

AFM Stereo Signal Processor for 8 mm VCR

Description

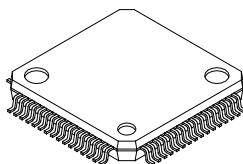

The CXA1737R is a bipolar IC designed as an AFM stereo signal processor for 8mm VCR.

All functions necessary for AFM stereo are concentrated onto a single 64-pin LQFP.

Features

- Low supply voltage (3.15V) design
- Low power consumption ($V_{cc} = 3.15V$)
 - Recording: 150mW
 - Playback: 240mW
- Built-in BPF (1.5MHz, 1.7MHz)
- Supports NTSC and PAL
- Enables both parallel and 3-line serial mode control
- Supports electronic volume (EVR) control

64 pin LQFP (Plastic)

Structure

Bipolar silicon monolithic IC

Applications

8mm VCRs

Absolute Maximum Ratings

- Supply voltage V_{cc} 5.25 V
- Operating temperature T_{opr} -20 to +75 °C
- Storage temperature T_{stg} -65 to +150 °C
- Allowable power dissipation P_D 1500 mW

Operating Conditions

- Recommended supply voltage

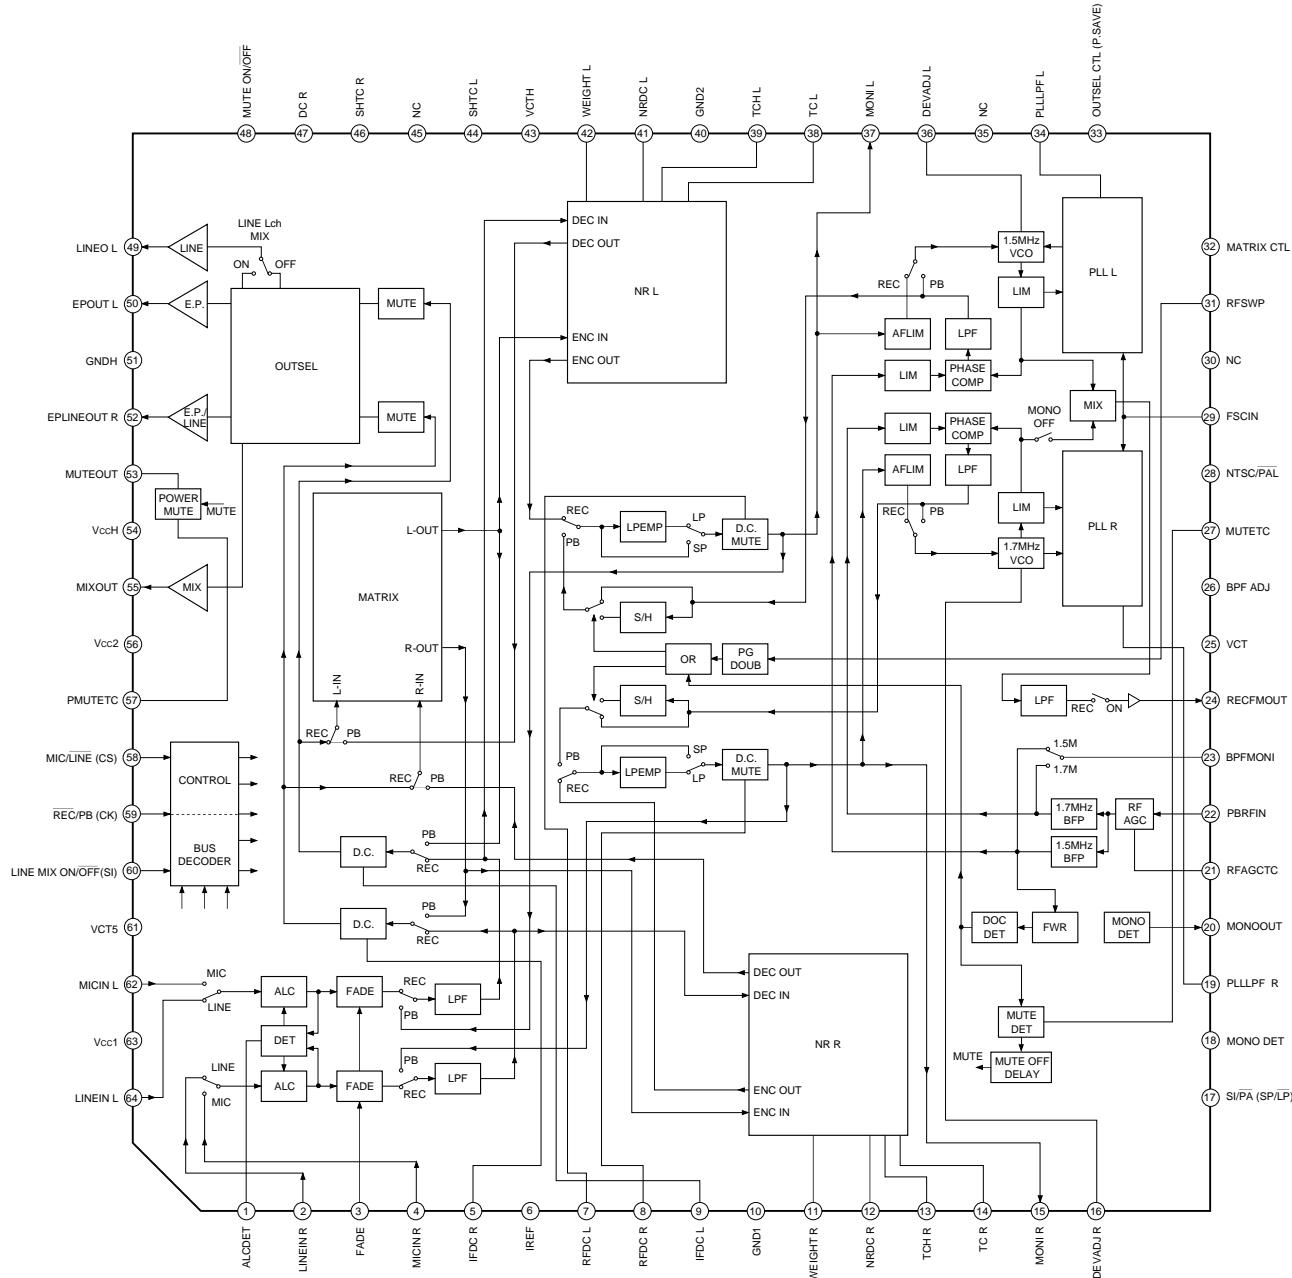

V_{cc}	3.15	V
----------	------	---

V_{ccH}	4.75	V
-----------	------	---

- Supply voltage range V_{cc} 3 to 5.25 V
 V_{ccH} 4.5 to 5.25 V

Pin Description

(Vcc1, Vcc2 = 3.15V, VccH = 4.75V, Ta = 27°C)

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
1	ALCDET	—	—		ALC time constant pin. ALC is OFF when this pin is low.
