### DESCRIPTION

The LVQ02 is a low voltage CMOS QUAD 2-INPUT NOR GATE fabricated with sub-micron silicon gate and double-layer metal wiring C<sup>2</sup>MOS

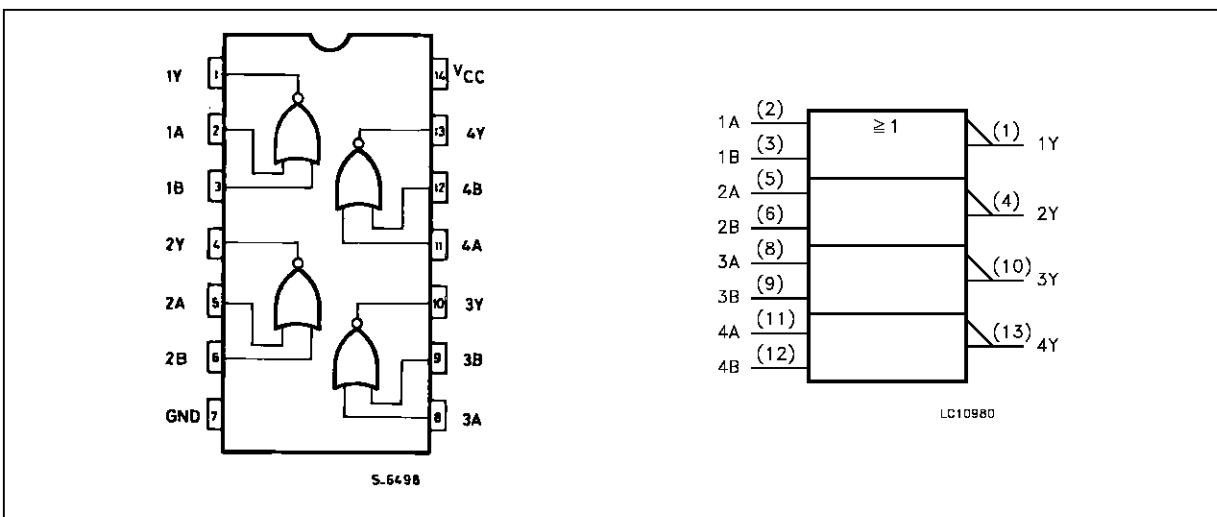

technology. It is ideal for low power and low noise 3.3V applications.

The internal circuit is composed of 3 stages including buffer output, which enables high noise immunity and stable output.

It has better speed performance at 3.3V than 5V LS-TTL family combined with the true CMOS low power consumption.

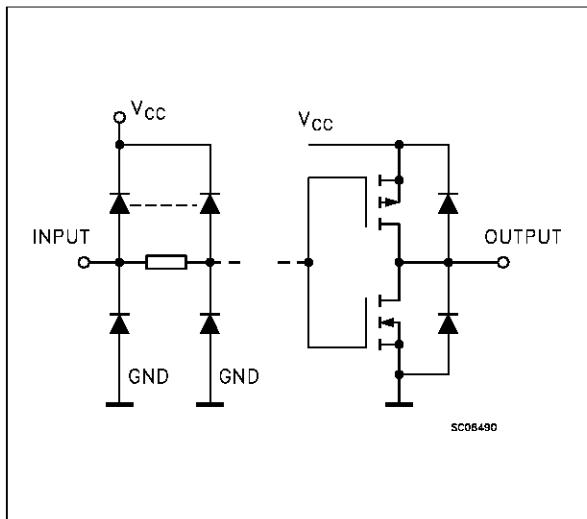

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
