SECAM chroma signal processor for VHS VCRs

BA7107/BA7107F/BA7107S

The BA7107, BA7107F and BA7107S are monolithic ICs that incorporate the principle circuits required for SECAM chroma signal processing. The ICs are divided into recording system and playback system blocks.
The recording system consists of a REC EQ amplifier, a divide-by-four circuit, a limiter amplifier, an anti-bell amplifier, and a REC sync gate, and the playback system consists of PB EQ amplifier, a multiply-by-four circuit (two multiply-by-two circuits), a limiter amplifier, a bell amplifier, and a PB sync gate. Switching between the recording and playback systems is accomplished by switching power supplies.

●Applications

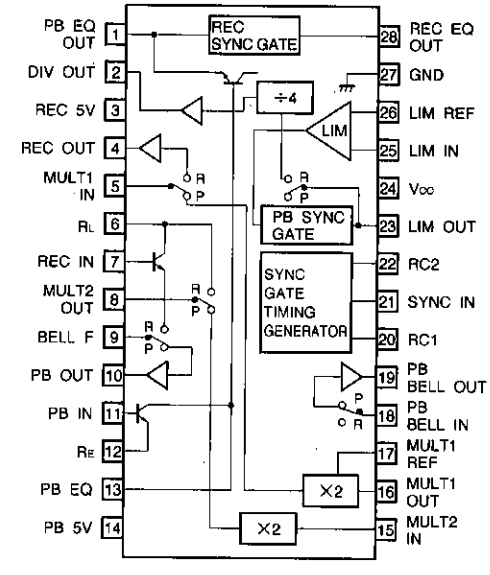
SECAM and VHS format video cassette recorders

●Features

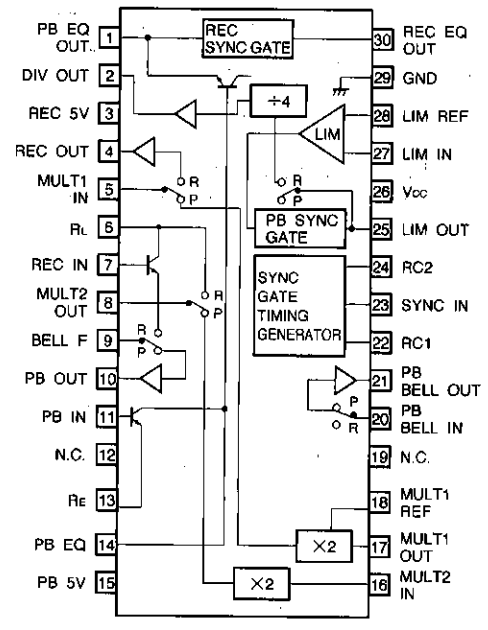
1)Recording and playback processor for SECAM chroma signals can be constructed using a single IC.
2)Switching between the recording and playback systems is accomplished by switching power supplies.
3)Operates off a 5V power supply voltage and is suitable for use in low voltage portable sets.
4)Available in SOP, DIP and SDIP packages (BA7107F: SOP28, BA7107: DIP28 and BA7107S: SDIP30).

●Block diagram

BA7107 / BA7107F



BA7107S



ROHM

●Absolute maximum ratings (Ta=25℃)

Parameter		Symbol	Limits	Unit
Power supply voltage		V_{CC}	6.5	V
Power dissipation	BA7107	Pd	1000 *	mW
	BA7107F / S		600 *	
Operating temperature		Topr	−10~65	℃
Storage temperature		Tstg	−55~125	℃

* Reduced by 10mW (BA7107) and 6mW (BA7107F/S) for each increase in Ta of 1°C over 25°C.

●Electrical characteristics (Unless otherwise specified : Ta=25℃, V_{CC}=5V, REC system: REC5V=5V, PB system: PB5V=5V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Power supply voltage	V_{CC}	4.5	5	5.5	V	Common power supply and same voltage for REC and PB
Limiter amplifier output level (pin 23)	V_{OLIM}	0.75	1.10	1.45	V	f_{IN}=4.3MHz, V_{IN}=10mV (25pin)
Limiter amplifier gain (pin 23)	G_{VLIM}	38	52	62	dB	f_{IN}=4.3MHz, V_{IN}=0.5mV (25pin)
F/F output level (pin 2)	$V_{O\ (F/F)}$	0.35	0.50	0.65	V_{P-P}	f_{IN}=4.3MHz, V_{IN}=10mV (25pin)
REC gate isolation (pin 1)	I_{SOR}	−25	−40	−	dB	f_{IN}=1MHz, V_{IN}=0.5V_{P-P} (28pin)
PB gate isolation (pin 23)	I_{SOP}	−20	−30	−	dB	f_{IN}=4.3MHz, V_{IN}=0.5mV (25pin)
2-stage multiplier output level (pin 16)	$V_{O\ (X2)}$	0.25	0.4	0.55	V_{P-P}	f_{IN}=1MHz, V_{IN}=0.2V_{P-P} (5pin)
1st harmonic distortion (pin 16)	$D_{1\ (X2)}$	−	−30	−20	dB	f_{IN}=1MHz, V_{IN}=0.2V_{P-P} (5pin)
3rd harmonic distortion (pin 16)	$D_{2\ (X2)}$	−	−35	−20	dB	f_{IN}=1MHz, V_{IN}=0.2V_{P-P} (5pin)
4-stage multiplier output level (pin 8)	$V_{O\ (X4)}$	0.09	0.14	0.25	V_{P-P}	f_{IN}=2MHz, V_{IN}=0.3V_{P-P} (15pin)
1st harmonic distortion (pin 8)	$D_{1\ (X4)}$	−	−30	−20	dB	f_{IN}=2MHZ, V_{IN}=0.3V_{P-P} (15pin)
3rd harmonic distortion (pin 8)	$D_{2\ (X4)}$	−	−35	−20	dB	f_{IN}=2MHz, V_{IN}=0.3V_{P-P} (15pin)
Quiescent current (PB mode)	$I_{Q\ (PB)}$	−	38	52	mA	−
Quiescent current (REC mode)	$I_{Q\ (REC)}$	−	40	52	mA	−
REC gate amplifier gain (pin 1)	G_{VRG}	7.5	9.5	11.5	dB	f_{IN}=1MHz, V_{IN}=70mV (28pin)
SYNC threshold voltage (pin 21)	V_{TH}	1.0	1.35	2.0	V	Voltage at which SYNC gate operates.
Chroma killer level	V_{CK}	−	4.7	4.9	V	f_{IN}=1.1MHz, V_{IN}=0.2V_{P-P} (5pin)
Pin 20 timing (pin 20)	T_1	48	56	64	μs	R_T=100kΩ, C_T=1000pF, SYNC IN : 21pin
Pin 22 timing (pin 22)	T_2	4.4	5.2	6.0	μs	R_T=120kΩ, C_T=33pF, SYNC IN : 21pin
Gate output offset (pin 1, pin 23)	V_{OSG}	−0.1	−	0.1	V	V_{IN} = 0V for both REC and PB

