

SN54LS384, SN74LS384 8-BIT BY 1-BIT TWO'S-COMPLEMENT MULTIPLIERS

SDLS169

D2419, JANUARY 1981 — REVISED MARCH 1988

- Two's-Complement Multiplication
- Magnitude Only Multiplication
- Cascadable for Any Number of Bits
- 8-Bit Parallel Multiplicand Data Input
- Serial Multiplier Data Input
- Serial Data Output for Multiplication Product
- 40 MHz Typical Maximum Clock Frequency

description

The 'LS384 is an 8-bit by 1-bit sequential logic element that performs digital multiplication of two numbers represented in two's-complement form to produce a two's-complement product without external correction by using Booth's algorithm internally. The device accepts an 8-bit multiplicand (X input) and stores this data in eight internal latches. These X latches are controlled via the clear input. When the clear input is low, all internal flip-flops are cleared and the X latches are opened to accept new multiplicand data. When the clear input is high, the latches are closed and are insensitive to X input changes.

The multiplier word data is passed by the Y input in a serial bit stream, least significant bit first. The product is clocked out the PROD output, least significant bit first.

The multiplication of an m-bit multiplicand by an n-bit multiplier results in an (m + n)-bit product. The 'LS384 must be clocked for m + n clock cycles to produce this two's complement product. The n-bit multiplier (Y-input) sign bit data must be extended for the remaining m bits to complete the multiplication cycle.

The device also contains a K input so that devices can be cascaded for longer length X words. The PROD output of one device is connected to the K input of the succeeding device when cascading. The mode input is used to indicate which device contains the most significant bit. The mode input is wired high or low depending on the position of the 8-bit slice in the total X word length. The device with the most significant bit is wired low and all lower order bit packages are wired high.

The SN54LS384 will be characterized for operation over the full military temperature range from -55°C to 125°C . The SN74LS384 will be characterized for operation from 0°C to 70°C .

FUNCTION TABLE

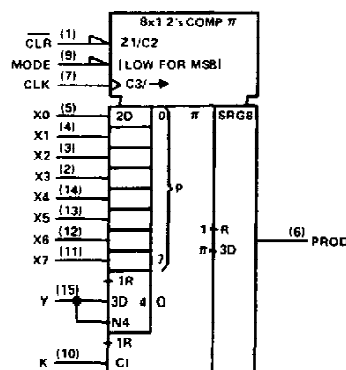

INPUTS				INTERNAL Y_{-1}	OUTPUT PROD	FUNCTION
CLR	CLK	X_i	Y			
L	X	Data	X	L	L	Load new multiplicand and clear internal sum and carry registers
H	↑	X	L	L	Output per Booth's algorithm	Shift sum register
H	↑	X	L	H		Add multiplicand to sum register and shift
H	↑	X	H	L		Subtract multiplicand from sum register and shift
H	↑	X	H	H		Shift sum register

H = high-level, L = low-level, X = irrelevant, ↑ = low-to-high-level transition

schematics of inputs and outputs

logic symbol†

†This symbol is in accordance with ANSI/IEEE Std. 91-1984 and IEC Publication 617-12.

Pin numbers shown are for J and N packages.

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, V_{CC} (see Note 1)	7 V
Input voltage (see Note 2)	5.5 V
Operating free-air temperature range: SN54LS384	-55°C to 125°C
SN74LS384	0°C to 70°C
Storage temperature range	-65°C to 150°C

NOTES: 1. Voltage values are with respect to network ground terminal.
 2. Input voltages must be zero or positive with respect to network ground terminal.

recommended operating conditions

		SN54LS384			SN74LS384			UNIT
		MIN	NOM	MAX	MIN	NOM	MAX	
Supply voltage, V_{CC}		4.5	5	5.5	4.75	5	5.25	V
High-level output current, I_{OH}				-400			-400	μ A
Low-level output current, I_{OL}				4			8	mA
Clock frequency, f_{clock}		0		25	0		25	MHz
Setup time, t_{SU}	Y before Clock \uparrow	45			38			ns
	K before Clock \uparrow	30			24			
	X before Clear \uparrow	23			19			
Clear inactive-state set up time before Clock \uparrow		30			20			ns
Hold time, t_H	Y after Clock \uparrow	0			0			
	K after Clock \uparrow	0			0			
	X after Clear \uparrow	2			2			
Pulse width, t_W	Clock high	20			20			ns
	Clock low	20			20			
	Clear low	38			33			
Operating free-air temperature, T_A		-65		125	0		70	$^{\circ}$ C

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS [†]		SN54LS384			SN74LS384			UNIT
				MIN	TYP [‡]	MAX	MIN	TYP [‡]	MAX	
V_{IH}	High-level input voltage			2			2			V
V_{IL}	Low-level input voltage					0.7			0.8	V
V_{IK}	Input clamp voltage	$V_{CC} = \text{MIN}$, $I_I = -18 \text{ mA}$				-1.5			-1.5	V
V_{OH}	High-level output voltage	$V_{CC} = \text{MIN}$, $V_{IL} = V_{IL \text{ max}}$, $V_{IH} = 2 \text{ V}$, $V_{OH} = -400 \mu\text{A}$		2.5	3.4		2.7	3.4		V
V_{OL}	Low-level output voltage	$V_{CC} = \text{MIN}$, $V_{IL} = V_{IL \text{ max}}$, $V_{IH} = 2 \text{ V}$, $I_{OL} = 4 \text{ mA}$	$I_{OL} = 8 \text{ mA}$	0.25	0.4		0.25	0.4		V
I_I	Input current at maximum input voltage	$V_{CC} = \text{MAX}$, $V_I = 5.5 \text{ V}$				1			1	mA
I_{IH}	High-level input current	X, Mode	$V_{CC} = \text{MAX}$, $V_I = 2.7 \text{ V}$			20			20	μ A
		K, Clear				30			30	
		Clock				40			40	
		Y				80			80	
I_{IL}	Low-level input current	X, Mode	$V_{CC} = \text{MAX}$, $V_I = 0.4 \text{ V}$			-0.48			-0.48	mA
		K, Clear				-1.2			-1.2	
		Clock				-1.6			-1.6	
		Y				-3.2			-3.2	
I_{OS}	Short-circuit output current [§]	$V_{CC} = \text{MAX}$		-20		-100	-20		-100	mA
I_{CC}	Supply current	$V_{CC} = \text{MAX}$, See Note 3		91		132	91		132	mA

[†]For conditions shown at MIN or MAX, use the appropriate value specified under recommended operating conditions.

[‡]All typical values are at $V_{CC} = 5 \text{ V}$, $T_A = 25^{\circ}\text{C}$.

[§]Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTE 3: I_{CC} is measured with the clear input grounded and all other inputs and outputs open.

switching characteristics, $V_{CC} = 5 \text{ V}$, $T_A = 25^{\circ}\text{C}$

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
f_{max}	Maximum clock frequency	$C_L = 15 \text{ pF}$, $R_L = 2 \text{ k}\Omega$, See Note 4		25	40		MHz
t_{PLH}	Propagation delay time, low-to-high-level output from clock				15	23	ns
t_{PHL}	Propagation delay time, high-to-low-level output from clock				15	23	ns
t_{PHL}	Propagation delay time, high-to-low-level output from clear				17	25	ns

NOTE 4: Load circuits and voltage waveforms are shown in Section 1.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
