Beaverton, Oregon 97077

Serial Number \_\_\_\_\_

**OEM WARRANTY**  
**COMMUNICATIONS DIVISION**  
**DAC 850E**

The DAC 850E is warranted against defective materials and workmanship under normal use and service for a period of ninety days from date of initial shipment. Tektronix will repair or replace, at its option, those products determined to be defective within the warranty period and returned, freight prepaid, to Tektronix Factory Service, Delivery Station 93-186, P.O. Box 500 Beaverton, Oregon 97077.

Tektronix shall be under no obligation to furnish warranty service if:

- a. Attempts to repair or service the equipment are made by other than Tektronix personnel.
- b. Modifications are made by other than Tektronix personnel.

The foregoing warranty shall be enforceable only by the original buyer and not by the buyer's customer.

There is no implied warranty for fitness of purpose.

# DAC 850E

## Option 3, Option 4, Option 13, and Option 14

### DESCRIPTION

The TEKTRONIX DAC 850E is an 8-bit digital-to-analog converter optimized for digital video processing but capable of operating at a 50-MHz input word rate, and designed for an OEM market. The Option 3 and Option 4 models have been optimized to operate at three and four times subcarrier rate (respectively) in the NTSC system. The Option 13 and 14 models have been optimized to operate at three and four times subcarrier rate (respectively) in the PAL system. The low-pass filter and sin x/x-corrected output amplifiers are flat over the video passband. The advanced design of the DAC 850E provides a clean, monotonic, analog signal without the usual "deglitching" output circuits of more conventional high-speed converters. The DAC 850E does not need to be "matched" to a specific analog-to-digital converter. The DAC 850E can be utilized as a multiplying or external-referenced D/A converter.

The DAC 850E in its option configurations consists of a small Low-Pass Filter board piggy-backed on the larger Converter board. The larger board is 6" X 8", with a dual 40-contact edge connector, with 0.1" spacing, and no parts projecting more than 1" above the main board. Both boards are manufactured with and by UL-approved materials and processes.

### INTERFACE REQUIREMENTS

#### Signal Input Considerations

The DAC 850E requires an 8-bit, parallel, straight binary code (BIN) input format. Logic levels are ECL-compatible; a "high" is -0.96 V to -0.81 V, a "low" is -1.85 V to -1.65 V. Each data input represents one standard ECL load. Bit 0 through Bit 7 inputs are assigned to edge-connector pins 3, 5, 7, 9, 11, 13, 15, and 17 respectively. Bit  $\bar{0}$  through Bit  $\bar{7}$  inputs are assigned to edge-connector pins 4, 6, 8, 10, 12, 14, 16, and 18 respectively. All odd pin numbers are on the component side of the edge connector, with the even numbers on the opposite side.

#### Strobe (or clock) Input Consideration

The input word can be updated at any rate up to 50 MHz. The pulse applied to the differential strobe inputs must be at least 8 ns wide and end at least 8 ns before the next pulse transition. In each Option, the low-pass filter and output amplifier have been optimized for minimum nonlinear distortions at the respective update rates of each system subcarrier multiple.

The strobe inputs at pins 37 and 38 are balanced ECL, terminated in  $100\ \Omega$ , and requiring logic levels of  $-0.96$  to  $-0.81\text{ V}$  to recognize a "high", and  $-1.85$  to  $-1.65\text{ V}$  to recognize a "low". Locations for pulldown resistors for each strobe input are provided on the A1 Converter board in the event that the external system does not pull down on the clock bus lines. (See the schematic diagram and Figure 3, Parts Location illustration.)

#### *NOTE*

*If a TEKTRONIX ADC 820E is being used in the system, and is strobed by a common clock bus, pulldowns ( $100\ \Omega$  to  $-2\text{ V}$ ) already exist on the A/D board and need not be added to the D/A board.*

### **Reference Voltages**

**INTERNAL.** The DAC 850E contains its own highly regulated, internal reference voltage source. When referenced to this internal voltage source, all conversion performance specifications are guaranteed.

