ANALOG-TO-DIGITAL  
CONVERTER  
(B020000 and Up)**

**INSTRUCTIONS**

Tektronix, Inc.  
P.O. Box 500  
Beaverton, Oregon 97077

Serial Number \_\_\_\_\_

**OEM WARRANTY**

**COMMUNICATIONS DIVISION  
ADC 820T**

The ADC 820T is warranted against defective materials and workmanship under normal use and service for a period of ninety days from date of initial shipment. Tektronix will repair or replace, at its option, those products determined to be defective within the warranty period and returned, freight prepaid, to Tektronix Factory Service, Delivery Station 93-186, P.O. Box 500, Beaverton, Oregon 97077.

Tektronix shall be under no obligation to furnish warranty service if:

- a. Attempts to repair or service the equipment are made by other than Tektronix personnel.
- b. Modifications are made by other than Tektronix personnel.

The foregoing warranty shall be enforceable only by the original buyer and not by the buyer's customer.

There is no implied warranty for fitness of purpose.

# ADC 820T

## DESCRIPTION

The TEKTRONIX ADC 820T is an 8-bit, 20-MHz analog-to-digital converter, optimized for digital video processing and designed for the OEM market. The ADC 820T consists of a single 6" X 8" circuit board with a dual 40-contact edge connector with 0.1" spacing. No parts on the board project more than 1.125" above the board. The board is manufactured with and by UL-approved materials and processes. The ADC 820T is distinctive for its high speed, excellent resolution and accuracy, low power consumption, high reliability, and construction simplicity. Monotonicity<sup>1</sup> of the output word is guaranteed.

## INTERFACE REQUIREMENTS

### Signal Input Considerations

The dc-coupled,  $75\ \Omega$ , analog signal input at pin 57 has a full scale dynamic range of 1.214 V p-p (170 IRE for video signals), centered around 0 V. To ensure monotonicity, resolution, and accuracy, standard video input signals must be externally dc-restored, so that sync tips are at  $-0.607$  V, a  $-321$  mV offset for NTSC or  $-307$  mV for PAL systems.

A good  $75\text{-}\Omega$  impedance match will give at least  $-46$  dB return loss over the video passband. A maximum  $\pm 2$  V signal can be tolerated at the input before damage will result.

### Strobe (or Clock) Input Considerations

The strobe inputs at pins 37 and 38 are balanced ECL, with a maximum common mode of  $\pm 1$  V, and a frequency response up to 20 MHz. Pulldown resistors ( $100\ \Omega$  to  $-2$  V) are provided onboard for each strobe input. Nominal input level to recognize a high state is  $-0.96$  V. To recognize a low state, it is  $-1.66$  V.

### Output Capabilities

Parallel digital outputs, Bit 0 (LSB) through Bit 7 (MSB), are provided on pins 17, 15, 13, 11, 9, 7, 5, and 3 respectively. Each output is TTL-level compatible and capable of driving up to ten standard TTL loads. Two Data Available lines are available at pins 19 (Data Available B0-B3) and pin 21 (Data Available B4-B7). These outputs are also TTL-compatible and capable of driving ten standard TTL loads each. Each pulse is at least 20 ns wide. Refer to the following discussion for the timing of the data and output pulses with respect to the clocking signal.

<sup>1</sup>Monotonicity, as used in this document, refers to the ability of the digital output to follow changes in the analog input signals, with no output polarity reversals.

### Timing Relationships

The key timing reference  $t_n$  is the 50% point of the rising edge of the clocking pulse. The MSBs (Bits 4 through 7) are valid 30 ns after  $t_n$  and last until 15 ns after the next rising edge of the clock pulse ( $t_{n+1}$ ). The LSBs (Bits 0 through 3) are valid 57 ns after  $t_n$  and last until 37 ns after  $t_{n+1}$ .

The leading edge of the Data Available B4-B7 pulse occurs 10 ns after  $t_n$  and lasts at least 20 ns. The Data Available B0-B3 pulse occurs 35 ns after  $t_n$  and lasts at least 20 ns. See Figure 1.

