

# VIF / SIF signal processor for televisions and VCRs

## BA7358S

The BA7358S is multi-format (M, B / G, D / K, and I) VIF / SIF signal processor for television and VCR applications. It features separate-carrier PLL with full synchronous detection and employs a pulse-count detector audio system that does not require adjustment. It also includes a sound trap band-pass filters that use our independently-developed filter technology. This IC reduces external component requirements, and allows space savings.

### ●Applications

TVs and VCRs

### ●Features

- 1) Separate-carrier PLL with full synchronous detection. Excellent DG / DP, CS beat (920kHz) and cross color. In addition, by pulling down the SIF input (pin 9) it can be used as an intercarrier.
- 2) The IF AGC time constant is dual-layered to allow faster speeds.
- 3) The variable-gain amplifier has excellent linearity to ensure low distortion, and AGC variance and temperature drift have been minimized.
- 4) Built-in SOUND filter (SOUND trap and SOUND BPF). The MODE switch can be used to switch between M, B / G, I, and D / K (4.5MHz, 5.5MHz, 6.0MHz, and 6.5MHz respectively). In particular, the SOUND BPF gives a larger attenuation ratio than conventional discrete circuits by using two-layer SIF + 500kHz BPFs.
- 5) The audio detector uses a 500kHz beatdown pulse-counter detector that does not require adjustment. This eliminates the need for a detector coil and gives better linearity and S / N.
- 6) Use of pulse-counter detection and the built-in SOUND filter means fewer pins, external components and adjustment locations are required. The IC is available in a 22-pin SDIP package and will enable cost and space savings.

### ●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Applied voltage	V <sub>CCMax.</sub>	10.5*1	V
Power dissipation	P <sub>dMax.</sub>	1250*2	mW
Operating temperature	T <sub>opr</sub>	- 15 ~ + 70	°C
Storage temperature	T <sub>stg</sub>	- 40 ~ + 150	°C
Pin 2 applied voltage	V <sub>P2Max.</sub>	10.5	V

\*1 24Ω resistor connected between V<sub>CC</sub> and V<sub>reg</sub>.

\*2 When IC is stand alone, reduced by 10mW for each increase in Ta 1°C over 25°C.

