

No. 5486 LC66E2316

# Four-Bit Single-Chip Microcontroller with 16 KB of On-Chip EPROM

# **Preliminary**

#### Overview

The LC66E2316 is an on-chip EPROM version of the LC6623XX Series CMOS 4-bit single-chip microcontrollers. The LC66E2316 provides the same functions as the LC662316A, and is pin compatible with that product. Since the LC66E2316 is provided in a window package, it can be reprogrammed repeatedly and is thus optimal for program development.

# **Features and Functions**

- On-chip EPROM capacity of 16 kilobytes, and an onchip RAM capacity of 512 × 4 bits.
- Fully supports the LC66000 Series common instruction set (128 instructions).
- I/O ports: 36 pins
- DTMF generator

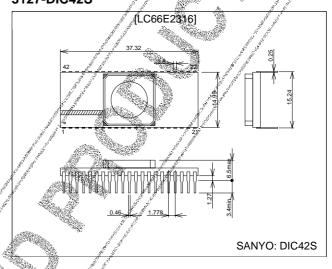

This microcontroller incorporates a circuit that can generate two sine wave outputs, DTMF output, or a melody output for software applications.

- 8-bit serial interface: one circuit
- Instruction cycle time: 0.95 to 10 µs (at 4.5 to 5.5 V)
- Powerful timer functions and prescalers
  - Time limit timer, event counter, pulse width measurement, and square wave output using a 12-bit timer.
  - Time limit timer, event counter, PWM output, and square wave output using an 8-bit timer
  - Time base function using a 12-bit prescaler.
- Powerful interrupt system with 10 interrupt factors and 7 interrupt vector locations.
  - External interrupts: 3 factors/3 vector locations
  - Internal interrupts: 4 factors/4 vector locations
     (Waveform output internal interrupts:/3 factors and 1 vector; shared with external expansion interrupts)
- Flexible I/O functions
   Selectable options include 20-mA drive outputs, inverter
   circuits, pull-up and open-drain circuits.
- Optional runaway detection function (watchdog timer)
- 8-bit I/O functions
- Power saving functions using halt and hold modes.
- Packages: DIC42S (window), QFC48 (window)
- Evaluation LSIs: EC66599 (evaluation chip) + EVA800/850 TB662YXX2

#### **Pin Assignments**

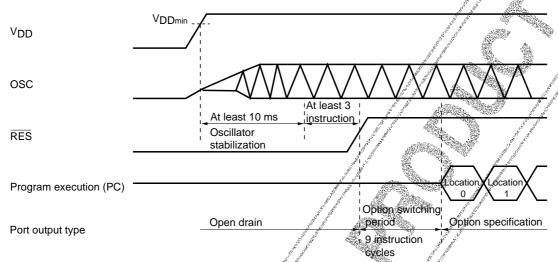

#### **Usage Notes**

The LC66E2316 was created for program development, product evaluation, and prototype development for products based on the LC6623XX Series microcontrollers. Keep the following points in mind when using this product.

#### 1. After a reset

The  $\overline{RES}$  pin must be held low for an additional 3 instruction cycles after the oscillator stabilization period has elapsed. Also, the port output circuit types are set up during the 9 instruction cycles immediately after  $\overline{RES}$  is set high. Only then is the program counter set to 0 and program execution started from that location. (The port output circuits all revert to the open-drain type during periods when  $\overline{RES}$  is low.)

#### 2. Notes on LC6623XX evaluation

The high end of the EPROM area (locations 3FFOH to 3FFFH) are the option specification area. Option specification data must be programmed for and loaded into this area. The Sanyo specified cross assembler for this product is the program LC66S.EXE. Also, insert JMP instructions so that user programs do not attempt to execute addresses that exceed the capacity of the mask ROM, and write zeros (00H) to areas (other than 3FF0H to 3FFFH) that exceed the actual capacity of the mask ROM.

