

LC74776, 74776M

On-Screen Display Controller IC

Preliminary

Overview

The LC74776/M is an on-screen display controller CMOS IC that displays characters and patterns on the TV screen under microprocessor control. This IC includes a built-in PDC/VPS/UDT interface circuit.

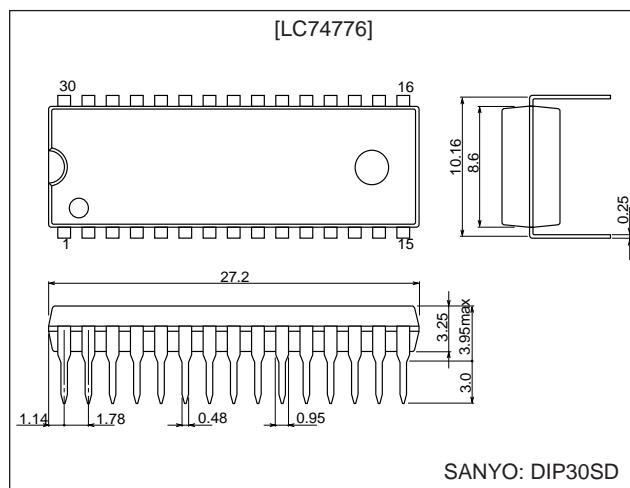

Functions

- Display format: 24 characters by 12 rows (Up to 288 characters)
- Character format: 12 (horizontal) × 18 (vertical) dots
- Character sizes: Three sizes each in the horizontal and vertical directions
- Characters in font: 256 (Of the 256 characters, one is a space character (FE hexadecimal) and one is a transparent space character (FF hexadecimal))
- Initial display positions: 64 horizontal positions and 64 vertical positions
- Blinking: Specifiable in character units
- Blinking types: Two periods supported: 1.0 second and 0.5 second
- Blanking: Over the whole font (12 × 18 dots)
- Background color: 8 colors (internal synchronization mode): 4f_{SC} and 2f_{SC}
Blue background only: NTSC
- Line background color: Three lines can be set up.
8 line background colors (in internal synchronization mode): 4f_{SC} and 2f_{SC}
- External control input: 8-bit serial input format
- On-chip sync separator circuit
- Video outputs: PAL and NTSC format composite video outputs
- On-chip PDC/VPS/UDT interface circuit supporting I²C
- Package: DIP30SD