2	LINEIN R	1.23V	Reference input -38dBm *1		Line input pin. Standard input level: -38dBm. This pin has a small input signal level and high input impedance. Therefore, be careful not to cause cross talk with other signals.
3	FADE	See Graph 1.	—		EVR control pin for fader. 0 to 0.5V with fixed gain. Increasing the applied voltage lowers the gain and causes the fader to operate.
4	MICIN R	1.23V	Reference input -38dBm *1		Microphone input pin. Standard input level: -38dBm. This pin has a small input signal level and high input impedance. Therefore, be careful not to cause cross talk with other signals.

*1 0dBm = 2.19Vp-p

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
5	IFDC R	1.90V	—		DC monitor pin of Rch signal path.
6	IREF	1.17V	—		Pin for generating the reference current. Connect a 47kΩ external resistor to GND. Be careful not to cause pin cross talk.
7	RFDC L	1.91V	—		DC monitor pin of Lch signal path.
8	RFDC R	1.91V	—		DC monitor pin of Rch signal path.

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
9	IFDC L	1.90V	—		DC monitor pin of Lch signal path.
10	GND1	0V*1	—	—	Audio system GND pin.
11	WEIGHT R	1.23V	—		NR WEIGHT time constant pin.
12	NRDC R	1.73V	—		DC offset cancel pin of NR block.

