

SN54AS286, SN74AS286 9-BIT PARITY GENERATORS/CHECKERS WITH BUS-DRIVER PARITY I/O PORT

SDAS050B – DECEMBER 1983 – REVISED DECEMBER 1994

- Generate Either Odd or Even Parity for Nine Data Lines
- Cascadable for n-Bit Parity
- Direct Bus Connection for Parity Generation or Checking by Using the Parity I/O Port
- Glitch-Free Bus During Power Up/Down
- Package Options Include Plastic Small-Outline (D) Packages, Ceramic Chip Carriers (FK), and Standard Plastic (N) and Ceramic (J) 300-mil DIPs

description

The SN54AS286 and SN74AS286 universal 9-bit parity generators/checkers feature a local output for parity checking and a 48-mA bus-driving parity input/output (I/O) port for parity generation/checking. The word-length capability is easily expanded by cascading.

The transmit ($\overline{\text{XMIT}}$) control input is implemented specifically to accommodate cascading. When $\overline{\text{XMIT}}$ is low, the parity tree is disabled and PARITY ERROR remains at a high logic level regardless of the input levels. When $\overline{\text{XMIT}}$ is high, the parity tree is enabled. PARITY ERROR indicates a parity error when either an even number of inputs (A–I) are high and PARITY I/O is forced to a low logic level, or when an odd number of inputs are high and PARITY I/O is forced to a high logic level.

The I/O control circuitry was designed so that the I/O port remains in the high-impedance state during power up or power down to prevent bus glitches.

The SN54AS286 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74AS286 is characterized for operation from 0°C to 70°C .

PARAMETER MEASUREMENT INFORMATION SERIES 54ALS/74ALS AND 54AS/74AS DEVICES

- NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. When measuring propagation delay items of 3-state outputs, switch S1 is open.
D. All input pulses have the following characteristics: $PRR \leq 1$ MHz, $t_r = t_f = 2$ ns, duty cycle = 50%.
E. The outputs are measured one at a time with one transition per measurement.