To avoid losing data at conversion rates above 15 MHz, both Data Available pulses, B0-B3 for the four LSB's and B4-B7 for the four MSB's, should be used to strobe the output data into external circuitry.

At conversion rates up to 15 MHz, Data Available B4-B7 will adequately strobe all eight bits into external circuitry. Both pulses together can be used at these slower rates as well.

### Power Supply Requirements

The ADC 820T is designed to operate from commonly available analog and digital power supplies of +12 V, -12 V, +5 V, and -5.2 V. Power supply lines should be carefully decoupled and as noise-free as possible. Each power supply is named for its nominal value, with the tolerable limits and current delivery capabilities called out in the specifications table. No more than 7 watts of power are required to run the ADC 820T.

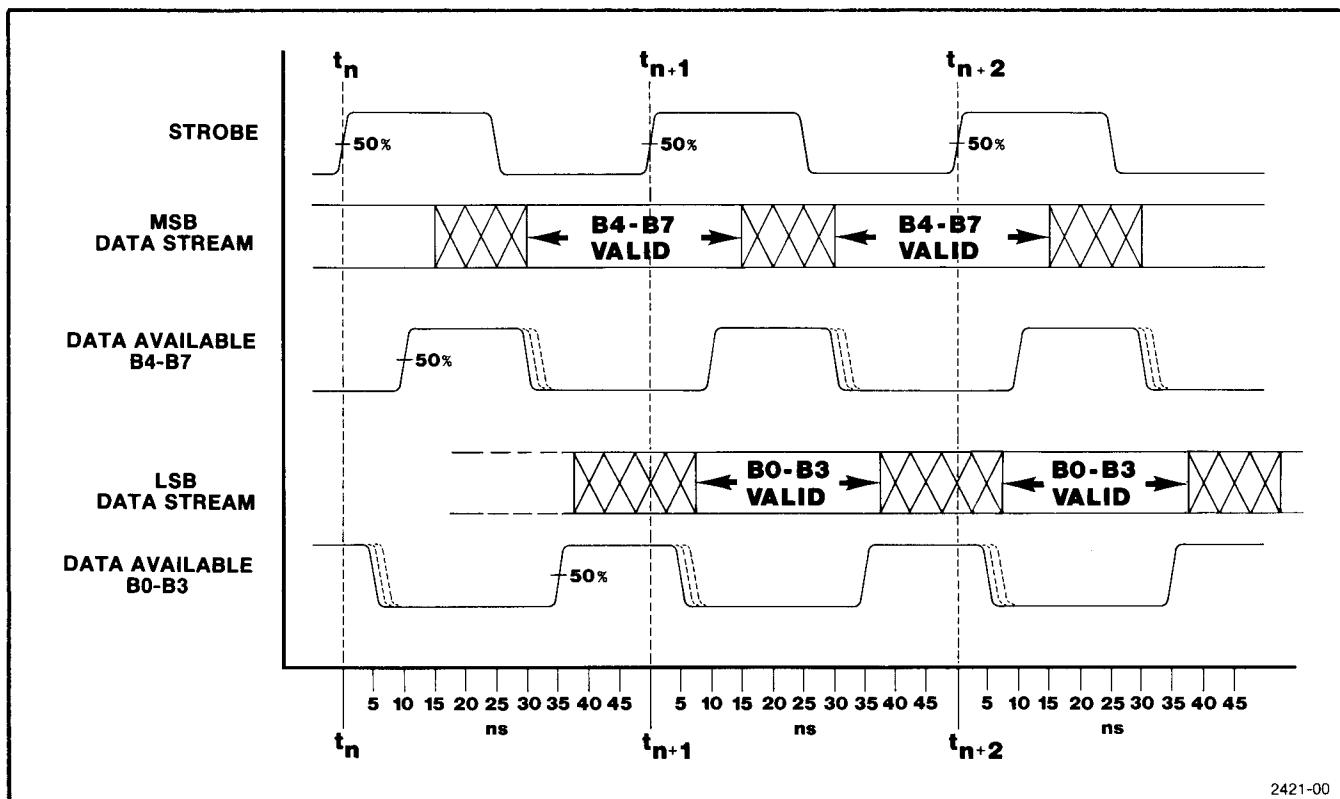

Fig. 1. ADC 820T Timing Diagrams at maximum conversion rate of 20 MHz.

