- **Inputs Are TTL-Voltage Compatible**
- **True Logic**
- **High-Current 3-State Outputs Can Drive up to 15 LSTTL Loads**
- **Package Options Include Plastic Small-Outline (DW) and Ceramic Flat (W) Packages, Ceramic Chip Carriers (FK), and Standard Plastic (N) and Ceramic (J) 300-mil DIPs**
description

These octal bus transceivers are designed for asynchronous two-way communication between data buses. These devices transmit data from the A bus to the B bus or from the B bus to the A bus, depending upon the level at the direction-control (DIR) input. The output-enable ($\overline{\text{OE}}$) input can be used to disable the device so the buses are effectively isolated.

The SN54HCT645 is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74HCT645 is characterized for operation from –40°C to 85°C.

Storage temperature range, T_{stg} .... −65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
        2. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

NOTES: A. C_L includes probe and test-fixture capacitance.
      B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
         Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
      C. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following
         characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r = 6 ns, t_f = 6 ns.
      D. The outputs are measured one at a time with one input transition per measurement.
      E. t_{PLZ} and t_{PHZ} are the same as t_{dis}.
      F. t_{PZL} and t_{PZH} are the same as t_{en}.
      G. t_{PLH} and t_{PHL} are the same as t_{pd}.
