First Printing OCT 1979

WARNING

THE FOLLOWING SERVICING INSTRUCTIONS ARE FOR USE BY QUALIFIED PERSONNEL ONLY. TO AVOID PERSONAL INJURY, DO NOT PERFORM ANY SERVICING OTHER THAN THAT CONTAINED IN OPERATING INSTRUCTIONS UNLESS YOU ARE QUALIFIED TO DO SO.

WARRANTY

Tektronix warrants to the original purchaser that this product and options, excluding customer supplied equipment, is free from defects in materials and workmanship, under normal use, for a period of one (1) year from the date of shipment. Tektronix will, at its option, repair or replace the product if Tektronix determines it is defective within the warranty period, and it is returned, freight prepaid, to a Tektronix Service Center.

In the forty-eight (48) contiguous United States and the District of Columbia, and in other areas where Tektronix normally has service available for this product, Tektronix will provide on-site warranty service at no charge during the first ninety (90) days from the date of shipment.

Tektronix shall be under no obligation to furnish warranty service if:

- a. Attempts to repair or service the product are made by personnel other than Tektronix service representatives.
- b. Modifications are made to the hardware or software by personnel other than Tektronix representatives.
- c. Damage results from connecting the product to incompatible equipment.

There is no implied warranty of fitness for a particular purpose. Tektronix is not liable for consequential damages.

Section 1

GENERAL DESCRIPTION

INTRODUCTION

The 067-0902-00 System Test Fixture (Figure 1-1) is an aid in troubleshooting microprocessor hardware. The System Test Fixture must be used with a test fixture interface (personality) board that is designed specifically for the system under test. The personality board defines what the System Test Fixture can do and allows it to be connected to the system under test.

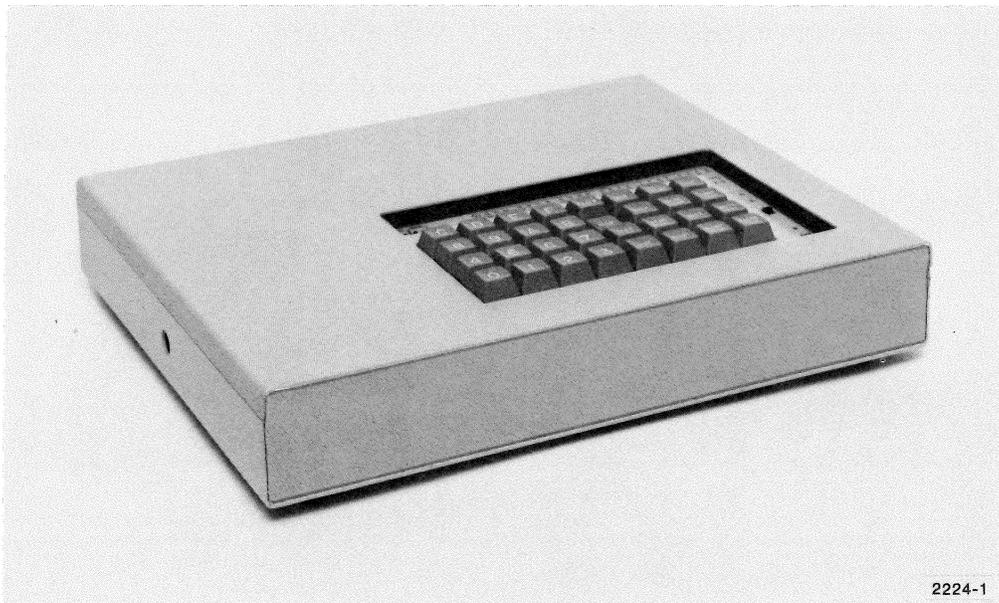

Figure 1-1. 067-0902-00 System Test Fixture.

DESCRIPTION

The System Test Fixture has a keypad, LEDs to display information, and some control switches. The function of the keys and LEDs is set by the personality board connected to the test fixture. Refer to the manual on the personality board for a description of keypad functions, LED meanings, and how to use the Fixture board.

GENERAL DESCRIPTION

The 067-0902-00 System Test Fixture uses common circuitry built around a 6800 microprocessor. The fixture's circuit board contains the 6800 chip, clock circuitry, address and data bus buffers, RAM, keypad decoder, and LEDs. Memory space for the 6800 is divided as shown in Figure 1-2. The function of much of memory space depends on the attached personality board.

