that the measured value is 23 W or less. Press the [B] button for one second or more, and the display returns to the test menu screen.

#### 4-19. QUIT (Exit the test program)

00 CHOOSE TEST < >  
19 QUIT

Press the [B] button to exit the test program, and the NXAMP enters the ordinary mode.

## ■ INSPECTIONS

### 1. Measurement Conditions

#### 1-1. Environment

- Normal temperature: From 10 °C to 35 °C
- Normal humidity: From 45 % to 85 %

#### 1-2. Power Source

- When measuring the electrical characteristics, set the power supply voltage and frequency as specified in the table below.

Destination	Power supply voltage	Frequency
U	120 V +2/-0 %	60 Hz
CHN	230 V +2/-0 %	50 Hz

#### 1-3. Measuring Instruments

- Use a reliable measuring device capable of precisely measuring the specification values indicated in this document.
- Input impedance of the measuring instrument should be more than 1 MΩ.
- The noise level should be measured with a 22 Hz-22 kHz band pass filter.

When you use the Audio Analyzer System made by Audio Precision, Inc. for noise measurement, set the filter characteristics as follows.

BW : 22 Hz-22 kHz

Filter (Fltr) : None

#### 1-4. Connections

Each input and output terminal of channels 1-4 are as shown in the figure below.

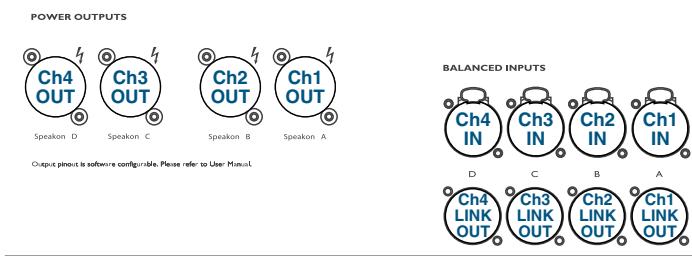

Fig. 1

##### 1-4-1. Input connector

The XLR-3-31 (female) type connectors are used for channel 1-4 input terminals.

Condition : Balanced input

Wiring : pin 1 to ground, pin 2 to hot (+), pin 3 to cold (-)

##### 1-4-2. Output connector

Neutrik SPEAKON connectors are used for output terminals in channels 1-4.

Connect the load resistor between pin 1+ and pin 1- of the Neutrik SPEAKON connector.

##### 1-4-3. Load resistor

Use a load resistor with no inductivity and a power rating high enough to perform each test safely.

##### 1-4-4. Link out connectors

XLR-3-32 (male) type connectors are used for input terminals in channels 1-4.

Condition : Balanced output

Wiring : pin 1 to ground, pin 2 to hot (+), pin 3 to cold (-)

**1-5. Other**

0 dBu is defined as 0.775 Vrms in these inspections.

**2. Inspection with ordinary mode****Condition:**

- Ground each input terminal via a  $600\ \Omega$  resistor.
- Do not connect the load resistor to the output terminal.

**2-1. Power ON sequence**

- 1) Turn the power switch on. Confirm that the latest firmware version appears on the LCD and the four (4) MUTE LEDs light up.

Example of firmware version 1.00

-- [v 1.00] --  
(c) NEXO 2007.

- 2) Confirm that all the fans start rotation at low speed within 4 seconds after turning the power switch on.
- 3) Confirm that the following display appears on the LCD within  $18 \pm 3$  seconds after turning the power switch on. Also confirm that the POWER LED and only one of the VOLUME LEDs for each channel light up.

-20.0 -20.0 -20.0 -20.0 Vol(dB)  
[MAIN ] [MAIN ] [SUB ] [SUB ] < >

**2-2. Power consumption when idling**

Measure the primary power consumption and confirm that the measured value is  $70 \pm 20$  W.

**2-3. Output terminal DC voltage**

Measure the DC voltage (Vdc) of each output terminal and confirm that the measured value is  $Vdc = 0 \pm 50$  mV.

**3. Inspection with attenuation test mode****Condition:**

- Perform each test in this section in the attenuation test mode. (See page 56)
- Connect a  $8\ \Omega$  load resistor to each output terminal.
- Ground each input terminal via a  $600\ \Omega$  resistor.

**3-1. Residual noise**

Confirm that each output terminal's residual noise level is -65 dBu or less.

#### 4. Inspection with analog test mode

##### Condition:

- Perform each test item in this section with the analog test mode of the test program. (See page 57)
- Unless otherwise specified, perform the test with a  $8\ \Omega$  resistor connected to each output terminal.

##### 4-1. Link out

Input the 1 kHz, -10 dBu sine wave to each input terminal and confirm that the output voltage obtained at each link out terminal is  $-10 \pm 0.5$  dBu.

##### 4-2. Efficiency

Input the 1 kHz sine wave to the channel 1 input terminal and confirm that the primary power consumption is  $175 \pm 10$  W when the output voltage obtained at the channel 1 output terminal is +29.2 dBu.

Perform the same test for channels 2-4 in the same manner.

##### 4-3. Gain

Input the 1 kHz, 0 dBu sine wave to each input terminal and confirm that the output voltage obtained at each output terminal is  $+29.1 \pm 1.2$  dBu.

##### 4-4. Frequency response

Perform the following test at each channel.

Input the 10 Hz, 1 kHz, 20 kHz, 0 dBu sine wave to the input terminal and one by one measure the output voltage obtained at the output terminal for each frequency.

Confirm that the output voltage at 10 Hz is  $0 \pm 0.5$  dB when compared with the output voltage at 1 kHz (0 dB).

Confirm that the output voltage at 20 kHz is  $+0.5 \pm 0.5$  dB when compared with the output voltage at 1 kHz (0 dB).

##### 4-5. Distortion

Input the 1 kHz sine wave to each channel input terminal and confirm that the distortion in each channel output terminal is 1.0 % or less when 500 W (with 8 ohms load) output is obtained for each terminal at the same time.

##### 4-6. Maximum output

Connect the 4 ohms 500 W resistor to each output terminal.

Input the BURST signal as shown in fig. 2 to each input terminal and adjust the input signal level so that a Vburst voltage of 174 Vp-p (volt peak to peak) is obtained in each channel output terminals.

Measure the last wave of the BURST signal peak to peak by the oscilloscope's MEASURE function. Confirm that the measured voltage is 170 volt or more. (See fig. 2)

**Note:** Perform the test of all channels at the same time.

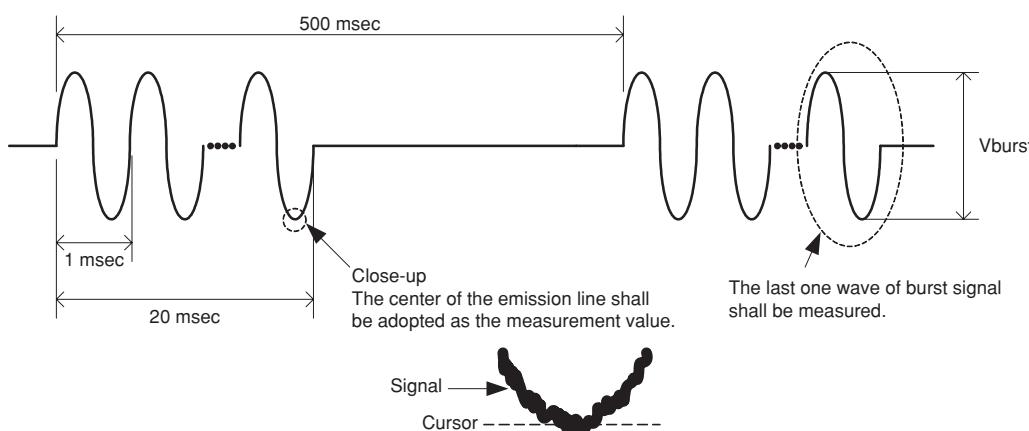

Fig. 2

**4-7. Channel separation**

- 1) Ground the channel 2, channel 3 and channel 4 input terminals via a  $600\ \Omega$  resistor.

Input the 1 kHz, 0 dBu sine wave to the channel 1 input terminal and measure the output voltage obtained at the channel 1 output terminal as the reference voltage (0 dB).

Confirm that the output voltage at the channel 2, channel 3 and channel 4 output terminals is -65 dB or less as compared with the reference voltage.

- 2) Ground the channel 1, channel 3 and channel 4 input terminals via a  $600\ \Omega$  resistor.

Input the 1 kHz, 0 dBu sine wave to the channel 2 input terminal and measure the output voltage obtained at the channel 2 output terminal as the reference voltage (0 dB).

