

# Video signal switcher with test pattern generator

## BA7024

The BA7024 is a switching IC with built-in test-signal generator developed for use in VCRs.

A frequency divider is used to divide a 500kHz reference signal and produce the horizontal synchronization signal and white signal. The test pattern image is two white lines on black background.

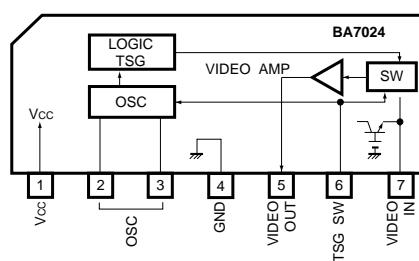

### ● Applications

Video cassette recorders

### ● Features

- 1) TSG generator circuit and video signal switch on one chip.
- 2) Supports 5V sets.
- 3) Small 7-pin SIP package.

### ● Block diagram

### ● Absolute maximum ratings ( $T_a = 25^\circ\text{C}$ )

Parameter	Symbol	Limits	Unit
