3.3V 18-bit universal bus transceiver (3-State)**74LVT16500A****FEATURES**

- 18-bit bidirectional bus interface
- 3-State buffers
- Output capability: +64mA/-32mA
- TTL input and output switching levels
- Input and output interface capability to systems at 5V supply
- Bus-hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Live insertion/extraction permitted
- Power-up reset
- Power-up 3-State
- No bus current loading when output is tied to 5V bus
- Negative edge-triggered clock inputs
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883 Method 3015 and 200V per Machine Model

DESCRIPTION

The 74LVT16500A is a high-performance BiCMOS product designed for V_{CC} operation at 3.3V.

This device is an 18-bit universal transceiver featuring non-inverting 3-State bus compatible outputs in both send and receive directions. Data flow in each direction is controlled by output enable ($OEAB$ and \overline{OEBA}), latch enable ($LEAB$ and $LEBA$), and clock (\overline{CPAB} and $CPBA$) inputs. For A-to-B data flow, the device operates in the transparent mode when $LEAB$ is High. When $LEAB$ is Low, the A data is latched if \overline{CPAB} is held at a High or Low logic level. If $LEAB$ is Low, the A-bus data is stored in the latch/flip-flop on the High-to-Low transition of \overline{CPAB} . When $OEAB$ is High, the outputs are active. When $OEAB$ is Low, the outputs are in the high-impedance state.

Data flow for B-to-A is similar to that of A-to-B but uses \overline{OEBA} , $LEBA$ and \overline{CPBA} . The output enables are complimentary ($OEAB$ is active High, and \overline{OEBA} is active Low).

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

QUICK REFERENCE DATA

| SYMBOL | PARAMETER | CONDITIONS $T_{amb} = 25^\circ C$ | TYPICAL | UNIT |
|------------------------|---|--|---------|---------------|
| t_{PLH} t_{PHL} | Propagation delay An to Bn or Bn to An | $C_L = 50\text{pF};$ $V_{CC} = 3.3\text{V}$ | 1.9 | ns |
| C_{IN} | Input capacitance (Control pins) | $V_I = 0\text{V}$ or 3.0V | 3 | pF |
| $C_{I/O}$ | I/O pin capacitance | Outputs disabled; $V_{I/O} = 0\text{V}$ or 3.0V | 9 | pF |
| I_{CCZ} | Total supply current | Outputs disabled; $V_{CC} = 3.6\text{V}$ | 70 | μA |

FUNCTION TABLE

| INPUTS | | | | Internal Registers | OUTPUTS Bn | OPERATING MODE |
|--------|------|--------|----|-----------------------|---------------|----------------------|
| OEAB | LEAB | CPAB | An | | | |
| L | H | X | X | X | Z | Disabled |
| L | ↓ | X | h | H | Z | Disabled, Latch data |
| L | ↓ | X | I | | Z | |
| L | L | H or L | X | NC | Z | Disabled, Hold data |
| L | L | ↓ | h | H | Z | Disabled, Clock data |
| L | L | ↓ | I | | Z | |
| H | H | X | H | H | H | Transparent |
| H | H | X | L | | L | |
| H | ↓ | X | h | H | H | Latch data & display |
| H | ↓ | X | I | | L | |
| H | L | ↓ | h | H | H | Clock data & display |
| H | L | ↓ | I | | L | |
| H | L | H or L | X | H | H | Hold data & display |
| H | L | H or L | X | | L | |

NOTE: A-to-B data flow is shown; B-to-A flow is similar but uses OEBA, LEBA, and CPBA.