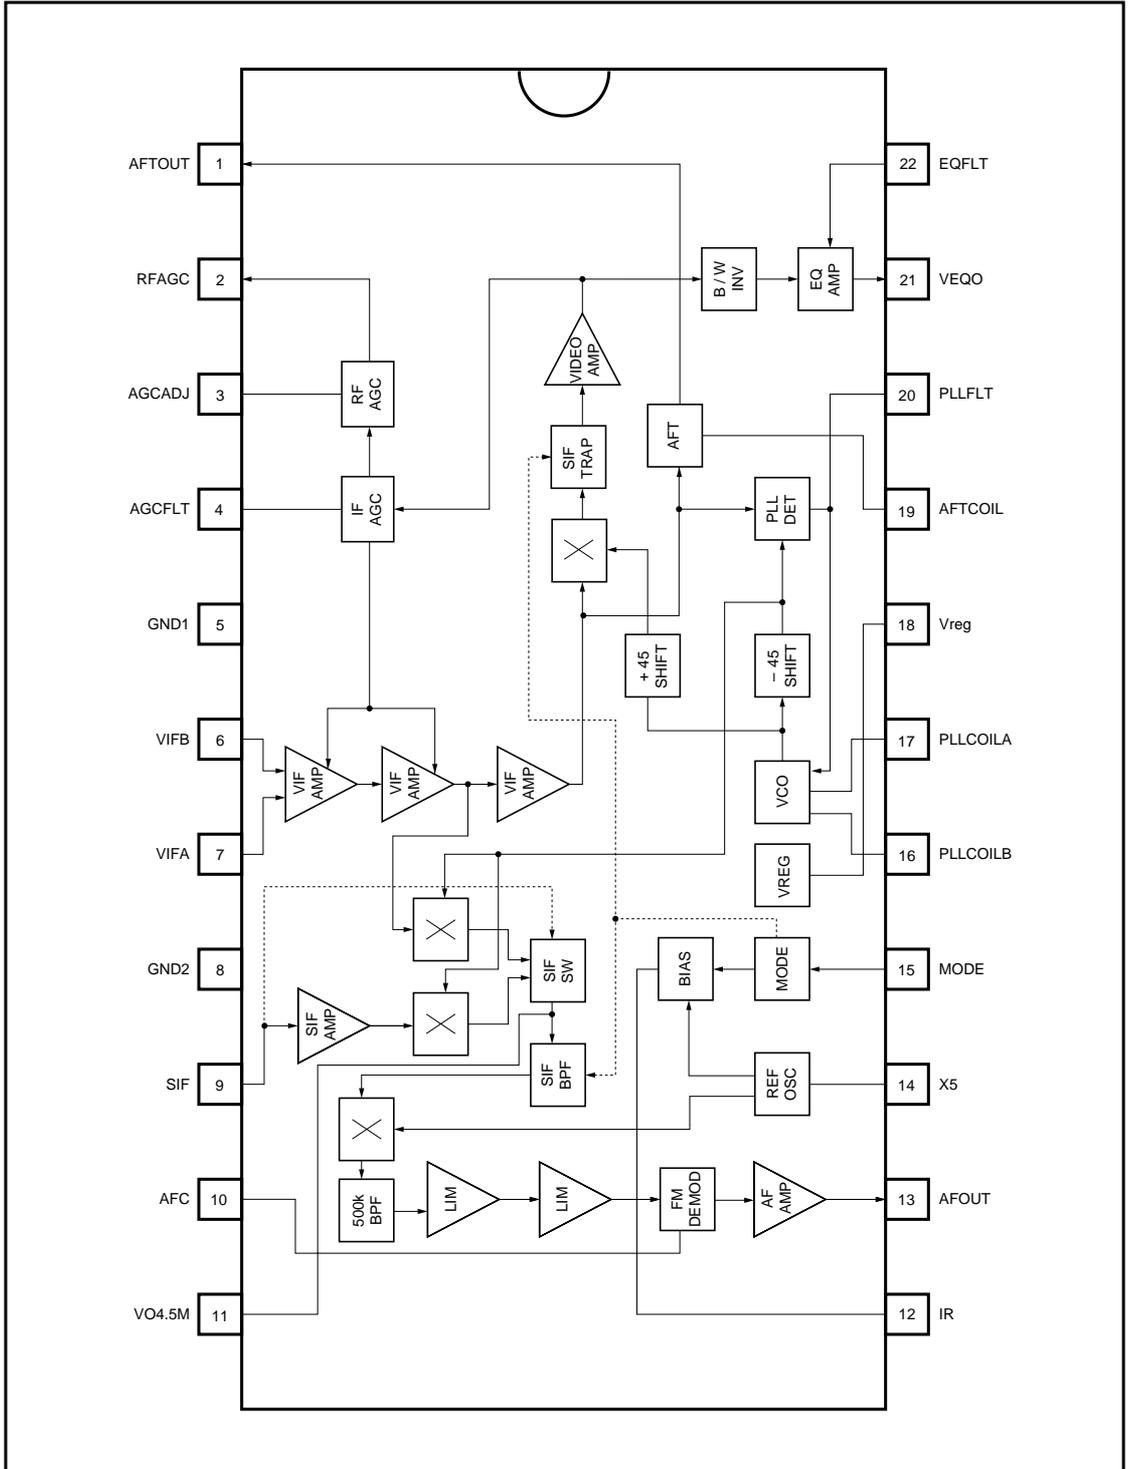

### ●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage (9V)	V <sub>CC9V</sub>	8.8 ~ 9.2*1	V
Power supply voltage (12V)	V <sub>CC12V</sub>	11.7 ~ 12.3*2	V
Guaranteed operating power supply voltage	V <sub>CC</sub>	8.5 ~ 9.5*1	V

\*1 24Ω resistor connected between V<sub>CC</sub> and V<sub>reg</sub>.

\*2 56Ω resistor connected between V<sub>CC</sub> and V<sub>reg</sub>.

●Block diagram

## ●Pin descriptions

Pin No.	Pin name	Function
1	AFTOUT	AFT OUT
2	RFAGC	RF AGC OUT
3	AGCADJ	RF AGC delay point adjustment
4	AGCFLT	IF AGC Filter
5	GND1	VIF, BIAS GND
6	VIFB	VIF B IN
7	VIFA	VIF A IN
8	GND2	SIF, PLL GND
9	SIF	SIF IN / intercarrier switch
10	AFC	Audio detector filter and A / V mute switch
11	VO4.5M	2ndSIF OUT
12	IR	Filter bias resistor (within $\pm 1\%$ )
13	AFOUT	AUDIO OUT
14	X5	Filter system reference frequency oscillator
15	MODE	MODE SW
16	PLLCOILB	PLL oscillator coil
17	PLLCOILA	PLL oscillator coil
18	Vreg	Vreg
19	AFTCOIL	AFT COIL
20	PLLFLT	PLL phase detect filter
21	VEQO	Video out after EQ amplifier
22	EQFLT	EQ Filter