**EXTERNAL.** A special external reference voltage input is provided at pin 1 of the edge connector and requires a strap change on the Converter board. (See the schematic diagram and Figure 3, Parts Location Illustration.) In the externally-referenced mode, the DAC 850E can be used as a multiplying D/A converter. In this mode, the conversion specification tolerances cannot be guaranteed.

### **Output Capabilities**

The output signal is bipolar and monotonic over the peak-to-peak full-scale voltage range of  $1.214\text{ V}$ . The resolution is 1 LSB of the 8-bit input code. This can be stated two ways:  $1/255$  equals  $0.4\%$ , or  $1.214/255$  equals  $4.76\text{ mV}$ . Output accuracy is within  $\pm 1/2$  LSB ( $0.2\%$  of full scale, or  $2.38\text{ mV}$ ).

Non-linear distortions in the form of differential phase and gain have been minimized for use in the video passband, especially for applications in color television.

The output signal is dc-offset  $-286\text{ mV}$ , with a  $50\text{ mV}$  adjustable range. Two outputs are provided at pins 59 and 61 of the edge connector. Each output can be terminated in  $75\ \Omega$  and has a return loss of  $-30\text{ dB}$  or greater.

### **Timing Relationships**

See Figure 1. The key timing reference point is the 50% point of the leading edge of the strobe pulse. The data must be present and stable for at least 7 ns before the pulse edge occurs, and must remain stable for at least 1 ns after the pulse edge.