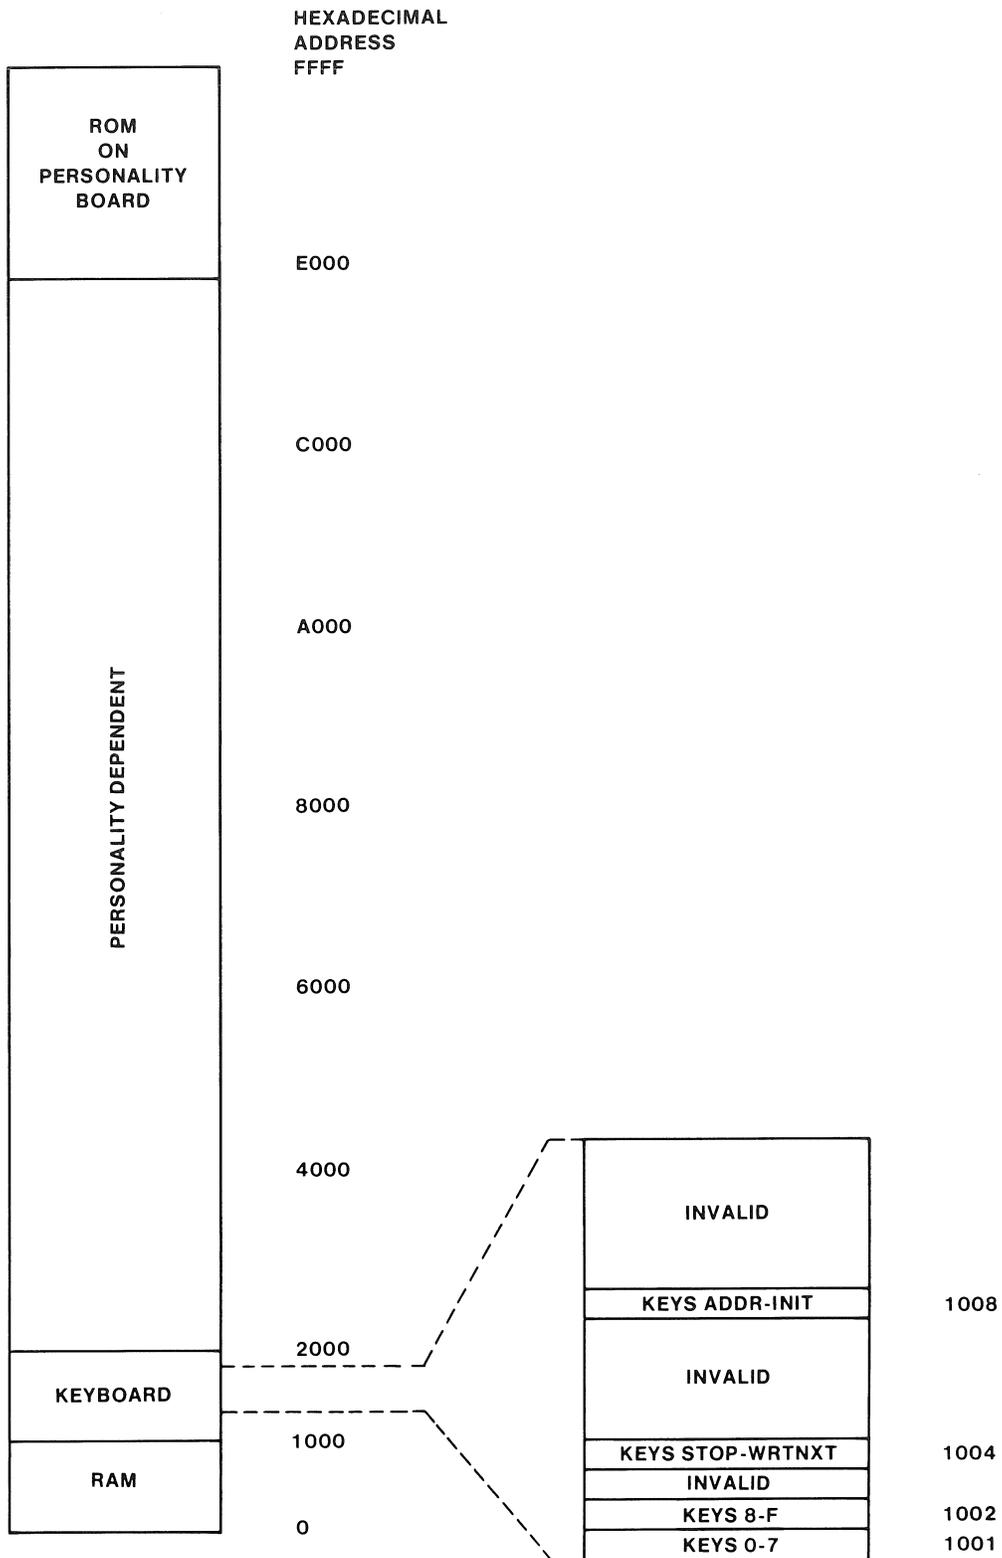

Figure 1-2. Memory Address Space Utilization.

Section 2
SPECIFICATIONS

PERFORMANCE

The 067-0902-00 System Test Fixture will be part of a unit. The complete unit will check out a microprocessor-based system.

Environmental Limits

The Test Fixture is used in an indoor environment and requires a static-free workstation for servicing. Table 2-1 lists the Test Fixture environmental limits.

Table 2-1
ENVIRONMENTAL LIMITS

Temperature	
Operating	10 to 40 degrees C (50 to 104 degrees F)
Non-Operating	-40 to 65 degrees C (-40 to 113 degrees F)
Altitude	
Operating	to 4,500 M (15,000 ft)
Non-Operating	to 15,000 M (50,000 ft)
Humidity	
Operating	80% relative humidity, non-condensing
Non-Operating	95% relative humidity, non-condensing
Heat Dissipation	
Operating (average)	approximately 41 BTU/HV (12 watts)

SPECIFICATIONS

Physical

The unit consists of a circuit board (the controller) encased in a mechanical package. Another circuit board (the personality board) is added for the particular system under test. The unit has a 12-key keypad that allows commands to be entered into the system under test; LEDs display the output.