MFP30S

LC74776, 74776M

Pin Functions

Pin no.	Pin	Function	Notes
1	V _{SS1}	Ground	Ground connection (digital system ground)
2	Xtal _{IN}	Crystal oscillator (MUTE input)	These pins are used either to connect the crystal and capacitors used to form an external crystal oscillator circuit to generate the internal synchronizing signals, or to input an external clock signal (2fsc or 4fsc). As a mask option, the Xtal _{OUT} pin can be set to function as the MUTE input pin. When this pin is set low, the video output is held at the pedestal level. (A pull-up resistor is built in and the input has hysteresis characteristics.)
3	Xtal _{OUT} (MUTE)		
4	CTRL1 (CHABLK)	Crystal oscillator input switching (CHABLK)	Switches the mode between external clock input and crystal oscillator operation. A low level selects crystal oscillator operation and a high level selects external clock input. As a mask option, the CTRL1 input pin can be set to function as the CHABLK (character . frame) output. This is a 3-value output.
5	SCL	I ² C clock input	Clock input for the PDC/VPS data output. I ² C bus.
6	OSC _{IN}	LC oscillator connections	Connection for the external coil and capacitor for the oscillator used to generate the character output dot clock
7	OSC _{OUT}		
8	SYNC _{JDC}	External synchronizing signal judgment output	Outputs the state of the external synchronizing signal presence/absence judgment. Outputs a high level when synchronizing signals are present. Outputs either the crystal oscillator clock if CS and RST are low, or the VCO clock if CS and RST are high. (This signal is not output after a command reset.)
9	CS	Enable input	Enable input for the OSD serial data input. Serial data input is enabled when this pin is low. A pull-up resistor is built in and the input has hysteresis characteristics.
10	SCLK	Clock input	Serial data input enable pin. A pull-up resistor is built in and the input has hysteresis characteristics.
11	SIN	Data input	Serial data input. A pull-up resistor is built in and the input has hysteresis characteristics.
12	V _{DD2}	Power supply	Composite video signal level adjustment power supply (analog system power supply)
13	CP _{OUT}	Charge pump output	Charge pump output. Connect a low-pass filter to this pin.
14	VCO _{IN}	Oscillator control voltage input	VCO oscillator control voltage input. (For data slicing)
15	V _{SS3}	Ground	Ground (VCO ground)
16	VCO _R	Oscillator range adjustment	VCO oscillator range adjustment resistor connection
17	NC		This pin must either be connected to ground or left open
18	V _{DD3}	Power supply (+5 V)	Power supply (+5 V: VCO power supply)
19	CV _{OUT}	Video signal output	Composite video signal output
20	V _{SS2}	Ground	Ground (analog system ground)
21	CV _{IN}	Video signal input	Composite video signal input
22	CV _{CR}	Video signal input	SECAM chrominance signal input
23	V _{DD1}	Power supply (+5 V)	Power supply (+5 V: digital system power supply)
24	SYN _{IN}	Sync separator circuit input	Video signal input to the internal sync separator circuit
25	SEPC	Slice level output	Slice level verification pin
26	SEP _{OUT}	Composite synchronizing signal output	Internal sync separator circuit composite synchronizing signal output. The signal actually output can be switched by MOD0 and SEL0. The DAV signal is output in the initial state.
27	SDA	I ² C bus data I/O	PDC/VPS data I/O. The I ² C bus write address is [0111 1100]. The I ² C bus read address is [0111 1101].
28	CDLR	Background color phase adjustment	Background color phase adjustment resistor connection
29	RST	Reset input	System reset input. A pull-up resistor is built in and the input has hysteresis characteristics.
30	V _{DD1}	Power supply (+5 V)	Power supply (+5 V: digital system power supply)

Note: *Both V_{DD1} pins must be connected to power.

LC74776, 74776M

Absolute Maximum Ratings

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\max}$	V_{DD1}, V_{DD2} , and V_{DD3}	$V_{SS} - 0.3$ to $V_{SS} + 6.5$	V
Maximum input voltage	$V_{IN\max}$	All input pins	$V_{SS} - 0.3$ to $V_{DD1} + 0.3$	V
Maximum output voltage	$V_{OUT\max}$	SDA , $SYNC_{JDG}$, and $SEPOUT$	$V_{SS} - 0.3$ to $V_{DD1} + 0.3$	V
Allowable power dissipation	$P_d \max$	$T_a = 25^\circ C$	350	mW
Operating temperature	T_{opr}		-30 to +70	°C
Storage temperature	T_{stg}		-40 to +125	°C

Allowable Operating Ranges

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V_{DD1}	V_{DD1}, V_{DD3}	4.5	5.0	5.5	V
	V_{DD2}	V_{DD2}	4.5	5.0	6.5	V
Input high-level voltage	V_{IH1}	\overline{CS} , SIN , $SCLK$, SDA , SCL ,	0.8 V_{DD1}		5.5	V
	V_{IH2}	\overline{RST} , $MUTE$	0.8 V_{DD1}		$V_{DD1} + 0.3$	V
	V_{IH3}	$CTRL1$	0.7 V_{DD1}		$V_{DD1} + 0.3$	V
Input low-level voltage	V_{IL1}	\overline{RST} , \overline{CS} , \overline{SIN} , $SCLK$, SDA , SCL , MUTE	$V_{SS} - 0.3$		0.2 V_{DD1}	V
	V_{IL2}	$CTRL1$	$V_{SS} - 0.3$		0.3 V_{DD1}	V
Pull-up resistance	R_{PU}	RST , CS , SIN , $SCLK$, MUTE Applies to pins set up by options.	25	50	90	kΩ
Composite video signal input voltage	V_{IN1}	CV_{IN} , CV_{CR} : $V_{DD1} = 5V$		2.0		Vp-p
	V_{IN2}	SYN_{IN} : $V_{DD1} = 5V$	1.5	2.0	2.5	Vp-p
Input voltage	V_{IN3}	Xtal _{IN} (when used for external clock input) $f_{IN} = 2f_{SC}$ or $4f_{SC}$: $V_{DD1} = 5V$	0.10		5.0	Vp-p
Oscillator frequencies	f_{OSC1}	Xtal _{IN} and Xtal _{OUT} oscillator pins (2f _{SC} : PAL)		8.867		MHz
	f_{OSC2}	Xtal _{IN} and Xtal _{OUT} oscillator pins (4f _{SC} : PAL)		17.734		MHz
	f_{OSC3}	OSC _{IN} and OSC _{OUT} oscillator pins (LC oscillator)	5		10	MHz