●Equivalent circuits

Pin No.	Pin name	IN / OUT	Standard voltage	Equivalent circuit	Function
1	AFTOUT	OUT	—		AFT output. Vreg / GND push-pull output.
2	RFAGC	OUT	—		RFAGC output. Open-collector output. Gain can be set using an external resistor (minimum value of the maximum sink current of pin 2 is 0.7mA). Keep the pin 2 voltage at 10.5V or less.
3	AGCADJ	—	2.7V (when 100kΩ resistor connected)		RF AGC delay point adjustment. Connect to GND via a variable resistor (approx. 100kΩ).
4	AGCFLT	—	5.0V		For filter time constant for VIF AGC.
5	GND1	—	0V	—	GND for VIF, AGC and AFT.

\* Vcc and Vcc2 in the equivalent circuit diagrams are connected to the Vreg terminal (pin 18).

Pin No.	Pin name	IN / OUT	Standard voltage	Equivalent circuit	Function
6 7	VIFB VIFA	IN	4.2V		Video IF input. Use with balanced input.
8	GND2	—	0V	—	SIF and PLL GND.
9	SIF	IN	6.6V		Audio IF input. Can set to intercarrier mode by pulling down via a 2kΩ resistor.
10	AFC	—	2.7V		Holding the audio output DC level fixed. Connect to GND via a 4.7μF capacitor and to Vreg via a 10μF capacitor to reduce buzz. Set this pin to 0.3V or lower to apply audio / video mute.
11	VO4.5M	—	5.2V		2nd SIF output. Connect a trap to this pin to vary the sound filter characteristics. The internal impedance is a high (Approximately) 1kΩ, so connect a buffer to output.

Pin No.	Pin name	IN / OUT	Standard voltage	Equivalent circuit	Function
12	IR	—	2.4V		Reference current source for adjusting the internal filter. Use connected to GND via a 24kΩ resistor. Use an accurate resistor with good temperature characteristics (e.g. ± 1% metal film).
13	AFOUT	OUT	3.2V		Audio signal output. The standard output in the case of B / G is 520mV <sub>rms</sub> (when f = 50kHz). Connect to GND via a 10kΩ resistor.
14	X5	—	5.0V		For connection to a 5MHz oscillator (when M format is used). Use as a reference oscillator for automatic adjustment of the internal filter, and as the signal for the SIF signal low frequency conversion. (B / G, D / K format: 6MHz, I format: 6.5MHz).
15	MODE	IN	3.4V		Input for Trap Filter SW. 0V: M format (4.5MHz) 2.4V: D / K format (6.5MHz) 4.3V: I format (6.0MHz) Vreg: B / G format (5.5MHz)

Pin No.	Pin name	IN / OUT	Standard voltage	Equivalent circuit	Function
16 17	PLLCOILA PLLCOILB	—	3.6V		For connection of IF detector VCO oscillator coil.
18	Vreg	OUT	6.6V		IF circuit power supply. Pin 18 has a built-in shunt regulator.
19	AFTCOIL	—	3.0V		For connection of AFT coil. To apply AFT defeat, connect to GND via a 1kΩ (approx.) resistor.
20	PLLFLT	—	3.4V		Time constant circuit for the PLL filter.

Pin No.	Pin name	IN / OUT	Standard voltage	Equivalent circuit	Function
21	VEQO	OUT	2.0V (SYNC)		<p>VIDEO output. Output is via the sound trap, B / W noise inverter, and EQ AMP. Connect to GND via a 4.7kΩ resistor.</p>
22	EQFLT	—	5.2V		<p>EQ Filter. Connect to GND via an LCR series resonant circuit. R should be <math>\cong 1k\Omega</math>.</p>

●Electrical characteristics (unless otherwise noted, Ta = 25°C, Vcc = 9V, P = 38.9MHz)

Note: Connect a 16.7pF capacitor between 4 and 6 when measuring in the case of the VCO COIL.  
Connect a 0pF capacitor between 1 and 3 when measuring in the case of the AFT COIL.

●Operation notes

(1) Simultaneous audio and video output muting function

It is possible to simultaneously mute the audio and video output by pulling the AFC filter terminal down.

(2) AFT defeat function

AFT defeat can be applied by pulling the AFT coil terminal down via a 1kΩ resistor.

(3) Recommended SIF input range for intercarrier mode

P / S = 20 to 30dB (including SAW-FILTER).

(4) IF input range for RF-AGC switching

60 to 95dBμ.

(5) Intercarrier mode switching

Intercarrier mode can be set by pulling the SIF terminal down via a 2kΩ resistor.

(6) IR terminal external resistor

This resistor sets the filter system reference current, so use an accurate component that has good temperature characteristics.
