

SANYO

No.1845C

LA3605

Monolithic Linear IC

7-BAND GRAPHIC EQUALIZER

Applications

- Portable component stereos, radio-cassette recorders, tape recorders, car stereos.

Features

- One OP amp on chip.
- 7-band graphic equalizer for one channel can be formed easily by externally connecting capacitors and variable resistors which fix fo (resonance frequency).
- Series connection of two LA3605's makes multiband available.
- Highly stable to capacitive load.

Maximum Ratings at Ta=25°C

| | | unit |
|-----------------------------|---------------------|----------------|
| Maximum Supply Voltage | V _{CC} max | 20 V |
| Allowable Power Dissipation | Pdmax | 300 mW |
| Operating Temperature | T _{Op} | -20 to +75 °C |
| Storage Temperature | T _{Stg} | -40 to +125 °C |

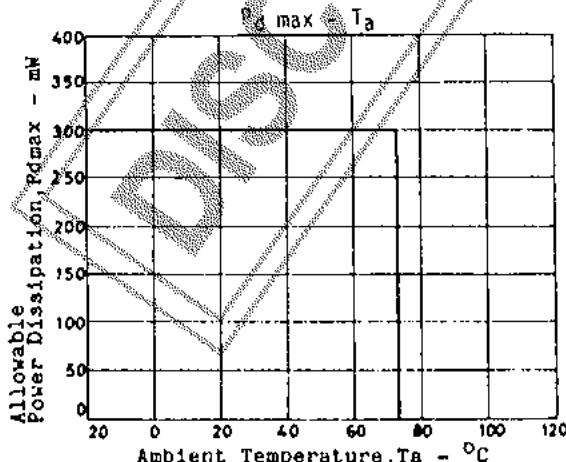

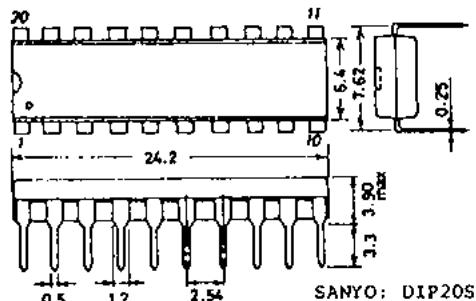

Operating Conditions at Ta=25°C

| | | unit |
|----------------------------|--------------------|-----------|
| Recommended Supply Voltage | V _{CC} | 8 V |
| Operating Voltage Range | V _{CC} OP | 5 to 15 V |

Operating Characteristics at Ta=25°C, V_{CC}=8V, R_L=10kohms, R_g=600ohms, See specified test circuit.

| | | | min | typ | max | unit |
|-------------------|------------------|---|------|------|-----|------|
| Quiescent Current | I _{QCO} | Quiescent | 7 | 9 | mA | |
| Voltage Gain | V _G | f=1kHz, Vin=-10dB at all flat mode | -3.8 | -0.8 | 2.2 | dB |
| Boost Amount | BOOST | f=60Hz [Vo=-10dB is taken] f=150Hz [as 0dB at all] f=400Hz [flat mode at f=1kHz.] | 8 | 10 | 12 | dB |