Note: Applications must be especially cautious about noise when using the Xtal_{IN} input pin in clock input mode.

Electrical Characteristics at $T_a = -30$ to $+70^\circ C$, $V_{DD1} = 5$ V unless otherwise specified

Parameter	Symbol	Conditions	Ratings			Unit	
			min	typ	max		
Input off leakage current	I_{leak1}	CV_{IN} , CV_{CR}			1	µA	
Output off leakage current	I_{leak2}	CV_{OUT} , SDA			1	µA	
Output high-level voltage	V_{OH1}	$SEPOUT$, $CPOUT$, $SYNC_{JDG}$ $V_{DD1} = 4.5V$, $I_{OH} = -1.0$ mA	3.5			V	
Output low-level voltage	V_{OL1}	$SEPOUT$, $CPOUT$, $SYNC_{JDG}$ $V_{DD1} = 4.5$ V, $I_{OL} = 1.0$ mA			1.0	V	
	V_{OL2}	SDA : $V_{DD1} = 5.0$ V, $I_{OL} = 3.0$ mA			0.4	V	
Three-value output voltage	V_O	$CHABLK$: $V_{DD1} = 5.0$ V	H	3.3		5.0	V
			M	1.8		2.3	V
			L	0		0.8	V
Input current	I_{IH}	\overline{RST} , \overline{CS} , \overline{SIN} , $SCLK$, SDA , SCL , $CTRL1$, MUTE, $VCOIN$: $V_{IN} = V_{DD1}$			1	µA	
	I_{IL}	$CTRL1$, SDA , SCL , $VCOIN$ $V_{IN} = V_{SS1}$	-1			µA	
Operating mode current drain	I_{DD1}	V_{DD1} and V_{DD3} : With all outputs open Xtal: 17.734 MHz, LC: 8 MHz			40	mA	
	I_{DD2}	V_{DD2} : $V_{DD2} = 5$ V			20	mA	
SYNC level	V_{SN}	CV_{OUT} : $V_{DD1} = 5.0$ V, $V_{DD2} = 5.0$ V	(1)		0.80	V	
			(2)		1.00	V	
			(3)		1.40	V	
Pedestal level	V_{PD}	CV_{OUT} : $V_{DD1} = 5.0$ V, $V_{DD2} = 5.0$ V	(1)		1.37	V	
			(2)		1.57	V	
			(3)		1.97	V

Display Control Commands

Display control commands have an 8-bit format and are transferred using the serial input function. Commands consist of a command identification code in the first byte and command data in the following bytes. The following commands are supported.

COMMAND0: Display memory (VRAM) write address setup command

COMMAND1: Display character data write command

COMMAND2: Vertical display start position and vertical character size setup command

COMMAND3: Horizontal display start position and horizontal character size setup command

COMMAND4: Display control setup command

COMMAND5: Display control setup command

COMMAND6: Synchronizing signal detection setup command

COMMAND7 to COMMAND12 and COMMAND18: Display control setup commands

COMMAND13 to COMMAND17: VPS/PDC control commands. These commands can only be written with the I²C bus (the SCL and SDA pins).

Display Control Command Table

Command	First byte								Second byte							
	Command identification code				Data				Data							
	7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0

Once written, a first byte command identification code is stored until the next first byte is written. However, when the display character data write command (COMMAND1) is written, the LC74776/M locks into the display character data write mode, and another first byte cannot be written.

When the CS pin is set high, the LC74776/M is set to the COMMAND0 (display memory write address setup mode) state.