* Pin numbers are for the DIP (BA7107) and SOP (BA7107F) packages.

Fig. 4 Playback mode

●SYNC gate timing

BA7107/BA7107F

The SYNC gate opens T_2 seconds after the rising edge of the SYNC IN signal from pin 21, and closes T_1 seconds after the falling edge of the signal (see Fig. 5). T_1 is set by the time constant of the CR circuit connected to pin 20, and T_2 by the time constant of the CR circuit connected to pin 22.

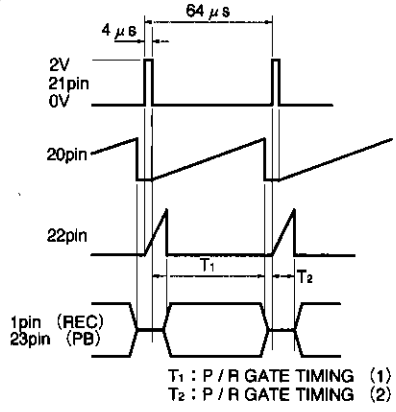

Fig. 5 P/R gate timing chart

The REC and PB SYNC gates are closed for an interval determined by T_1 and T_2 during horizontal scanning (SYNC IN: 64 μS), and the gates stay closed during vertical retrace (the SYNC IN input pulse period becomes shorter than T_1; 32 μS). Refer to Fig. 6.

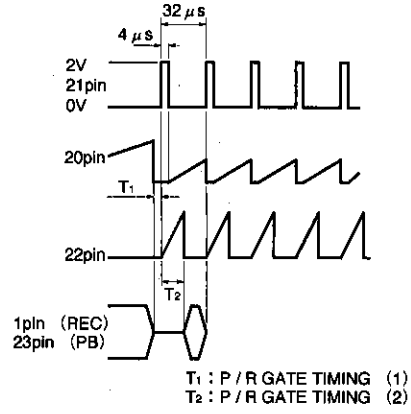

Fig. 6 P/R gate timing chart (V interval)

●Recording/playback switching

Switching between recording and playback is accomplished by switching power supply terminals. The IC is in recording mode when power is supplied to the Vcc pin (pin 24) and the REC5V pin (pin 3), and is in playback mode when power is supplied to the Vcc pin (pin 24) and the PB5V pin (pin 14).

Mode	Vcc (24pin)	REC 5V(3pin)	PB 5V(14pin)
REC	ON	ON	OFF
PB	ON	OFF	ON

* The pin numbers given above are for the DIP and SOP packages.

Notes

- The contents described in this catalogue are correct as of March 1997.
- No unauthorized transmission or reproduction of this book, either in whole or in part, is permitted.
- The contents of this book are subject to change without notice. Always verify before use that the contents are the latest specifications. If, by any chance, a defect should arise in the equipment as a result of use without verification of the specifications, ROHM CO., LTD., can bear no responsibility whatsoever.
- Application circuit diagrams and circuit constants contained in this data book are shown as examples of standard use and operation. When designing for mass production, please pay careful attention to peripheral conditions.
- Any and all data, including, but not limited to application circuit diagrams, information, and various data, described in this catalogue are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO., LTD., disclaims any warranty that any use of such device shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes absolutely no liability in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices; other than for the buyer's right to use such devices itself, resell or otherwise dispose of the same; no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD., is granted to any such buyer.
- The products in this manual are manufactured with silicon as the main material.
- The products in this manual are not of radiation resistant design.

The products listed in this catalogue are designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys). Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers, or other safety devices) please be sure to consult with our sales representative in advance.

- Note when exporting
  - It is essential to obtain export permission when exporting any of the above products when it falls under the category of strategic material (or labor) as determined by foreign exchange or foreign trade control laws.
  - Please be sure to consult with our sales representatives to ascertain whether any product is classified as a strategic material.