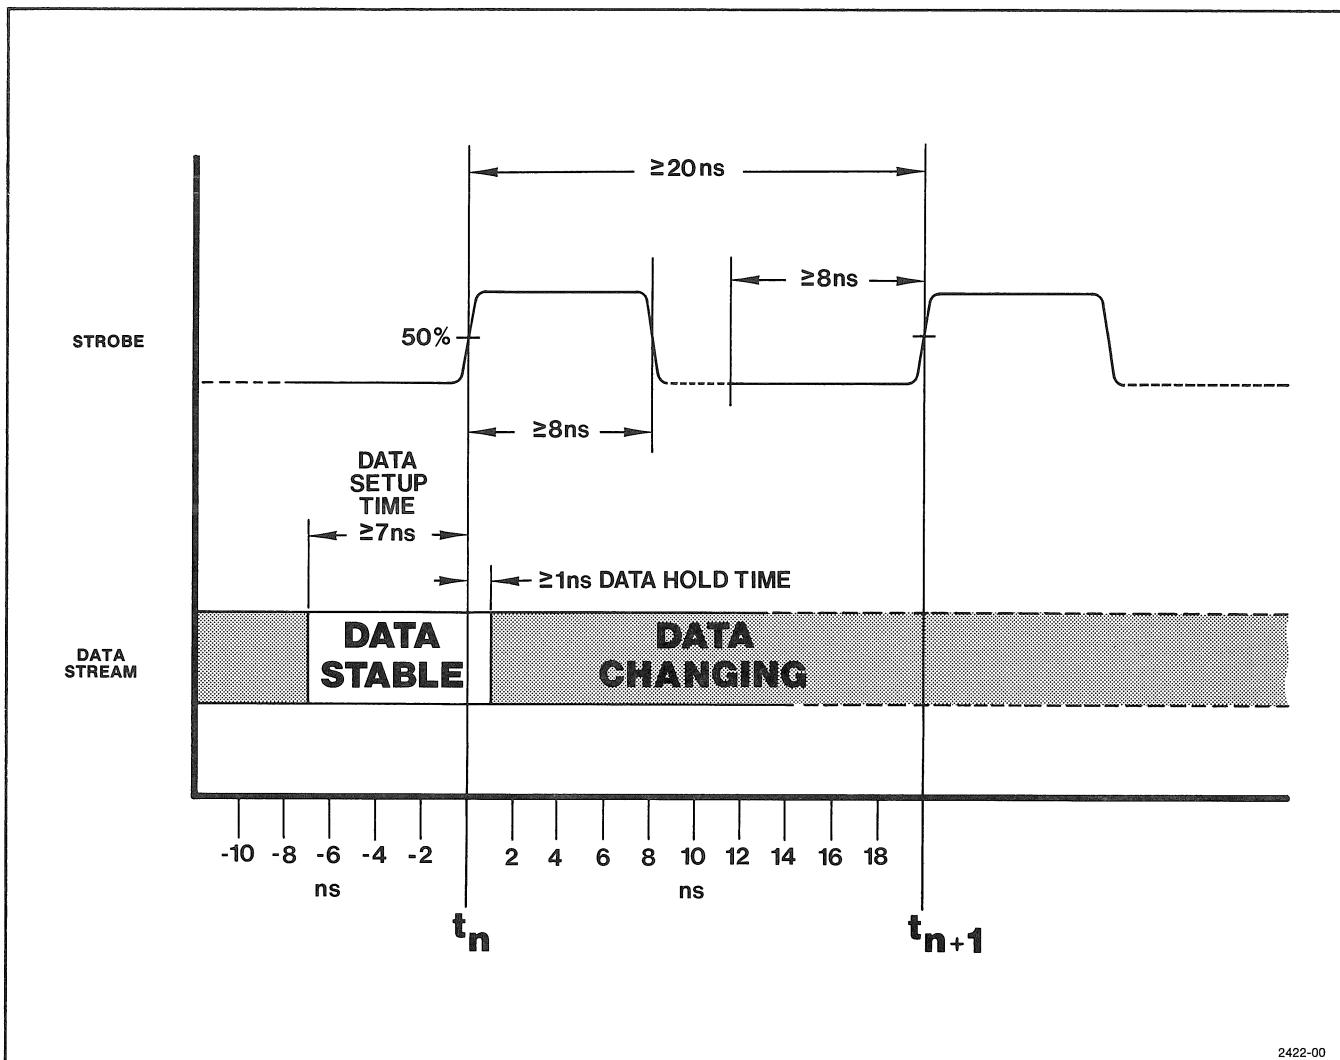

Fig. 1. Data and Strobe Timing for Minimum Pulse Width and Maximum Update Rate.

2422-00

### Power Supply Requirements

The DAC 850E is designed to operate from commonly available analog and digital power supplies of +12 V, -12 V, +5 V, and -5.2 V. A +5 V supply capable of delivering at least 75 mA is required for analog circuits. Power supply lines should be carefully decoupled and as noise-free as possible, especially the +5 V Analog and -5.2 V supplies. Each power supply is named for its nominal value, with the tolerable limits and current delivery capabilities called out in the specification table. No more than 5.3 watts are needed to power the DAC 850E.

## INSTALLATION

### **Thermal Considerations**

The DAC 850E will operate within its stated specification in ambient temperatures ranging from 0° to 60° C. Location within an OEM enclosure should consider convection air flow and temperature rise effect of the physical board orientation and relationship to other system components.

### **Physical Orientation**

The circuit board will benefit from optimum convection air flow when mounted vertically with the edge connector down. Other recommended mounting positions are also vertical on either edge. The worst position would be flat with the component side down.

### **Mechanical Outline**

See Figure 2 for maximum outside dimensions. Note that the dual-40 edge connector has keying slots between pins 25, 26, and 27, 28; 75, 76, and 77, 78. Components have been kept back from the sides of the board to allow mounting using card guides.

### **Connectors**

The following connectors will mate satisfactorily with the DAC 850E dual-40, 0.100"-spacing, edge connector:

<b>Style</b>	<b>Vendor</b>	<b>Tektronix Part Number</b>
0.025" Square Pins	Continental Connector Corporation, K600-100-80WB	131-0626-00
Pierced Tabs	Viking, 3VH40/1JN5	131-1856-00
Zero Insertion Force (with square pins)	AMP 1-530801-3 (3/16" leads)	none

This list is by no means exhaustive. Examination of connector manufacturers' catalog may show other compatible connectors.

## SERVICE

Please review the warranty in force at the time of purchase. For repair and recalibration, End Users should return the DAC 850E to the OEM who supplied their equipment. End Users who purchase directly from Tektronix should return the DAC 850E directly to Factory Service in Beaverton, Oregon 97077.