LC74776, 74776M

COMMAND0 (Display memory write address setup command)

		1				
3	HP3	0				
		1				
2	HP2	0				
		1				
1	HP1	0				
		1				
0	HP0 (LSB)	0				
		1				

Note: All registers are set to 0 when the LC74776/M is reset by the \overline{RST} pin.

LC74776, 74776M

COMMAND4 (Display control setup command)

- First byte

DA 0 to 7	Register	Contents		Notes	
		State	Function		
7	–	1	Command 4 identification code. Display character data write setup.		
6	–	1			
5	–	0			
4	–	0			
3	TSTMOD	0	Normal operating mode	This bit must be set to 0	
		1	Test mode		
2	RAMERS	0	Erase display RAM.(The RAM data is set to FF hexadecimal.)	Erasing RAM takes about 500 µs. (This operation must be executed in the DSPOFF state.)	
		1			
1	OSCSTP	0	Do not stop the crystal and LC oscillators	Valid in external synchronization mode when character display is off	
		1	Stop the crystal and LC oscillators		
0	SYSRST	0	Reset all registers and turn display off	The registers are reset when the CS pin is low, and the reset state is cleared when CS is set high.	
		1			

- Second byte

DA 0 to 7	Register	Contents		Notes
		State	Function	
7	–	0	Second byte identification bit	
6	BLK2	0	Character display area	Specifies the size for complete fill in
		1	Video display area	
5	BLK1	0	BLK0	Changes the blanking size
		1	BLK1	
4	BLK0	0	0 Blanking off Character size	
		1	1 Frame size Complete fill in size	
3	BK1	0	Blinking period: About 0.5 s	Switches the blinking period
		1	Blinking period: About 1.0 s	
2	BK0	0	Blinking off	Blinking in character reverse video mode switches the display between normal character display and reverse video display
		1	Blinking on	
1	RV	0	Reverse video off	
		1	Reverse video on	
0	DSPON	0	Character display off	
		1	Character display on	

Note: All registers are set to 0 when the LC74776/M is reset by the RST pin.

LC74776, 74776M

COMMAND5 (Display control setup command)

- First byte

DA 0 to 7	Register	Contents		Notes
		State	Function	
7	–	1	Command 5 identification code. Display control setup.	
6	–	1		
5	–	0		
4	–	1		
3	NP1	0	NTSC	Switches between NTSC and PAL
		1	PAL	
2	NP0	0	525 lines	Modified by the external input signal V
		1	625 lines	
1	NON	0	Interlaced	Switches between interlaced and noninterlaced video
		1	Noninterlaced	
0	INT	0	External synchronization	Switches between external and internal synchronization
		1	Internal synchronization	

- Second byte

DA 0 to 7	Register	Contents		Notes
		State	Function	
7	–	0	Second byte identification bit	
6	RSHLV2	0	Background color level 1. (Level that is different from blue.)	Switches the background color signal level
		1	Background color level 2. (Level that is identical to the blue level.)	
5	HLFINT	0	Normal mode	
		1	Partial internal synchronization mode	
4	BCL	0	Background color on	Only valid in internal synchronization mode
		1	No background color. (Only the background level is set.)	
3	CB	0	Color burst signal output	Only valid when BCL is high
		1	Color burst signal output stopped	
2	PH2	0	PH2	Background color specification
		1	PH1	
1	PH1	0	PH0 (phase)	
		1	Background color	
0	PH0	0	0	
		1	Cyan	
1	PH1	0	0	
		1	Yellow	
0	PH1	0	1	
		1	Red	
1	PH1	0	1