Confirm that the output voltage at the channel 1, channel 3 and channel 4 output terminals is -65 dB or less as compared with the reference voltage.

- 3) Ground the channel 1, channel 2 and channel 4 input terminals via a  $600\ \Omega$  resistor.

Input the 1 kHz, 0 dBu sine wave to the channel 3 input terminal and measure the output voltage obtained at the channel 3 output terminal as the reference voltage (0 dB).

Confirm that the output voltage at the channel 1, channel 2 and channel 4 output terminals is -65 dB or less as compared with the reference voltage.

- 4) Ground the channel 1, channel 2 and channel 3 input terminals via a  $600\ \Omega$  resistor.

Input the 1 kHz, 0 dBu sine wave to the channel 4 input terminal and measure the output voltage obtained at the channel 4 output terminal as the reference voltage (0 dB).

Confirm that the output voltage at the channel 1, channel 2 and channel 3 output terminals is -65 dB or less as compared with the reference voltage.

**Note:** Measure the output level with the 22 Hz-22 kHz band pass filter specified at 1-3.

**4-8. Output noise level**

With each input terminal grounded via a  $600\ \Omega$  resistor, measure the noise level in each output terminal and confirm that the measured value is -60 dBu or less.

**Note:** Measure the noise level with the 22 Hz-22 kHz band pass filter specified at 1-3.

**4-9. Stability**

With no load resistors connected to all output terminals, input the 1 kHz, -6.0 dBu square wave and measure the primary power consumption ( $W_{no\_load}$ ).

With the 0.1 uF capacitor connected to all output terminals, input the 1 kHz, -6.0 dBu square wave and measure the primary power consumption ( $W_{cap\_load}$ ).

Confirm that the following equation is satisfied.

$$W_{cap\_load} - W_{no\_load} = 10\text{ W or less}$$

## 5. Inspection with BRIDGE mode

### Condition:

- Perform each test item in this section with the bridge test mode of the test program. (See page 57)
- Connect individually the 16 Ω load resistors to channel 1 and channel 3 output terminals.
- Keep the measurement reference of the measuring instrument in floating condition and connect it to the middle point of each load resistors.
- Do not connect any resistor to channel 2 and channel 4 output terminals.
- The input terminals and output terminals of channel 2 and channel 4 are not used in this section.

### 5-1. Gain

Input the 1 kHz, 0 dBu sine wave to each input terminal and confirm that the output voltage obtained at each output terminal is  $+29.1 \pm 1.2$  dBu.

### 5-2. Frequency response

Perform the following test at each channel.

Input the 10 Hz, 1 kHz, 20 kHz, 0 dBu sine wave to the input terminal and one by one measure the output voltage obtained at the output terminal for each frequency.

Confirm the output voltage at 10 Hz is  $0 \pm 0.5$  dB when compared with the output voltage at 1 kHz (0 dB).

Confirm the output voltage at 20 kHz is  $+0.5 \pm 0.5$  dB when compared with the output voltage at 1 kHz (0 dB).

## ■ UPDATING THE FIRMWARE

### 1. Preparation

#### 1-1. Downloading and installing the software for update

- 1) Download [http://www.st.com/stoneline/products/support/micro/files/standalone\\_jtag.zip](http://www.st.com/stoneline/products/support/micro/files/standalone_jtag.zip).
- 2) Extract the StandaloneJTAG\_1\_20.zip.
- 3) Double click the StandaloneJTAG\_1\_20, and the following install screen appears. (Fig. 1)
- 4) Click the [Finish] button to start installing the software for update.
- 5) Click the [Next] and [Yes] buttons to finish installing.
- 6) Restart the PC after completing the installation.

#### 1-2. Connection

Connect the USB port of the PC to the connector CN005 of the CONTROL circuit board installed in the NXAMP4x1 with the USB-JTAG adapter (RLINK-ST).

**Note:**

When you connect the USB-JTAG adapter (RLINK-ST) for the first time, the USB driver will be required. The USB driver is included in the downloaded file at previous step 1-1. Locate and install the driver.

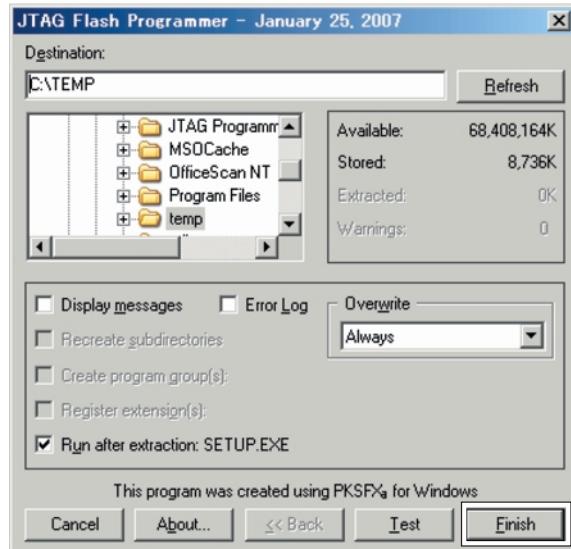

Fig. 1 Install screen

### 2. Updating operation

- 1) Turn the power switch of the NXAMP on.
- 2) Start up the installed JTAG Programmer.
- 3) Select new project from the project menu. The following "Create Project" screen appears. (Fig. 2)
- 4) Input the Project Name, Device Family and Device Name as the followings.

Project Name : an (any name may be used)  
 Device Family : uPSD3300  
 Device Name : uPSD3354DV-40U6

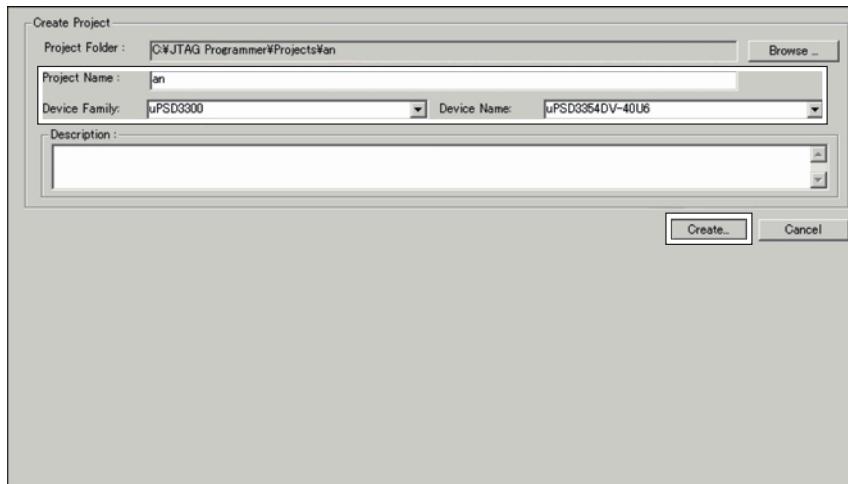

Fig. 2 Create Project screen

- 5) Click the [Create] button, and the following JTAG Programmer screen appears. (Fig. 3)
- 6) Click the [Browse] button to select the desired file.  
Check the [All] at Select region.  
Select Program/Verify at Select operation.

**Note:**

This operation is needed when you start up for the first time. Click the [Save] button to save the set up file so that this operation will not be required again.

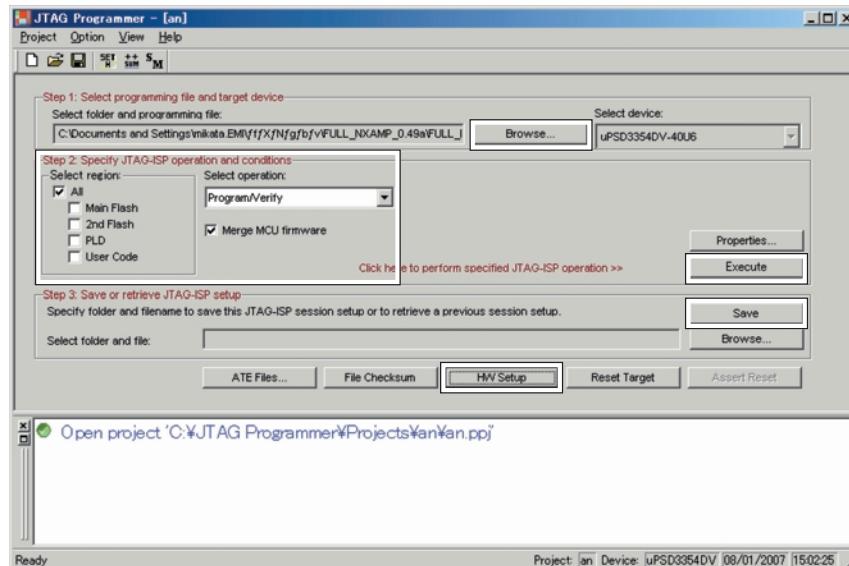

Fig. 3 JTAG Programmer screen

- 7) Click the [HW Setup] button, and the following hardware setting screen appears. (Fig. 4)
- 8) Select the RLink at Hardware selection.

