OCTAL ECL-TO-TTL TRANSLATOR WITH D-TYPE EDGE-TRIGGERED FLIP-FLOPS AND 3-STATE OUTPUTS

SDZS009 – D3418, JANUARY 1990

- 100K Compatible
- ECL Clock and TTL Control Inputs
- Flow-Through Architecture Optimizes PCB Layout
- Center Pin V_{CC} , V_{EE} , and GND Configurations Minimize High-Speed Switching Noise
- Package Options Include “Small Outline” Packages and Standard Plastic DIPs

description

This octal ECL-to-TTL translator is designed to provide efficient translation between a 100K ECL signal environment and a TTL signal environment.

This device is designed specifically to improve the performance and density of ECL-to-TTL CPU/bus-oriented functions such as memory-address drivers, clock drivers, and bus-oriented receivers and transmitters.

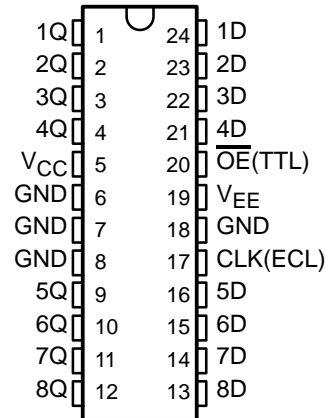

The eight flip-flops of the SN100KT5574 are edge-triggered D-type flip-flops. On the positive transition of the clock, the Q outputs are set to the logic levels that were set up at the D inputs.

A buffered output-enable input (\overline{OE}) can be used to place the eight outputs in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance third state and increased drive provide the capability to drive bus lines without need for interface or pullup components.

The output-enable input \overline{OE} does not affect the internal operations of the flip-flops. Old data can be retained or new data can be entered while the outputs are off.

The SN100KT5574 is characterized for operation from 0°C to 85°C.

absolute maximum ratings over operating temperature range (unless otherwise noted)[†]

Supply voltage range, V_{CC}	–0.5 V to 7 V
Supply voltage range, V_{EE}	–8 V to 0 V
Input voltage range: TTL (see Note 1)	–1.2 V to 7 V
ECL	V_{EE} to 0 V
Voltage applied to any output in the disabled or power-off state	–0.5 V to 5.5 V
Voltage applied to any output in the high state	–0.5 V to V_{CC}
Input current range, TTL	–30 mA to 5 mA
Current into any output in the low state	96 mA
Operating free-air temperature range	0°C to 85°C
Storage temperature range	–65°C to 150°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The TTL input voltage ratings may be exceeded provided the input current ratings are observed.

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. C_L includes probe and jig capacitance.
 B. For TTL inputs, input pulses are supplied by generators having the following characteristics $PRR \leq 10$ MHz, $Z_0 = 50 \Omega$, $t_r \leq 2.5$ ns, $t_f \leq 2.5$ ns.
 C. For ECL inputs, input pulses are supplied by generators having the following characteristics: $PRR \leq 10$ MHz, $Z_0 = 50 \Omega$, $t_r \leq 0.7$ ns, $t_f \leq 0.7$ ns.
 D. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 E. The outputs are measured one at a time with one transition per measurement.
