The control function implementation 2B8 23 26 2A8 minimizes external timing requirements. 2DIR 🛛 24 25 20E

This device can be used as two 8-bit transceivers or one 16-bit transceiver. It allows data

transmission from the A bus to the B bus or from the B bus to the A bus depending upon the logic level at the direction-control (DIR) input. The output-enable (\overline{OE}) input can be used to disable the device so that the buses are effectively isolated.

To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

The SN74ABT16245 is available in TI's shrink small-outline package (DL), which provides twice the I/O pin count and functionality of standard small-outline packages in the same printed-circuit-board area.

The SN54ABT16245 is characterized for operation over the full military temperature range of -55° C to 125°C. The SN74ABT16245 is characterized for operation from -40° C to 85°C.

FUNCTION TABLE (each 8-bit section)									
INP	UTS								
OE	DIR	OPERATION							
L	L	B data to A bus							
L	Н	A data to B bus							
Н	Х	Isolation

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[‡]

Supply voltage range, V _{CC} Input voltage range, V _I (except I/O ports) (see Note 1) Voltage range applied to any output in the high state or power-off state, V _O Current into any output in the low state, I _O : SN54ABT16245 SN74ABT16245	0.5 V to 7 V 0.5 V to 5.5 V
Input clamp current, I _{IK} (V _I < 0)	
Output clamp current, I _{OK} (V _O < 0)	
Maximum power dissipation at $T_A = 55^{\circ}C$ (in still air): DGG package	0.8 W
DL package	0.85 W
Storage temperature range	

[‡] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

recommended operating conditions (see Note 2)

		Control inputs				1.5		1.5		1.5		
Ci	V_{I} = 2.5 V or 0.5 V		Control inputs		3						pF	
C _{io}	V _O = 2.5 V or 0.5 V		A or B ports		8.5						pF	

[†] All typical values are at $V_{CC} = 5 V$.

[‡] On products compliant to MIL-STD-883, Class B, this parameter does not apply.

 $\$ The parameters I_{OZH} and I_{OZL} include the input leakage current.

¶ This data sheet limit may vary among suppliers.

[#]Not more than one output should be tested at a time, and the duration of the test should not exceed one second.

I This is the increase in supply current for each input that is at the specified TTL voltage level rather than V_{CC} or GND.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

- B. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, Z_O = 50 Ω , t_f \leq 2.5 ns, t_f \leq 2.5 ns.
- C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- D. The outputs are measured one at a time with one transition per measurement.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