Power

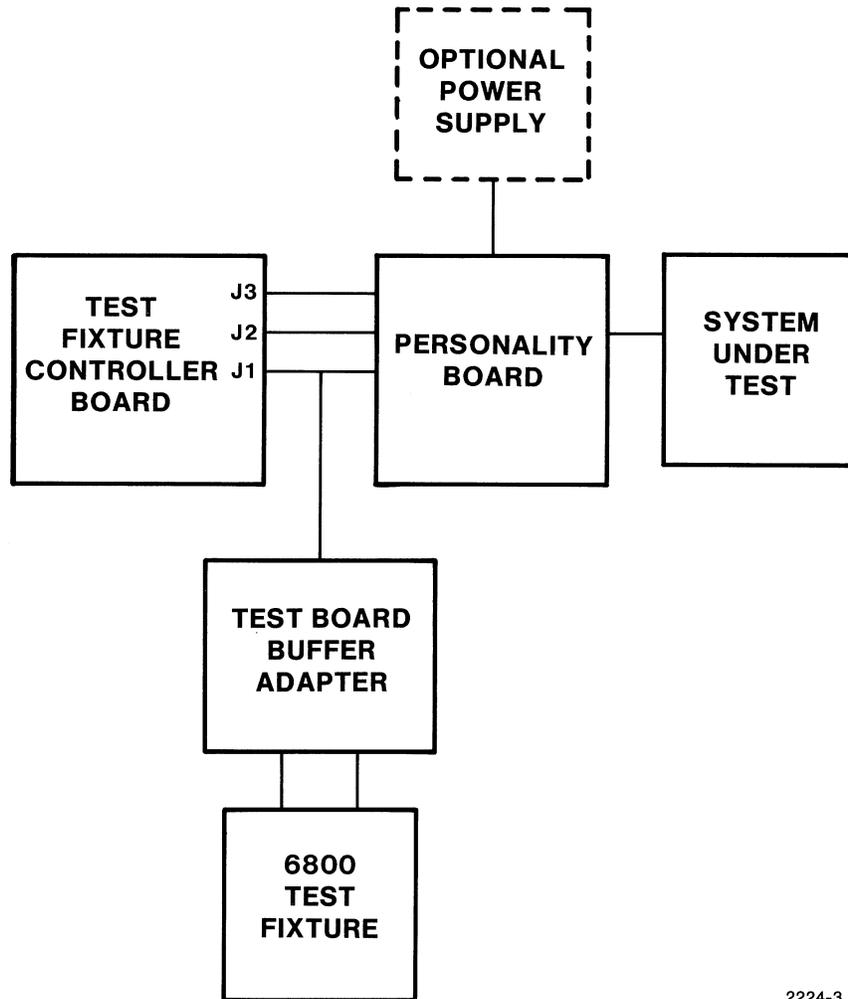

The power is normally supplied by the system under test, but can be supplied by an external source. The requirements are 5V at approximately 2.5A for the Test Fixture Controller. Additional power requirements are dependent on the personality board used in the complete test unit.

Section 3

MAINTENANCE

There are no internal adjustments to the Test Fixture. Routine maintenance of the System Test Fixture consists of an occasional cleaning. If the electronics are to be serviced, it should be done at a static-free workstation.

When the 067-0902-00 System Test Fixture requires repair, the 067-0746-00 System Test Fixture may be used to troubleshoot the 6800-related circuitry. To connect the 067-0746-00, first remove the cable between the 50-pin connectors on the personality board and the 067-0902-00 fixture's circuit board (see Figure 3-1). Substitute a ribbon cable with a loop-through connector cable assembly (175-5087-00) for the removed cable. Attach the loop-through connector to a 067-0811-00 Test Board Buffer Adapter. The 067-0746-00 Fixture's two ribbon cables plug onto the 067-0811-00 Test Board Buffer Adapter. Then use the 067-0746-00 Fixture to test RAM, ROM, and other circuitry. Refer to the manual for the 6800 System Test Fixture for instructions.

2224-3

Figure 3-1. Test Fixture Text Cabling.

