

PowerMOS transistors
FREDFET, Avalanche energy rated
PHX8ND50E**FEATURES**

- Repetitive Avalanche Rated
- Fast switching
- Stable off-state characteristics
- High thermal cycling performance
- Isolated package
- Fast reverse recovery diode

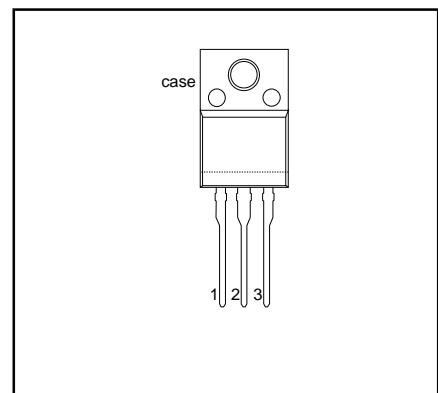

SYMBOL**QUICK REFERENCE DATA**
 $V_{DSS} = 500 \text{ V}$
 $I_D = 4.2 \text{ A}$
 $R_{DS(ON)} \leq 0.85 \Omega$
 $t_{rr} = 180 \text{ ns}$
GENERAL DESCRIPTION

N-channel, enhancement mode field-effect power transistor, incorporating a Fast Recovery Epitaxial Diode (FRED). This gives improved switching performance in half bridge and full bridge converters making this device particularly suitable for inverters, lighting ballasts and motor control circuits.

The PHX8ND50E is supplied in the SOT186A full pack, isolated package.

Notes

1. Observe the general handling precautions for electrostatic-discharge sensitive devices (ESDs) to prevent damage to MOS gate oxide.
2. Refer to mounting instructions for F-pack envelopes.
3. Epoxy meets UL94 V0 at 1/8".

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.