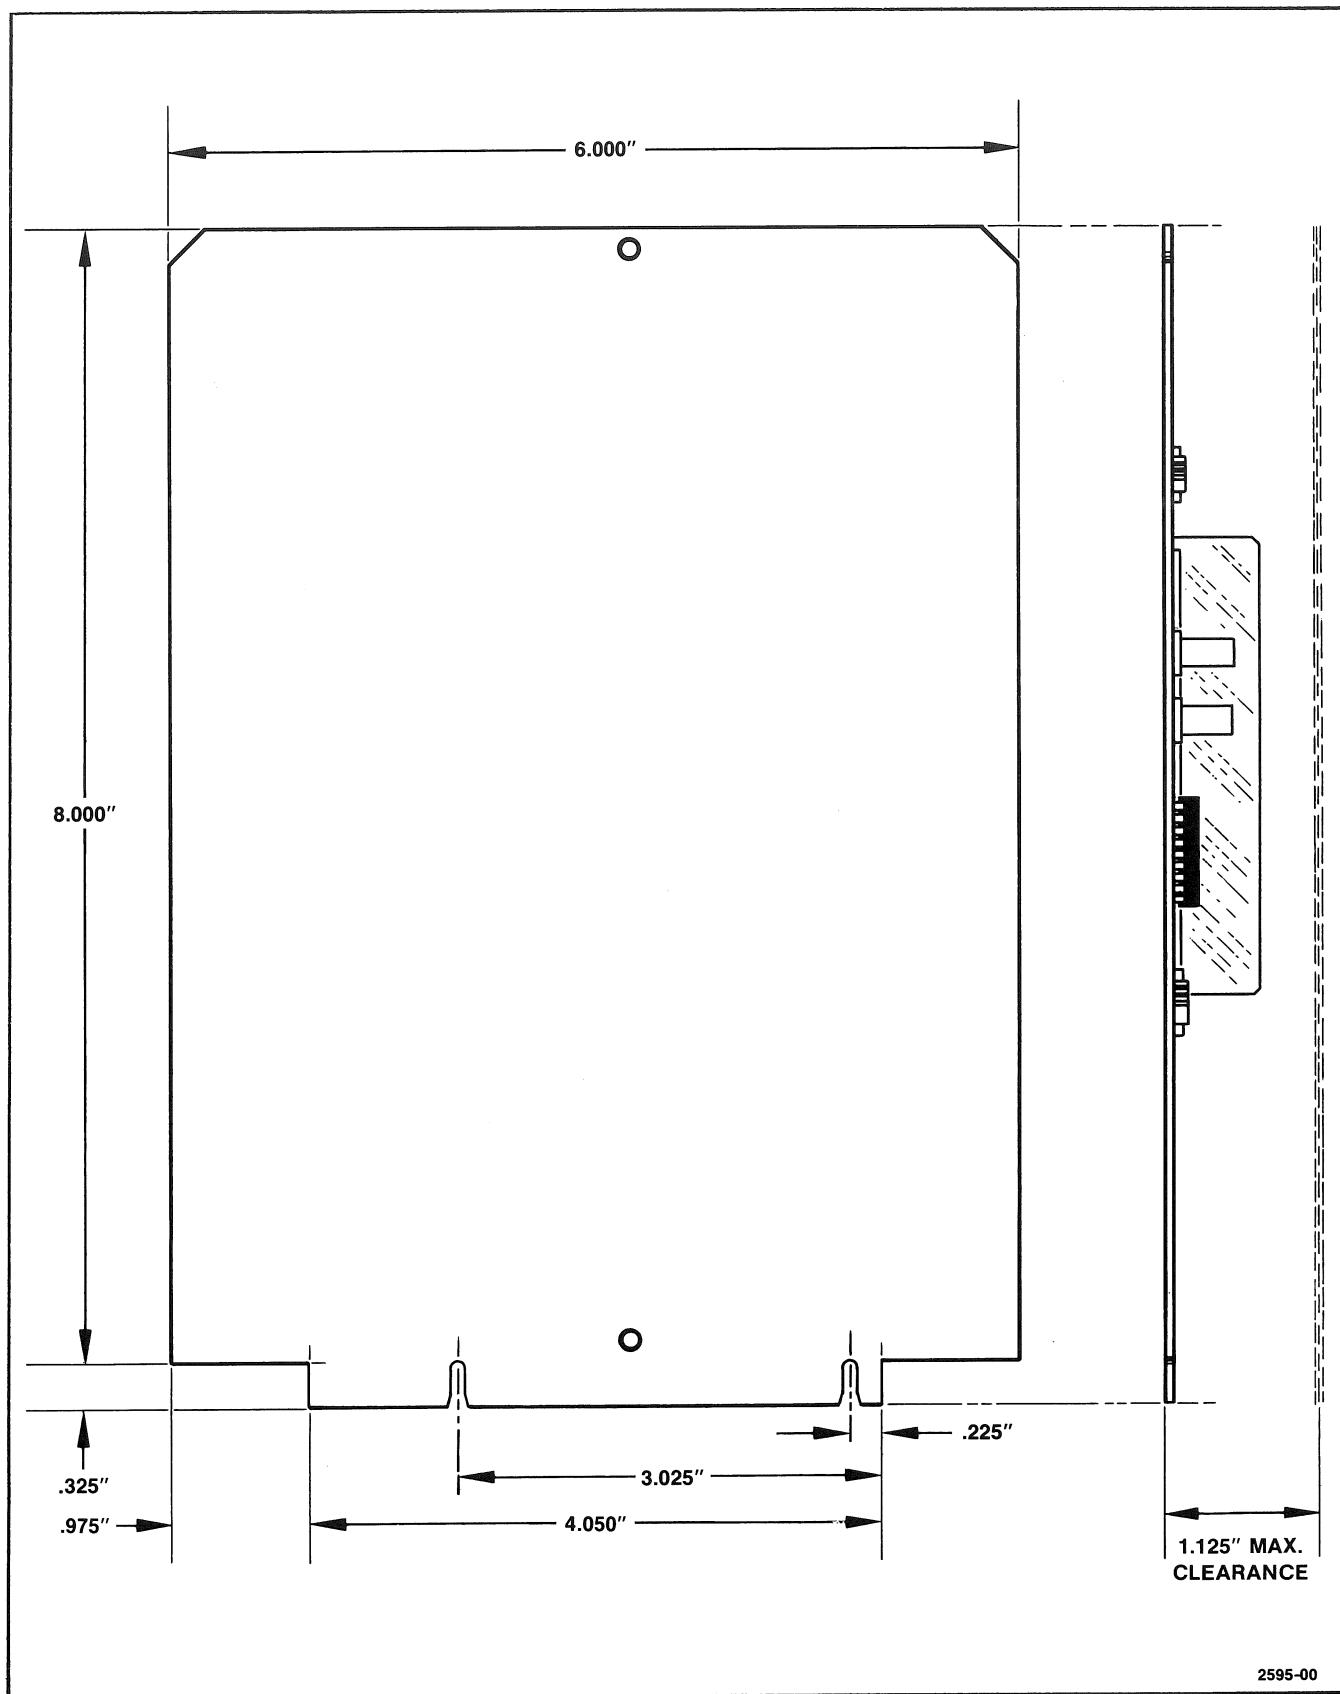

Fig. 2. Circuit Board Dimensions.

## CONNECTOR PIN ASSIGNMENT

(All odd pin numbers are on the component side of the board. All even pin numbers are on the opposite side.)