7	–	0	Second byte identification bit	Specification when the PDC data BMS bit is 0. The item in parentheses is the specification when the BMS bit is 1.
6	ECP19	0	Byte 19 Hamming error check on (Data hold) {Bytes 44, 28, 36, 20, 32, 42, 32, and 42}	
		1	Byte 19 Hamming error check off (Data write) {Bytes 44, 28, 36, 20, 32, 42, 32, and 42}	The item in curly braces lists the odd parity check on/off bytes for header modes 1, 2, 3, and 4 and status mode 1, 2, 3, and 4.
5	ECP18	0	Byte 18 Hamming error check on (Data hold) {Bytes 43, 27, 35, 19, 31, 41, 31, and 41}	
		1	Byte 18 Hamming error check off (Data write) {Bytes 43, 27, 35, 19, 31, 41, 31, and 41}	
4	ECP17	0	Byte 17 Hamming error check on (Data hold) {Bytes 42, 26, 34, 18, 30, 40, 30, and 40}	
		1	Byte 17 Hamming error check off (Data write) {Bytes 42, 26, 34, 18, 30, 40, 30, and 40}	
3	ECP16	0	Byte 16 Hamming error check on (Data hold) {Bytes 41, 25, 33, 17, 29, 39, 29, and 39}	
		1	Byte 16 Hamming error check off (Data write) {Bytes 41, 25, 33, 17, 29, 39, 29, and 39}	
2	ECP15	0	Byte 15 Hamming error check on (Data hold) {Bytes 40, 24, 32, 16, 28, 38, 28, and 38}	
		1	Byte 15 Hamming error check off (Data write) {Bytes 40, 24, 32, 16, 28, 38, 28, and 38}	
1	ECP14	0	Byte 14 Hamming error check on (Data hold) {Bytes 39, 23, 31, 15, 27, 37, 27, and 37}	
		1	Byte 14 Hamming error check off (Data write) {Bytes 39, 23, 31, 15, 27, 37, 27, and 37}	
0	ECP13	0	Byte 13 Hamming error check on (Data hold) {Bytes 38, 22, 30, 14, 26, 36, 26, and 36}	
		1	Byte 13 Hamming error check off (Data write) {Bytes 38, 22, 30, 14, 26, 36, 26, and 36}	

Note: All registers are set to 0 when the LC74776/M is reset by the RST pin.

Display Screen Structure

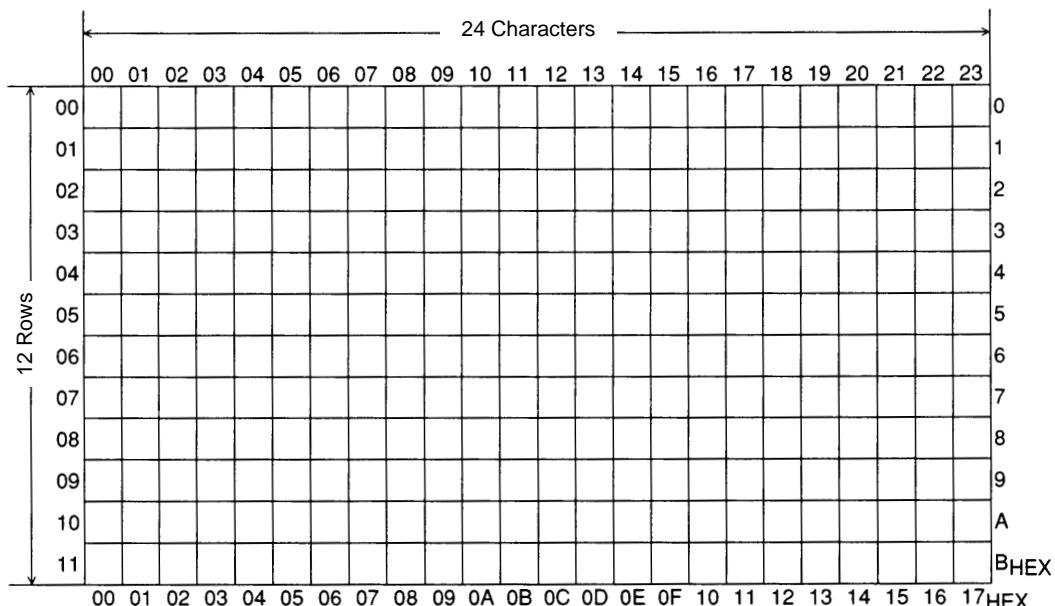

The display consists of 12 lines of 24 characters.

Up to 288 characters can be displayed.