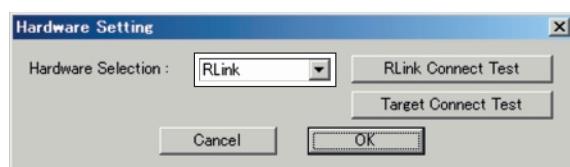

Fig. 4 Hardware Setting screen

- 9) Click the [Execute] button, and the following JTAG-ISP Operations screen appears. (Fig. 5)

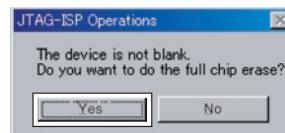

Fig. 5 JTAG-ISP Operations screen

- 10) Click the [Yes] button to start updating the firmware.
- 11) Restart the PC after the completion of the updating.

### ■ WARNING

Components having special characteristics are marked  $\Delta$  and must be replaced with parts having specification equal to those originally installed.

- The numbers "QTY" show quantities for each unit.
- The parts with "--" in "PART NO." are not available as spare parts.
- This mark "}" in the REMARKS column means these parts are interchangeable.
- The second letter of the shaded (■) part number is O, not zero.
- The second letter of the shaded (■) part number is I, not one.

### NXAMP4x1 LEVEL DIAGRAM

This level diagram is for the purpose of circuit design only.  
The actual gain structure will depend on the firmware that is used.