**SPECIFICATION**

<b>Characteristic</b>	<b>Performance Requirements</b>			
D/A Conversion (Valid for Internal $V_{REF}$ only)				
Resolution	8 bits (1 LSB=0.4% of full scale).			
Accuracy (including Linearity)	$\pm 1/2$ LSB ( $\pm 0.2\%$ of full scale).			
Monotonicity	Guaranteed for 8 bits. Output polarity follows input code change.			
Nonlinear Distortions	(Measured with a distortion-free, digitized, 286 mV p-p subcarrier linearity ramp.)			
Differential Gain	0.75% or less (Options 4 & 14), 1% or less (Options 3 & 13).			
Differential Phase	0.25° or less (Options 4 & 14), 0.5° or less (Options 3 & 13).			
Frequency Response Amplitude	Option 3	Option 4	Option 13	Option 14
0 dB, $\pm 0.2$ dB	0 to 3.6 MHz	0 to 5 MHz	0 to 5 MHz	0 to 6 MHz
-3 dB or less	5.37 MHz	7.16 MHz	6.65 MHz	8.8 MHz
-42 dB or less	7.5 MHz and up	10 MHz and up	9.3 MHz and up	12.4 MHz and up
Constant Delay (within 10 ns)	0 to 3.6 MHz	0 to 5 MHz	0 to 5 MHz	0 to 6 MHz
Noise (Excluding quantizing noise measured under no signal condition.)	-67 dB or less to 5 MHz. -60 dB or less to 20 MHz.			

**INTERFACE REQUIREMENTS**

Data Inputs Format	8-bit parallel, straight binary (BIN) differential ECL inputs, terminated in $100\ \Omega$ .
Logic	ECL-compatible; High -0.96 V to -0.81 V Low -1.85 V to -1.65 V

**SPECIFICATIONS (cont)**

<b>Characteristics</b>	<b>Performance Requirements</b>
Setup Time	At least 7 ns before 50% point of leading edge of strobe pulse.
Hold Time	At least 1 ns after 50% point of leading edge of strobe pulse.
Strobe Input Format	Differential ECL inputs, terminate in 100 $\Omega$ .
Logic	ECL: High $-0.96$ to $-0.81$ V. Low $-1.85$ to $-1.65$ V.
Up-date Rate	50 MHz, maximum.
Minimum Pulse Width	8 ns.
Maximum Pulse Width	Must end at least 8 ns before next pulse transition.
External Reference Input ( $V_{REF}$ Multiplying Input)	A wire jumper must be moved on the Converter board to connect to the external input pin. (The DAC $V_{REF}$ is normally tied to an onboard reference supply.)
$V_{REF}$ for Normal Output	$-5.66$ V.
External Reference Gain	350 mV/V Full Scale.
Frequency Response Option 3	0 dB to 5.37 MHz.
Option 4	0 dB to 7.16 MHz.
Option 13	0 dB to 6.65 MHz.
Option 14	0 dB to 8.8 MHz.
Output Full Scale Range	1.214 V peak-to-peak $\pm 1\%$ (adjustable).
DC Offset	$-286$ mV $\pm 50$ mV (adjustable).
Offset Range	At least 100 mV.
Impedance	75 $\Omega$ (2 outputs).
Return Loss	At least $-30$ dB.

