

# SN74ALS666, SN74ALS667 8-BIT D-TYPE TRANSPARENT READ-BACK LATCHES WITH 3-STATE OUTPUTS

SDAS227A – JUNE 1984 – REVISED JANUARY 1995

- 3-State I/O-Type Read-Back Inputs
- Bus-Structured Pinout
- Choice of True or Inverting Logic
  - SN74ALS666 . . . True Outputs
  - SN74ALS667 . . . Inverted Outputs
- Preset and Clear Inputs
- Package Options Include Plastic Small-Outline (DW) Packages and Standard Plastic (NT) 300-mil DIPs

## description

These 8-bit D-type transparent latches are designed specifically for storing the contents of the input data bus, plus reading back the stored data onto the input data bus. In addition, they provide a 3-state buffer-type output and are easily utilized in bus-structured applications.

While the latch enable (LE) is high, the Q outputs of the SN74ALS666 follow the data (D) inputs. The  $\overline{Q}$  outputs of the SN74ALS667 provide the inverse of the data applied to its D inputs. The Q or  $\overline{Q}$  output of both devices is in the high-impedance state if either output-enable ( $\overline{OE1}$  or  $\overline{OE2}$ ) input is at a high logic level.

Read back is provided through the read-back control ( $\overline{OERB}$ ) input. When  $\overline{OERB}$  is taken low, the data present at the output of the data latches passes back onto the input data bus. When  $\overline{OERB}$  is taken high, the output of the data latches is isolated from the D inputs.  $\overline{OERB}$  does not affect the internal operation of the latches; however, caution should be exercised to avoid a bus conflict.

The SN74ALS666 and SN74ALS667 are characterized for operation from 0°C to 70°C.

## 8-BIT D-TYPE TRANSPARENT READ-BACK LATCHES

### WITH 3-STATE OUTPUTS

SDAS227A – JUNE 1984 – REVISED JANUARY 1995

#### timing diagram

$\overline{CLR} = H$ ,  $\overline{PRE} = H$ ,  $\overline{OE1} = L$ ,  $\overline{OE2} = L$ .

† This setup time ensures the read-back circuit does not create a conflict on the input data bus.

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)‡

Supply voltage, $V_{CC}$	7 V
Input voltage, $V_I$ (all inputs except D inputs)	7 V
Voltage applied to D inputs and to disabled 3-state outputs	5.5 V
Operating free-air temperature range, $T_A$ : SN74ALS666, SN74ALS667	0°C to 70°C
Storage temperature range	–65°C to 150°C

‡ Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### recommended operating conditions

			$I_{OL} = 8\text{ mA}$	0.35	0.5	
	Q or $\overline{Q}$	$V_{CC} = 4.5\text{ V}$	$I_{OL} = 12\text{ mA}$	0.25	0.4	
			$I_{OL} = 24\text{ mA}$	0.35	0.5	
$I_{OZH}$	Q or $\overline{Q}$	$V_{CC} = 5.5\text{ V}$ ,	$V_O = 2.7\text{ V}$		20	$\mu\text{A}$
$I_{OZL}$	Q or $\overline{Q}$	$V_{CC} = 5.5\text{ V}$ ,	$V_O = 0.4\text{ V}$		-20	$\mu\text{A}$
$I_I$	D inputs	$V_{CC} = 5.5\text{ V}$	$V_I = 5.5\text{ V}$		0.1	mA
	All others		$V_I = 7\text{ V}$		0.1	
$I_{IH}$	D inputs <sup>‡</sup>	$V_{CC} = 5.5\text{ V}$ ,	$V_I = 2.7\text{ V}$		20	$\mu\text{A}$
	All others				20	
$I_{IL}$	D inputs <sup>‡</sup>	$V_{CC} = 5.5\text{ V}$ ,	$V_I = 0.4\text{ V}$		-0.1	mA
	All others				-0.1	
$I_{OS}$		$V_{CC} = 5.5\text{ V}$ ,	$V_O = 2.25\text{ V}$	-30	-112	mA
$I_{CC}$	SN74ALS666	$V_{CC} = 5.5\text{ V}$ , OERB high	Q outputs high	25	50	mA
			Q outputs low	40	73	
			Q outputs disabled	30	55	
	SN74ALS667	$V_{CC} = 5.5\text{ V}$ , OERB high	$\overline{Q}$ outputs high	25	50	
			$\overline{Q}$ outputs low	45	79	
			$\overline{Q}$ outputs disabled	30	60	

<sup>†</sup> All typical values are at  $V_{CC} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

<sup>‡</sup> For I/O ports ( $Q_A$  through  $Q_H$ ), the parameters  $I_{IH}$  and  $I_{IL}$  include the off-state output current.

<sup>§</sup> The output conditions have been chosen to produce a current that closely approximates one half of the true short-circuit output current,  $I_{OS}$ .

LOAD CIRCUIT FOR Q OR  $\bar{Q}$  OUTPUTS

LOAD CIRCUIT FOR D OUTPUTS

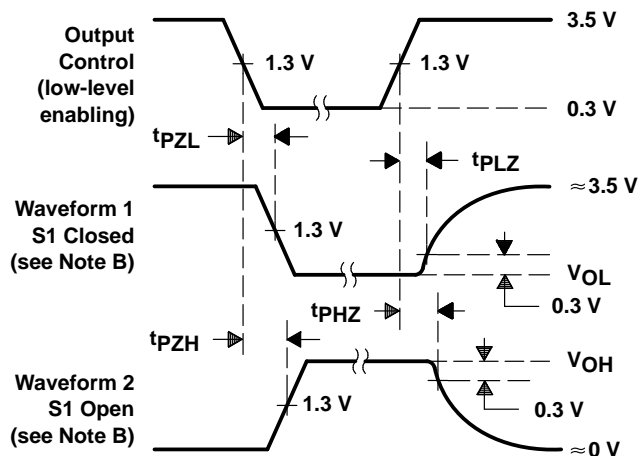

VOLTAGE WAVEFORMS  
SETUP AND HOLD TIMES

VOLTAGE WAVEFORMS  
PULSE DURATIONS

VOLTAGE WAVEFORMS  
PROPAGATION DELAY TIMES

VOLTAGE WAVEFORMS  
ENABLE AND DISABLE TIMES, 3-STATE OUTPUTS

- NOTES:
- $C_L$  includes probe and jig capacitance.
  - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - All input pulses have the following characteristics:  $PRR \leq 1$  MHz,  $t_r = t_f = 2$  ns, duty cycle = 50%.
  - When measuring propagation delay times of 3-state outputs, switch S1 is open.

## **IMPORTANT NOTICE**

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

**TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.**

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