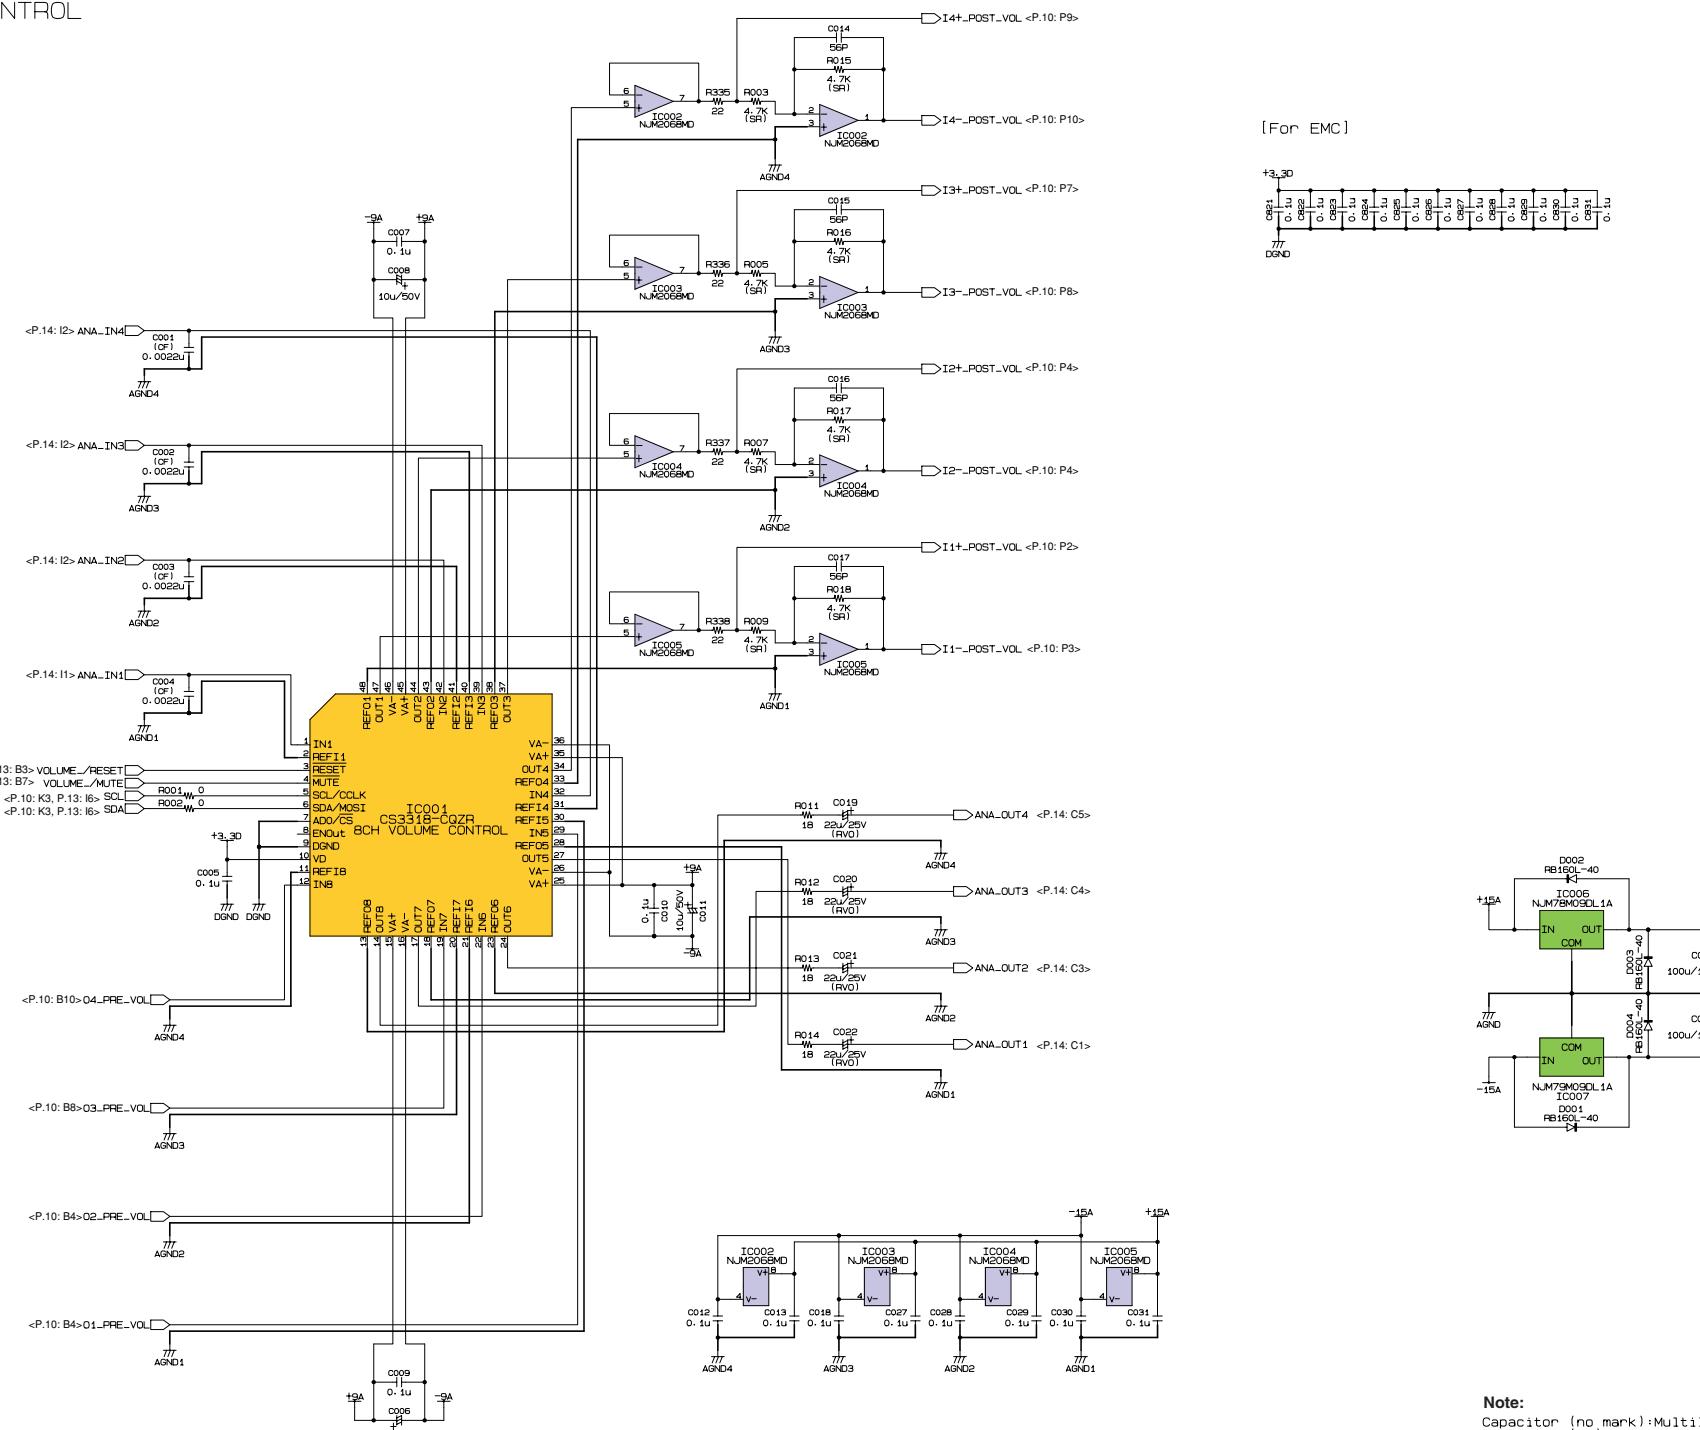

**Note:**

The solid line shows the gain structure in the analog test mode of the test program mode.  
The broken line shows an example in the setting that allows the maximum input signal level.

