## INTRODUCTION

The Model 990 tube tester is one of the few compact tube testers which include all full sized tube test facilities in a miniature sized package.

The basic test is the industry-approved Dynamic Cathode Emission, supplemented by a sensitive leakage-shorts check. Your Model 990 features the special, unique, open-circuit slide-switch Meter Selection System which frees any and all multiple element terminations. Your Model 990 is therefore, one of the few truly obsolescence-proof tube testers now available in the economy price class!

The Cathode Emission test circuit uses pre-selected loads and voltages and subjects multi-section tubes to individual tests where one overall test would not reveal a questionable condition in one section.

## FUNCTION OF PANEL COMPONENTS

1. SOCKETS: The eight panel sockets include all the up-to-date sockets required for modern up to date testing. Note that although the Magnoval and Novar sockets are identical in configuration the larger pin diameter of the Magnoval tube as compared to the Novar tube require separate sockets for both types in the interest of long socket life.

2. METER: The 3-1/2" wide vision meter incorporates a separate 3 color arc for diode testing. The 0-100 linear scale is included for direct comparison readings between the same-type tubes.

## SWITCHES X - Y - Z

3. SWITCH X: 12 position FILAMENT SELECTOR picks out one filament termination and feeds it on to the "FIL VOLTS" switch. It also shorts all unselected terminations to circuit ground.

**SWITCH Y:** 9 position "FILAMENT VOLTS". Switch selects the pre-determined filament voltage for all tubes.

**SWITCH Z:** 8 position combination Meter Sensitivity switch and series load/voltage selector.

"TEST-SHORTS" Spring-return slide switch. When this switch is pushed to the "TEST" position it switches the anode or cathode (which has been preset by one or more of the white push button switches) in to the metering circuit for the Cathode Emission Test. When it is left in the "Shorts" position it connects the preset element to the neon shorts/leakage-indicating circuit.

**4. TWELVE WHITE 3-POSITION SLIDE SWITCHES:** Each of these numbered white slide switches controls the corresponding numbered contact on all sockets. For example, Slide Switch No. 2 connects to contact No. 2 of the Compactron Socket, the Octal Socket and all other sockets.

- When the switches are in the "NORM" position, each element is connected on to the "FIL SELECTOR" Switch.
- When a switch (or switches) is thrown to the "OPEN" position the corresponding tube element is open-circuited.
- When the switch (or switches) is thrown to the "TEST" row the corresponding tube element is thrown into either the "SHORTS" indicating circuit or into the Cathode emission measuring circuit (dependent upon the position of the "TEST-SHORTS" slide button at the lower right of the panel).

**5. GRID CAP LEAD:** Connects internally to numbered circuit 11.

**6. SHORTS-LEAKAGE NEON LAMP.** Faint or bright neon glow indicates a short or leakage up to approximately 1 megohm between the element thrown by the white lever button up to the "TEST" position and all other elements.

## **TEST PROCEDURE**

**FIRST....** Make sure that all 12 white slide buttons are down in the "NORM" (normal) position!

**THEN.... BEFORE** plugging the tube into the appropriate socket....

1. Look up the tube type in the data section of this book and set switches "X", "Y", "Z" to the positions listed in the data.

2. Set the white slide button or buttons to the "TEST" row as indicated under the heading "TEST" in the data.

3. If there are buttons listed under the "OPEN" in the data, then set those buttons to the "OPEN" position (middle setting of the white slide buttons).

**THEN, AND ONLY THEN....** plug the tube into the appropriate socket in the panel. If the tube has an overhead cap, then attach the grid cap connector to the cap.

Note that the "Magnoval" socket and the "Novar" socket look identical. The contact clips, however, are different and a Magnoval Tube should never be plugged into the Novar socket. For this reason, all Magnoval tubes are indicated as "Mag" next to the tube on the data.