## INSTALLATION

### System-Matching Electrical Adjustments

Differences between factory and user power supply and strobe characteristics may produce slight performance changes. Optimum results may be obtained by performing the following adjustments:

Step 1: Install the ADC 820T in its normal operating situation.

Step 2: Connect the outputs of the ADC 820T to a highly-accurate digital-to-analog converter, such as the TEKTRONIX DAC 850T. Monitor the DAC output with a wide-band oscilloscope, such as a Tektronix 7603 with appropriate vertical amplifier and time base unit plug-ins.

Step 3: Apply a sawtooth or triangular waveform of approximately 1 V peak-to-peak amplitude and between 1 kHz and 100 kHz to the ADC 820T input. (For video applications, a linearity test signal without subcarrier modulation may be used.)

Step 4: Adjust Bias control R316 (labeled "B" on the circuit board; also, refer to Figure 3, the Parts Location Illustration) for minimum aberrations in the most negative portions of the waveform.

Step 5: Adjust Offset control R324 (labeled "O") and Span control R317 (labeled "S") for minimum aberrations in the overall waveform.

Step 6: Repeat Steps 4 and 5 until no further improvement is realized.

### Thermal Considerations

The ADC 820T will operate within its stated specification when the ambient air temperatures around it are between 0° and 60°C. Convection air flow, temperature rise effects of the physical board orientation, and relationship to other system components should be considered when locating the board within an OEM enclosure.

### Physical Orientation

Optimum convection flow and heat relief is achieved with the circuit board edge-mounted such that pin 1 of the edge connector is always at the top. The worst mounting position would be flat, with the component side down.

## **ADC 820T (B020000 & up)**

### **Mechanical Outline**

See Figure 2 for the maximum outside dimensions. Note that the dual-40 edge connector has a keying slot between pins 23, 24 and 25, 26. Components have been kept back from the sides of the board to allow mounting when using card guides.

### **SERVICE**

Please review the warranty in force at the time of purchase. For repair and recalibration, end users should return the ADC 820T to the OEM who supplied their equipment. If the OEM requests service from Tektronix on out-of-warranty products, he will be charged for labor and material at our existing rates. Since the product is a component of a system, the Tektronix product must be isolated from the system by the OEM. End users who purchase directly from Tektronix should return the ADC 820T directly to Factory Service in Beaverton, Oregon 97077.

### **Connectors**

The following connectors will mate satisfactorily with the ADC 820T dual-40, 0.100"-spacing, edge connector:

<b>Style</b>	<b>Vendor</b>	<b>Tektronix Part Number</b>
0.025" Square Pins	Continental Connector Corporation, K600-100-80WB	131-0626-00
Pierced Tabs	Viking, 3VH40/1JN5	131-1856-00
Zero Insertion Force (with square pins)	AMP 1-530801-3 (3/16" leads)	none

This list is by no means exhaustive. Examination of connector manufacturer's catalogs may show other compatible connectors.