## ■ CIRCUIT DIAGRAM 1/15 (CONTROL 1/6)

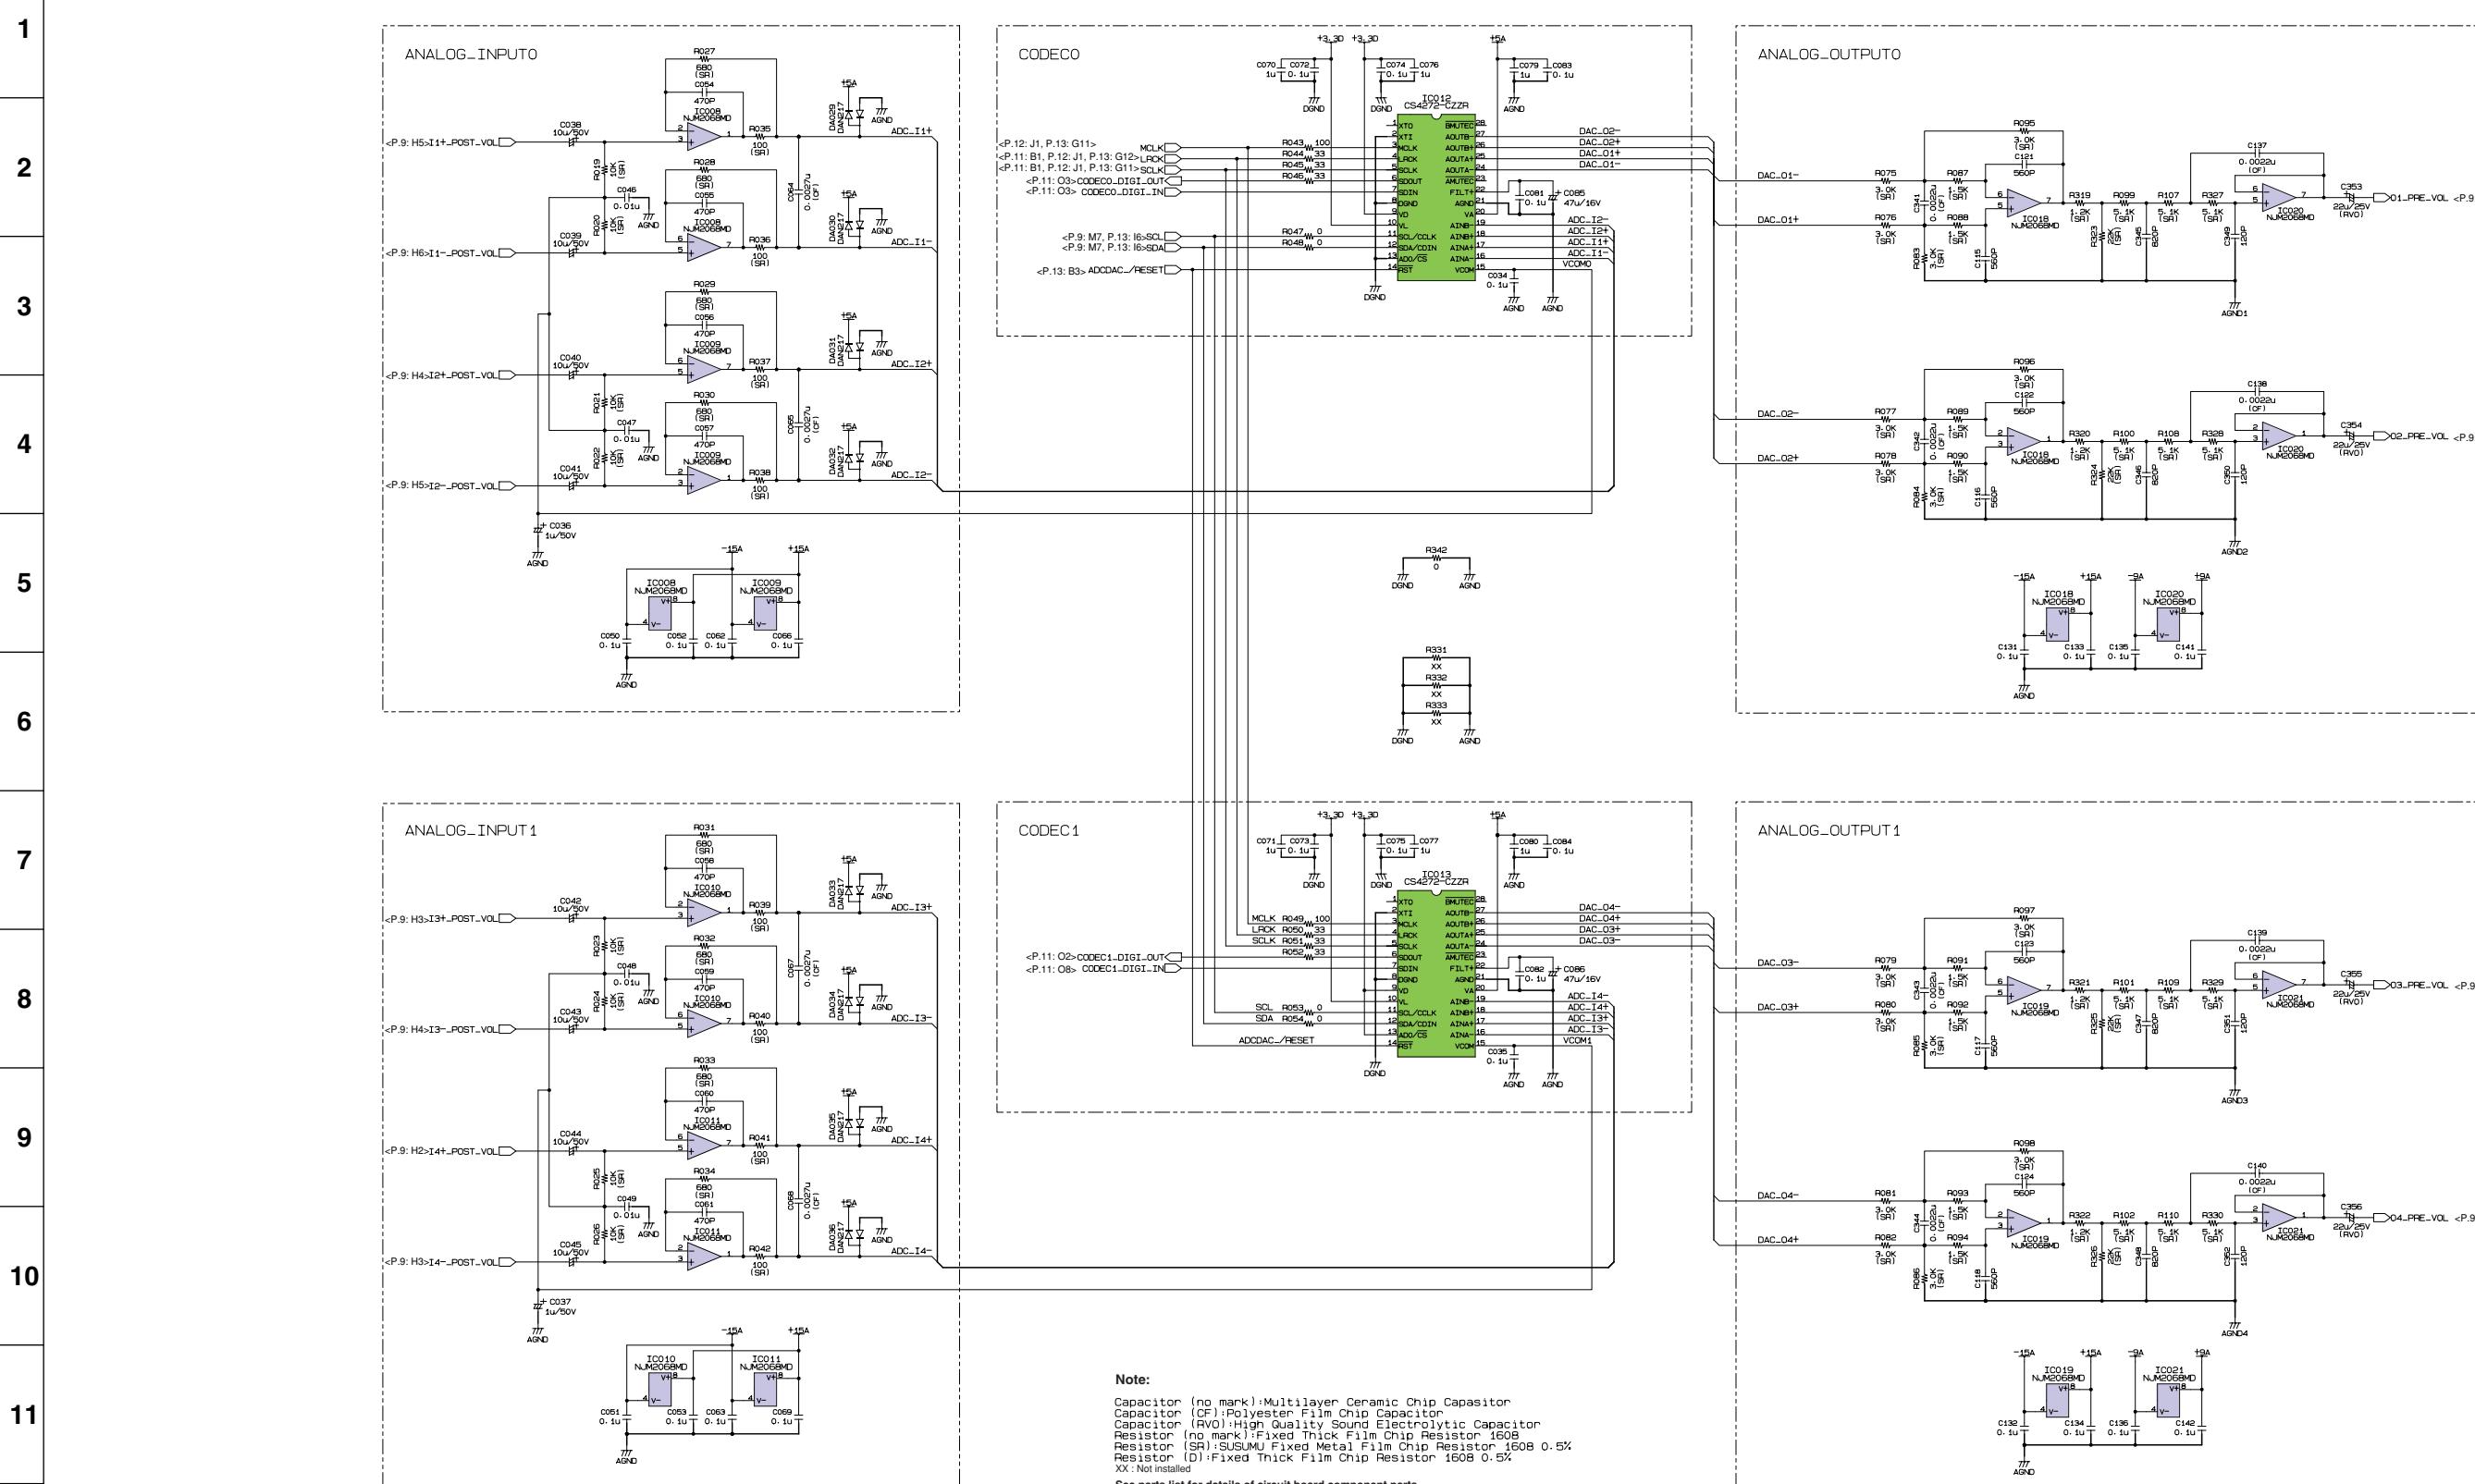

## VOLUME\_CONTROL

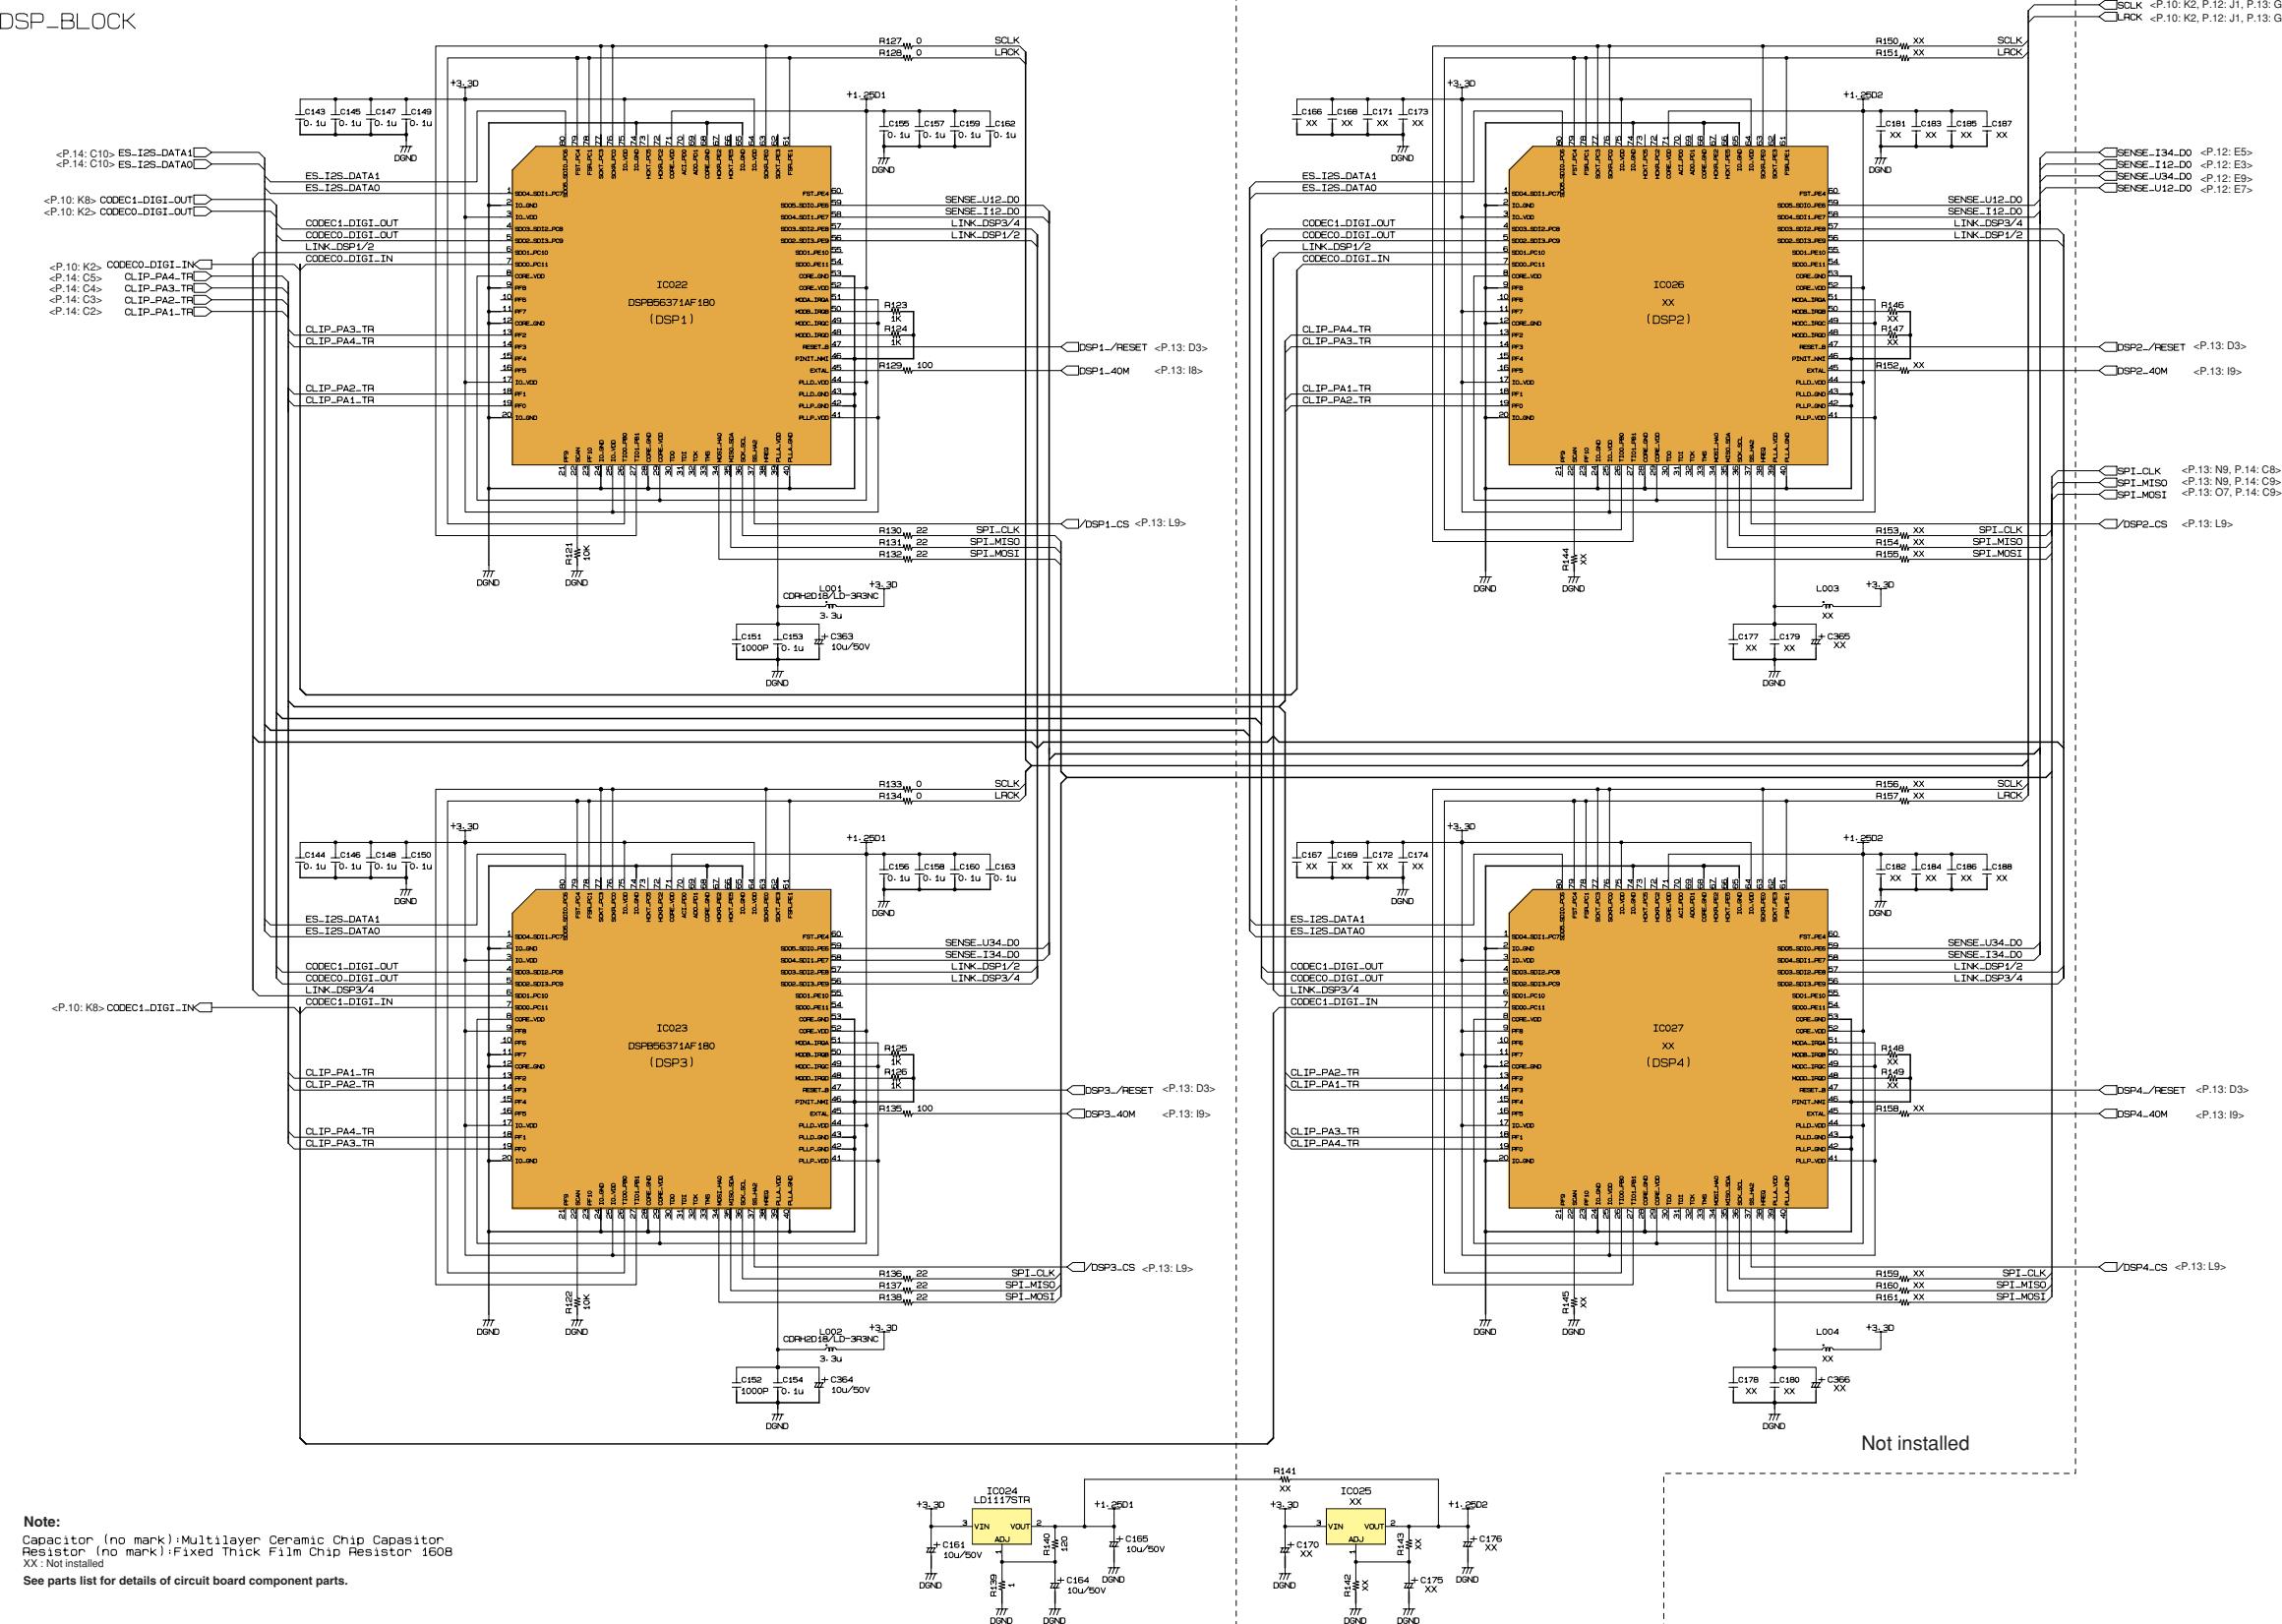

**Note:**  
 Capacitor (no mark): Multilayer Ceramic Chip Capacitor  
 Capacitor (CF): Polyester Film Chip Capacitor  
 Capacitor (RV): Quality Sound Electrolytic Capacitor  
 Resistor (no mark): Fixed Thick Film Chip Resistor 1608  
 Resistor (SA): SUSUMU Fixed Metal Film Chip Resistor 1608 0.5%

See parts list for details of circuit board component parts.

