18-element bar graph LCD driver**HEF4754V**
LSI**DESCRIPTION**

The HEF4754V drives an 18-element bar graph LCD in linear relation to the control voltage (V_c) in a pointer or thermometer mode.

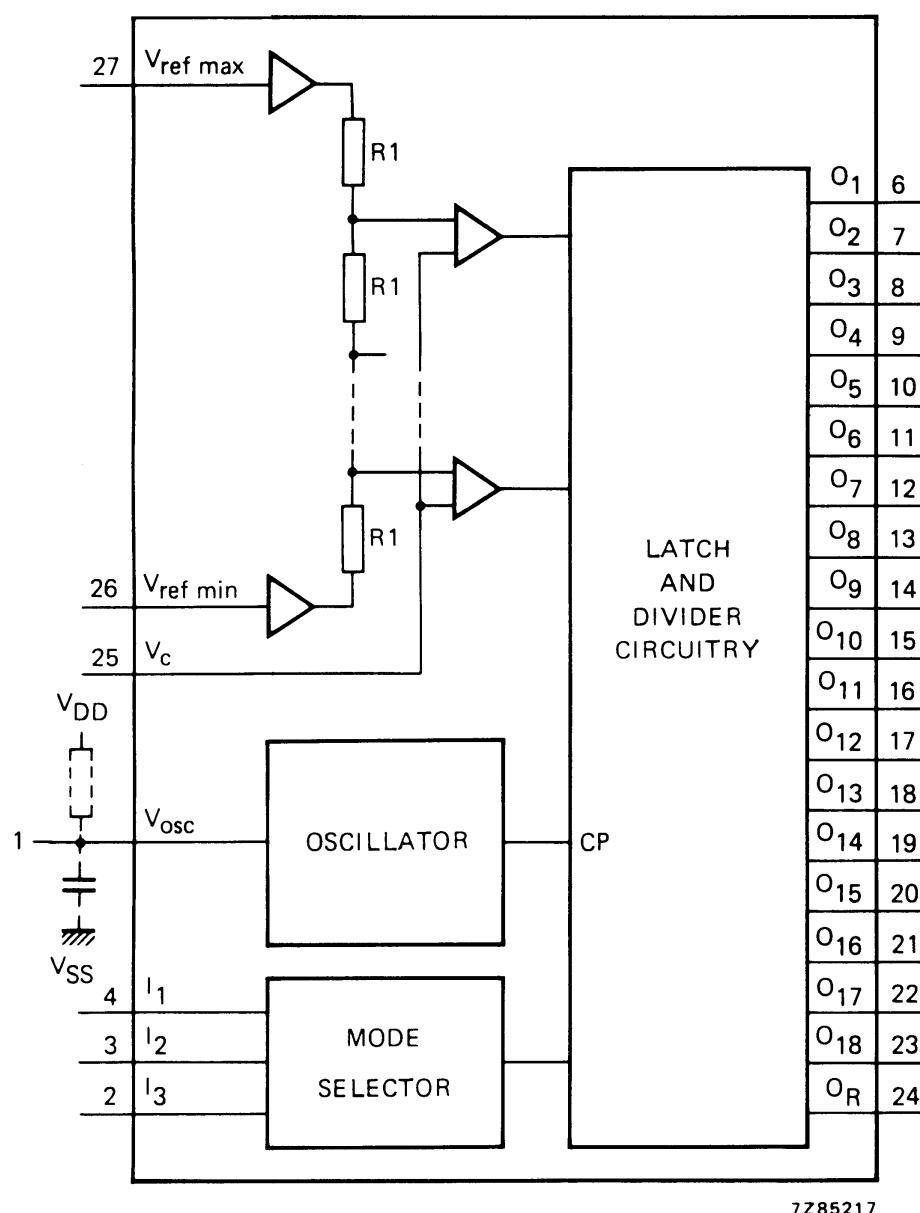

Fig.1 Functional diagram.

