## Tone Ringer

### ■ Overview

The AN6171 is a tone ringer IC which drives a ceramic sounder or speaker as power supply for IC upon receipt of a call signal from telephone set.

### ■ Features

- Wide selection of output tone

Four types of tremolo sounds can be selected by SW<sub>1</sub> and SW<sub>2</sub>. Each tremolo sound is generated by I<sup>2</sup>L divider circuit and mixer circuit.

- Rumbling starting voltage variable

Ringer rumbling starting voltage is made variable with external resistors Rh1 and Rh2.

- Built-in hysteresis circuit

This circuit can prevent malfunction due to power noise, resonance due to dial pulse and malfunction due to howler.

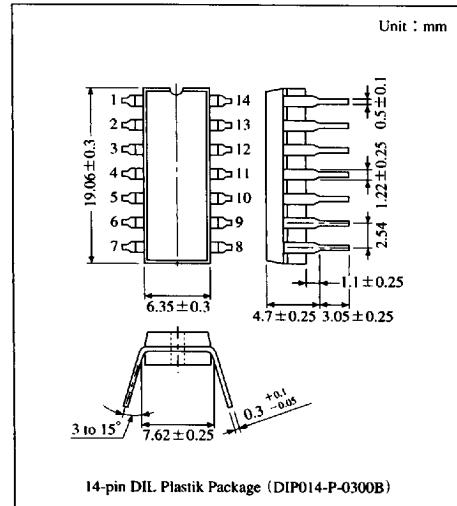

- Built-in time starting circuit

This circuit follows the signal such as Centlex whose nonrumbling time is short.

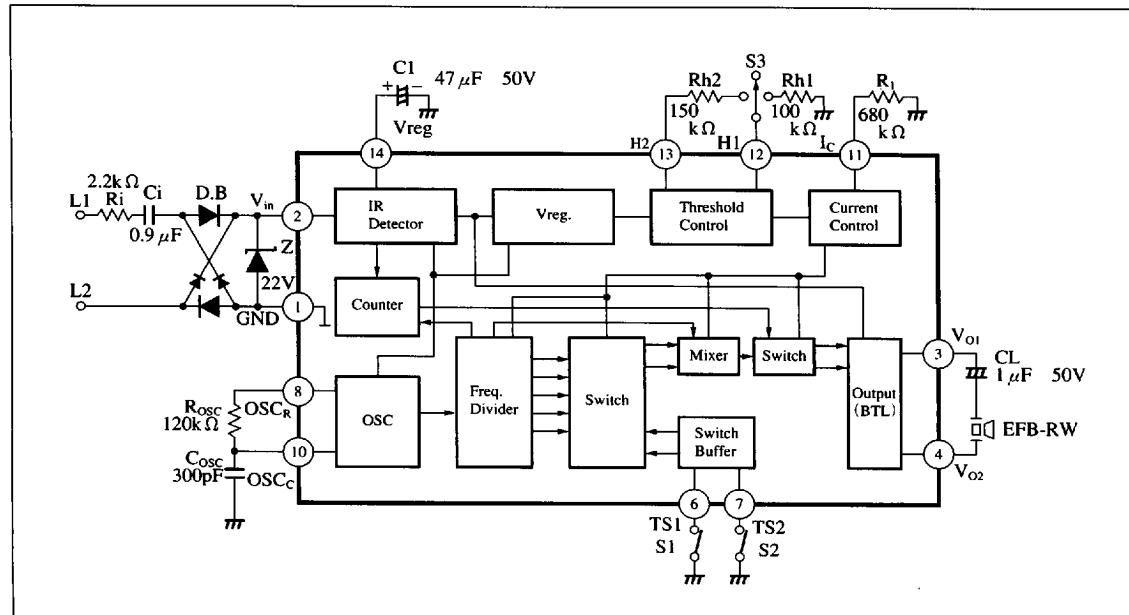

- High output power by BTL circuit

\*1 Howler : Alarm signal when the receiver is off-hook.

\*2 Centlex : 0.2-sec interval of call signal.