**POWER SUPPLY REQUIREMENTS**

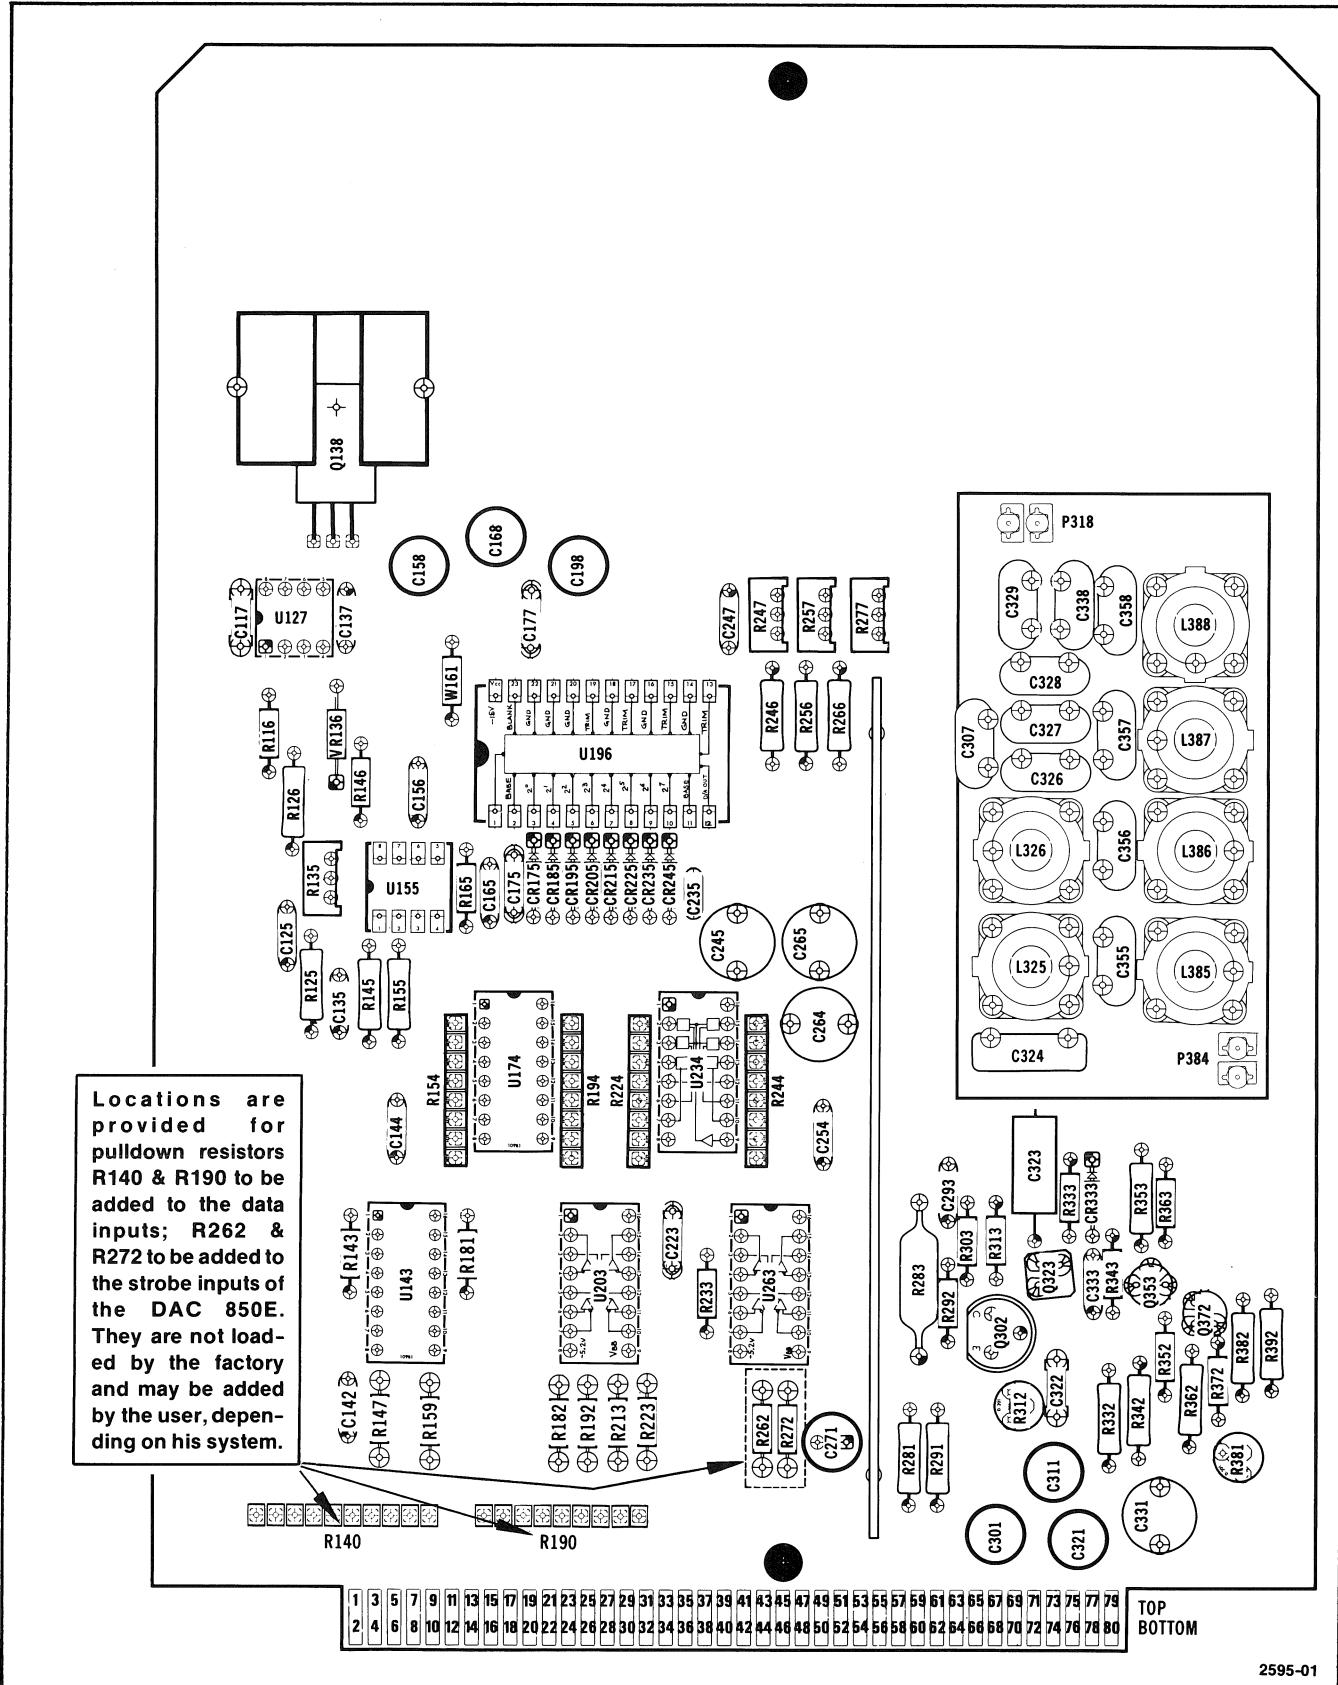

<b>Characteristic</b>	<b>Performance Requirement</b>
+12 V	+12 Vdc $\pm 1.5\%$ (11.8 to 12.2 V) at 16 mA.
-12 V	-12 Vdc $\pm 1.5\%$ (-11.8 to +12.2 V) at 200 mA.
+5 V (Analog V1)	+5 Vdc $\pm 5\%$ (4.75 to 5.25 V) at 75 mA.
-5.2 V	-5.2 Vdc $\pm 5\%$ (-4.94 to -5.46 V) at 370 mA.
Power Consumption	5.3 Watts or less.

**PHYSICAL**

Size	6" x 8" x 1".
Connector	Dual 40 contact card edge, with 0.1" spacing.

**ENVIRONMENTAL**

Temperature Range	0° to 60°C.
Warmup Time	Allow 3 minutes.

**Fig. 3. Parts Location.**

# REPLACEABLE ELECTRICAL PARTS

## PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

## SPECIAL NOTES AND SYMBOLS

- |      |  |
|------|--|
| X000 | Part first added at this serial number |
| 00X  | Part removed after this serial number  |

### ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

# REPLACEABLE MECHANICAL PARTS

## PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

## SPECIAL NOTES AND SYMBOLS

X000      Part first added at this serial number

00X      Part removed after this serial number

## FIGURE AND INDEX NUMBERS

Items in this section are referenced by figure and index numbers to the illustrations.

## INDENTATION SYSTEM

This mechanical parts list is indented to indicate item relationships. Following is an example of the indentation system used in the description column.

1 2 3 4 5	Name & Description
	<i>Assembly and/or Component</i>
	<i>Attaching parts for Assembly and/or Component</i>
	---
	<i>Detail Part of Assembly and/or Component</i>
	<i>Attaching parts for Detail Part</i>
	---
	<i>Parts of Detail Part</i>
	<i>Attaching parts for Parts of Detail Part</i>
	---

Attaching Parts always appear in the same indentation as the item it mounts, while the detail parts are indented to the right. Indented items are part of, and included with, the next higher indentation. The separation symbol --- indicates the end of attaching parts.

**Attaching parts must be purchased separately, unless otherwise specified.**

## ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.
