

## DUAL JK NEGATIVE EDGE-TRIGGERED FLIP-FLOP

The MC74F112 contains two independent, high-speed JK flip-flops with Direct Set and Clear inputs. Synchronous state changes are initiated by the falling edge of the clock. Triggering occurs at a voltage level of the clock and is not directly related to the transition time. The J and K inputs can change when the clock is in either state without affecting the flip-flop, provided that they are in the desired state during the recommended setup and hold times relative to the falling edge of the clock. A LOW signal on  $\bar{S}_D$  or  $\bar{C}_D$  prevents clocking and forces Q or  $\bar{Q}$  HIGH, respectively. Simultaneous LOW signals on  $\bar{S}_D$  and  $\bar{C}_D$  force both Q and  $\bar{Q}$  HIGH.

**CONNECTION DIAGRAM**

**FUNCTION TABLE (Each Half)**

| Inputs  | Output      |
|---------|-------------|
| @ $t_n$ | @ $t_n + 1$ |
| J K     | Q           |
| L L     | $Q_n$       |
| L H     | L           |
| H L     | H           |
| H H     | $\bar{Q}_n$ |

Asynchronous Inputs:

LOW Input to  $\bar{S}_D$  sets Q to HIGH level

LOW Input to  $\bar{C}_D$  sets Q to LOW level

Clear and Set are independent of clock

Simultaneous LOW on  $\bar{C}_D$  and  $\bar{S}_D$  makes both Q and  $\bar{Q}$  HIGH

H = HIGH Voltage Level

L = LOW Voltage Level

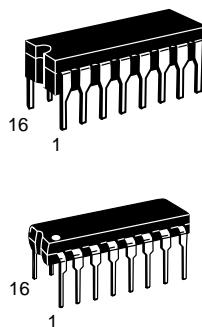

$t_n$  = Bit time before clock pulse

$t_n + 1$  = Bit time after clock pulse

| I <sub>OS</sub> | Output Short Circuit Current (Note 2)  | -60    |      | -150 | mA   | V <sub>CC</sub> = MAX, V <sub>OUT</sub> = 0 V           |
| I <sub>CC</sub> | Power Supply Current   |        | 12   | 19   | mA   | V <sub>CC</sub> = MAX, V <sub>CP</sub> = 0 V            |

### NOTES:

- For conditions shown as MIN or MAX, use the appropriate value specified under guaranteed operating ranges.
- Not more than one output should be shorted at a time, nor for more than 1 second.