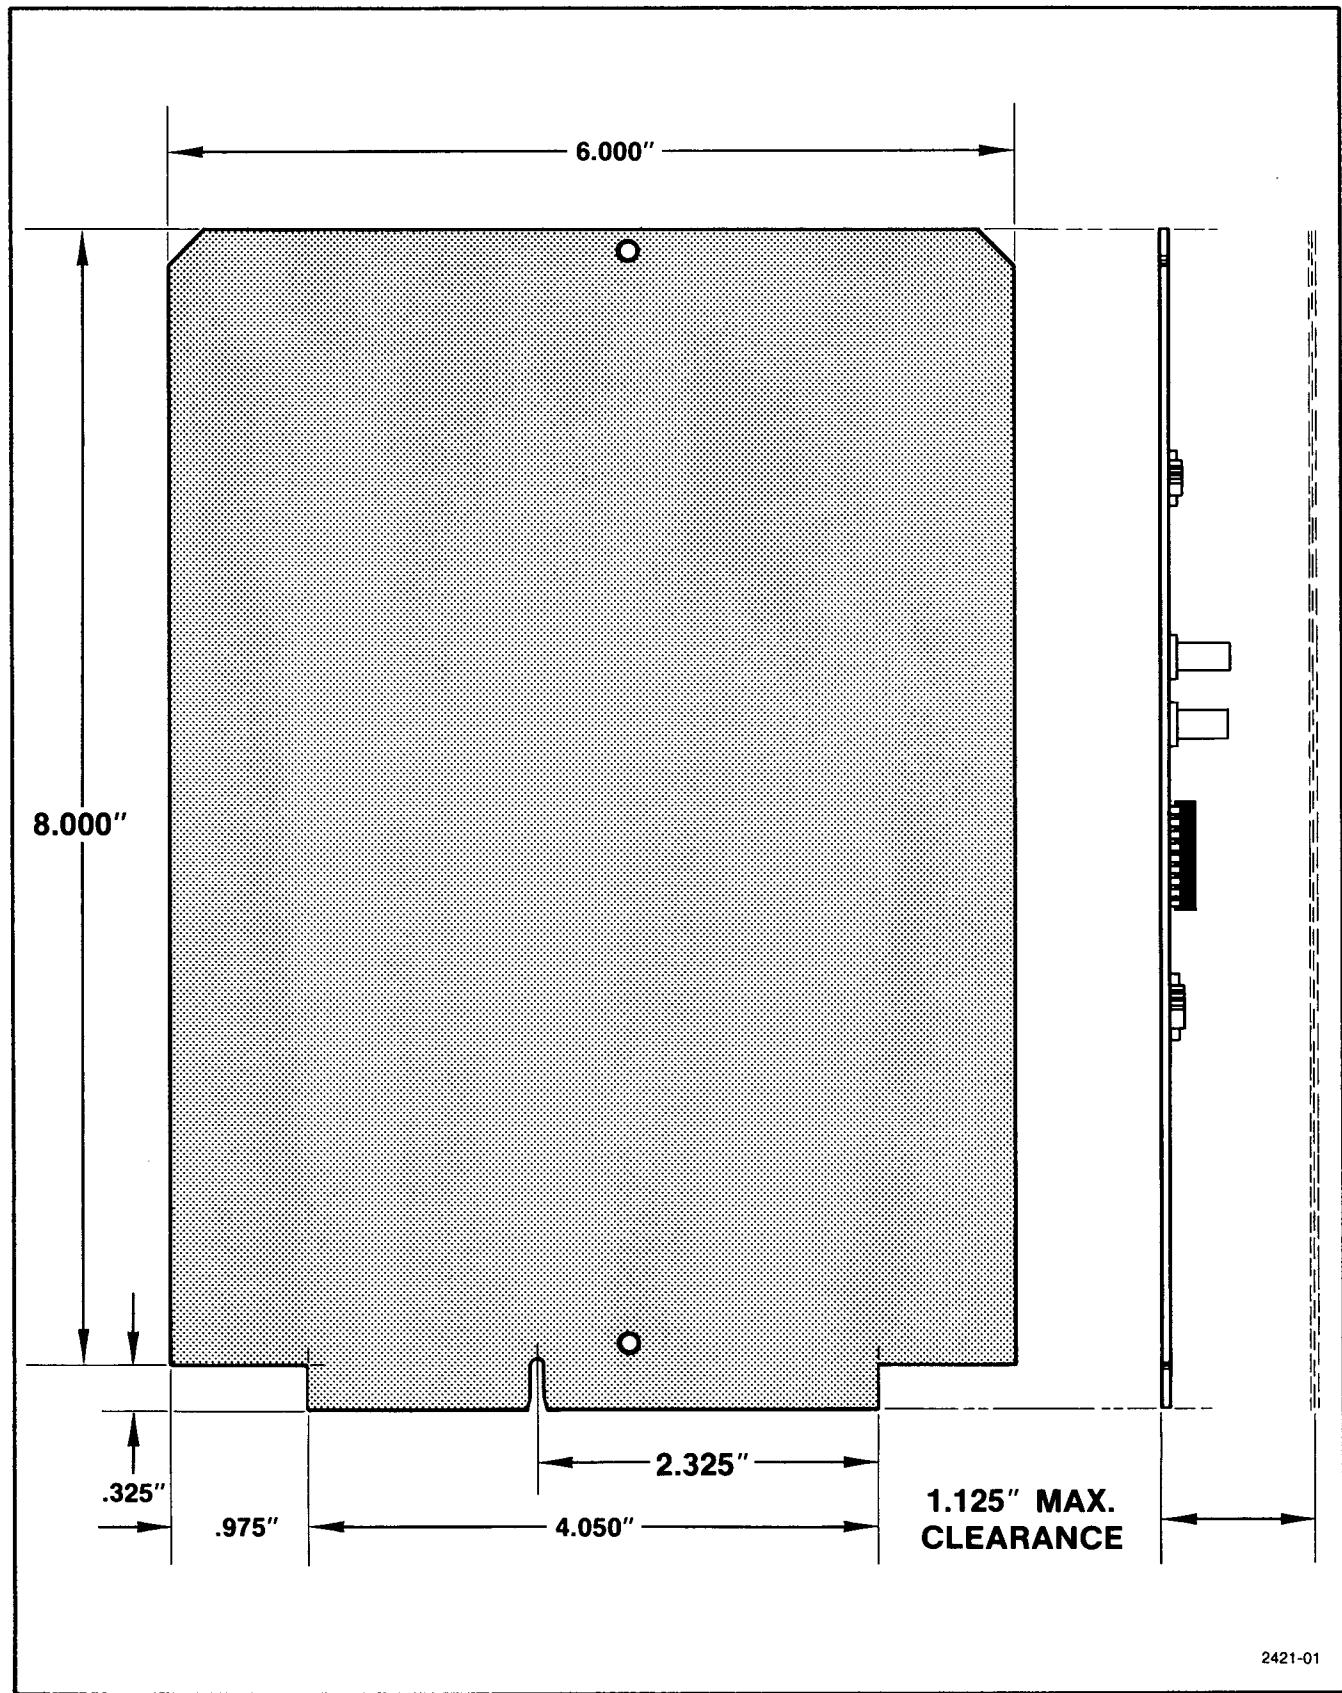

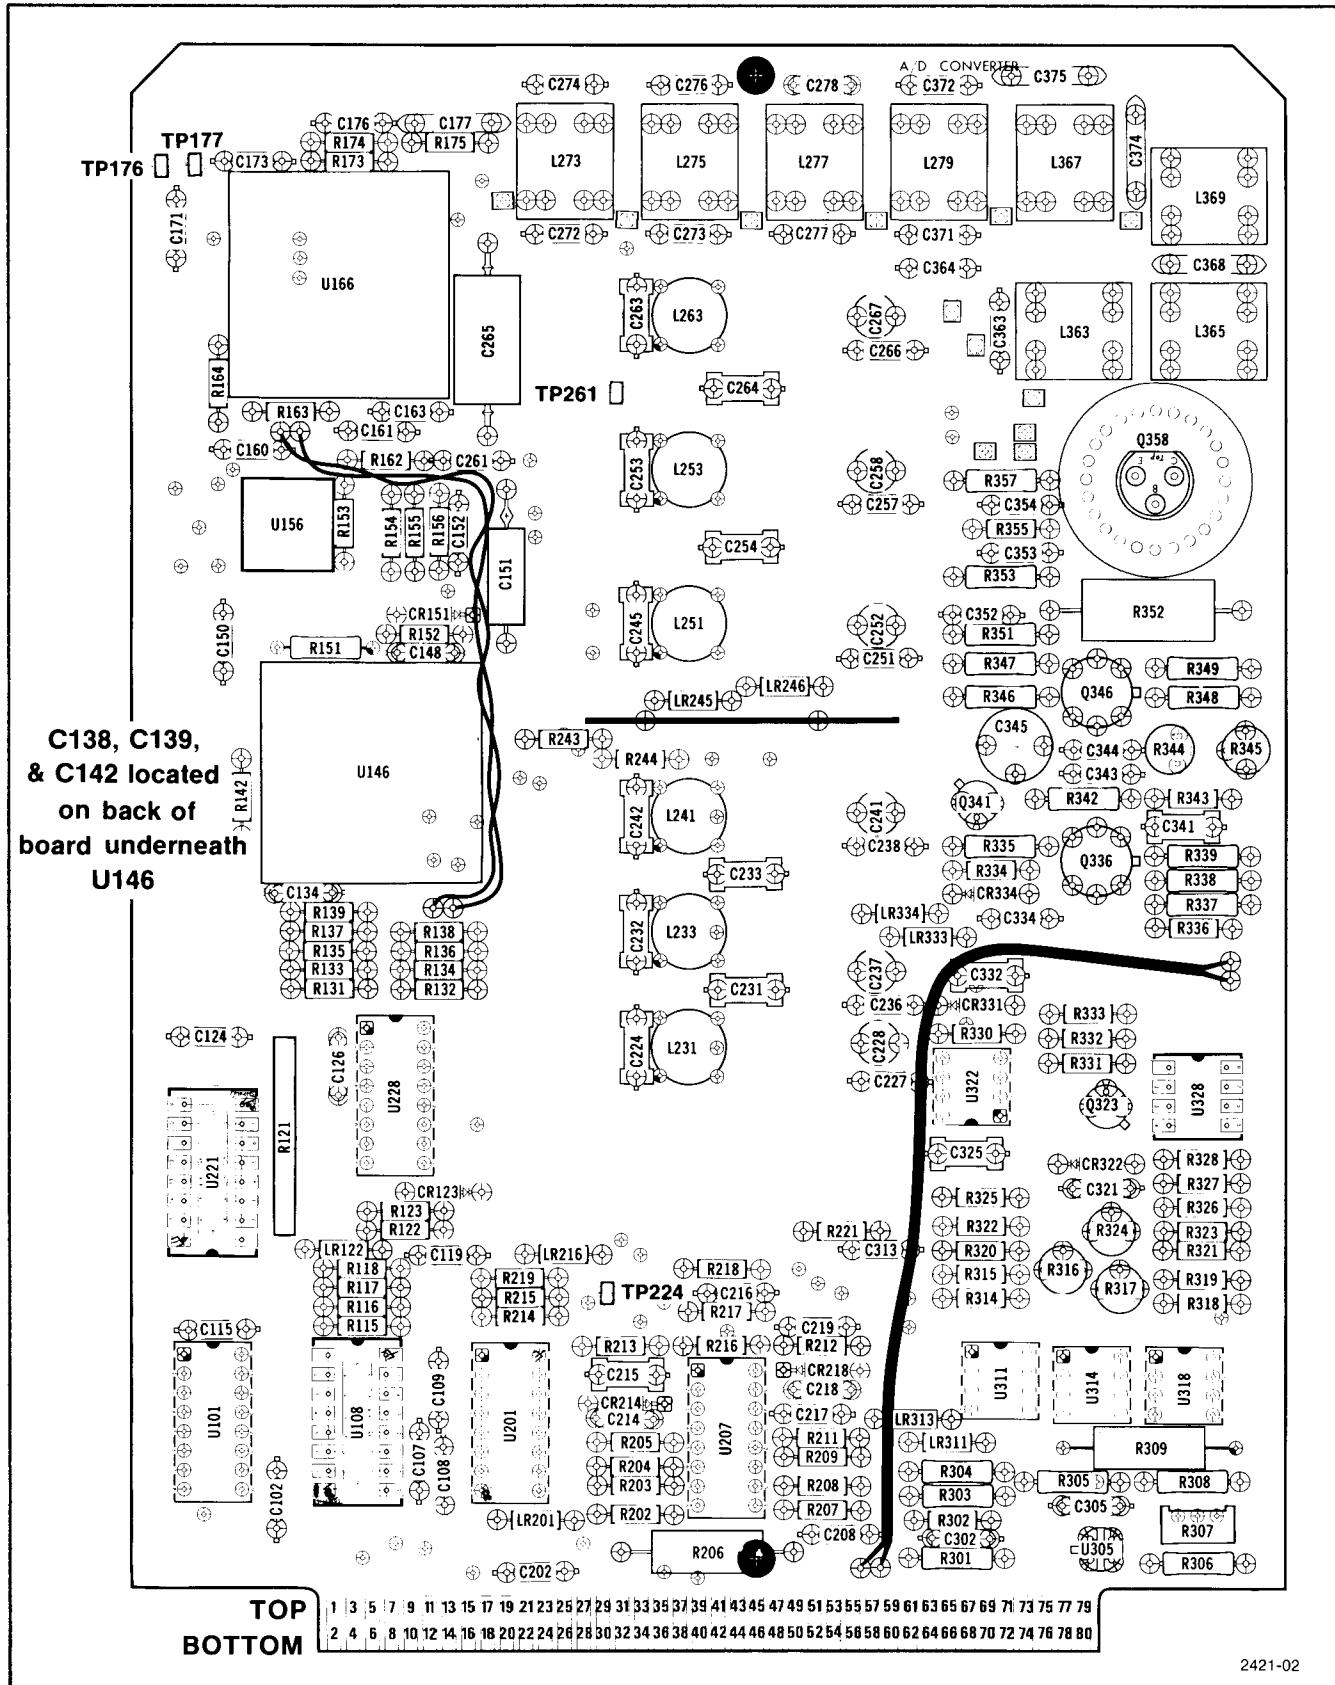

Fig. 2. Circuit Board maximum dimensions.

**SPECIFICATIONS**

<b>Characteristic</b>	<b>Performance Requirement</b>
Resolution	8 Bits (0.4%)
Accuracy	Referred to a straight line through cutpoints 15 and 239. (Cutpoint n is defined as the voltage at which it is equally probable that the output word will be $\leq n$ or $\geq n + 1$ ).
RMS	$\pm 0.25$ LSB ( $\pm 0.1\%$ ).