H = High voltage level

h = High voltage level one set-up time prior to the Enable or Clock transition

L = Low voltage level

I = Low voltage level one set-up time prior to the Enable or Clock transition

NC= No Change

X = Don't care

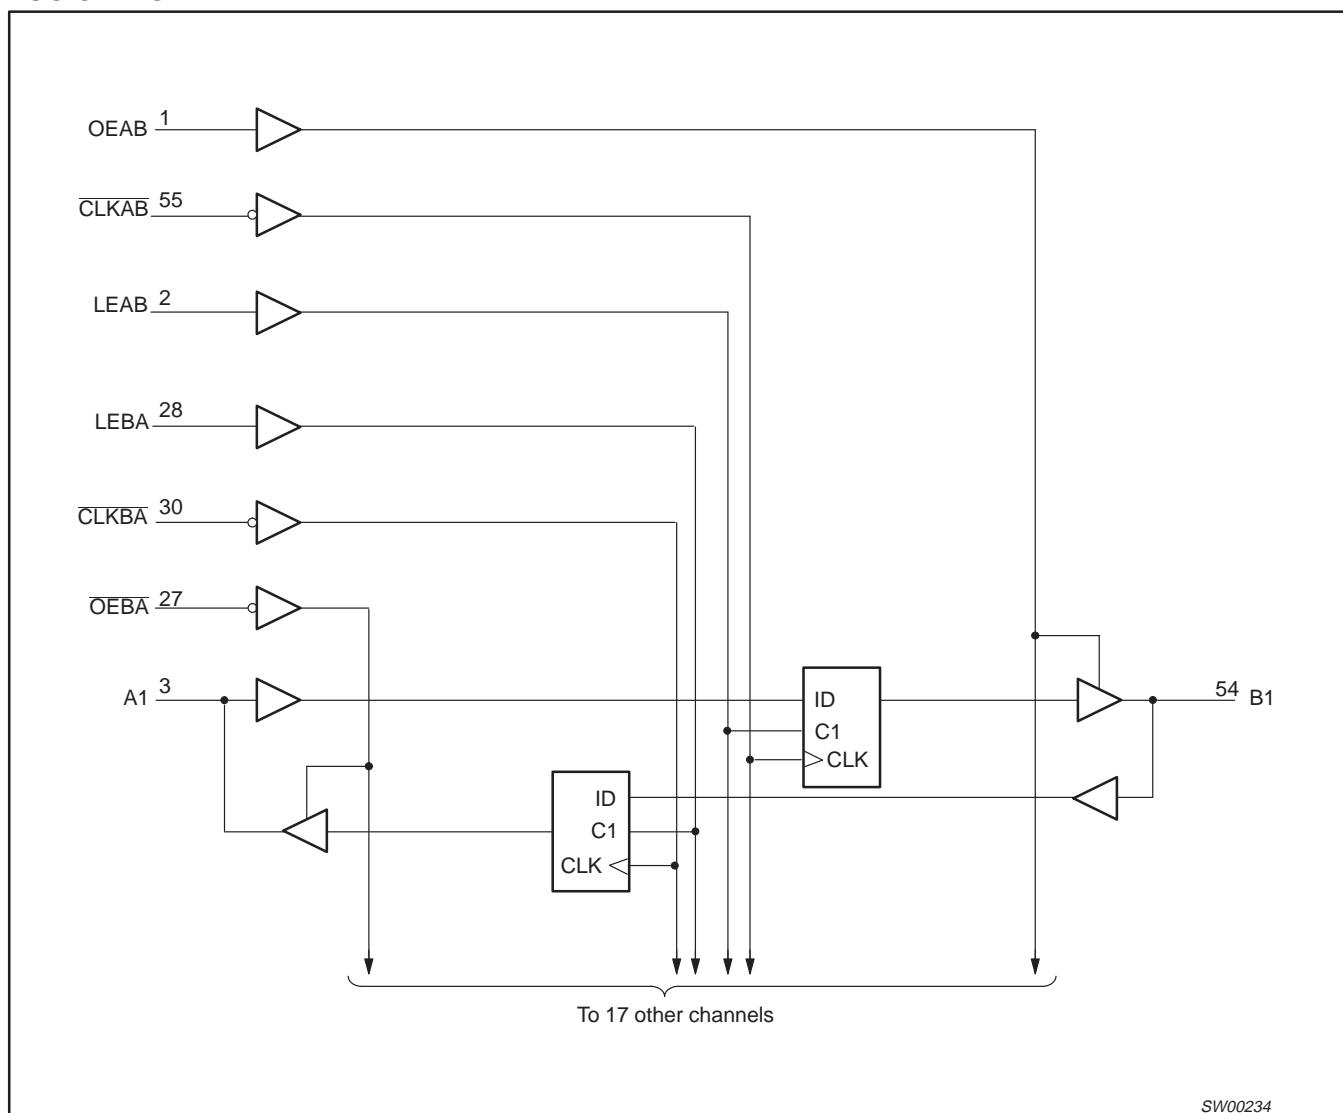

Z = High Impedance "off" state

↓ = High-to-Low Enable or Clock transition

ABSOLUTE MAXIMUM RATINGS^{1, 2}

| SYMBOL | PARAMETER | CONDITIONS | RATING | UNIT |
|------------------|--------------------------------|-----------------------------|--------------|------|
| V _{CC} | DC supply voltage | | -0.5 to +4.6 | V |
| I _{IK} | DC input diode current | V _I < 0 | -50 | mA |
| V _I | DC input voltage ³ | | -0.5 to +7.0 | V |
| I _{OK} | DC output diode current | V _O < 0 | -50 | mA |
| V _{OUT} | DC output voltage ³ | Output in Off or High state | -0.5 to +7.0 | V |
| I _{OUT} | DC output current | Output in Low state | 128 | mA |
| | | Output in High state | -64 | |
| T _{stg} | Storage temperature range | | -65 to +150 | °C |

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.
3. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

RECOMMENDED OPERATING CONDITIONS

| SYMBOL | PARAMETER | LIMITS | | UNIT |
|------------------|--|--------|-----|------|
| | | MIN | MAX | |
| V _{CC} | DC supply voltage | 2.7 | 3.6 | V |
| V _I | Input voltage | 0 | 5.5 | V |
| V _{IH} | High-level input voltage | 2.0 | | V |
| V _{IL} | Input voltage | | 0.8 | V |
| I _{OH} | High-level output current | | -32 | mA |
| I _{OL} | Low-level output current | | 32 | mA |
| | Low-level output current; current duty cycle ≤ 50%; f ≥ 1kHz | | 64 | |
| Δt/Δv | Input transition rise or fall rate; Outputs enabled | | 10 | ns/V |
| T _{amb} | Operating free-air temperature range | -40 | +85 | °C |

NOTES:

- All typical values are at V_{CC} = 3.3V and T_{amb} = 25°C.
- This is the increase in supply current for each input at the specified voltage level other than V_{CC} or GND
- This parameter is valid for any V_{CC} between 0V and 1.2V with a transition time of up to 10msec. From V_{CC} = 1.2V to V_{CC} = 3.3V ± 0.3V a transition time of 100µsec is permitted. This parameter is valid for T_{amb} = 25°C only.
- Unused pins at V_{CC} or GND.
- For valid test results, data must not be loaded into the flip-flops (or latches) after applying power.
- I_{CCZ} is measured with outputs pulled to V_{CC} or GND.
- This is the bus hold overdrive current required to force the input to the opposite logic state.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
