DESCRIPTION

The **HCC4016B** (extended temperature range) and **HCF4016B** (intermediate temperature range) are monolithic integrated circuit, available in 14-lead dual in-line plastic or ceramic package and plastic micropackage.

The **HCC/HCF4016B** Series types are quad bilateral switches intended for the transmission or multiplexing

of analog or digital signals. Each of the four independent bilateral switches has a single control signal input which simultaneously biases both the p and n device in a given switch ON or OFF.