Peak	$\pm 0.5$ LSB ( $\pm 0.2\%$ ).
Conversion Rate	20 MHz maximum.
Monotonicity	All 256 codes present and in sequence with no polarity reversals.
Non-Linear Distortions	Measured at 20 MHz with a 40 IRE subcarrier Linearity signal on a TEKTRONIX 520A Vectorscope.
Maximum Differential Gain	1.0%
Maximum Differential Phase	0.5°
Frequency Response	
Amplitude	
0 to 5.2 MHz	0 dB $\pm 0.25$ dB.
7.16 MHz (2f <sub>sc</sub> NTSC)	-46 dB or less.
8.86 MHz (2f <sub>sc</sub> PAL)	-46 dB or less.
10 MHz and above	-40 dB or less.
Delay	Constant, $\pm 10$ ns, from 0 to 5.2 MHz.

**SPECIFICATIONS (cont)****INTERFACE REQUIREMENTS**

<b>Characteristic</b>	<b>Performance Requirement</b>
Inputs	
Signal Input	
Full Scale Range	1.214 V p-p (170 IRE p-p) ( $\pm 0.607$ V).
0 count	-0.607 V (for standard video signals, the sync tip should be dc restored to -0.607 V, a -321 mV offset for NTSC or -307 mV for PAL).
255 count	+0.607 V.
Damage Level	$\pm 2$ V Max.
Coupling	Dc coupled.
Impedance	75 $\Omega$ .
Return Loss	At least -46 dB from 0 to 5 MHz.
Strobe Input	
Frequency	20 MHz or less.
Duty Cycle	0.4 to 0.6.
Characteristics	Balanced ECL, $\pm 1$ V maximum common mode. Onboard pulldowns (100 $\Omega$ to -2 V) are provided for each line.
Outputs	
Digital Output Characteristics	
Format	Parallel 8 Bit Straight Binary.
Logic Level	TTL compatible High = 2.4 to 5 V; Low = 0 to 0.4 V.
Drive	Up to 10 Standard TTL loads.