3. Always apply an opaque seal to the window on the EC66E2316 package when actually using the device.

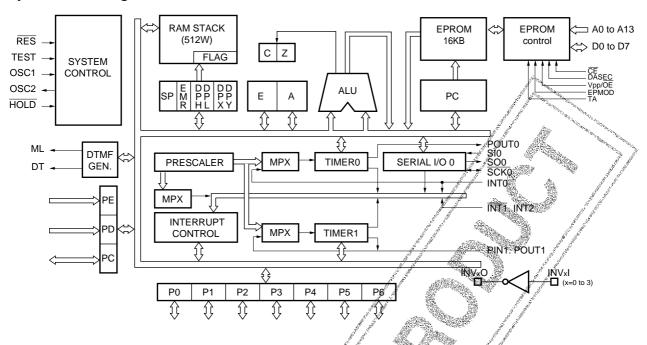

#### Main differences between the LC66E2316, LC66P2316, and LC6623XX Series

		Jill All	
Item	LC6623XX Series (mask version)	LC66E2316	LC66P2316
Differences in the main characteristics • Operating temperature range	_30 to +70°€.	+10 to +40°C	-30 to +70°C
Operating supply voltage/operating frequency (cycle time)	3.5 to 5.5 V/0.95 to 10 µs	4.5 to 5.5 V/0.95 to 10 μs	4.0 to 5.5 V/0.95 to 10 μs
• Input high-level current (RES)	Махітит: ∄ µА	Typical: 10 μA (normal operation and halt mode) Hold mode: 1 μA maximum	Typical: 10 μA (normal operation and halt mode) Hold mode: 1 μA maximum
Input low-level current (RES)	Maximum: 1 μA	Typical: 100 μA	Typical: 100 μA
Current drain     (Operating at 4 MHz)     (Halt mode at 4 MHz)     (Hold mode)	Typical: 10 pA, maximum: 10 μA	Larger than that for the mask versions Typical: 10 nA, maximum: 10 μA*	Larger than that for the mask versions Typical: 10 nA, maximum: 10 μA*
Port output types at reset	The output type specified in the options	Open-drain outputs	Open-drain outputs
Package	• DIP42S • QFP48E	DIC42S window package     QFC48 window package	• DIP42S • QFP48E

Note: \* Although the microcontroller will remain in hold mode if the RES pin is set low while it is in hold mode, always use the reset start sequence (after switching HOLO from low to high, switch RES from low to high) when clearing hold mode. Also not that a current of about 100 μA flows from the RES pin when it is low. This increases the hold mode current drain by about 100 μA.

See the data sheets for the individual products for details on other differences.

# **System Block Diagram**

#### **Pin Function Overview**

				A 40		
Pin	I/O	Overview	Output driver type	Options	State after a reset	Standby mode operation

P60/ML P61 P62/DT	l/O	I/O ports P60 to P63 Input or output th 4-bit or 1-bit units P60 is also used as the melody output ML pin P62 is also used as the tone output DT	Pch: CMOS type     Nch: Intermediate sink current	CMOS or Nch OD output	н	Hold mode: Output off
P63/PIN1	4	P62 is also used for the event count input to timer 1.	type	σαιραι		Halt mode: Output retained

#### Continued from preceding page.

Pin	I/O	Overview	Output driver type	Options	State after a reset	Standby mode operation
PC2/CE PC3/DASEC	ı	I/O ports PC2 to PC3  • Output in 2-bit or 1-bit units  • PC3 is also used as the control CE and DASEC pin in EPROM mode.	Pch: CMOS type     Nch: Intermediate sink current type	CMOS or Nch OD output	H. Carrier and the second	Hold mode: Port output off  Halt mode: Port output
PD0/INV2I PD1/INV2O PD2/INV3I PD3/INV3O	ı	Dedicated input ports PD0 to PD3 Dedicated inverter circuits (option)	When the inverter circuit option is selected. CMOS type Nch: Intermediate sink current type	Inverter circuits	Normal input Inverter I/O goes to the output off state.	Hold mode: Inverter Output off Halt mode: friverter output continues
PE0 PE1	I	Dedicated input ports			A STATE OF THE STA	Hold mode: input disabled 
OSC1 OSC2	I 0	System clock oscillator connections When an external clock is used, leave OSC2 open and connect the clock signal to OSC1.		Ceramic escillator or external clock selection	Option selection	Hold mode: oscillator stops 
RES/V <sub>PP</sub> / OE	ı	System reset input  • When the P33/HOLD pin is at the high level, a low level input to the RES pin will initialize the CPU.  • This pin is also used as the Vpp OE pin in EPROM mode.				
TEST/ EPMOD	I	CPU test pin This pin must be connected to V <sub>SS</sub> during normal operation. Setting this pin to +12 V switches the LC66E2316 to EPROM mode.				
V <sub>DD</sub> V <sub>SS</sub>		Power supply pins	and the second s			

Note: Pull-up MOS type: The output circuit includes a MOS transistor that pulls the pin up to V<sub>DD</sub>. CMOS output: Complementary output:

OD output: Open-drain output.