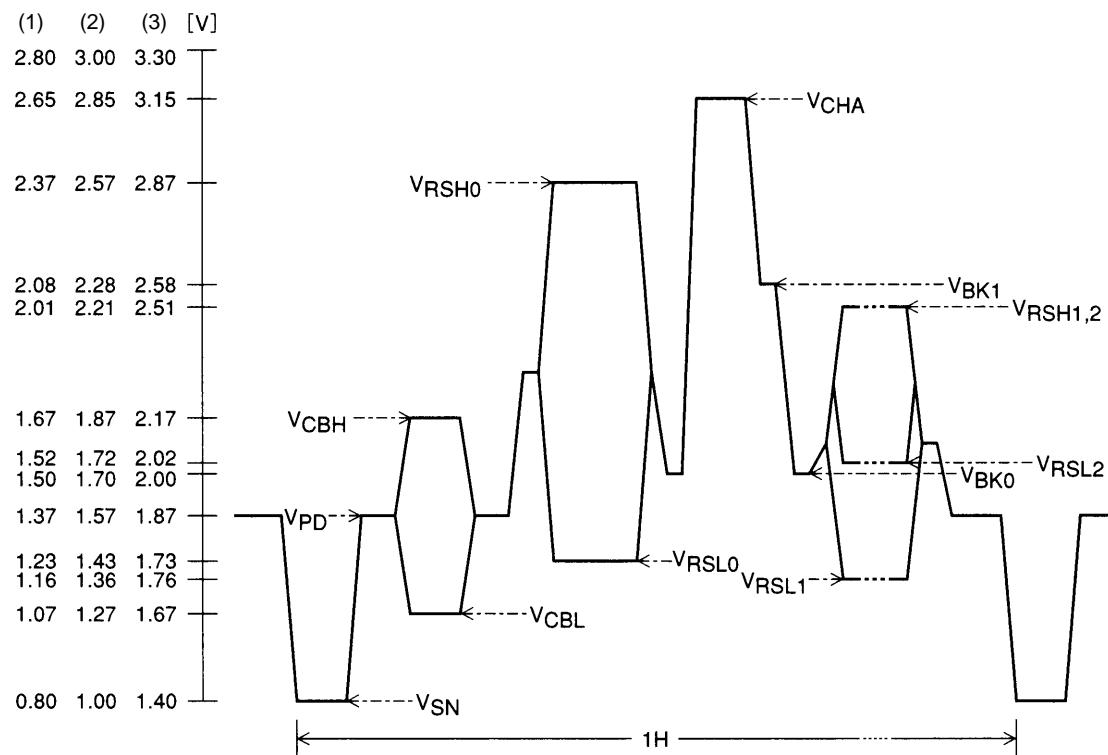

The number of characters that can be displayed is reduced from the 288 maximum when enlarged characters are displayed.

Display memory addresses are specified as row (0 to 11 decimal) and column (0 to 23 decimal) addresses.

Display Screen Structure (display memory addresses)

A10741

Composite Video Signal Output Levels (internally generated levels)CV_{OUT} output level waveform ($V_{DD2} = 5.00$ V)