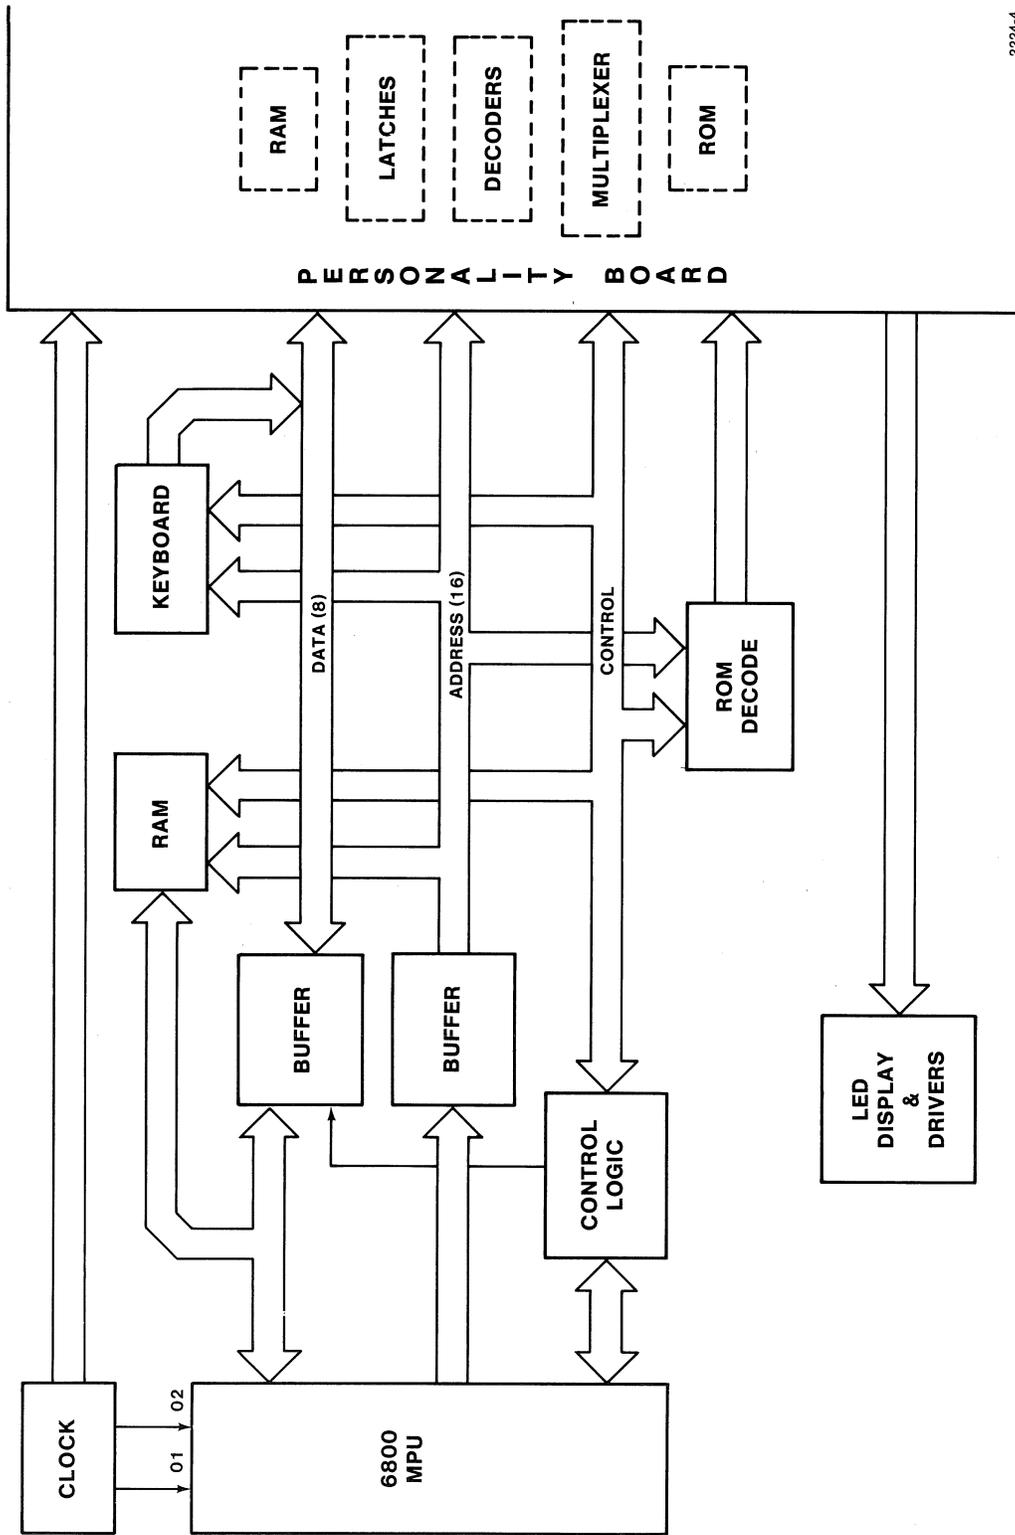

Section 4

THEORY OF OPERATION

The 067-0902-00 System Test Fixture is the controller of a complete test unit. The Test Fixture must be used with a personality board designed for the system under test. Information on the personality board will be found in its own manual.

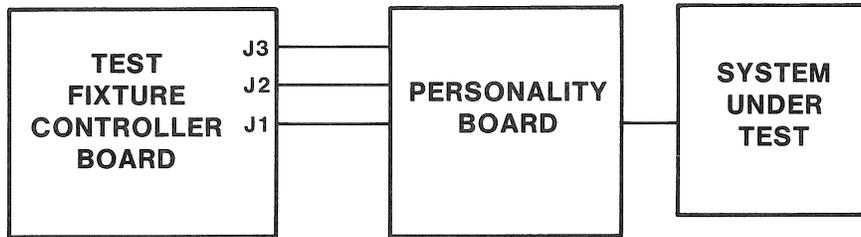

The Test Fixture Controller is composed of a clock, a 6800 microprocessor, latches, LED drivers, decoders, RAM, a keyboard and 66 LEDs for readout. The LEDs are in groups of 32, 24, 6 and 4. The personality board contains the necessary circuitry for the instrument being checked, latches, memory, decoders, ROM and a multiplexer (see Figure 4-1).

The keyboard has 32 keys, 16 for hexadecimal coding and 16 are available for special commands such as STEP, STOP READ, etc. The FUNCTION key operates like a shift key and makes it possible to have another set of 12 functions for the keyboard. A block diagram of a system under test using the System Test Fixture is shown in Figure 4-2.

Section 5 REPLACEABLE PARTS

PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

SPECIAL NOTES AND SYMBOLS

X000 Part first added at this serial number
00X Part removed after this serial number

FIGURE AND INDEX NUMBERS

Items in this section are referenced by figure and index numbers to the illustrations.

INDENTATION SYSTEM

This mechanical parts list is indented to indicate item relationships. Following is an example of the indentation system used in the description column.

```

1 2 3 4 5           Name & Description
Assembly and/or Component
Attaching parts for Assembly and/or Component
-----*-----
Detail Part of Assembly and/or Component
Attaching parts for Detail Part
-----*-----
Parts of Detail Part
Attaching parts for Parts of Detail Part
-----*-----

```

Attaching Parts always appear in the same indentation as the item it mounts, while the detail parts are indented to the right. Indented items are part of, and included with, the next higher indentation. The separation symbol ---*--- indicates the end of attaching parts.

Attaching parts must be purchased separately, unless otherwise specified.

ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

Section 6

DIAGRAMS

Symbols and Reference Designators

Electrical components shown on the diagrams are in the following units unless noted otherwise:

- Capacitors = Values one or greater are in picofarads (pF).
Values less than one are in microfarads (μ F).
- Resistors = Ohms (Ω).

Graphic symbols and class designation letters are based on ANSI Standard Y32.2-1975.

Logic symbology is based on ANSI Y32.14-1973 in terms of positive logic. Logic symbols depict the logic function performed and may differ from the manufacturer's data.

Abbreviations are based on ANSI Y1.1-1972.