#### **User Options**

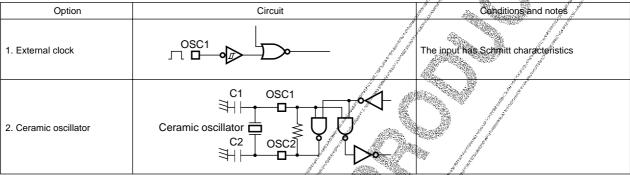

1. Port 0, 1, 4, and 5 output level at reset option

The output levels at reset for I/O ports 0, 1, 4, and 5, in independent 4-bit groups, can be selected from the following two options.

Option	Conditions and notes
Output high at reset	The four bits of ports 0, 1, 4, or 5 are set in a group
2. Output low at reset	The four bits of ports 0, 1, 4, or 5 are set in a group

#### 2. Oscillator circuit options

· Main clock

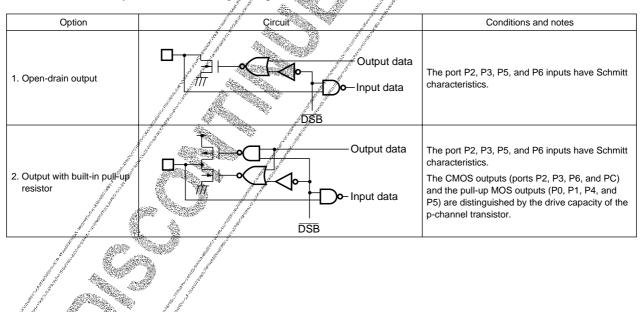

Note: There is no RC oscillator option.

3. Watchdog timer option

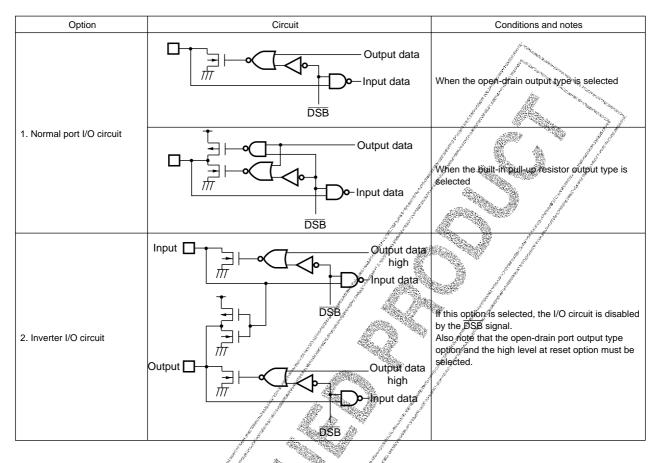

A runaway detection function (watchdog timer) can be selected as an option.

- 4. Port output type options
  - The output type of each bit (pin) in ports P0, P1, P2, P3 (except for the P33/HOLD pin), P4, P5, P6, and PC can be selected individually from the following two options.

#### 5. Inverter array circuit option

One of the following options can be selected for each of the following port sets: P40/P41, P42/P43, PD0/PD1, and PD2/PD3.

# LC662316 Series Option Data Area and Definitions

#### **Usage Notes**

#### 1. Option specification

When using a Sanyo cross assembler with the LC66E2316, use the version called "LC66S.EXE" and specify the actual microcontroller to be evaluated with the CPU pseudo instruction in the source file. The port options must be specified in the source file. The cross assembler will create an option code list in the option specification area (locations 3FF0H to 3FFFH). It is also possible to directly set up data in the option specification area. If this is done, the options must be specified according to the option code creation table shown on the following page.

#### 2. Writing the EPROM

Use a special-purpose writing conversion board (the W66EP5316D for the DIP package, and the W66EP2316Q for the QFP package) to allow the EPROM programmers listed below to be used when writing the data created by the cross assembler to the LC66E2316.

The EPROM programmers listed below can be used

Manufacturer	Models that can be used
Advantest	R4945, R4944A, R4943, or equivalent products
Ando	AF9704
AVAL	
Minato Electronics	MODEL1890A

- The "27512 (V<sub>PP</sub> 12.5 V) Intel high-speed write" technique must be used to write the EPROM. Set the address range to location 0 to 3FFFH. The DASEC jumper must be off.
- 3. Using the data security function

The data security function sets up the microcontroller in advance so that data that was written to the microcontroller EPROM cannot be read out.

Use the following procedure to enable the LC66E2316 data security function.

- Set the write conversion board DASEC jumper to the on position.
- Write the data to the EPROM once again.