*1 Externally applied voltage

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
13	TCH R	0.56V	—		NR attack/ recovery time constant pins.
14	TC R	1.19V	—		
15	MONI R	1.89V	Reference output -15dBm *1		Pin for monitoring the signal before modulation during recording and after demodulation during playback of Rch.
16	DEVADJ R	See Graph 4.	—		Deviation adjusting pin. The variable width is from 0 to Vcc.

*1 0dBm = 2.19Vp-p

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description				
		DC	AC						
17	SI/PA (SP/ LP)	—	—		<p>Serial/ parallel (SP/ LP) mode switching pin. When this pin is 4.3V or more, the IC operates in serial control mode and mode control for the IC is performed by CS, CK and SI of Pins 58, 59 and 60. When this pin is 3.5V or less, the IC operates in parallel control mode as follows.</p> <table border="1"> <tr> <td>L (0 to 1V)</td> <td>LP</td> </tr> <tr> <td>H (2 to 3.5V) or OPEN</td> <td>SP</td> </tr> </table>	L (0 to 1V)	LP	H (2 to 3.5V) or OPEN	SP
L (0 to 1V)	LP								
H (2 to 3.5V) or OPEN	SP								
18	MONO DET	2.47V	—		MONO DET time constant pin.				
19	PLL/PF R	—	—		PLL time constant pin. Since this pin has a small attraction and discharge current, signals should be received with high impedance when monitoring this pin. Also, be careful not to cause pin cross talk.				

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
20	MONOUT	—	—	<p>MONODET discrimination output pin. This pin is open collector, and it is pulled up to Vcc with 100kΩ resistor. During parallel mode, this pin is also recording bilingual control input pin.</p> <ul style="list-style-type: none"> • Specification for parallel CTL During recording: Bilingual recording mode when this pin is set to low (0 to 1 V) during low of Pin 32 (REC MONO mode). <p>During playback: Outputs MONO discrimination result. Open for MONO; Low for others.</p> <ul style="list-style-type: none"> • Specification for serial CTL See Mode Control Tables of 3) SO control mode table. 	<p>MONODET discrimination output pin. This pin is open collector, and it is pulled up to Vcc with 100kΩ resistor. During parallel mode, this pin is also recording bilingual control input pin.</p> <ul style="list-style-type: none"> • Specification for parallel CTL During recording: Bilingual recording mode when this pin is set to low (0 to 1 V) during low of Pin 32 (REC MONO mode). <p>During playback: Outputs MONO discrimination result. Open for MONO; Low for others.</p> <ul style="list-style-type: none"> • Specification for serial CTL See Mode Control Tables of 3) SO control mode table.
21	RFAGCTC	2.48V	—		RFAGC time constant pin.
22	PBREFIN	—	Reference input AFM 15mVp-p (1.5MHz)		<p>Input pin for PB RF signal. The reference input level is approximately 200mVp-p (Y + C + AFM). Note that the reference input level of AFM 1.5MHz component is 15mVp-p.</p>

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description
		DC	AC		
23	BPFMONI	During 1.5M BPF monitoring 1.09V During 1.7M BPF monitoring 2.51V	Reference output 1.5M BPF = 180mVp-p 1.7M BPF = 190mVp-p		This pin is for measurement which monitors the BPF output. For monitoring 1.5M BPF characteristics, connect 4.7kΩ resistor to GND. For monitoring 1.7M BPF characteristics, connect 4.7kΩ resistor to Vcc.
24	RECFMOUT	0.96V	1.5M + 1.7M reference output		Recording FM modulated output pin. Reference output is 220mVp-p for 1.5M component; 175mVp-p for 1.7M component.
25	VCT	1.89V	—		IC internal bias pin. Connect a decoupling capacitor.
26	BPF ADJ	See Graph 2.	—		Pin for varying the BPF fo. The variable width is 0 to Vcc.

