| The 'ACT16623 are 16-bit transceivers designed for asynchronous two-way communication between | GND [15 2B3 [16 | 34] GND 33] 2A3 | | | | |
| data buses. The control-function implementation allows for maximum flexibility in timing. | 2B4 [17 V _{CC} [18 | 32 2A4 31 V _{CC} | | | | |
| These devices can be used as two 8-bit | 2B5 19 2B6 20 | 30 2A5 29 2A6 | | | | |
| transceivers or one 16-bit transceiver. They allow | GND 21 | 28 GND | | | | |
| data transmission from the A bus to the B bus or | 2B7 🛛 22 | 27 2A7 | | | | |
| from the B bus to the A bus, depending on the logic | 2B8 🛛 23 | 26 2A8 | | | | |

The dual-enable configuration gives the bus transceiver the capability to store data by simultaneously enabling OEBA and OEAB. Each output reinforces its input in this transceiver configuration. When both control inputs are enabled and all other data sources to the two sets of bus lines are at high impedance, the bus lines remain at their last states.

The 74ACT16623 is packaged in TI's shrink small-outline package, which provides twice the functionality of standard small-outline packages in the same printed-circuit-board area.

The 54ACT16623 is characterized for operation over the full military temperature range of -55° C to 125° C. The 74ACT16623 is characterized for operation from -40° C to 85° C.

isolated.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

| Supply voltage range, V _{CC} | –0.5 V to 7 V |
|--|--------------------------------|
| Input voltage range, V _I (see Note 1)–0. | |
| Output voltage range, V _O (see Note 1)–0. | 5 V to V _{CC} + 0.5 V |
| Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$) | ±20 mA |
| Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$) | ±50 mA |
| Continuous output current, $I_O (V_O = 0 \text{ to } V_{CC})$ | ±50 mA |
| Continuous current through V _{CC} or GND | ±400 mA |
| Maximum power package dissipation at $T_A = 55^{\circ}C$ (in still air) (see Note 2): DL package | 1.2 W |
| Storage temperature range, T _{stg} | –65°C to 150°C |

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.

recommended operating conditions (see Note 3)

| | | | | 74ACT16623 | | | UNIT | |
|---------------------|------------------------------------|-----|-----|------------|-----|------|------|------|
| | | | | NOM | MAX | UNIT | | |
| Vcc | Supply voltage (see Note 4) | 4.5 | 5 | 5.5 | 4.5 | 5 | 5.5 | V |
| VIH | High-level input voltage | 2 | | EИ | 2 | | | V |
| VIL | Low-level input voltage | 0.8 | | | | 0.8 | V | |
| VI | Input voltage | 0 | 2 | VCC | 0 | | VCC | V |
| Vo | Output voltage | 0 | (C) | VCC | 0 | | VCC | V |
| ЮН | High-level output current | ~0 | 20 | -24 | | | -24 | mA |
| IOL | Low-level output current | 20 | / | 24 | | | 24 | mA |
| $\Delta t/\Delta v$ | Input transition rise or fall rate | Ō | | 10 | 0 | | 10 | ns/V |
| Т _А | Operating free-air temperature | -55 | | 125 | -40 | | 85 | °C |

NOTES: 3. Unused inputs should be connected to V_{CC} through a pullup resistor of approximately 5 k Ω or greater.

4. All V_{CC} and GND pins must be connected to the proper power supply.

PRODUCT PREVIEW information concerns products in the formative or design phase of development. Characteristic data and other specifications are design goals. Texas Instruments reserves the right to change or discontinue these products without notice.

SCAS152A - JANUARY 1991 - REVISED APRIL 1996

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. C_L includes probe and jig capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - C. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, Z_O = 50 Ω , t_f = 3 ns, t_f = 3 ns.
 - D. The outputs are measured one at a time with one input transition per measurement.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