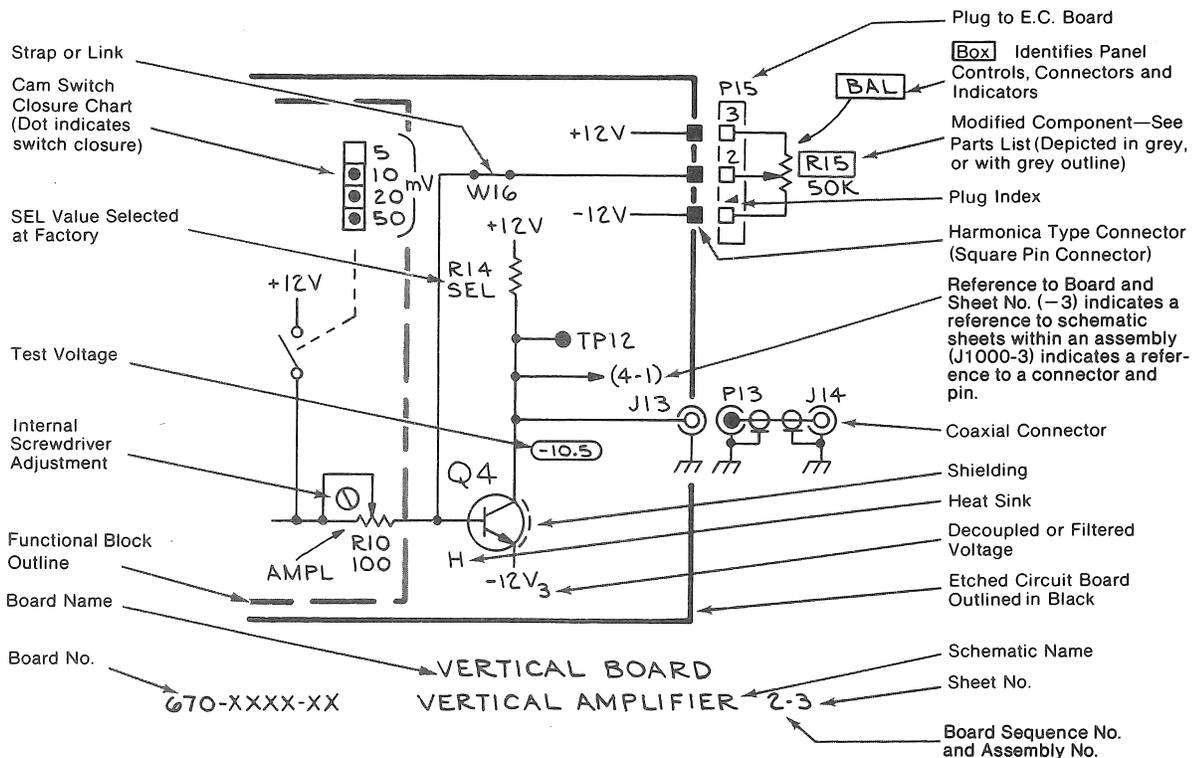

Other ANSI standards that are used in the preparation of diagrams by Tektronix, Inc. are:

- Y14.15, 1966 Drafting Practices.
- Y14.2, 1973 Line Conventions and Lettering.
- Y10.5, 1968 Letter Symbols for Quantities Used in Electrical Science and Electrical Engineering.

The following prefix letters are used as reference designators to identify components or assemblies on the diagrams.

A	Assembly, separable or repairable (circuit board, etc)	H	Heat dissipating device (heat sink, heat radiator, etc)	S	Switch or contactor
AT	Attenuator, fixed or variable	HR	Heater	T	Transformer
B	Motor	HY	Hybrid circuit	TC	Thermocouple
BT	Battery	J	Connector, stationary portion	TP	Test point
C	Capacitor, fixed or variable	K	Relay	U	Assembly, inseparable or non-repairable (integrated circuit, etc.)
CB	Circuit breaker	L	Inductor, fixed or variable	V	Electron tube
CR	Diode, signal or rectifier	M	Meter	VR	Voltage regulator (zener diode, etc.)
DL	Delay line	P	Connector, movable portion	W	Wirestrap or cable
DS	Indicating device (lamp)	Q	Transistor or silicon-controlled rectifier	Y	Crystal
E	Spark Gap, Ferrite bead	R	Resistor, fixed or variable	Z	Phase shifter
F	Fuse	RT	Thermistor		
FL	Filter				

The following special symbols may appear on the diagrams:

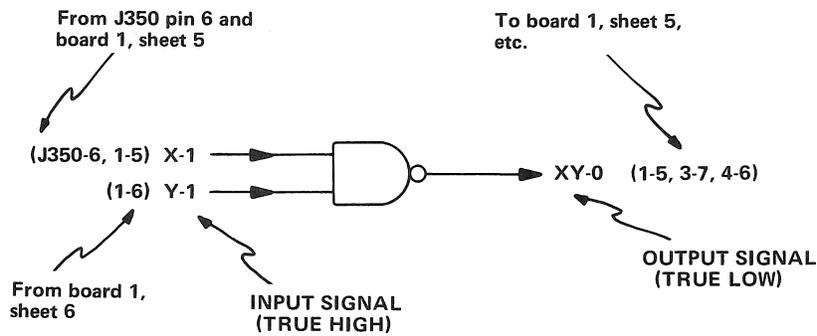

1. TRUE HIGH and TRUE LOW Signals

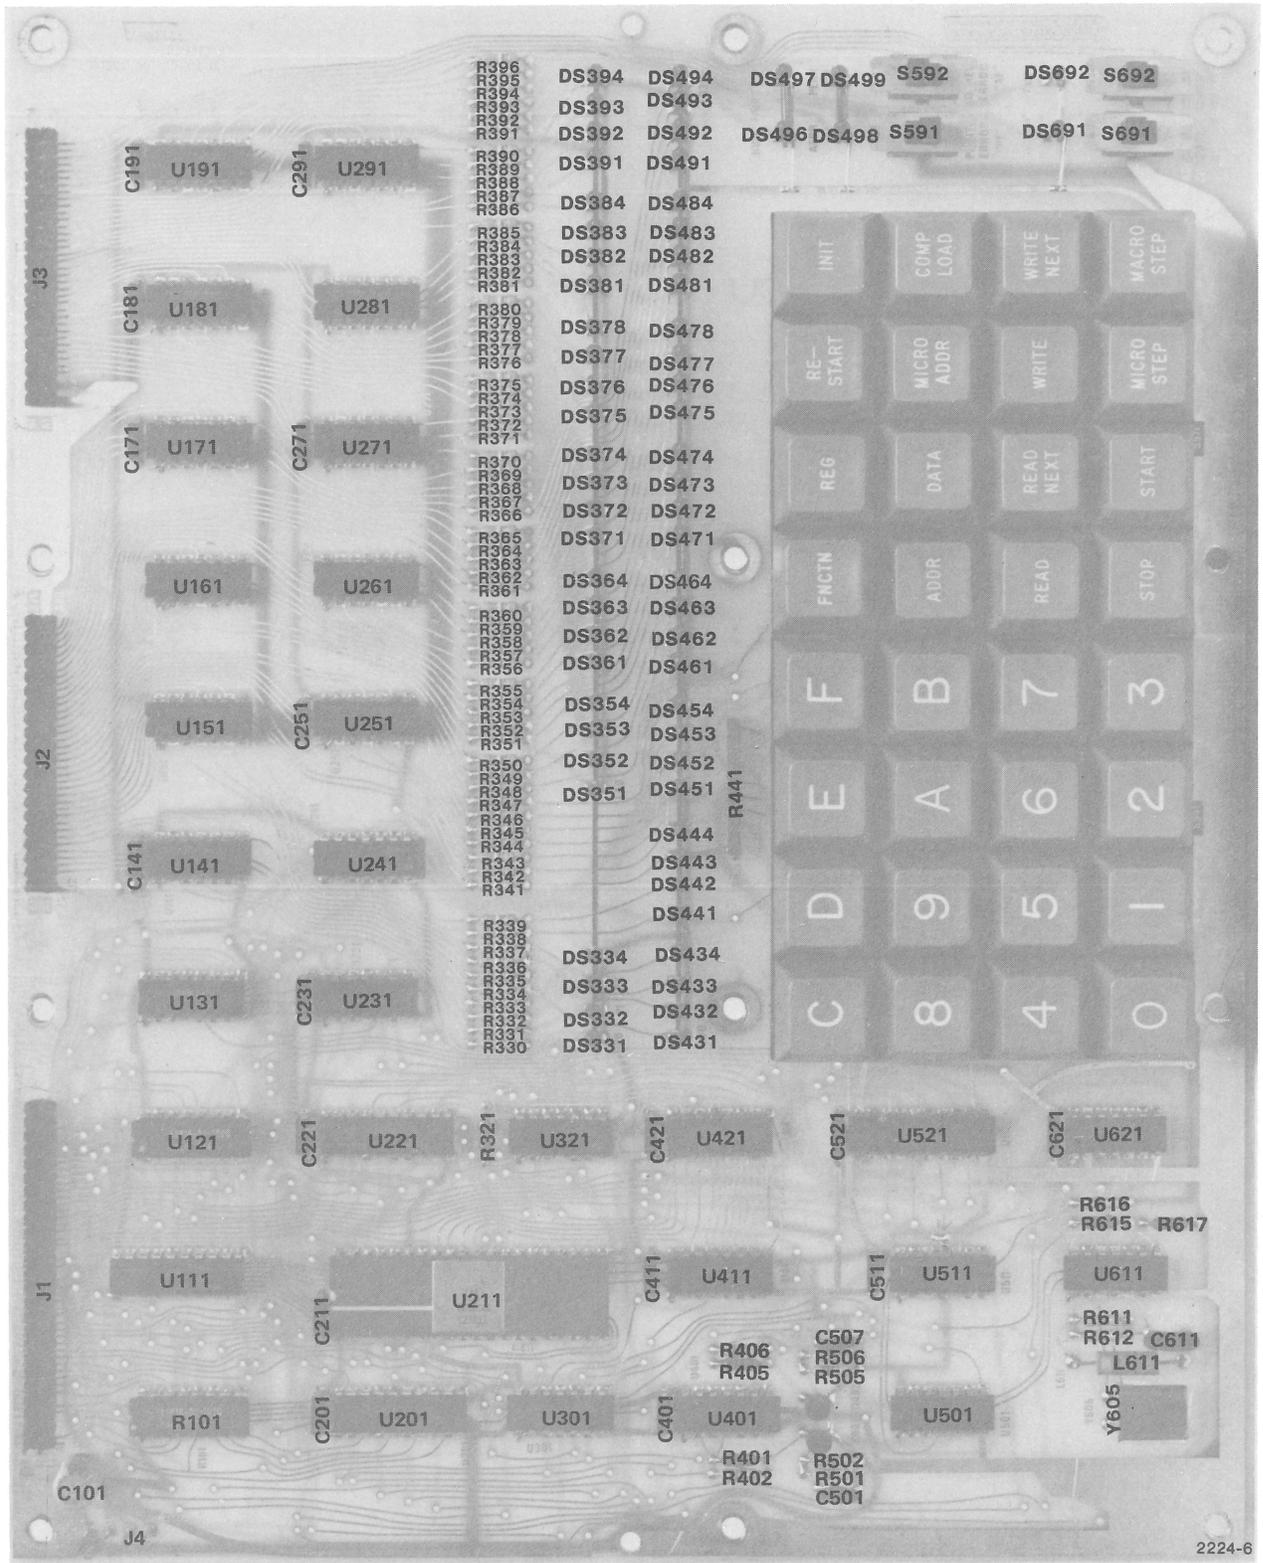

Signal names on the schematics are followed by -1 or -0. A TRUE HIGH signal is indicated by -1, and a TRUE LOW signal is indicated by -0.