FAMILY DATA

See Family Specifications

18-element bar graph LCD driver

HEF4754V
LSI**PINNING**

V_{osc}	oscillator terminal
V_c	control voltage input
$V_{ref\ min}$	reference voltage inputs
$V_{ref\ max}$	
I_1	thermometer/pointer (choice select input)
I_2	peak value; reset/9 or 18 bars (choice select input)
I_3	reset; repetitively reset (choice select input)
O_1 to O_{18}	bar outputs
O_R	back plate output

HEF4754VP(N): 28-lead DIL; plastic
(SOT117-2)HEF4754VD(F): 28-lead DIL; ceramic (cerdip)
(SOT135)HEF4754VT(D): 28-lead SO; plastic
(SOT136-1)

(): Package Designator North America

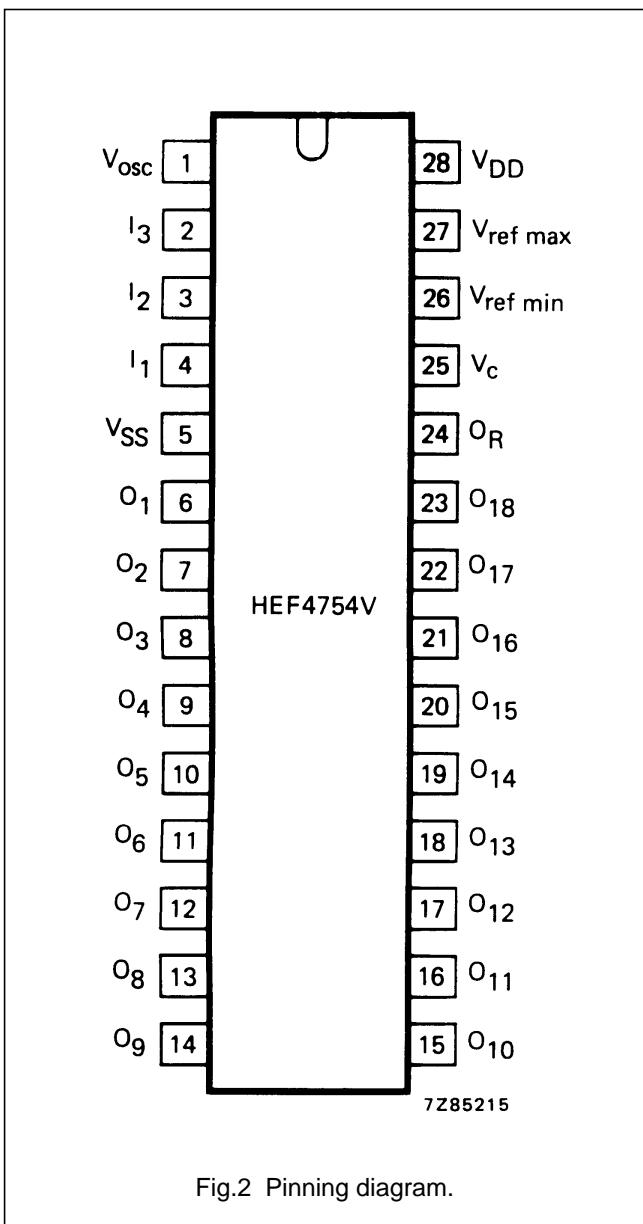

Fig.2 Pinning diagram.

FUNCTION TABLE

I_1	I_2	I_3	MODE
L	L	X	pointer; 18 bars
L	H	X	pointer; 9 bars
H	L	X	thermometer; no peak value
H	H	L	thermometer; peak value, repetitively reset
H	H	H	thermometer; peak value, manually reset

Note

1. H = HIGH state (the more positive voltage)
2. L = LOW state (the less positive voltage)
3. X = state is immaterial

18-element bar graph LCD driver

HEF4754V
LSI

GENERAL DESCRIPTION

The HEF4754V drives an 18-element bar graph LCD in linear relation to the control voltage (V_c) in a pointer or thermometer mode. The first bar lights up when V_c is smaller than $V_{T(\text{bar})2}$ (see equation [3] below).

