## LCD Driver with Level Meter

### Overview

The LC7583N is an LCD driver that can be microcomputer-controlled to provide segment display and level meter display.

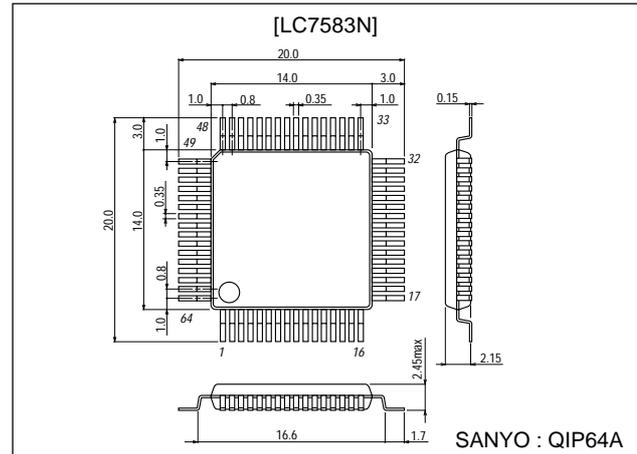

### Features

- The serial data address is "5".
- 1/2duty, 1/2bias, 66 segments (max) (Except ADC output, DSP input display).
- 5-bit AD converter and three selections of level output shown below.
  - (1) 13 dots x 2ch Log scale
  - (2) 13 dots x 2ch Linear scale
  - (3) 26 dots x 1ch Linear scale
- 2 display (DSP) pins for direct display.
- Microcomputer-controlled data input using 3 pins for serial data input and control.
- The full scale of the AD converter is  $31/48V_{ref}$ . The  $V_{ref}$  is variable (with  $V_{ref}$  pin).

## COMMON Connection

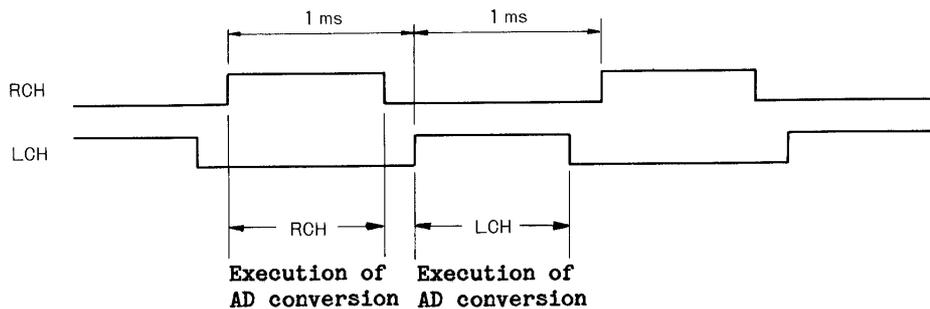

1ch (monaural) Display

Connect the RI pin and LI pin at the monaural mode.

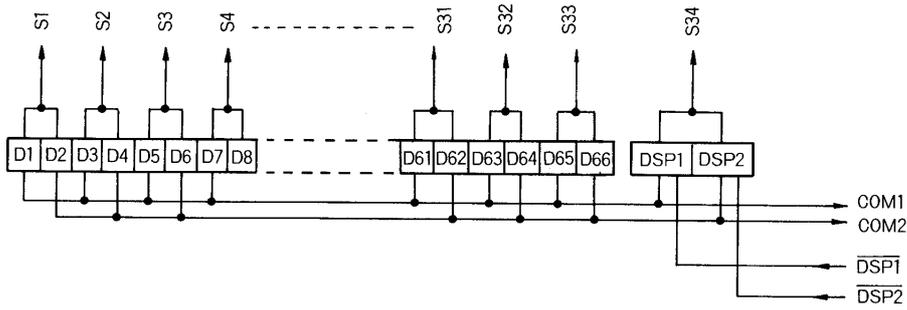

ADC Conversion Time

When the oscillation frequency is 32kHz, individual input signals at the RI pin, LI pin are sampling-processed alternately once every 1ms.