On the other hand no harm is done if a Novar tube is plugged into a Magnoval socket, with the exception that the connections may be a bit loose due to the different sizing between the Novar tube pins and Magnoval socket clips. Novar tubes, therefore, really should be plugged into the Novar socket.

1. The tube is now automatically set up to reveal cathode shorts. After the tube has heated (usually several seconds) the tube should be lightly tapped with the finger while watching the "Shorts/Leakage" neon lamp for a glow. The tapping will usually show up intermittent short conditions. A short indication will show a cathode-to-grid shorts/leakage or a cathode-to-filament short/leakage. These leakage paths are usually the most troublesome leakage paths in the actual used circuit.

If shorts or leakage are indicated, the tube should be discarded without further testing.

2. If no shorts are indicated, press the "TEST" slide switch at the lower right of the panel and read the meter.

If the tube is a Diode or Rectifier, the data will indicate that the meter is to be read on the "DIODES" arc instead of the main arc.

3. If more than one listing appears in the data for a particular tube, this means that the tube is a multi-section and, therefore, more than one test is to be performed just as though you were testing two or more separate tubes.

4. The test is now complete. Remove the tube and rotate "Y" back to "PWR. OFF". Snap the white slide button, or buttons, back to "NORM" position, ready for the next tube to be tested.

\*\*\*\*\*

### SHORTS/LEAKAGE NOTES

As noted previously, the shorts test reveals shorts or leakage between Cathode (when the tube being tested is cathode-type) and grid, as well as Cathode and Filament. Practically all shorts/leakage trouble relates to these elements.

However, if the operator wishes to examine a tube in further detail he may proceed as follows:

Any white button which is thrown to the "TEST" row automatically connects its corresponding numbered tube element into the neon-indicating shorts-test circuit.

This element is then being short/leakage tested against any and all other elements.

For example: if, in a triode, the plate element is No. 4.... then the white button No. 4 would be thrown to "TEST" position and the neon lamp would automatically reveal shorts/leakage between plate and all other elements.

### "INTERNAL CONNECTION" NOTE

Many tubes have unused pins which can be used by the tube manufacturer as internal structural support and may, therefore, be internally connected to any tube element. Such pins are usually indicated in the Receiving Tube Manuals as "IC", meaning "Internal Connection".

In the 990 the test problems introduced by these "IC's" are eliminated by throwing the white buttons corresponding to these "IC's" to the "OPEN" position, thereby eliminating cross-connections.

SEE REAR OF BOOK FOR PARTS LIST AND SCHEMATIC.

## MODEL 990

### REPLACEMENT PARTS LIST

<u>Description</u>	<u>Part Number</u>
470 ohm 1/2w 10% Resistor	1-0-10
3.9k ohm 1/2w 10% Resistor	1-0-20
10k ohm 1/2w 10% Resistor	1-0-33
1500 ohm 1/2w 10% Resistor	1-0-40
820 ohm 1/2w 10% Resistor	1-0-41
1 Megohm 1/2w 10% Resistor	1-0-45
330 ohm 1/2w 10% Resistor	1-0-49
.01 Mfd. 600V. 10% Capacitor	3-1-18
100 Mfd. Electrolytic Capacitor 10%	3-4-9A
Spring Return "Shorts-Test" Slide Switch	6-1-2
3 Position White-Button Slide Switch	6-1-9
2 Pole 10 Position "Y" Switch	6-2-28
1 Pole 12 Position "X" Switch	6-2-61
8 Position "Z" Switch	6-2-62
Octal Socket	8-1-1
Nuvistor - 5 Pin Socket	8-1-15
9-10 Pin Socket	8-1-17
12 Pin Compactron Socket	8-1-18
Decal Socket	8-1-25
7 Pin Miniature Socket	8-1-29
Novar Socket	8-1-26
Magnoval Socket	8-1-40
Transformer	10-1-30
Meter 1 Ma., 950 ohms	11-1-26
Case - Gray Plastic	14-4-5
Knob	15-1-31B
Ne-2 Neon Bulb	17-1-2
Diode	18-1-1
Line Cord	22-1-3
Grid Clip	27-1-3