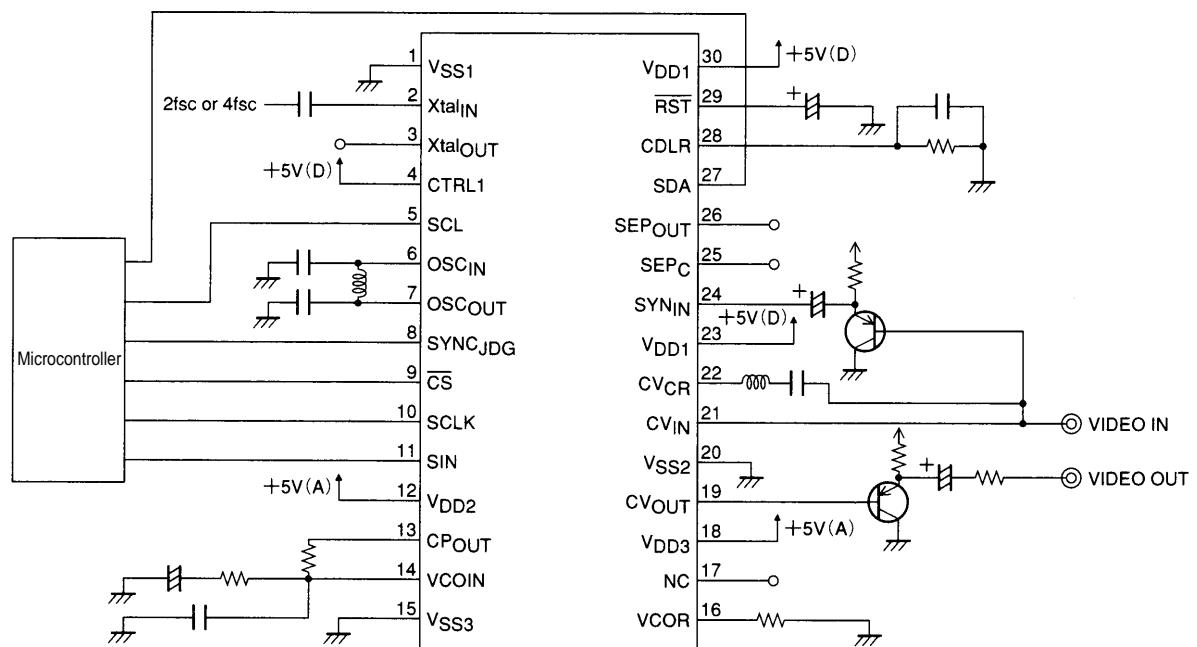

A10742

Output level	Output voltage (1) [V]	Output voltage (2) [V]	Output voltage (3) [V]
V_{CHA} : Character	2.65	2.85	3.25
V_{RSH0} : Background colors other than blue: high	2.37	2.57	2.97
$V_{RSH1,2}$: Blue background colors 1 and 2: high	2.01	2.21	2.61
V_{CBH} : Color burst high	1.67	1.87	2.27
V_{RSL0} : Background colors other than blue: low	1.23	1.43	1.83
V_{RSL1} : Blue background color 1: low	1.16	1.36	1.76
V_{RSL2} : Blue background color 2: low	1.52	1.72	2.12
V_{BK1} : Frame 1	2.08	2.28	2.68
V_{BK0} : Frame 2	1.50	1.70	2.10
V_{PD} : Pedestal	1.37	1.57	1.97
V_{CBL} : Color burst low	1.07	1.27	1.67
V_{SN} : Sync	0.80	1.00	1.40