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description				
		DC	AC						
27	MUTETC	2.43V	—		Time constant pin for determining the MUTE OFF delay time. MUTE ON when drop out (T) continues approximately 1ms (during 680pF externally). <p>Pin 22 input </p> <p>Pin 27 </p>				
28	NTSC/ PAL	—	—		NTSC/PAL switching pin during parallel mode. <table border="1"> <tr> <td>L (0 to 1V)</td> <td>PAL</td> </tr> <tr> <td>H (2V to Vcc)</td> <td>NTSC</td> </tr> </table>	L (0 to 1V)	PAL	H (2V to Vcc)	NTSC
L (0 to 1V)	PAL								
H (2V to Vcc)	NTSC								
29	FSCIN	1.68V	Reference input 200mVp-p		fsc input pin. The input level is approximately 200mVp-p. During NTSC: 3.579545MHz During PAL: 4.433619MHz				
30	NC	—	—	—	—				
31	RFSWP	—	Reference input 30Hz		RFSWP input pin. H (2V to Vcc) L (0 to 1V)				

Pin No.	Symbol	Pin voltage		Equivalent circuit	Description

20	REC BIL CTL	REC	BIL REC (during Pin 32 low)	—	—	—	CTL IN during REC
	PB MONODET OUT	PB	STEREO/ BIL	MONO	—	—	DET OUT during PB
28	NTSC/PAL		PAL	—	NTSC	—	
32	MATRIX CTL	REC	Forced MONO	STEREO	STEREO	—	—
		PB	Bilingual/ MONO auto detection	STEREO/ MONO auto detection	Forced STEREO	—	—
33	OUTSEL CTL		Lch/Rch	Lch/Lch	—	Rch/Rch	—
	POWER SAVE		OFF	OFF	—	OFF	ON
	BPF ON/OFF		ON	ON	—	ON	OFF (only 1.5M BPF is through)
48	MUTE	MUTE OFF	MUTE ON	MUTE ON	—	—	
58	MIC/LINE	LINE	LINE	MIC	—	—	
59	REC/PB	REC	REC	PB	—	—	
60	RFU (MIX)	OFF	OFF	ON	—	—	

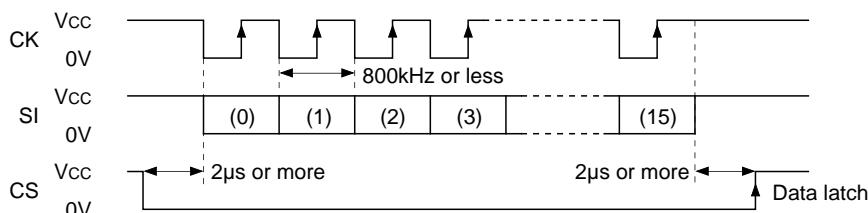

*1 When Pin 17 is 4.3V or more, the IC operates in serial control mode.

2. Serial control

* When Pin 17 is 4.3V or more, the IC operates in serial control mode.

1) Input condition

Item	Symbol	Min.	Typ.	Max.	Unit	Pin No.	Symbol	CTL voltage		
								LOW (0 to 1V)	OPEN	HIGH (2V to Vcc)
Clock frequency	fck			800	kHz	58	CS	L	L	H
Setup time	t _{SU}	400			ns	59	CK	L	L	H
Hold time	t _{HLD}	400			ns	60	SIN	L	L	H
CS rise time to SI start time	t ₁	2			μs					
Final CS rise time to CS fall time	t ₂	2			μs					

2) Serial CTL mode table

Bit No.	Control name	CTL value	Mode
0	—	L	—
1	—	L	—
2	—	L	—
3	—	L	—
4	—	L	—
5	POWER SAVE	L H	OFF ON
6	MATRIX2	See Table 1	See Table 1
7	MATRIX1		
8	OUTSEL2	See Table 2	See Table 2
9	OUTSEL1		
10	LINEOUT MIX	L H	OFF ON
11	LINE/MIC switching	L H	LINE MIC
12	LP/SP switching	L H	LP SP
13	PAL/NTSC switching	L H	PAL NTSC
14	MUTE	L H	OFF ON
15	REC/PB switching	L H	REC PB

