

# 6-channel inverter

## BA6266 / BA6266F

The BA6266 and BA6266F are driver ICs featuring high output voltage capability and high-current open collector output, and having six built-in inverter buffer circuits.

The open collector output enables “AND” ties. In addition, clamp diodes are connected to all inputs, minimizing error caused by ringing and other factors. These inverters feature a high output pressure withstand resistance of 30V, as well as a large output power supply (sink current) of 40mA, making them suitable for use in LED drivers and interfaces with other elements.

### ●Applications

General-purpose digital equipment

### ●Features

- 1) High output current. ( $I_{OL} = 40\text{mA}$ )
- 2) High output voltage. ( $V_O = 30\text{V}$ )
- 3) “AND” ties enabled.
- 4) Wide range of operating temperatures.