**TESTING & CALIBRATION**

# Model 990 TUBE TESTER

## TEST PROCEDURE

ELECTRONICS CORPORATION

manufacturers of quality electronic products

Mineola, New York 11501

## TEST PROCEDURE

CAUTION: Dangerous voltages may be present at the tube sockets and/or at the grid clip during operation. Do not touch the metallic portion of these parts while the TESTER is connected to the power line. Always disconnect the power cord before taking the wired panel out of the case.

### CHECK    STEP

#### I. INITIAL SET UP

- ( ) 1. Set slide switches number 1 through 12 at NORM.
- ( ) 2. Set knobs: X at no. 1 position.  
Y at PWR OFF position.  
Z at No. 1 position
- ( ) 3. Plug line cord into a 110-120 volt, 50-60 Hz power supply.

#### II. SHORTS TEST

- ( ) 1. Turn knob Y to position A. SHORTS/LEAKAGE neon should not light. Refer to TROUBLE SHOOTING GUIDE in case of difficulty in obtaining the correct results.
- ( ) 2. Set slide switches numbers 1 through 12, one at a time, from NORM to TEST then back to NORM. The neon indicator should not light in each instance.
- ( ) 3. Insulate the 15K ohms 1W 10% test resistor (brown-green-orange-silver) by bending one lead in the opposite direction and inserting the resistor into the large plastic sleeving as shown in Fig. 2. Cut the resistor leads evenly approximately 1/4" from the sleeve. Manipulate the test resistor by holding the insulated portion. Do not touch the exposed leads while applying the test resistor to the panel.
- ( ) 4. Check for the correct SHORTS/LEAKAGE indication with each of the following test set-ups. (Set switch Y at A, switch Z at 1 during this test).

CHECK    STEPTEST SET-UP

	CHECK	STEP	INSERT TEST RESISTOR INTO COMPACTRON PIN NUMBERS	SWITCH X SETTING	SET SWITCH TO TEST POS. (ALL OTHERS AT NORM)	SHORTS/LEAKAGE
						INDICATOR
( )	a.	1-2 (Fig. 3)		1	1	ON
( )	b.	1-2		1	1,2	OFF
( )	c.	1-2		2	2	ON
( )	d.	3-4		3	3	ON
( )	e.	3-4		3	3,4	OFF
( )	f.	3-4		4	4	ON
( )	g.	5-6		5	5	ON
( )	h.	5-6		5	5,6	OFF
( )	i.	5-6		6	6	ON
( )	j.	7-8		7	7	ON
( )	k.	7-8		7	7,8	OFF
( )	l.	7-8		8	8	ON
( )	m.	9-10		9	9	ON
( )	n.	9-10		9	9,10	OFF
( )	o.	9-10		10	10	ON
( )	p.	11-12		11	11	ON
( )	q.	11-12		11	11,12	OFF
( )	r.	11-12		12	12	ON

**III LOAD VOLTAGE TEST**

(Switches nos. 1 through 11 at NORM, switch no. 12 at TEST, X at 12, Y at A, Z at 1, test resistor in 11-12; all of these settings carried from the previous test).

Hold main TEST/SHORTS switch (S13) to TEST position and check for the correct meter indication on the 0-100 scale for each of the following X, Y, and Z combinations.

		<u>X</u>	<u>Y</u>	<u>Z</u>	APPROXIMATE * METER READING
( )	1.	12	A	1	5
( )	2.	12	A	2	13
( )	3.	12	A	3	24
( )	4.	12	A	4	77
( )	5.	12	A	5	27
( )	6.	12	A	6	66
( )	7.	11	H	7	58
( )	8.	11	J	7	0

\*Readings may vary  $\pm$  20% from those shown. However, they should progressively increase from Steps 1 thru 4, and from Steps 5 to 6.