## ■ CIRCUIT DIAGRAM 8/15 (OUTANL)

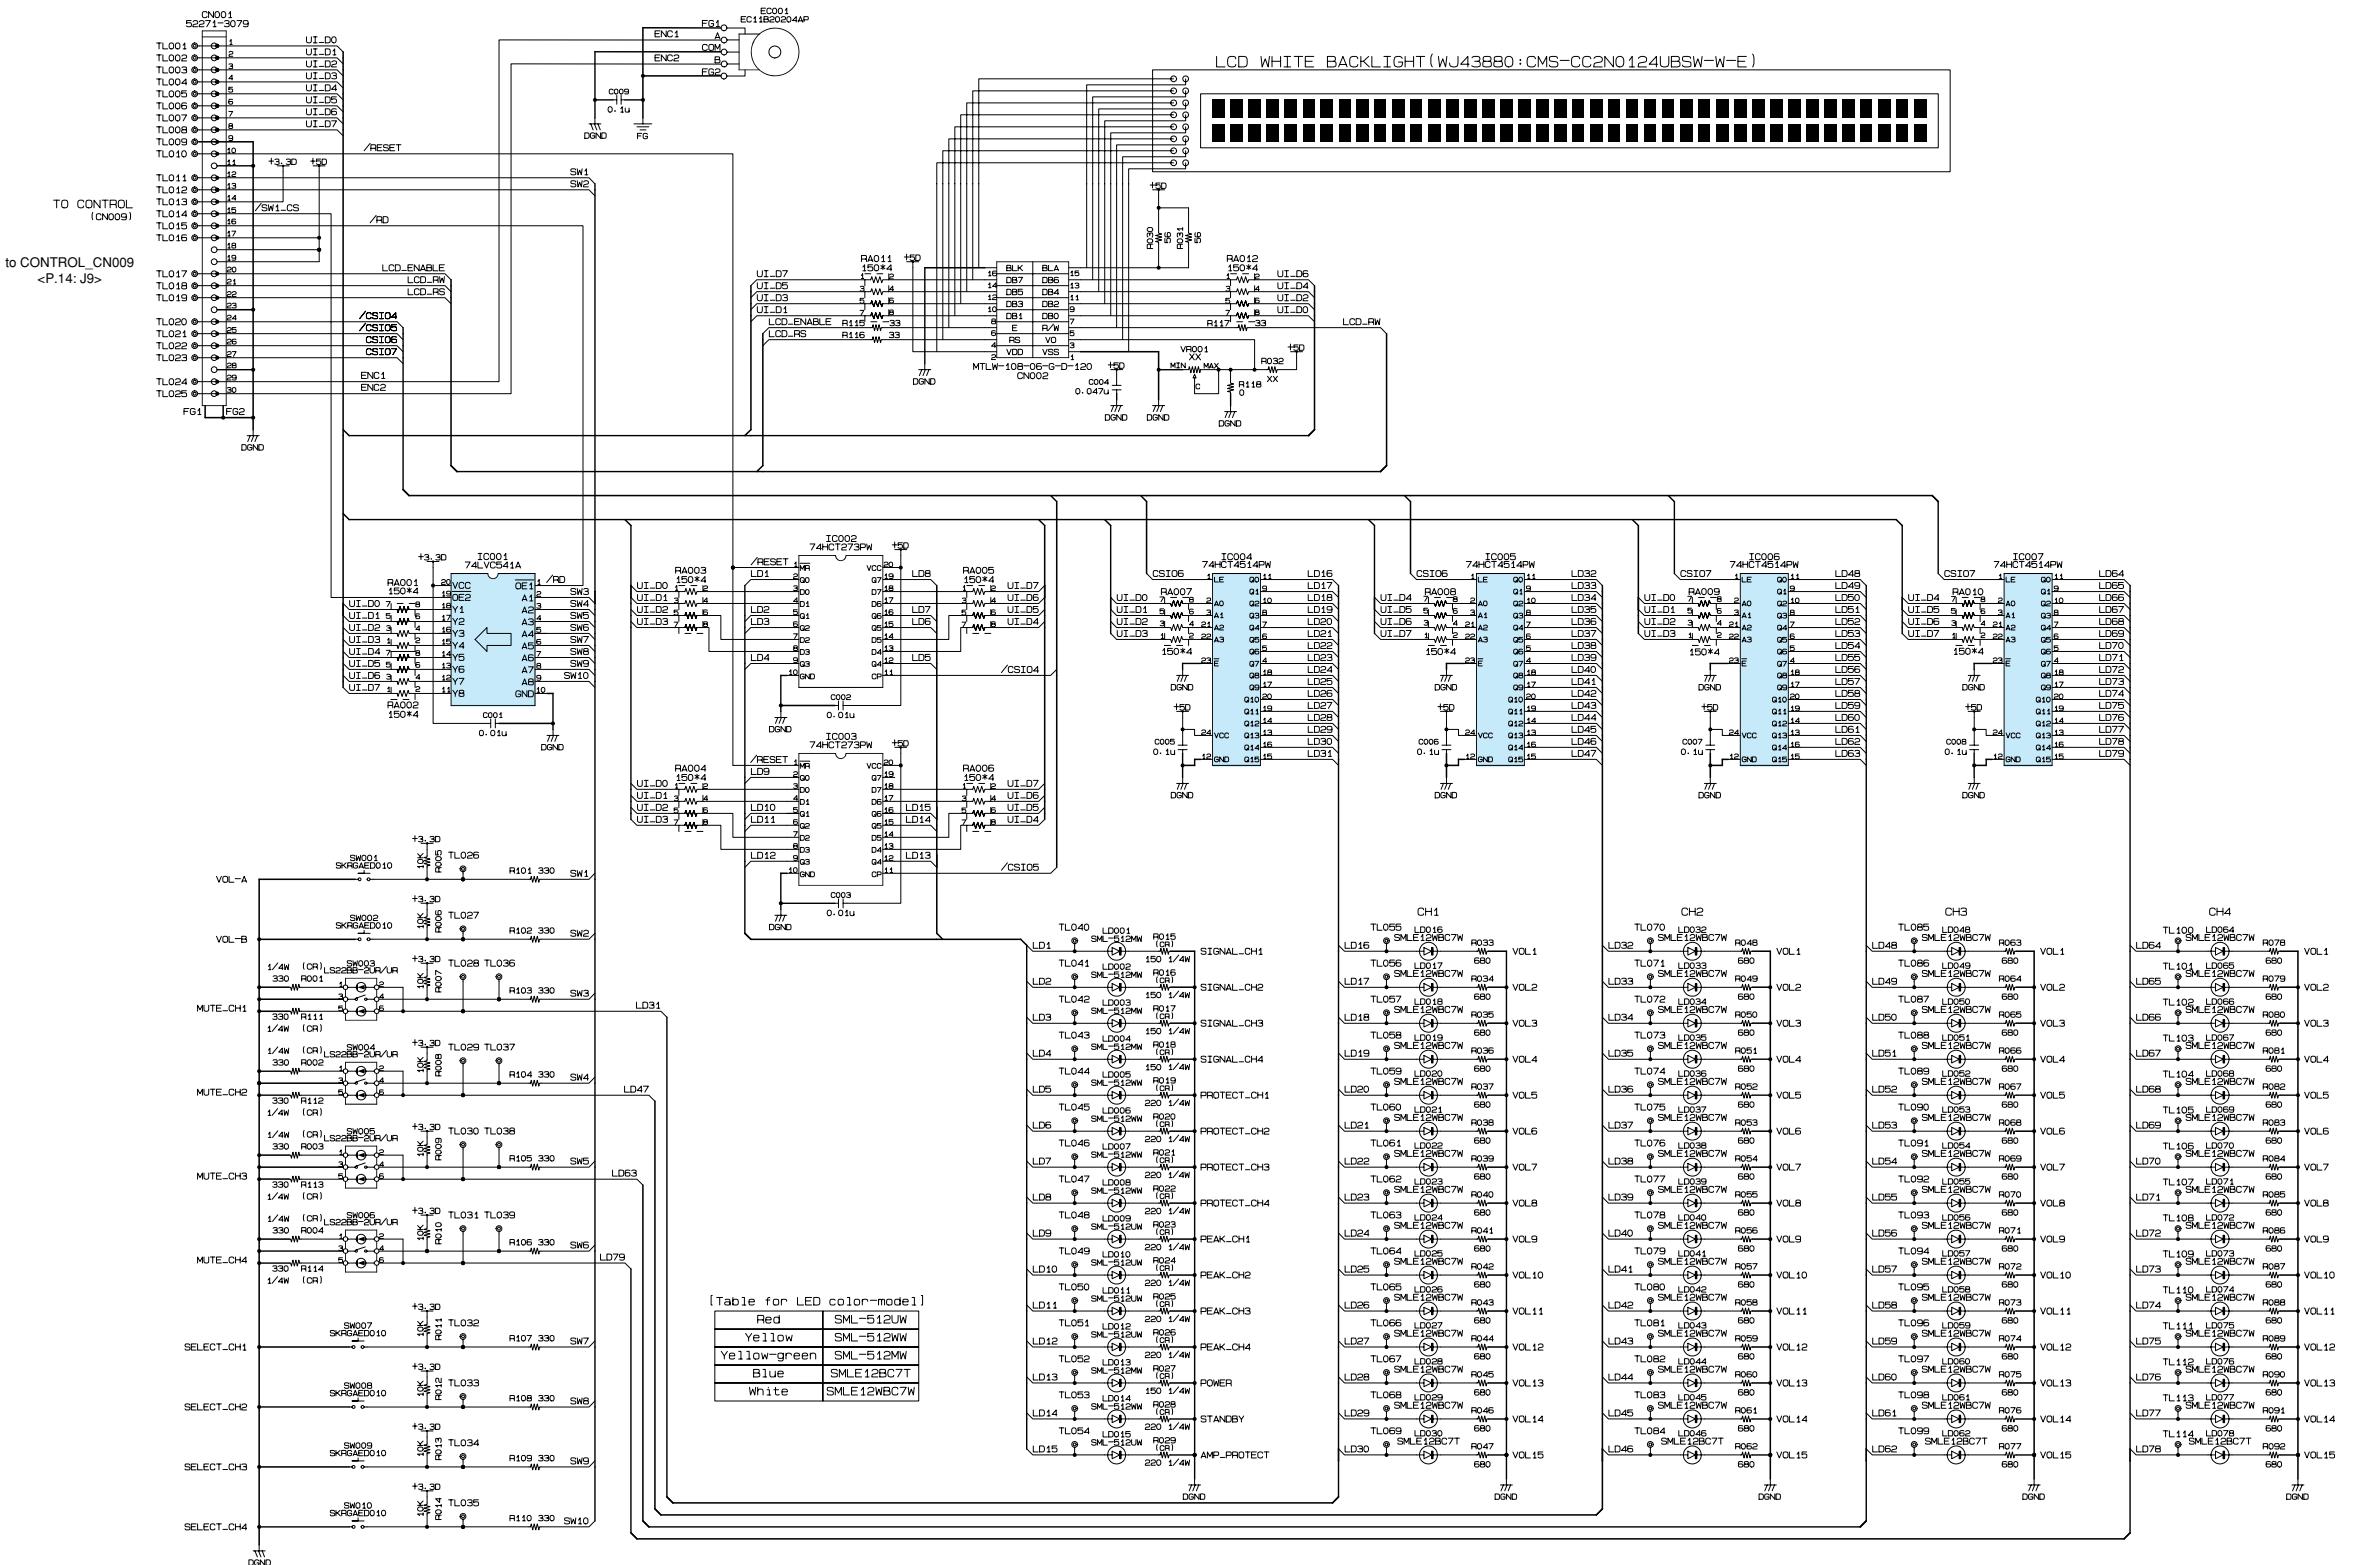

Note:	
(OR)	Fixed Metal Oxide Film Resistor
(FR)	Fixed Carbon Film Resistor Flame Retardant type
(D)	Fixed Thick Film Chip Resistor 1608 0.5%
(F)	Polyester Film Capacitor
Rino mark	Fixed Thick Film Chip Resistor 1608
Cino mark	Multilayer Ceramic Chip Capacitor

**See parts list for details of circuit board component parts.**

## ■ CIRCUIT DIAGRAM 9/15 (PN-AN)

PN-AN