In the pointer mode, the circuit can drive 9 or 18 bars; in the thermometer mode, the circuit also drives the peak value indication. This can be reset or repetitively reset, after 1,5 to 2 seconds.

The circuit has analogue and digital parts. The analogue part consists of 17 comparators, with their non-inverting inputs connected together and coupled to the control input V_c . The inverting inputs of the comparators are connected in succession to the nodes of an 18-part resistor divider.

The distance between the switching levels of the comparators is defined by the voltage difference across this divider. The extremities of the resistor divider are coupled via high-input amplifiers to the maximum reference voltage input and the minimum reference voltage input.

The digital part has one reference output (O_R) to drive the back plate, and 18 outputs (O_1 to O_{18}) to drive each bar. Three latches and some gates are incorporated for each bar output. An on-chip oscillator (1024 Hz) with external R and C drives the circuit. The outputs are driven at 64 Hz. The select inputs I_1 to I_3 are provided with an on-chip pull-up element, and they may therefore be left floating (equals HIGH state).

LINEARITY

$V_{DD} = 10 \text{ V}$; $V_{ref\ max} = 9,5 \text{ V}$; $V_{ref\ min} = 0,5 \text{ V}$; $T_{amb} = 25 \text{ }^\circ\text{C}$

$\Delta V_1 = 250 \text{ mV}$ (this is the tolerance of the step voltage).

$$V_{step} = V_{step''} + \Delta V_1 \quad [1]$$

$V_{step'}$ is the (internal) voltage drop across the resistor-ladder network.

$$V_{step'} = \frac{(V_{ref\ max} \pm \Delta V_2) - (V_{ref\ min} \pm \Delta V_2)}{18} \quad [2]$$

ΔV_2 is the maximum offset voltage spread of the on-chip voltage follower.

$\Delta V_2 = 250 \text{ mV}$.

The linearity is guaranteed for $V_{DD} > 10 \text{ V}$.

The monotony between $V_{DD} = 5 \text{ V}$ and 10 V is guaranteed. During ramping-up of the input voltage a maximum of two bars might be activated simultaneously.

ABSOLUTE VOLTAGE TRIGGER LEVEL

The absolute voltage trigger level at the V_c pin is $V_{T(\text{bar})n}$:

$$V_{T(\text{bar})n} = \{V_{ref\ min} \pm \Delta V_2^*\} + \{(n-1)V_{step'} \pm \Delta V_1\}, \text{ in which} \quad [3]$$

n = number of bars; $2 \leq n \leq 18$.

For $n = 1$ (first bar) see text above.

Note

* For ΔV_2 the same sign (+ or -) should be used as in equation [2].

Notes

1. $V_{ref\ min} = 0,5$ V; $V_{ref\ max} = 9,5$ V; $V_{osc} = V_c = 0$ V; I_1 , I_2 and I_3 at V_{DD} .
2. Pin under test at V_{SS} or V_{DD} , all other inputs simultaneously at V_{SS} or V_{DD} .
3. $I_O = 0$; all inputs at V_{SS} or V_{DD} .
4. At $V_{DD} = 5$ V: $V_{OH} = 4,5$ V.
At $V_{DD} = 10$ V: $V_{OH} = 9,5$ V.
At $V_{DD} = 15$ V: $V_{OH} = 13,5$ V.
5. At $V_{DD} = 5$ V: $V_{OL} = 0,4$ V; inputs at V_{SS} or V_{DD} .
At $V_{DD} = 10$ V: $V_{OL} = 0,5$ V; inputs at V_{SS} or V_{DD} .
At $V_{DD} = 15$ V: $V_{OL} = 1,5$ V; inputs at V_{SS} or V_{DD} .
6. $V_{ref\ min} + 4$ V < $V_{ref\ max}$.
