SN54AHC574 . . . J OR W PACKAGE

SCLS244D - OCTOBER 1995 - REVISED JUNE 1997

- Operating Range 2-V to 5.5-V V<sub>CC</sub>
- **3-State Outputs Drive Bus Lines Directly**
- **EPIC<sup>™</sup>** (Enhanced-Performance Implanted **CMOS)** Process
- High Latch-Up Immunity Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds 2000 V Per MIL-STD-883. Method 3015: Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- **Package Options Include Plastic** • Small-Outline (DW), Shrink Small-Outline (DB), Thin Shrink Small-Outline (PW), and Ceramic Flat (W) Packages, Ceramic Chip Carriers (FK), and Standard Plastic (N) and Ceramic (J) 300-mil DIPs

#### description

The 'AHC574 are octal edge-triggered D-type flip-flops that feature 3-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. These devices are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

On the positive transition of the clock (CLK) input, the Q outputs are set to the logic levels of the data (D) inputs.

A buffered output-enable ( $\overline{OE}$ ) input places the eight outputs in either a normal logic state (high or low) or the high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and the increased drive provide the capability to drive bus lines without interface or pullup components.

OE does not affect internal operations of the flip-flop. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

The SN54AHC574 is characterized for operation over the full military temperature range of -55°C to 125°C. The SN74AHC574 is characterized for operation from -40°C to 85°C.

#### logic symbol<sup>†</sup>

<sup>†</sup> This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

### logic diagram (positive logic)

**To Seven Other Channels** 

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>‡</sup>

Input voltage range, V <sub>I</sub> (see Note 1) Output voltage range, V <sub>O</sub> (see Note 1) Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0) Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0 or V <sub>O</sub> > Continuous output current, I <sub>O</sub> (V <sub>O</sub> = 0 to V Continuous current through V <sub>CC</sub> or GND	> V <sub>CC</sub> ) / <sub>CC</sub> ) DB package DW package N package	$\begin{array}{c} -0.5 \ \text{V to 7 V} \\ -20 \ \text{mA} \\ \pm 20 \ \text{mA} \\ \pm 20 \ \text{mA} \\ \pm 25 \ \text{mA} \\ \pm 75 \ \text{mA} \\ 115^{\circ}\text{C/W} \\ 97^{\circ}\text{C/W} \\ 67^{\circ}\text{C/W} \\ 128^{\circ}\text{C/W} \end{array}$
Storage temperature range, T <sub>stg</sub>	• •	——————————————————————————————————————

<sup>‡</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

#### PARAMETER MEASUREMENT INFORMATION

NOTES: A. CL includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1 MHz, Z<sub>O</sub> = 50  $\Omega$ , t<sub>f</sub> = 3 ns, t<sub>f</sub> = 3 ns.
- D. The outputs are measured one at a time with one input transition per measurement.

#### **IMPORTANT NOTICE**

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