Test Circuit

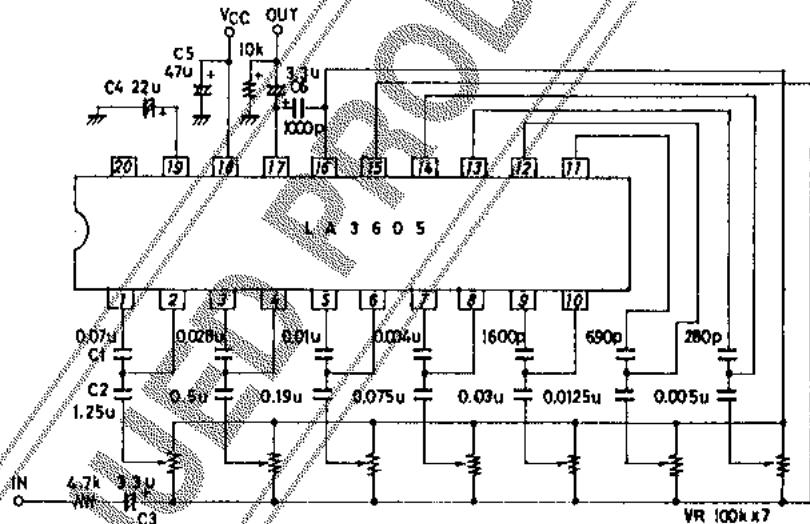

LA3605

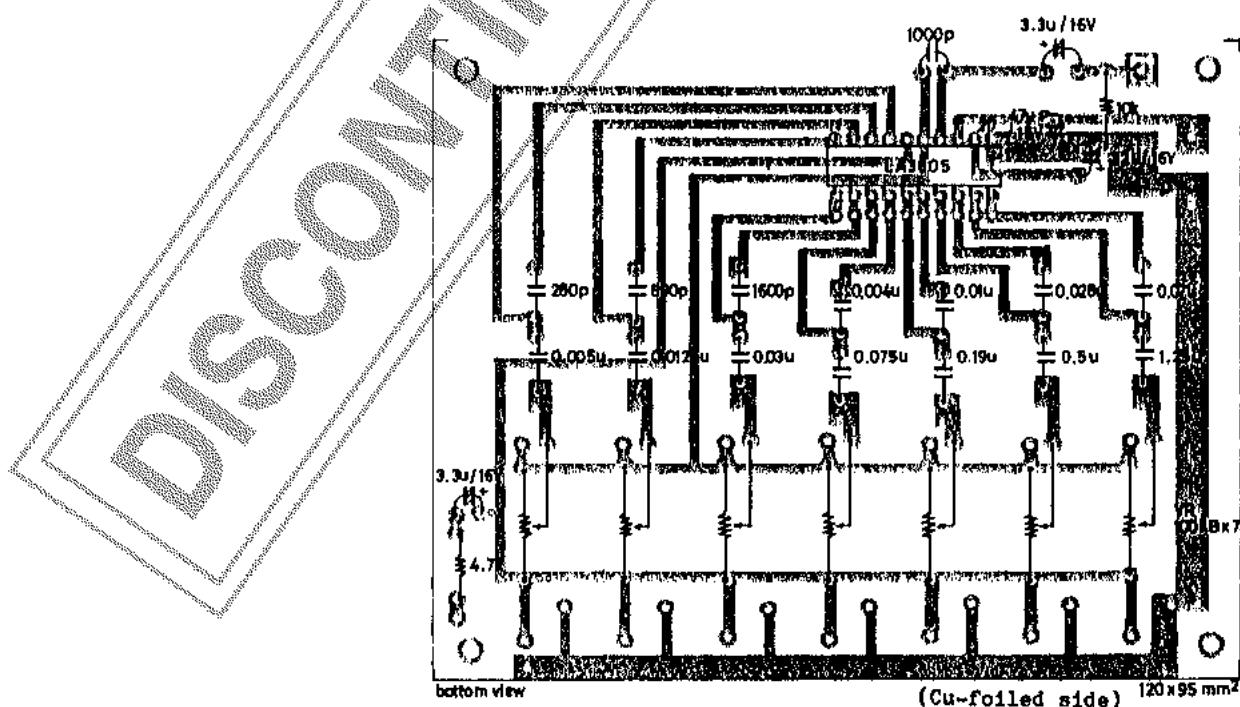

Equivalent Circuit Block Diagram

Sample Application Circuit

Sample Printed Circuit Pattern

f_0 (resonance frequency)

In the sample application circuit, f_0 for each of 7 bands is set as follows:

