SCAS097B - DECEMBER 1989 - REVISED APRIL 1996

- Members of the Texas Instruments Widebus™ Family
- Inputs Are TTL-Voltage Compatible
- 3-State Outputs Drive Bus Lines Directly
- Flow-Through Architecture Optimizes PCB Layout
- Distributed V_{CC} and GND Configuration to Minimize High-Speed Switching Noise
- EPIC™ (Enhanced-Performance Implanted CMOS) 1-µm Process
- 500-mA Typical Latch-Up Immunity at 125°C
- Package Options Include Plastic 300-mil Shrink Small-Outline (DL) Packages Using 25-mil Center-to-Center Pin Spacings, Thin Shrink Small-Outline (DGG) Packages, and 380-mil Fine-Pitch Ceramic Flat (WD) Packages Using 25-mil Center-to-Center Pin Spacings

description

The SN54ACT16245 and 74ACT16245 are 16-bit bus transceivers organized as dual-octal noninverting 3-state transceivers and designed for asynchronous two-way communication between data buses. The control-function implementation minimizes external timing requirements.

SN54ACT16245 . . . WD PACKAGE 74ACT16245 . . . DGG OR DL PACKAGE (TOP VIEW)

The devices allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the direction-control (DIR) input. The enable (\overline{G}) input can be used to disable the devices so that the buses are effectively isolated.

The SN54ACT16245 is characterized for operation over the full military temperature range of –55°C to 125°C. The 74ACT16245 is characterized for operation from –40°C to 85°C.

FUNCTION TABLE

	TROL UTS	OPERATION
G	DIR	
L	L	B data to A bus
L	Н	A data to B bus
Н	X	Isolation

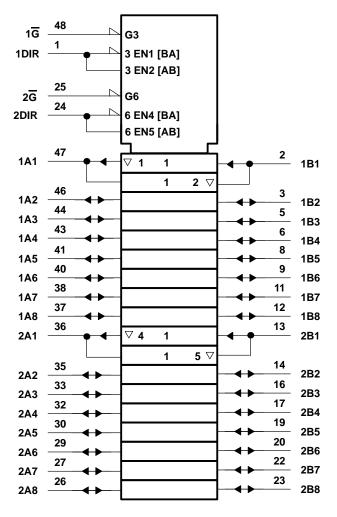

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

EPIC and Widebus are trademarks of Texas Instruments Incorporated.

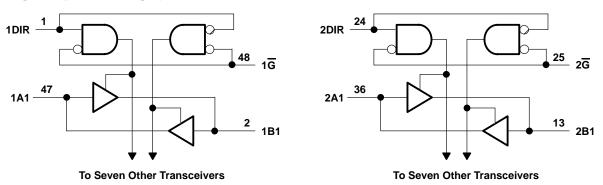

logic symbol†

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)

SCAS097B - DECEMBER 1989 - REVISED APRIL 1996

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V _{CC}	
Input voltage range, V _I (see Note 1)	
Output voltage range, VO (see Note 1)	
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$)	±20 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)	±50 mA
Continuous output current, $I_O(V_O = 0 \text{ to } V_{CC})$	±50 mA
Continuous current through V _{CC} or GND	±400 mA
Maximum power dissipation at T _A = 55°C (in still air) (see Note 2): DGG pa	
DL pack	kage
Storage temperature range, T _{stq}	

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

recommended operating conditions (see Note 3)

		SN54ACT16245		74ACT	UNIT	
		MIN	MAX	MIN	MAX	UNII
Vcc	Supply voltage (see Note 4)	4.5	5.5	4.5	5.5	V
VIH	High-level input voltage	2		2		V
V _{IL}	Low-level input voltage		0.8		0.8	V
٧ _I	Input voltage	0	Vcc	0	Vcc	V
٧o	Output voltage	0	Vcc	0	VCC	V
IOH	High-level output current		-24		-24	mA
lOL	Low-level output current		24		24	mA
Δt/Δν	Input transition rise or fall rate	0	10	0	10	ns/V
TA	Operating free-air temperature	-55	125	-40	85	°C

NOTES: 3. Unused inputs should be tied to V_{CC} through a pullup resistor of approximately 5 kΩ or greater to keep them from floating.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

^{2.} The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.

^{4.} All V_{CC} and GND pins must be connected to the proper voltage power supply.

operating characteristics, V_{CC} = 5 V, T_A = 25°C

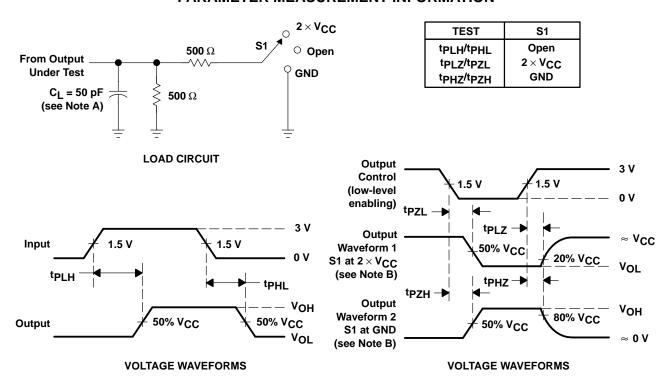

PARAMETER			TEST CON	TYP	UNIT	
C _{pd}	Power discination conscitones per transcriver	Outputs enabled	C 50 pE	f = 1 MHz	52	pF
	Power dissipation capacitance per transceiver	Outputs disabled	$C_L = 50 \text{ pF}, \qquad f = 1 \text{ N}$	I = I IVIIIZ	10	

For I/O ports, the parameter IOZ includes the input leakage current I_I.

[§] This is the increase in supply current for each input that is at one of the specified TTL voltage levels rather than 0 V or VCC.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, $Z_O = 50 \Omega$, $t_f = 3 \text{ ns}$, $t_f = 3 \text{ ns}$.
- D. The outputs are measured one at a time with one input transition per measurement.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