Table 1

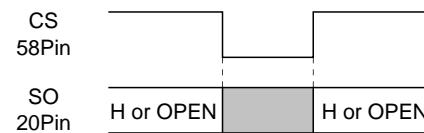

OUTSEL1 (bit 9)	OUTSEL2 (bit 8)	
H	H	Rch/Rch
L	H	Lch/Lch
—	L	Lch/Rch

Table 2

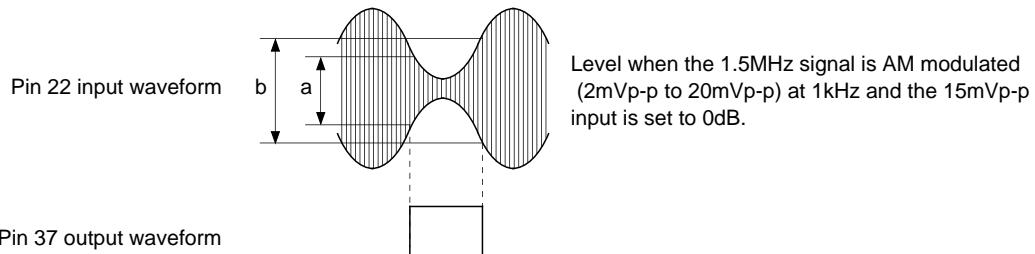

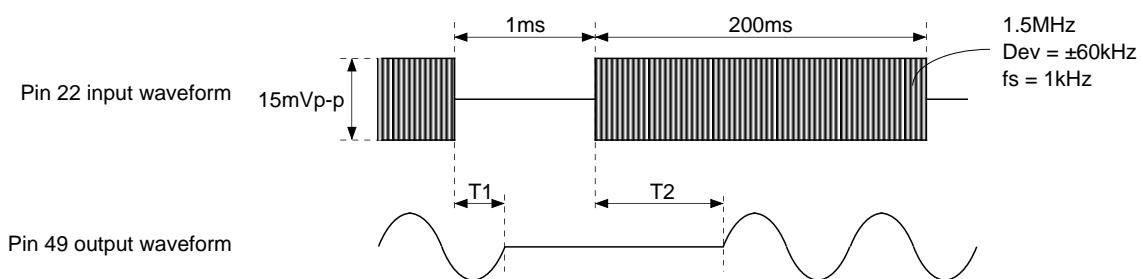

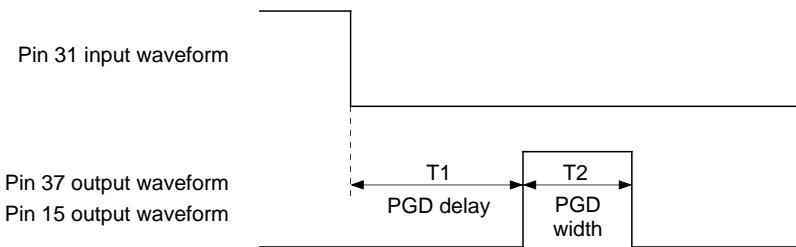

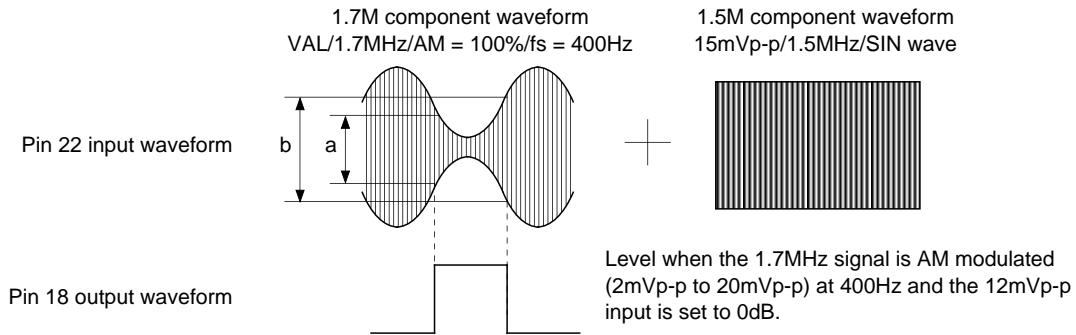

MATRIX1 (bit 7)	MATRIX2 (bit 6)	during REC	during PB
H	L	MATRIX ON	MATRIX ON
H	H	MATRIX ON	MATRIX (AUTO)
L	H	BIL REC	MATRIX (AUTO)
L	L	REC MONO	MATRIX OFF BIL/MONO (AUTO)

3) SO control mode table

Mode (only the shaded period as shown in the figure right)		Pin 20 (SO)
REC	During Pin 32 = L	OPEN
	During Pin 32 = H	L
PB	MONO	L
	MONO	OPEN

The result of detection is output during CS period.
H or OPEN other than CS period.

