

2A STEP DOWN SWITCHING REGULATOR

PRODUCT PREVIEW

- UP TO 2A STEP DOWN CONVERTER
 - OPERATING INPUT VOLTAGE FROM 8V TO 55V
 - PRECISE 3.3V ($\pm 1\%$) INTERNAL REFERENCE VOLTAGE
 - OUTPUT VOLTAGE ADJUSTABLE FROM 3.3V TO 50V
 - SWITCHING FREQUENCY ADJUSTABLE UP TO 500KHz
 - VOLTAGE FEEDFORWARD
 - ZERO LOAD CURRENT OPERATION
 - INTERNAL CURRENT LIMITING (PULSE-BY-PULSE AND HICCUP MODE)
 - INHIBIT FOR ZERO CURRENT CONSUMPTION
 - PROTECTION AGAINST FEEDBACK DISCONNECTION
 - THERMAL SHUTDOWN
 - SOFT START FUNCTION

DESCRIPTION

The L4978 is a step down monolithic power switching regulator delivering 2A at a voltage between 3.3V and 50V (selected by a simple external divider). Realized in BCD mixed technology, the device uses an internal power D-MOS transistor (with a typical R_{DSON} of 0.25Ω) to obtain very high efficiency and high switching speed.

TYPICAL APPLICATION CIRCUIT

A switching frequency up to 500KHz is achievable (the maximum power dissipation of the packages must be observed).

A wide input voltage range between 8V to 55V and output voltages regulated from 3.3V to 50V cover the majority of today's applications.

Features of this new generations of DC-DC converter include pulse-by-pulse current limit, hiccup mode for short circuit protection, voltage feedforward regulation, soft-start, protection against feedback loop disconnection, inhibit for zero current consumption and thermal shutdown.

The device is available in plastic dual in line, MINIDIP 8 for standard assembly, and SO16W for SMD assembly.

L4978

BLOCK DIAGRAM

PIN CONNECTIONS

PIN FUNCTIONS

DIP	SO (*)	Name	Function
1	2	GND	Ground
2	3	SS_INH	A logic signal (active low) disables the device (sleep mode operation). A capacitor connected between this pin and ground determines the soft start time. When this pin is grounded disables the device (driven by open collector/drain).
3	4	OSC	An external resistor connected between the unregulated input voltage and this pin and a capacitor connected from this pin to ground fix the switching frequency. (Line feed forward is automatically obtained)
4	5, 6	OUT	Stepdown regulator output
5	11	Vcc	Unregulated DC input voltage
6	12	BOOT	A capacitor connected between this pin and OUT allows to drive the internal DMOS Transistors
7	13	COMP	E/A output to be used for frequency compensation
8	14	FB	Stepdown feedback input. Connecting directly to this pin results in an output voltage of 3.3V. An external resistive divider is required for higher output voltages.

(*) Pins 1, 7, 8, 9, 10, 15 and 16 are not connected.

THERMAL DATA