$f_0 = 60\text{Hz}, 150\text{Hz}, 400\text{Hz}, 1\text{kHz}, 2.5\text{kHz}, 6\text{kHz}, 15\text{kHz}$

f_0 is calculated using the following formula.

$$f_0 = \frac{1}{2\pi\sqrt{C_1 \cdot C_2 \cdot R_1 \cdot R_2}}$$

Q (quality factor)

Q is calculated using the following formula.

$$Q = \sqrt{\frac{C_1 \cdot R_2}{C_2 \cdot R_1}}$$

When Q is increased, the frequency band affected by the resonance circuit is narrowed and a clear distinction between this band and an adjacent band is provided, but the frequency response swells greatly at all boost mode and the peak of the composite frequency is lowered.

The above must be considered to fix C_1, C_2 .

Description of external parts

C_1, C_2 : Capacitors used to fix f_0 (resonance frequency)

C_3 : Input capacitor. Decreasing the capacitor value lowers the frequency response at low frequencies.

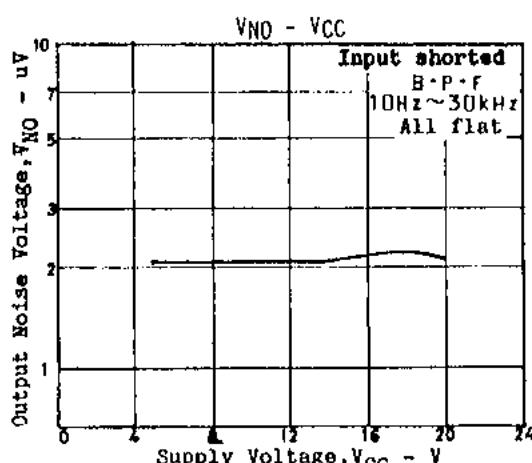

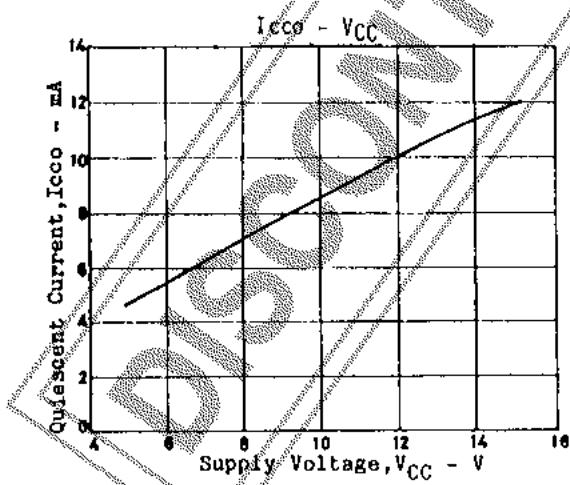

C_4 : Decoupling capacitor. Decreasing the capacitor value makes the effect of power supply stronger, whereby ripple is liable to occur.

