DGG PACKAGE

(TOP VIEW)

SCAS588A - MAY 1997 - REVISED JULY 1997

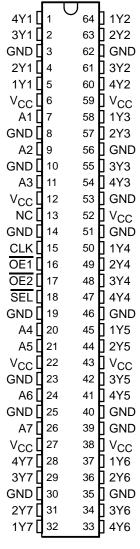

- **Member of the Texas Instruments** Widebus™ Family
- **EPIC™** (Enhanced-Performance Implanted **CMOS) Submicron Process**
- Output Ports Have Equivalent 26- Ω Series Resistors, So No External Resistors Are Required
- **ESD Protection Exceeds 2000 V Per** MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Latch-Up Performance Exceeds 250 mA Per **JESD 17**
- Bus Hold on Data Inputs Eliminates the **Need for External Pullup/Pulldown** Resistors
- **Packaged in Thin Shrink Small-Outline Package**

description

This 1-bit to 4-bit address register/driver is designed for 2.3-V to 3.6-V V_{CC} operation. This device is ideal for use in applications where a single address bus is driving four separate memory locations. The SN74ALVCH162832 can be used as a buffer or a register, depending on the logic level of the select (SEL) input.

When SEL is a logic high, the device is in the buffer mode. The outputs follow the inputs and are controlled by the two output-enable (OE) controls. Each \overline{OE} controls two groups of seven outputs.

When SEL is a logic low, the device is in the register mode. The register is an edge-triggered D-type flip-flop. On the positive transition of the clock (CLK) input, data at the A inputs is stored in the internal registers. \overline{OE} controls operate the same as in the buffer mode.

NC - No internal connection

When \overline{OE} is a logic low, the outputs are in a normal logic state (high or low logic level). When \overline{OE} is a logic high, the outputs are in the high-impedance state.

Neither $\overline{\text{SEL}}$ nor $\overline{\text{OE}}$ affect the internal operation of the flip-flops. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

The outputs, which are designed to sink up to 12 mA, include equivalent $26-\Omega$ resistors to reduce overshoot and undershoot.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

EPIC and Widebus are trademarks of Texas Instruments Incorporated.

SCAS588A - MAY 1997 - REVISED JULY 1997

description (continued)

To ensure the high-impedance state during power up or power down, $\overline{\text{OE}}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

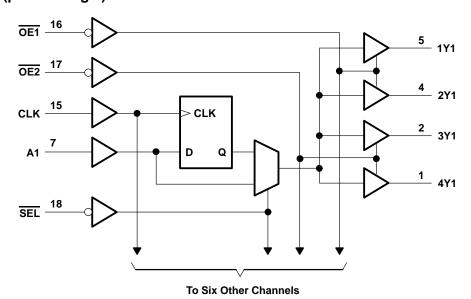

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

The SN74ALVCH162832 is characterized for operation from -40°C to 85°C.

FUNCTION TABLE

	INPUTS					
OE	SEL	CLK	Α	Υ		
Н	Х	Х	Х	Z

logic diagram (positive logic)

SN74ALVCH162832 1-TO-4 ADDRESS REGISTER/DRIVER WITH 3-STATE OUTPUTS

SCAS588A - MAY 1997 - REVISED JULY 1997

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V _{CC}	0.5 V to 4.6 V
Input voltage range, V _I (see Note 1)	–0.5 V to 4.6 V
Output voltage range, VO (see Notes 1 and 2)	\dots -0.5 V to V _{CC} + 0.5 V
Input clamp current, I _{IK} (V _I < 0)	
Output clamp current, I _{OK} (V _O < 0 or V _O > V _{CC})	±50 mA
Continuous output current, I_O ($V_O = 0$ to V_{CC})	±50 mA
Continuous current through each V _{CC} or GND	±100 mA
Package thermal impedance, θ _{JA} (see Note 3)	73°C/W
Storage temperature range, T _{stq}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

- 2. This value is limited to 4.6 V maximum.
- 3. The package thermal impedance is calculated in accordance with JESD 51.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