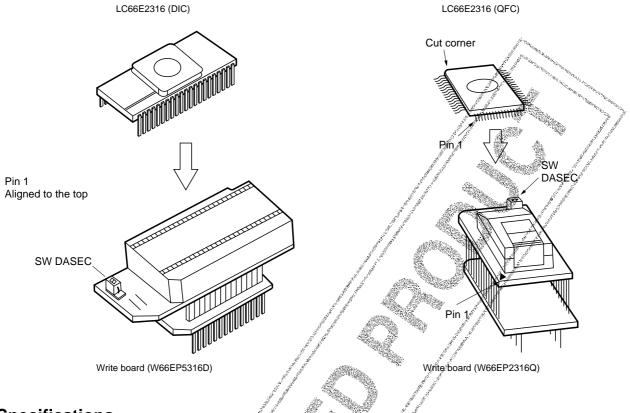

At this time, since this function will operate, the EPROM programmer will issue an error. However, this error does not indicate that there was a problem in either the programmer or the LSI.

Notes: 1. If the data at all addresses was "FF" at step 2, the data security function will not be activated.

- 2. The data security function will not be activated at step 2 if the "blank → program → verify" operation sequence is used.
- 3. Always return the jumper to the off position after the data security function has been activated.

#### 4. Erase procedure

Use a general-purpose EPROM eraser to erase data written to the EPROM.

# **Specifications**

Absolute Maximum Ratings at  $Ta = 25^{\circ} \text{C} . \text{V}_{SS} = \text{C}$

Total pin current	ΣÎ <sub>OP</sub> 1	P0, P1, P2, P3 (except for the P33/HOLD pin), PD	25	mA	4
	Σ I <sub>OP</sub> 2	P4, P5, P6, PC	25	mA	4
Allowable power dissipation.	Pd max	Ta = +10 to +40°C: DIC42S (QFC48)	600 (430)	mW	5
Operating temperature	Topr		-30 to +70	°C	
Storage temperature	Tstg		-55 to +125	°C	

- Note: 1. Applies to pins with open-grain output specifications. For pins with other than open-drain output specifications, the ratings in the pin column for that pin apply
  - 2. For the oscillator input and output pins, levels up to the free-running oscillation level are allowed.
  - 3. Sink current (Applies to PD when the inverter array specifications have been selected.)
  - 4. Source current (Applies to all pins except PD for which the pull-up output specifications, the CMOS output specifications, or the inverter array specifications have been selected. Applies to P8 pins for which the inverter array specifications have been selected.) Contact your Sanyo representative for the electrical characteristics when the inverter array or buffer array options are specified.

# Allowable Operating Ranges at Ta = +10 to $+40^{\circ}C$ , $V_{SS} = 0$ V, $V_{DD} = 4.5$ to 5.5 V, unless otherwise specified.

#### LC66XXXX Series Instruction Table (by function)

#### Abbreviations:

AC: Accumulator
E: E register
CF: Carry flag
ZF: Zero flag

HL: Data pointer DPH, DPL XY: Data pointer DPX, DPY

M: Data memory

M (HL): Data memory pointed to by the DPH, DPL data pointer

M (XY): Data memory pointed to by the DPX, DPY auxiliary data pointer

M2 (HL): Two words of data memory (starting on an even address) pointed to by the DPL data pointer

SP: Stack pointer

M2 (SP): Two words of data memory pointed to by the stack pointer M4 (SP): Four words of data memory pointed to by the stack pointer

in: n bits of immediate data

t2: Bit specification

t2	11	10	01	00
Bit	2 <sup>3</sup>	22	21	20

PCh: Bits 8 to 11 in the PC
PCm: Bits 4 to 7 in the PC
PCl: Bits 0 to 3 in the PC
Fn: User flag, n = 0 to 15

TIMER0: Timer 0
TIMER1: Timer 1
SIO: Serial register

P: Port

P (i4): Port indicated by 4 bits of immediate data

INT: Interrupt enable flag

( ), [ ]: Indicates the contents of a location

←: Transfer direction, result.

