## BUS CONTROLLED PAL/SECAM/NTSC TV PROCESSOR

ADVANCE DATA

- I<sup>2</sup>C BUS CONTROL OF ALL FUNCTIONS
- INTEGRATED FILTERS  
(TRAP, BANDPASS, CLOCHE)
- INTEGRATED LUMINANCE DELAY LINE
- PAL/SECAM/NTSC CHROMA DEMODULATORS
- AUTOMATIC CUT-OFF CURRENT LOOP
- TWO RGB INPUTS
- SVHS SWITCH
- TWO PLLs HORIZONTAL DEFLECTION
- VERTICAL COUNT DOWN
- VERY FEW EXTERNAL COMPONENTS

### DESCRIPTION

The STV2118A is a fully bus controlled IC for TV luma, chroma and deflection processing.

Used with STV8224 (PIF/SIF/switches), TDA1771 or TDA8174 (frame booster), STV2180 (delay line), it allows to design a PAL/SECAM/NTSC (BGDKILMN) set with very few external components and no adjustment.

## FUNCTIONAL DESCRIPTION

### 1 - DEFLECTION CIRCUIT

**Note :** [X,Y] : line number referred to the internal line counter numbering

- Fully integrated synch. separator, with a low pass filter, a black level alignment of the Y/CVBS input, a slicing level at 2/3,1/3 of the sync. pulse amplitude.
- Frame sync. pulse locked on 2  $f_H$  frequency to perfect interlace.
- 500kHz VCO with an external ceramic resonator.
- Two phase locked loops
  - the first PLL locks the VCO on the video signal frequency,
  - the second PLL compensates the line transistor storage time.
- Three time constants for the first PLL.
  - the long time constant is used for normal operation
  - the short time constant is automatically used during the frame retrace and in search mode of VCR when the frame pulse is outside [258,264] and [309,314].
  - very long time constant when no video recognition

Time constants in normal operation

(automatic selection of time constants) :

50Hz input signal :

- short time constant : [306, 21]
- long time constant : the rest of the field

60Hz input signal :

- short time constant : [0, 16]
- long time constant : the rest of the field

• inhibition of the first PLL :

the first locked loop is opened from line 309 to line 4.5 (or 314) in 50Hz mode. It is opened from line 258 to line 5.5 (or 264) in 60Hz mode.

- the time constants values are chosen by means of external components.
- possibility to force the short time constant through the bus.
- possibility to force the very long time constant through the bus.

- Video identification : coincidence detector between the line synchro top and a line frequency window from the first PLL. The video identification status is available in the output register of the I<sup>2</sup>C bus decoder.

- Generation of burst gate pulses and line frequency signals from the first PLL to drive the

chroma and video circuits. The burst gate pulse is also sent to the sandcastle generator.

- Frame synchro window :  
[248, 352] catching
- Field frequency selection windows :  
[248, 288] 60Hz mode selection if two consecutive frame pulses occur inside this window, otherwise 50Hz mode selection.  
[288, 352] 50Hz mode selection window
- frame blanking pulse :  
from line 0 to 21 in 50Hz mode  
from line 0 to 16 in 60Hz mode
- Vertical output pulse is 10.5 lines long.
- Horizontal output pulse : 28μs line pulse on an open collector output;
- Start up circuit : the horizontal output is at a high level when V<sub>cc</sub> increases from 0 to 6.8V. On shutting down, horizontal pulses are disabled when V<sub>cc</sub> is below 6.2V.
- Soft-start circuit : the duty cycle of the horizontal output is 78 % (Thigh/(Thigh + TLow)) when V<sub>cc1</sub> is lower than (0.75 x V<sub>cc2</sub>), during the rising time.  
During the falling time, a 78% duty cycle HOUT pulse is provided when V<sub>cc1</sub> is lower than (0.60 x V<sub>cc2</sub>).
- Possibility to disable the horizontal output pulse through the bus (force a high level on HOUT).
- Horizontal position adjustment controlled by bus.
- Bus controlled output voltage to adjust the vertical amplitude; this voltage permits to adjust the slope of the vertical sawtooth generated by the external frame booster.
- Bus controlled vertical position ; the high level of the vertical pulse permits to adjust the vertical position.
- Bus controlled 4/3-16/9 selection : the low level of the vertical pulse is 0.1V when 16/9 is selected, 2V when 4/3 is selected.
- Combined flyback input and sandcastle output (Pin 37).  
Two thresholds on LFB/SCO Pin : The lowest threshold (0.7V) permits to extract the line blanking pulse; the highest threshold (2V) permits to extract the line pulse for PLL2.  
The sandcastle signal at Pin 37 is used to control the external baseband chroma delay line.

**FUNCTIONAL DESCRIPTION (continued)****2 - FILTERS**

- Integrated trap filter :

$$Q = \frac{1}{\frac{f_o}{f_{-3dB}} - \frac{f_{-3dB}}{f_o}}$$

Q = 1.7 at sharp. min  
Q = 3.0 at sharp. max

Center frequency : - 4.43MHz,  
3.58MHz for PAL, NTSC  
- 4.25MHz, for SECAM  
( $f_{-3dB} = 3\text{ MHz}$  ; -20dB  
rejection between 4.1MHz  
and 4.4MHz)

- Integrated chroma bandpass :

Q = 3.5

Center frequency : 4.43MHz, 3.58MHz

- Integrated cloche filter for SECAM :

Q = 16

Center frequency : 4.286MHz

- Integrated delay line :

Bandwidth = 8MHz

- Integrated low pass filter for deflection part.