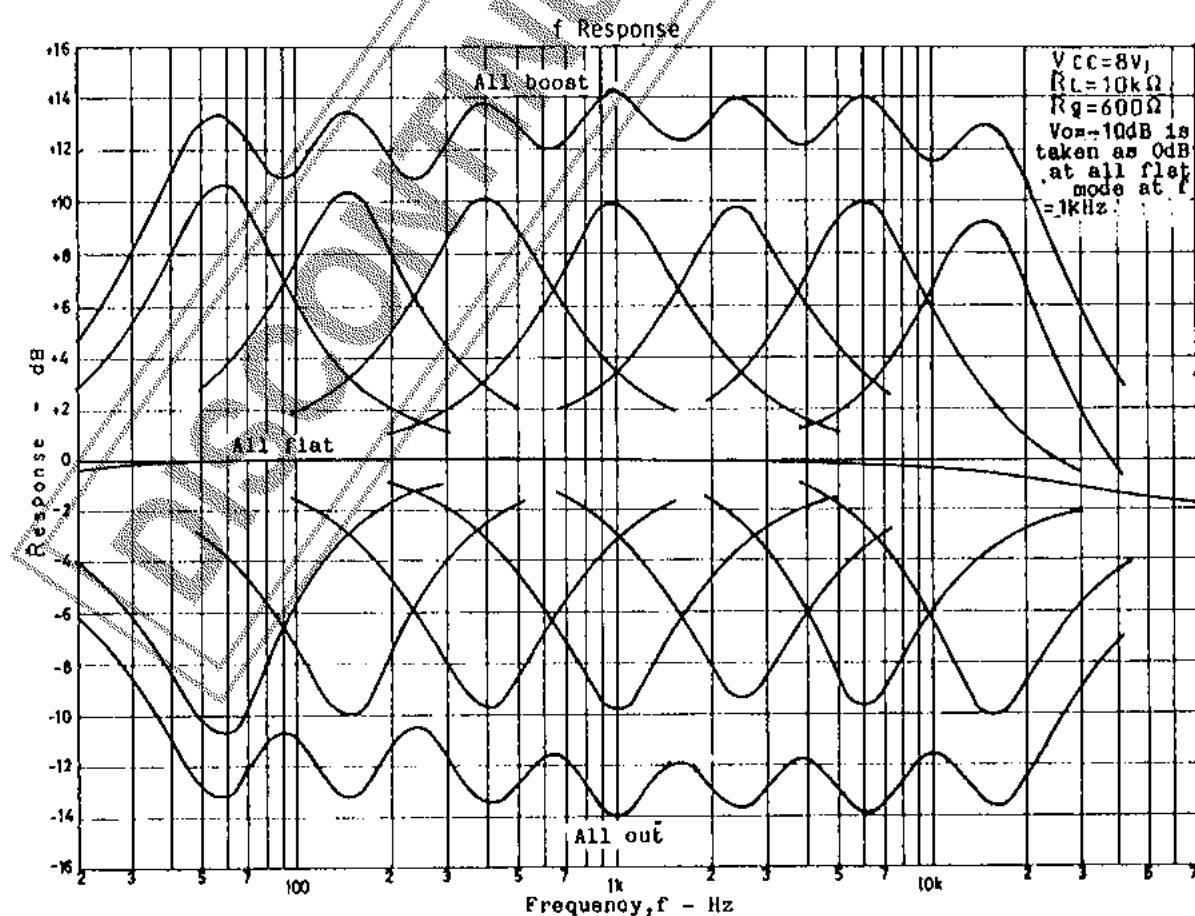

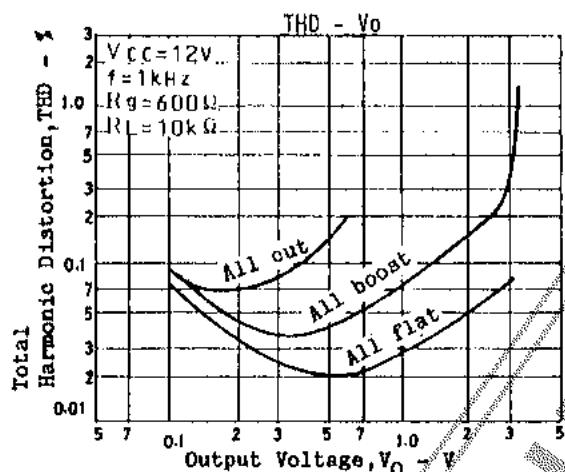

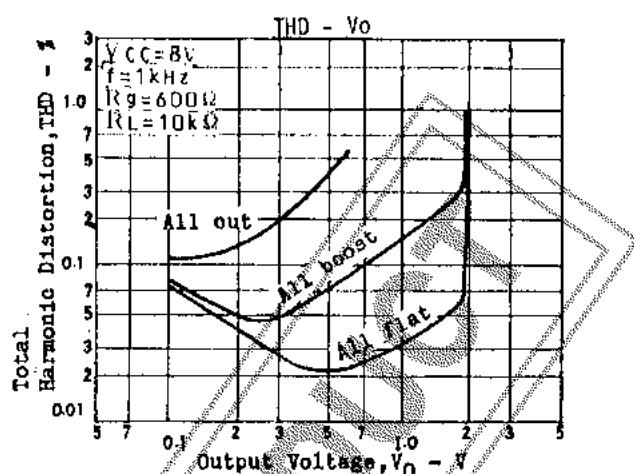

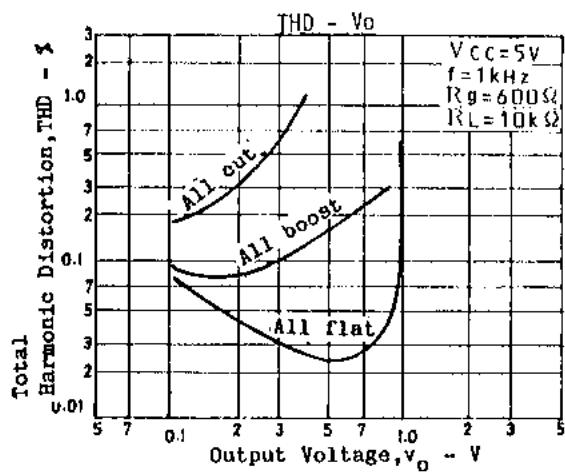

C_5 : Power capacitor.

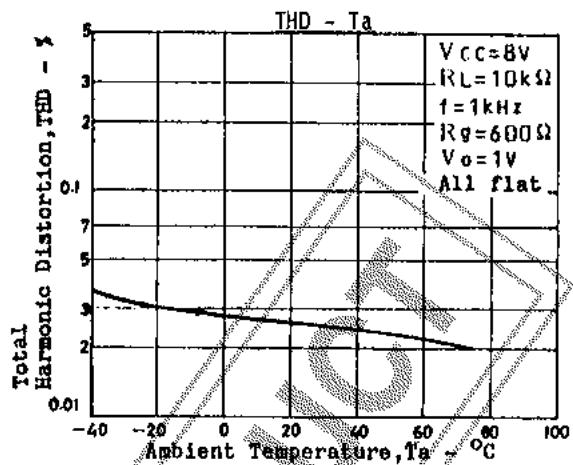

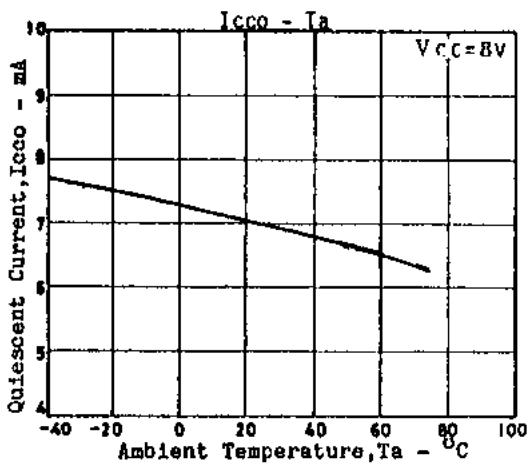

C_6 : Output capacitor. Decreasing the capacitor value lowers the frequency response at low frequencies.

Proper cares in using IC

- Maximum supply voltage V_{CC} max 20V must not be exceeded. The operating voltage is in the range of 5 to 15V.
- Application of power with the pin-to-pin spaces shorted causes breakdown or deterioration of the IC to occur. When mounting the IC on the board or applying power, make sure that the pin-to-pin spaces are not shorted with solder, etc.

DISCONTINUED PRODUCT

The application circuit diagrams and circuit constants herein are included as an example and provide no guarantees for designing equipment to be mass-produced.