LC74776, 74776M

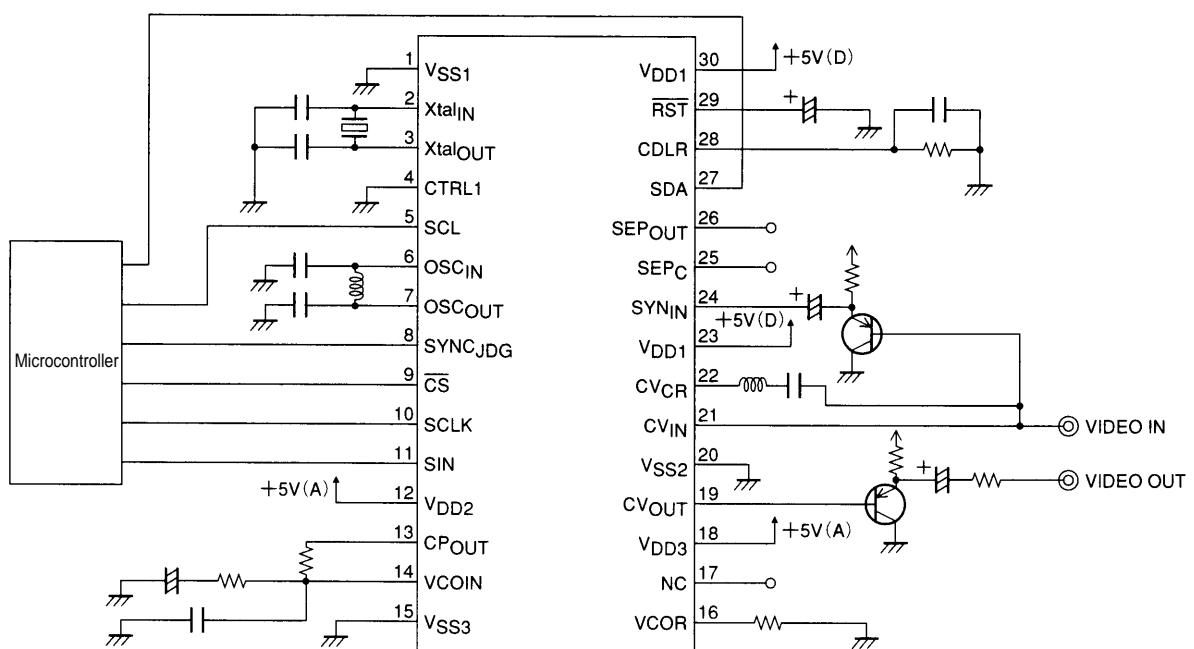

Application Circuit Examples (When used connected to a single-chip Y/C circuit)

- External system clock input

A10743

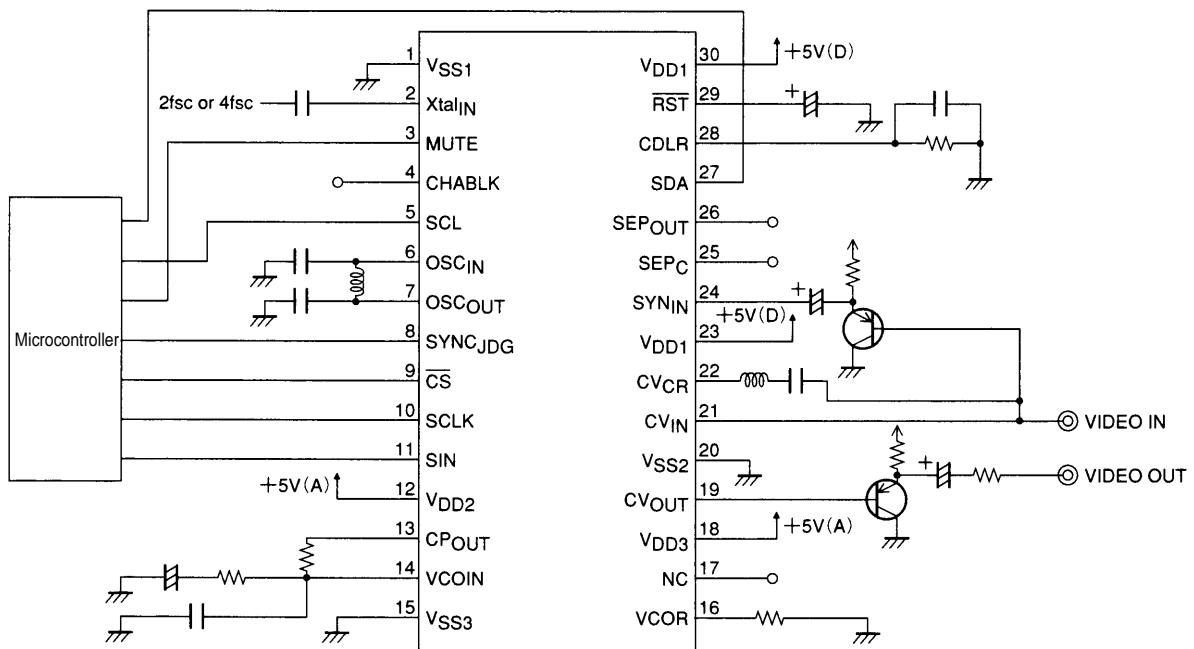

- Crystal oscillator

A10744

LC74776, 74776M

- External system clock input (with pins 3 and 4 modified in the mask options)

A10745

The electrolytic capacitor connected to SYN_{IN} must be connected with the correct polarity when a sync tip level of 1.4 VDC (CV_{IN} input signal: sync tip = 1.4 V) is selected in the options for video signals generated with internal synchronization.

When $\text{V}_{\text{DD}1}$ is 5.0 V, the SYN_{IN} input video signal pedestal level will be clamped to about 2.5 V.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