**SPECIFICATIONS (cont)****INTERFACE REQUIREMENTS (cont)**

<b>Characteristic</b>	<b>Performance Requirement</b>
Timing	$t_n$ is the rising edge of the clock pulse.
MSBs (B4-B7)	Valid from $t_n + 30$ ns to $t_{n+1} + 15$ ns.
LSBs (B0-B3)	Valid from $t_n + 57$ ns to $t_{n+1} + 37$ ns.
Data Available	Note: For conversion rates up to 15 MHz, the leading edge of Data Available B4-B7 should be used to strobe all eight data bits into external circuitry. For conversion rates above 15 MHz, Data Available B0-B3 is recommended for strobing the four LSBs, and the Data Available B4-B7 is recommended for strobing the four MSBs into external circuitry.
Format	Two pulses (B0-B3 and B4-B7).
Timing	
B4-B7	Leading edge occurs at $t_n + 10$ ns.
B0-B3	Leading edge occurs at $t_n + 35$ ns.
Pulse Width	At least 20 ns.
Logic Level	TTL Compatible High is 2.4 V to 5 V; Low is 0 V to 0.4 V.
Drive	Up to 10 standard TTL loads.

**SPECIFICATIONS (cont)****POWER SUPPLY REQUIREMENTS**

<b>Characteristic</b>	<b>Performance Requirement</b>
+12 V	+12 V $\pm 1.5\%$ (11.82 V to 12.18 V) at 100 mA. (Can be 100 mA higher during the first 5 seconds after turn on.)
-12 V	-12 V $\pm 1.5\%$ (-11.82 V to -12.18 V) at 120 mA. (Can be 100 mA higher during the first 5 seconds after turn on.)
+5 V	+5 V $\pm 5\%$ (4.75 V to 5.25 V) at 400 mA.
-5.2 V	-5.2 V $\pm 4\%$ (-5 V to -5.4 V) at 500 mA.
Power	7 watts or less.

**PHYSICAL**

Size	6" X 8" X 1".
Connector	Dual-40 contact card edge, with 0.1" spacing.

**ENVIRONMENTAL**

Temperature Range	0° to 60° C.
Warm-up time	At least 20 minutes.

# REPLACEABLE ELECTRICAL PARTS

## PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

## SPECIAL NOTES AND SYMBOLS

X000      Part first added at this serial number

00X      Part removed after this serial number

### ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.

# REPLACEABLE MECHANICAL PARTS

## PARTS ORDERING INFORMATION

Replacement parts are available from or through your local Tektronix, Inc. Field Office or representative.

Changes to Tektronix instruments are sometimes made to accommodate improved components as they become available, and to give you the benefit of the latest circuit improvements developed in our engineering department. It is therefore important, when ordering parts, to include the following information in your order: Part number, instrument type or number, serial number, and modification number if applicable.

If a part you have ordered has been replaced with a new or improved part, your local Tektronix, Inc. Field Office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

## SPECIAL NOTES AND SYMBOLS

X000      Part first added at this serial number

00X      Part removed after this serial number

## FIGURE AND INDEX NUMBERS

Items in this section are referenced by figure and index numbers to the illustrations.

## INDENTATION SYSTEM

This mechanical parts list is indented to indicate item relationships. Following is an example of the indentation system used in the description column.

1 2 3 4 5	Name & Description
	<i>Assembly and/or Component</i>
	<i>Attaching parts for Assembly and/or Component</i>
---	---
	<i>Detail Part of Assembly and/or Component</i>
	<i>Attaching parts for Detail Part</i>
---	---
	<i>Parts of Detail Part</i>
	<i>Attaching parts for Parts of Detail Part</i>
---	---

Attaching Parts always appear in the same indentation as the item it mounts, while the detail parts are indented to the right. Indented items are part of, and included with, the next higher indentation. The separation symbol --- \* --- indicates the end of attaching parts.

**Attaching parts must be purchased separately, unless otherwise specified.**

## ITEM NAME

In the Parts List, an Item Name is separated from the description by a colon (:). Because of space limitations, an Item Name may sometimes appear as incomplete. For further Item Name identification, the U.S. Federal Cataloging Handbook H6-1 can be utilized where possible.
