## I<sup>2</sup>C BUS SELECTION

Data transfers follow the usual I2C format: after the start condition (S), a 7-bit slave address is sent, followed by an eighth bit which is a data direction bit (W). A 8-bit subaddress is sent to select a register, followed by a 8-bit data word to put in it.

The IC's I2C bus decoder permits the automatic incrementation mode in write mode.
