

DUAL JK NEGATIVE EDGE-TRIGGERED FLIP-FLOP

The SN54/74LS114A offers common clock and common clear inputs and individual J, K, and set inputs. These monolithic dual flip-flops are designed so that when the clock goes HIGH, the inputs are enabled and data will be accepted. The logic level of the J and K inputs may be allowed to change when the clock pulse is HIGH and the bistable will perform according to the truth table as long as minimum set-up times are observed. Input data is transferred to the outputs on the negative-going edge of the clock pulse.

LOGIC DIAGRAM (Each Flip-Flop)

MODE SELECT — TRUTH TABLE

OPERATING MODE		INP	OUTPUTS			
OPERATING MODE	SD	CD	J	к	q	Q
Set	L	Н	Х	Х	Н	L
Reset (Clear)	н	L	Х	Х	L	н
*Undetermined	L	L	Х	Х	Н	н
Toggle	н	н	h	h	q	q
Load "0" (Reset)	Н	н	I.	h	L	Н
Load "1" (Set)	н	н	h		н	L
Hold	Н	Н	Ι	I	q	q

 * Both outputs will be HIGH while both SD and CD are LOW, but the output states are unpredictable if SD and CD go HIGH simultaneously.

H, h = HIGH Voltage Level

L, I = LOW Voltage Level

X = Don't Care

I, h (q) = Lower case letters indicate the state of the referenced input (or output) one set-up time prior to the HIGH to LOW clock transition.