- All filters are tuned with a reference phase locked loop.

The PLL consists of a lowpass filter, a phase comparator, a loop filter (an external capacitor). The reference signal is the continuous carrier wave from the VCO (4.43MHz or 3.58MHz). The PLL adjusts the center frequency of the lowpass so that it is equal to the reference signal. The tuning voltage of the PLL is used to adjust all other filters. The cloche filter is fine tuned with a second PLL operating during frame retrace.

**3 - VIDEO CIRCUIT**

- 2 RGB inputs : RGB (OSD) input has priority against the RGBext. Maximum contrast on RGB (OSD). -10dB range contrast control on RGBext.

Possibility to disable the RGBext insertion through the bus.

- Oversize blanking capability on FB(OSD)(Pin15) input. The RGB outputs will be blanked when the voltage on Pin 15 will exceed the second threshold at 1.9V (blanking threshold) : the whole field is blanked but not the inserted cut-off pulses. The OSD insertion threshold is 0.7V.
- Automatic cut-off current loop : 2V cut-off range. Sequential cut-off current measurement during the three lines after the frame blanking signal. Leakage current measurement during the frame blanking, memorization on an internal capacitor.
- Possibility to force through the bus the inserted cut-off pulses on lines 23/24/25(CCIR) in 50Hz and 60Hz mode.
- Warm up detector.
- Beam current limiter DC voltage input. The beam current limiter control voltage will act on contrast first, then the brightness will be decreased when contrast attenuation reaches -5dB.
- Bus control of the red, green and blue channel gain (White point adjustment)
- Bus control of the red and green DC levels (black point adjustment)
- PAL and SECAM matrix, specific NTSC matrix when demodulation angles are ( $0^\circ$ ,  $104^\circ$ ).
- Switch-off of the trap filter in SVHS mode.
- Bus controlled contrast on luminance (20dB range)
- Bus controlled saturation (50dB range)
- Bus controlled brightness : 40% range at maximum contrast.
- Bus controlled sharpness (peaking) ; sharpness active in PAL/NTSC standard only.
- Noise coring function on sharpness.

## FUNCTIONAL DESCRIPTION (continued)

### 4 - CHROMA CIRCUIT

#### 4.1 - PAL/SECAM/NTSC Decoders

- SVHS inputs ; bus controlled SVHS mode.
- 30dB range ACC
- Use of an external base band delay line (STV2180 recommended)
- Automatic standard identification, with possibility to force the standard through the bus.

#### 4.2 - PAL/NTSC Decoders

- ACC done by peak detector on synchronous demodulation of the burst
- Fully integrated killer functions.
- VCO using two standard crystals : 4.43MHz and 3.58MHz. One crystal is internally selected depending on the standard selection.

##### XTAL SPECIFICATION :

Frequency :

4.433619MHz(PAL/SECAM)  
3.579545MHz(NTSC M)  
3.575611MHz(PAL M)  
3.582056MHz(PAL N)

Vibration mode : Fondamental, series resonance  
(no serial capacitor)

Motional capacity :  $13fF \pm 3fF$

Resonance resistance :  $< 70\Omega$

Shunt capacitance :  $< 7pF$

Spurious response : No resonance at  $3*f_0 \pm 3kHz$

- $0^\circ$  and  $\pm 90^\circ$  demodulation angles for PAL
- $(0^\circ, 90^\circ)$  or  $(0^\circ, 104^\circ)$  = demodulation angles for NTSC. The selection of  $90^\circ$  or  $104^\circ$  is made through the bus.

- Bus control Hue adjustment in NTSC mode.

#### 4.3 - SECAM Decoder

- ACC
- Fully integrated killer
- Two integrated discriminators with two PLL
- Integrated deemphasis

#### 4.4 - Standard Identification

- Sequential identification.
- 3 identification sequences : XTAL1 (4.43MHz) mode to identify either PAL or NTSC, XTAL2 (3.58MHz) mode to identify either PAL or NTSC, SECAM mode (XTAL1 selection).
- PAL/NTSC priority
- the SECAM mode is locked after two identified SECAM sequences
- the SECAM mode can be selected in 50Hz only
- Blanking of the (R-Y) and B-Y) outputs during color search mode.

## 5 - OTHER FUNCTIONS : IF CONTROLS

### 5.1 - Volume Control and Mute

The volume control voltage range on Pin 10 is from 0.5V to 5V. A low voltage on Pin 10 (below 0.2V) will mute the FM demodulator of the IF circuit STV8224. It will put the volume at the minimum level and thus there will be no sound either in TV mode or SCART mode.

The volume control voltage and the mute level are controlled by the bus.

### 5.2 - IF Standard and TV/SCART Mode Selection

The selection of IF standard (positive or negative vision modulation) and the TV/SCART mode is controlled by the bus. The selection is converted in four voltages on Pin 21.

The lowest voltage selects the TV mode and the NEGATIVE vision modulation.

The highest voltage (open collector output with internal pull-up resistor to  $V_{CC}$ ) selects the SCART mode and the NEGATIVE vision modulation.

The two other intermediate voltages select either TV mode and POSITIVE vision modulation or SCART mode and POSITIVE vision modulation.

## APPLICATION DIAGRAM

2118A-35.EPS

- Notes :**
- STV2118A requires 2 XTALS (4.43MHz and 3.58MHz) for all operations (even with PAL and SECAM only signals). This drawback will be improved in new coming versions.
  - Recommended 4.43MHz XTAL is JAUCH Number 10080082.