SIGNAL-1 = TRUE HIGH
 SIGNAL-0 = TRUE LOW

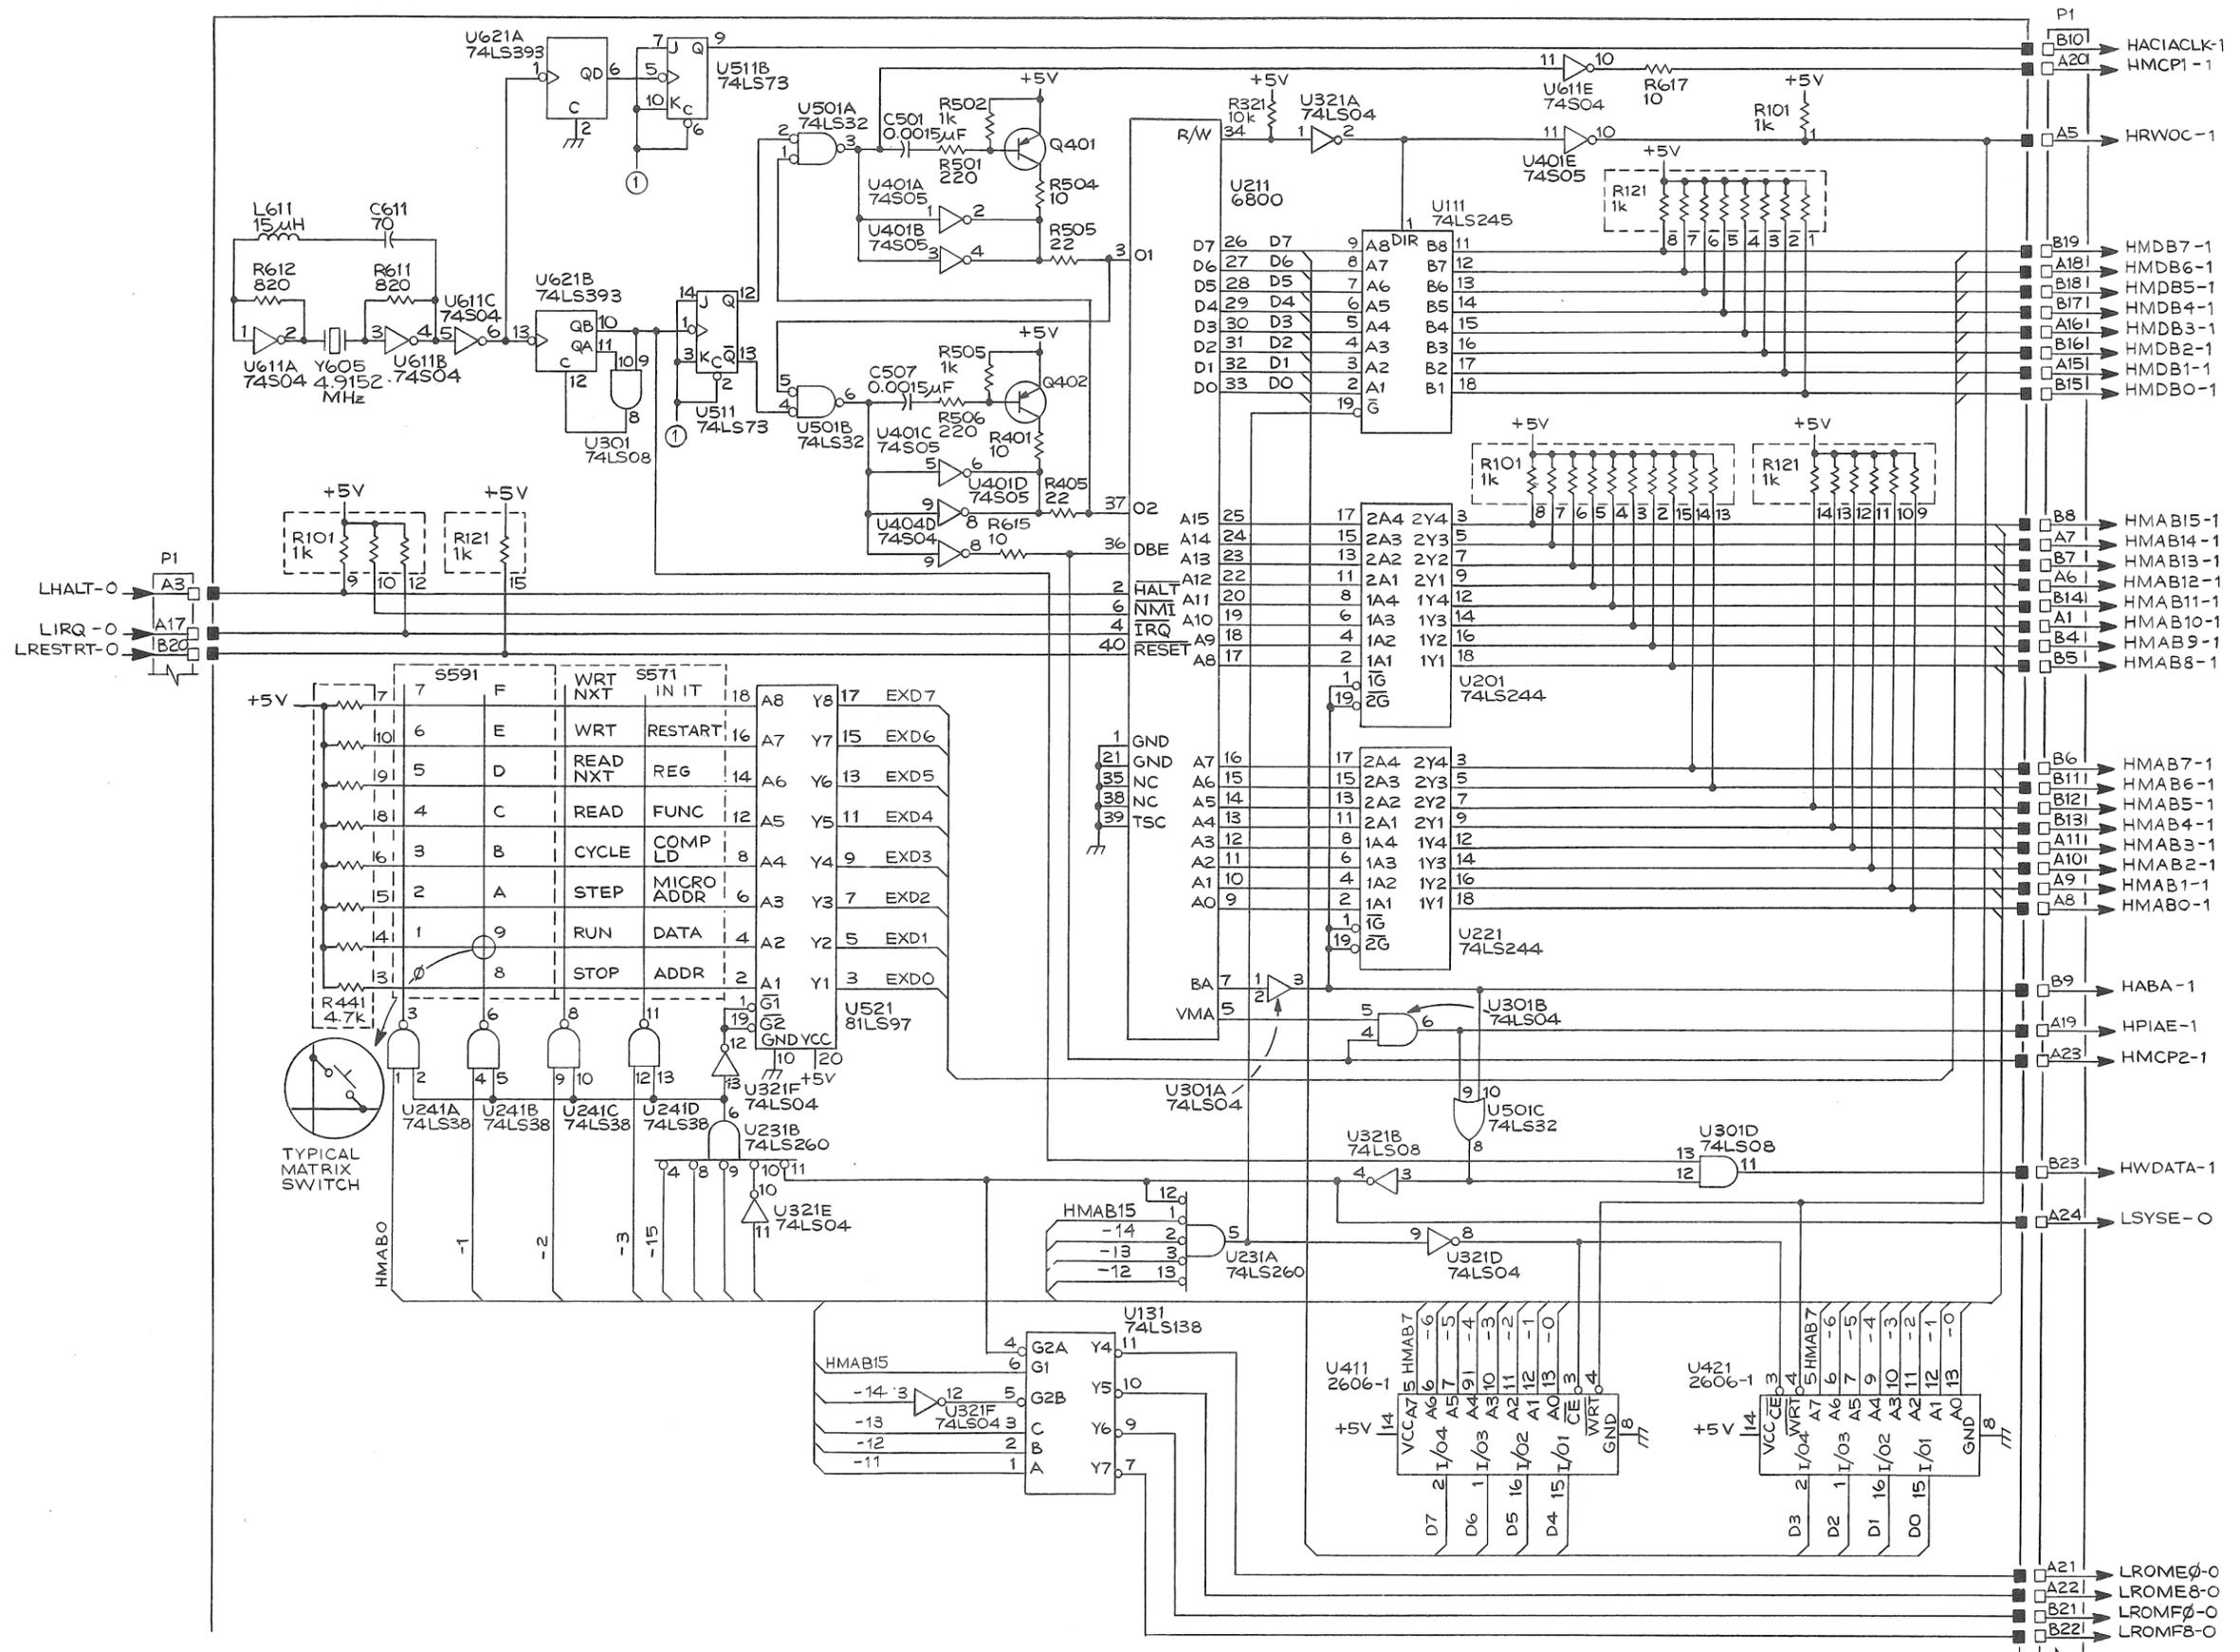

2. Cross-References

Schematic cross-references (from/to information) are included on the schematics. The "from" reference only indicates the signal "source," and the "to" reference lists all loads where the signal is used. All from/to information will be enclosed in parentheses.