CHECK    STEPTEST SET-UP**IV FILAMENT VOLTAGE TEST**

(Switches 1 through 11 at NORM, switch 12 at TEST, X at 11, Y at J, Z at 7, test resistor in 11-12; all of these settings carried from the previous test).

Hold main TEST/SHORTS switch (S13) to TEST position and check for the correct meter indication on the 0-100 scale for each of the following X, Y, and Z combinations:

		X	Y	Z	APPROXIMATE * METER READING
( )	1	11	J	7	0
( )	2	11	H	7	57
( )	3	11	G	7	85
( )	4	11	F	7	100
( )	5	11	F	4	35
( )	6	11	E	4	55
( )	7	11	D	4	60
( )	8	11	C	4	65
( )	9	11	B	4	70
( )	10	11	A	4	0

\* Readings may vary  $\pm$  25% from those shown. However, they should progressively increase from Steps 1 thru 4, and from Steps 5 thru 9.

Release main TEST switch (S13), remove test resistor, reset switch #12 to NORM, X to 1, Y to PWR OFF, and Z to 1.

**V DYNAMIC TEST**

Test a few tubes of known quality by following the test procedure as outlined in the INSTRUCTION MANUAL. Try to select a variety of tubes which will test out each of the tube sockets, and, the grid clip connector. Tubes that are known to be defective should test BAD and good tubes should test GOOD.

**CABINET ASSEMBLY**

Disconnect the TESTER from the power line and fasten the panel into the case by mounting the three #6-32 x 1/4" screws previously removed in Step 2 of the UNPACKING INSTRUCTIONS.

## TROUBLESHOOTING GUIDE

<u>STEP</u>	<u>SYMPTOM</u>	<u>CHECK</u>
II - 1	SHORTS/LEAKAGE INDICATOR LIT METER GOES OFF SCALE	Switch S1-16, neon NE2, resistor R1, capacitor C1. All point-to-point wiring
II - 2	SHORTS/LEAKAGE INDICATOR LIT WITH ANY SWITCH IN THE TEST POSITION  SWITCH DOES NOT MOVE FROM NORM TO TEST	Short between the respective socket pin and adjacent pins(all sockets) respective switch.  Clearance of wires under switch button
II-4a,b,c	WRONG INDICATION	Socket V4 pins 1 and 2, switches S1-2-13-16, neon NE2, resistor R1, capacitor C1.
II-4d,e,f	WRONG INDICATION	Socket V4 pins 3 and 4, switches S3-4-13-16.
II-4g,h,i	WRONG INDICATION	Socket V4 pins 5 and 6, switches S5-6-13-16.
II-4j,k,l	WRONG INDICATION	Socket V4 pins 7 and 8, switches S7-8-13-16.
II-4m,n,o	WRONG INDICATION	Socket V4 pins 9 and 10, switches S9-10-13-16.
II-4,p,q,r	WRONG INDICATION	Socket V4 pins 11 and 12, switches S11-12-13-16.
III - 1	NO INDICATION ON METER	Meter M1, switches S13-14, resistors R3-4-8-9, diodes D1-2, trans T1.
III - 2	INCORRECT METER READING	Resistor R5, switch S14.
III - 3	INCORRECT METER READING	Resistor R6, switch S14.
III - 4	INCORRECT METER READING	Resistor R7, switches S14.
III - 5	INCORRECT METER READING	Resistor R2, switch S14, trans T1.
III - 6	INCORRECT METER READING	Switch S14.
III - 7	INCORRECT METER READING	Switch S14-15.
IV-1 thru 10	INCORRECT METER READING	Switch S14-15, trans T1. If an AC voltmeter is available, check the filament voltages across the test resistor for each switch <u>Y</u> position. They should be the values indicated on the schematic diagram $\pm 10\%$
V	INCORRECT RESULTS FROM ANY SOCKET	Wiring of respective socket