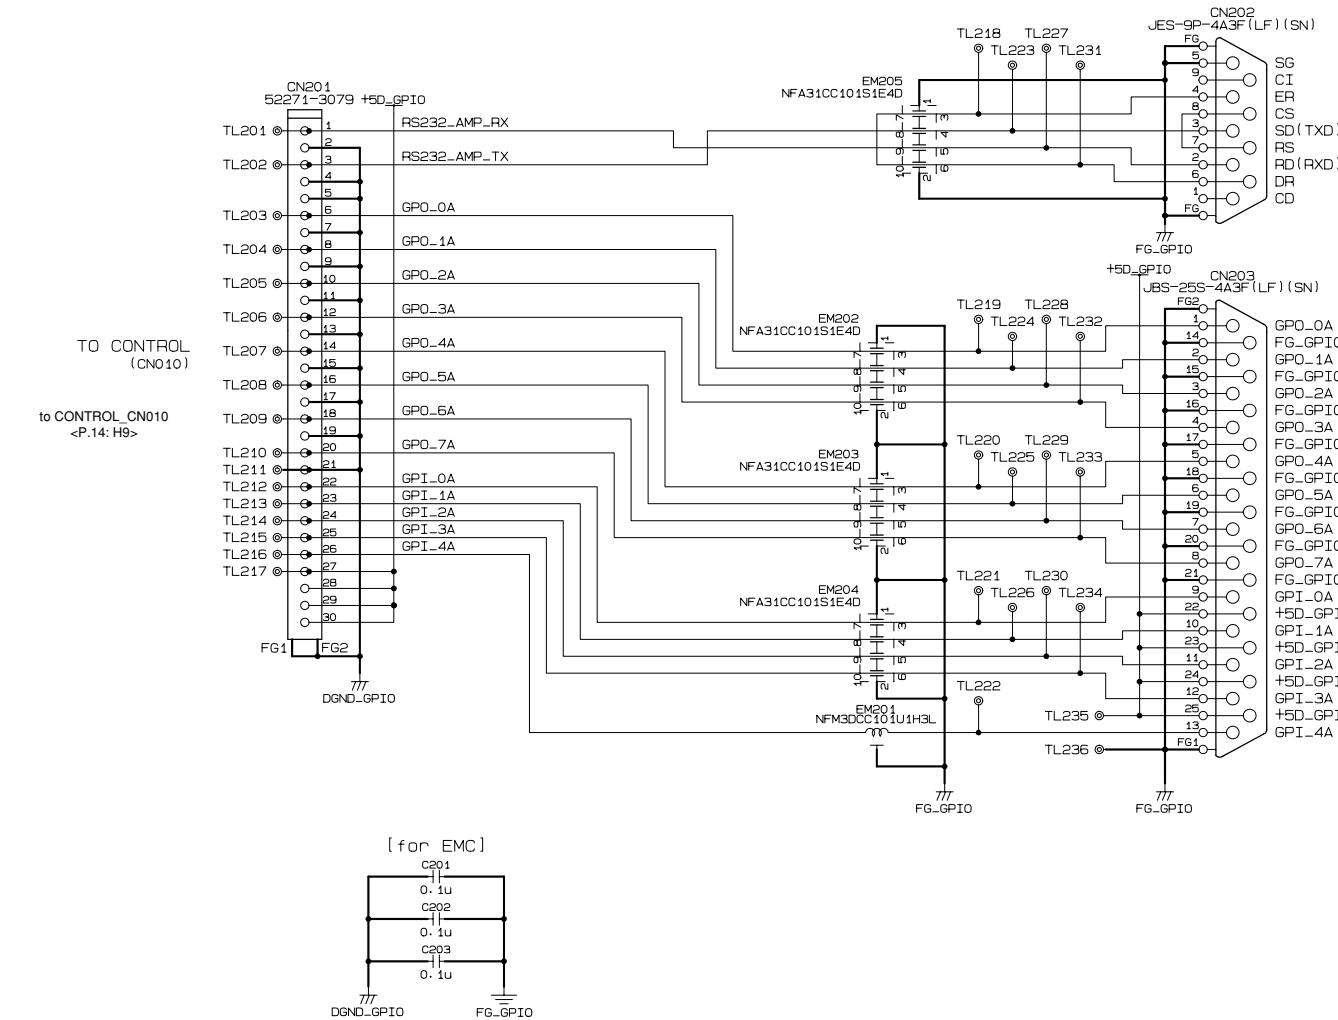

Note:  
 Capacitor (no mark): Multilayer Ceramic Chip Capacitor  
 Resistor (CR): Fixed Thick Film Chip Resistor 3216  
 Resistor (no mark): Fixed Thick Film Chip Resistor 1608  
 XX: Not installed  
 See parts list for details of circuit board component parts.

## ■ CIRCUIT DIAGRAM 10/15 (RS232-GPI)
