**LA7822**

Monolithic Linear IC

**Color TV Synchronization, Deflection Circuit**

The LA7822 is an IC containing not only the main functions required to achieve synchronization and deflection in color television receivers but also a generator of horizontal, vertical blanking pulses. It is a multifunctional IC ideally suited for use in color television receivers aiming at high-quality picture reproduction.

**Functions**

- Synchronizing separation
- Vertical oscillation
- Horizontal AFC
- Horizontal oscillation
- Composite blanking pulse (vertical + horizontal blanking pulse)
- X-ray protection
- Vertical blanking pulse (Only vertical blanking pulse can be taken out.)

**Features**

- Horizontal and vertical oscillations are stable against variations in ambient temperature and supply voltage due to small warm-up drift.
- Small variation in horizontal oscillation frequency
- Good linearity and interlace because DC bias at vertical output stage is subjected to sampling control within retrace time.
- Vertical blanking pulse width can be set freely by peripheral parts.
- Minimized picture distortion because AFC circuit is defeated during vertical trigger pulse input period.
- Multifunctional and compact (DIP-16).

**Maximum Ratings at  $T_a = 25^\circ\text{C}$** 

		unit
Maximum Supply Voltage	V <sub>CC13</sub>	14 V
Maximum Supply Current	I <sub>CC16</sub>	16 mA
Allowable Power Dissipation	P <sub>d max</sub> $T_a = 65^\circ\text{C}$	570 mW
Operating Temperature	T <sub>opg</sub>	-20 to +85 °C
Storage Temperature	T <sub>stg</sub>	-55 to +125 °C

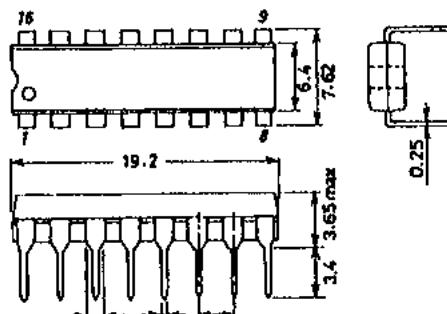

**Operating Conditions at  $T_a = 25^\circ\text{C}$** 

		unit
Recommended Supply Voltage	V <sub>CC13</sub>	12 V
Recommended Supply Current	I <sub>CC16</sub>	13 mA

		min	typ	max	unit
V <sub>CC14</sub> Current Dissipation	I <sub>CC13</sub>	16.8	26.0	mA	
V <sub>CC18</sub> Supply Voltage	V <sub>CC18</sub>	11.8	13.2	V