∀: Exclusive or
∧: Logical and
∨: Logical or
+: Addition
-: Subtraction

—: Taking the one's complement

RTIM0	Read timer 0	1 1 0 0	1 0 1 1	1	2	M2 (HL), AC ← (TIMER0)	Read out the contents of the timer 0 counter into M2 (Hi.), AC.		
RTIM1	Read timer 1	1 1 0 0 1 1 1 1	1 1 1 1 1 0 1	2	2	$E,AC \leftarrow (TIMER1)$	Read out the contents of the timer 1 counter into E, AC		<i>J</i>
START0	Start timer 0	1 1 0 0 1 1 1 0	1 1 1 1 0 1 1 0	2	2	Start timer 0 counter	Start the timer 0-counter.		<i>*</i>
START1	Start timer 1	1 1 0 0 1 1 1 0	1 1 1 1 0 1 1	2	2	Start timer 1 counter	Start the timer 1 counter.	A A A A A A A A A A A A A A A A A A A	
STOP0	Stop timer 0	1 1 0 0	1 1 1 1 0	2	2	Stop timer 0 counter	Stop the timer 0 counter.		
STOP1	Stop timer 1	1 1 0 0 1 1 1 1	1 1 1 1 1 0 1 1	2	2	Stop timer 1 counter	Stop the timer 7 counter.		
[Interrupt	control instructions]	Г	Г						
MSET	Set interrupt master enable flag	1 1 0 0 0 0 1 0 1	1 1 0 1	2	2	MSE ←1	Set the interrupt master enable flag to one.		
MRESET	Reset interrupt master enable flag	1 1 0 0 1	1 1 0 1 0 0 0	2	2	MSE ← 0	Clear the interrupt master enable flag to zero.		
EIH i4	Enable interrupt high	1 1 0 0 0 0 1 0 1	1 1 0 1 I <sub>3</sub> I <sub>2</sub> I <sub>1</sub> I <sub>0</sub>	2	2	EDIH ← (EDIH) √ 14	Set the interrupt enable flag to one:		
EIL i4	Enable interrupt low	1 1 0 0 0 0 1 0 0	1 1 0 1   I <sub>3</sub>   I <sub>2</sub>   I <sub>1</sub>   I <sub>0</sub>	2	2	EØIL ← (EDIL) ÿ i4	Set the interrupt enable flag to one.		
DIH i4	Disable interrupt high	1 1 0 0 1	1 1 0 1/ l <sub>3</sub> l <sub>2</sub> l <sub>1</sub> l <sub>0</sub>	2	2 🕅	EDIH ← (EDIH) ∧ i4	Grear the interrupt enable flag to zero.	ZF	
DIL i4	Disable interrupt low	1 1 0 0 1 0 0 0	1 1 0 1 1 <sub>3</sub> 1 <sub>2</sub> 1 <sub>4</sub> 1 <sub>0</sub>	2	2	EDIL ← (EDIL) ½ i4	Clear the interrupt enable flag to zero.	ZF	
WTSP	Write SP	1 1 0 0	1/1/1 1	2	2	\$P ← (E), (AC)	Transfer the contents of E, AC to SP.		
RSP	Read SP	1 1 0 0	1 1 1 1	2	2	E, AÇ (SP)	Transfer the contents of SP to E, AC.		
[Standby	control instructions]		430 70000	ia.	_	41			
HALT	HALT		1 1 1 1 1 1 1 0	2	2	HÄLT	Enter halt mode.		
HOLD	HOLD	1 1 0 0	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	- 47	2.5	HOLD	Enter hold mode.		
[Serial I/O	control instructions]	ÇÃ.	Y A	11	<i>y</i> .	T			
STARTS	Start serial I 0	1 1 0 0	1 1 1 0	2	2	START SI O	Start SIO operation.		
WTSIO	Write serial/I O	1 1 0 0	1 1 1 1 1	2	2	$SIO \leftarrow (E), (AC)$	Write the contents of E, AC to SIO.		
RSIO	Read serial I O	1 1 0 0 1 1 1 1	1/1/1 1	2	2	$E,AC \leftarrow (SIO)$	Read out the contents of SIO into E, AC.		
[Other ins	tructions]	NOTE OF THE PARTY	r de la companya de l			Г			
NOP 🤇	No operation	0 0 0 0	0 0 0 0	1	1	No operation	Consume one machine cycle without performing any operation.		
SB i2	Select bank	1 1 0 0 1 1 0 0	1 1 1 1 0 0 I <sub>1</sub> I <sub>0</sub>	2	2	PC13, PC12 ← I <sub>1</sub> I <sub>0</sub>	Specify the memory bank.		

- No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
- Anyone purchasing any products described or contained herein for an above-mentioned use shall:
  - Accept full responsibility and indemnify and defend SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors and all their officers and employees, jointly and severally, against any and all claims and litigation and all damages, cost and expenses associated with such use:
  - ② Not impose any responsibility for any fault or negligence which may be cited in any such claim or litigation on SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors or any of their officers and employees jointly or severally.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
