GENERAL DESCRIPTION

N-channel enhancement mode field-effect power transistor in a plastic envelope suitable for surface mounting featuring high avalanche energy capability, stable blocking voltage, fast switching and high thermal cycling performance. Intended for use in Compact Fluorescent Lights (CFL) and general purpose switching applications.

DEFINITIONS

Data sheet status				
Objective specification This data sheet contains target or goal specifications for product development.				
Preliminary specification	Preliminary specification This data sheet contains preliminary data; supplementary data may be published late			
Product specification	This data sheet contains final product specifications.			
Limiting values				
Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.				
Application information				
Where application information is given, it is advisory and does not form part of the specification.