I/O Waveform**Fig. 1****Fig. 2****Fig. 3****Fig. 4**

Adjustment and Measurement Methods

DEV adjustment method

- Lch adjustment

Input the reference input ($-38\text{dBm}/400\text{Hz}$) to the MIC input (Pin 62) and adjust the voltage applied to Pin 36 (V36) so that the Pin 24 output reference frequency deflection is $1.5\text{MHz} \pm 60\text{kHz}$.

When adjusting DEV, connect a $10\text{k}\Omega$ load resistor between Pin 24 and GND as shown in the electrical characteristics measurement circuit.

- Rch adjustment

Input the reference input ($-38\text{dBm}/400\text{Hz}$) to the MIC input (Pin 4) and adjust the voltage applied to Pin 16 (V16) so that the Pin 24 output reference frequency deflection is $1.7\text{MHz} \pm 30\text{kHz}$.

When adjusting DEV, connect a $10\text{k}\Omega$ load resistor between Pin 24 and GND as shown in the electrical characteristics measurement circuit.

Reference FM modulation distortion factor measuring method

Demodulate the Pin 24 output into the audio signal with the reference demodulator under the same conditions as for DEV adjustment above, then measure the distortion factor.

BPF adjustment method

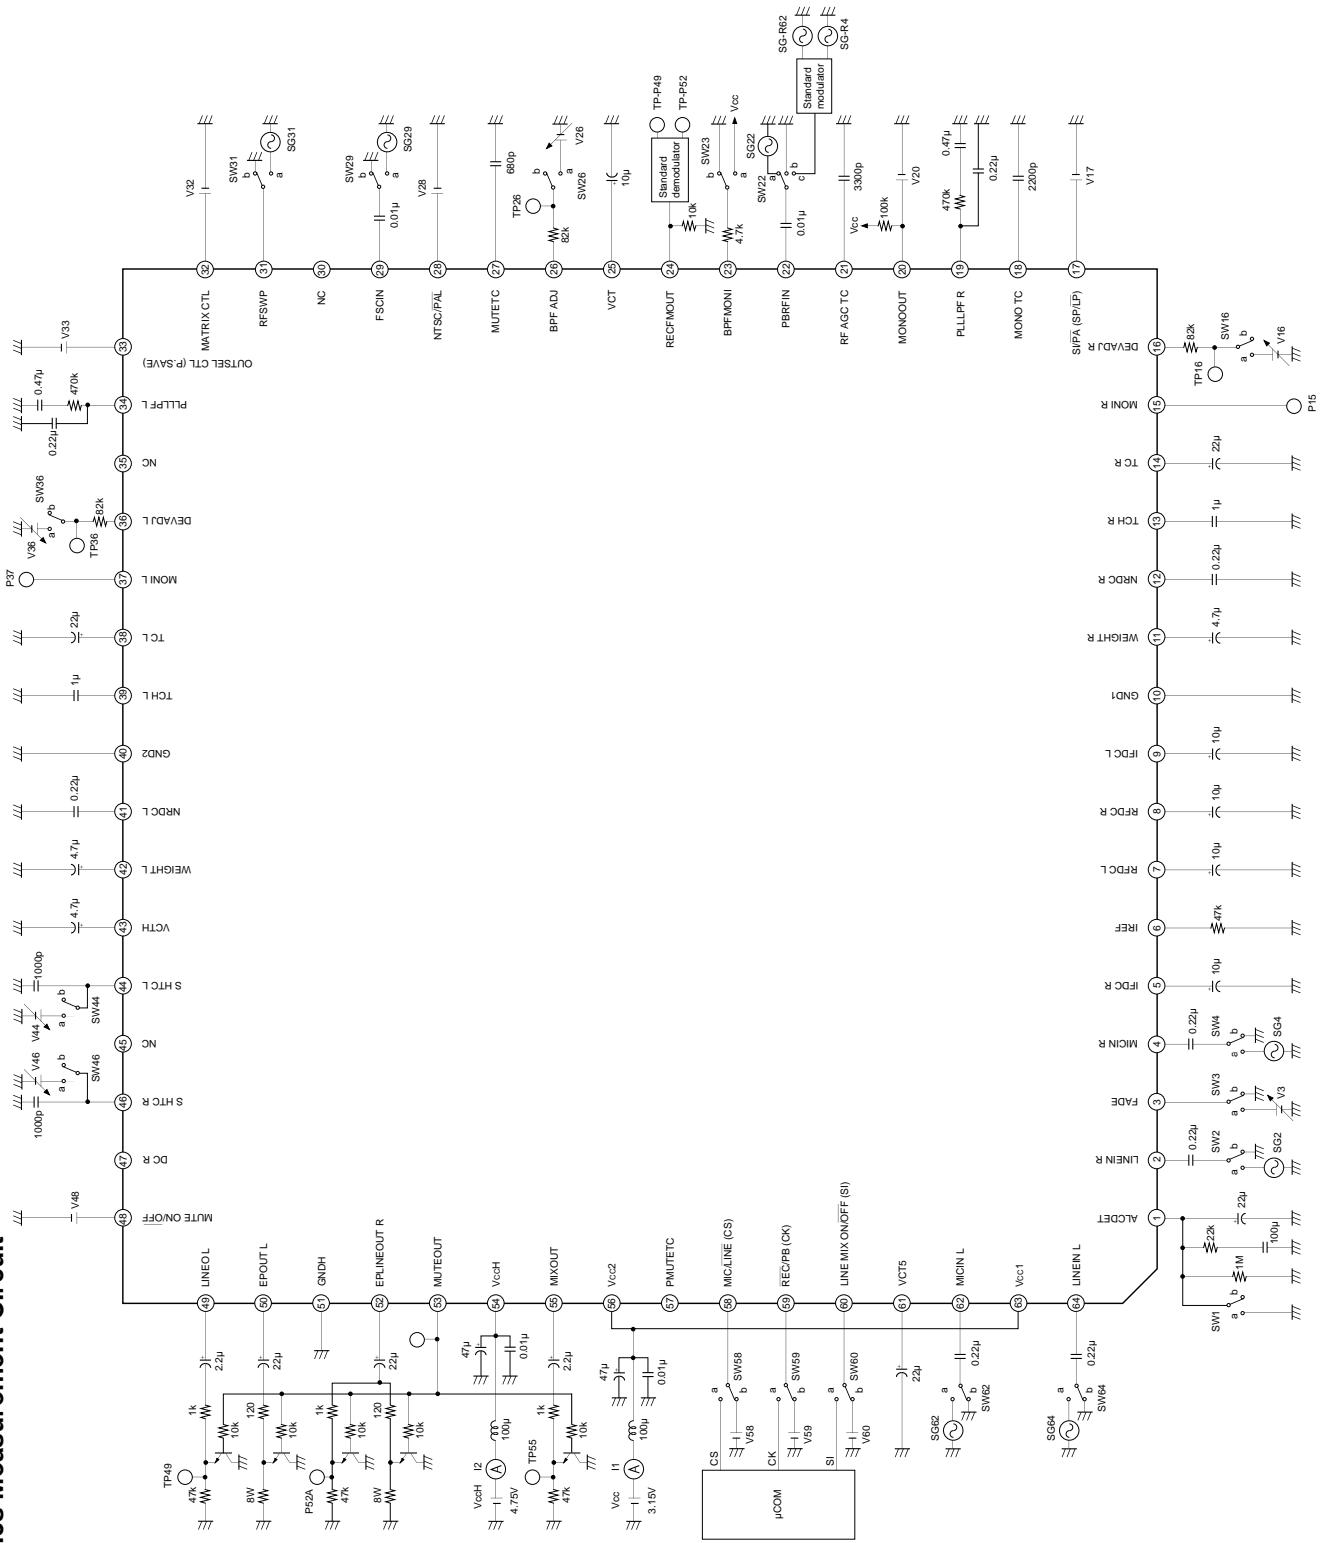

Input 15mVp-p , 1.625MHz signal to Pin 22 and adjust the voltage applied to Pin 26 (V26) so that the output level when the SW of Pin 23 is switched to "a" (1.7M BPF output) and the output level when the SW of Pin 23 is switched to "b" (1.5M BPF output) are equal.

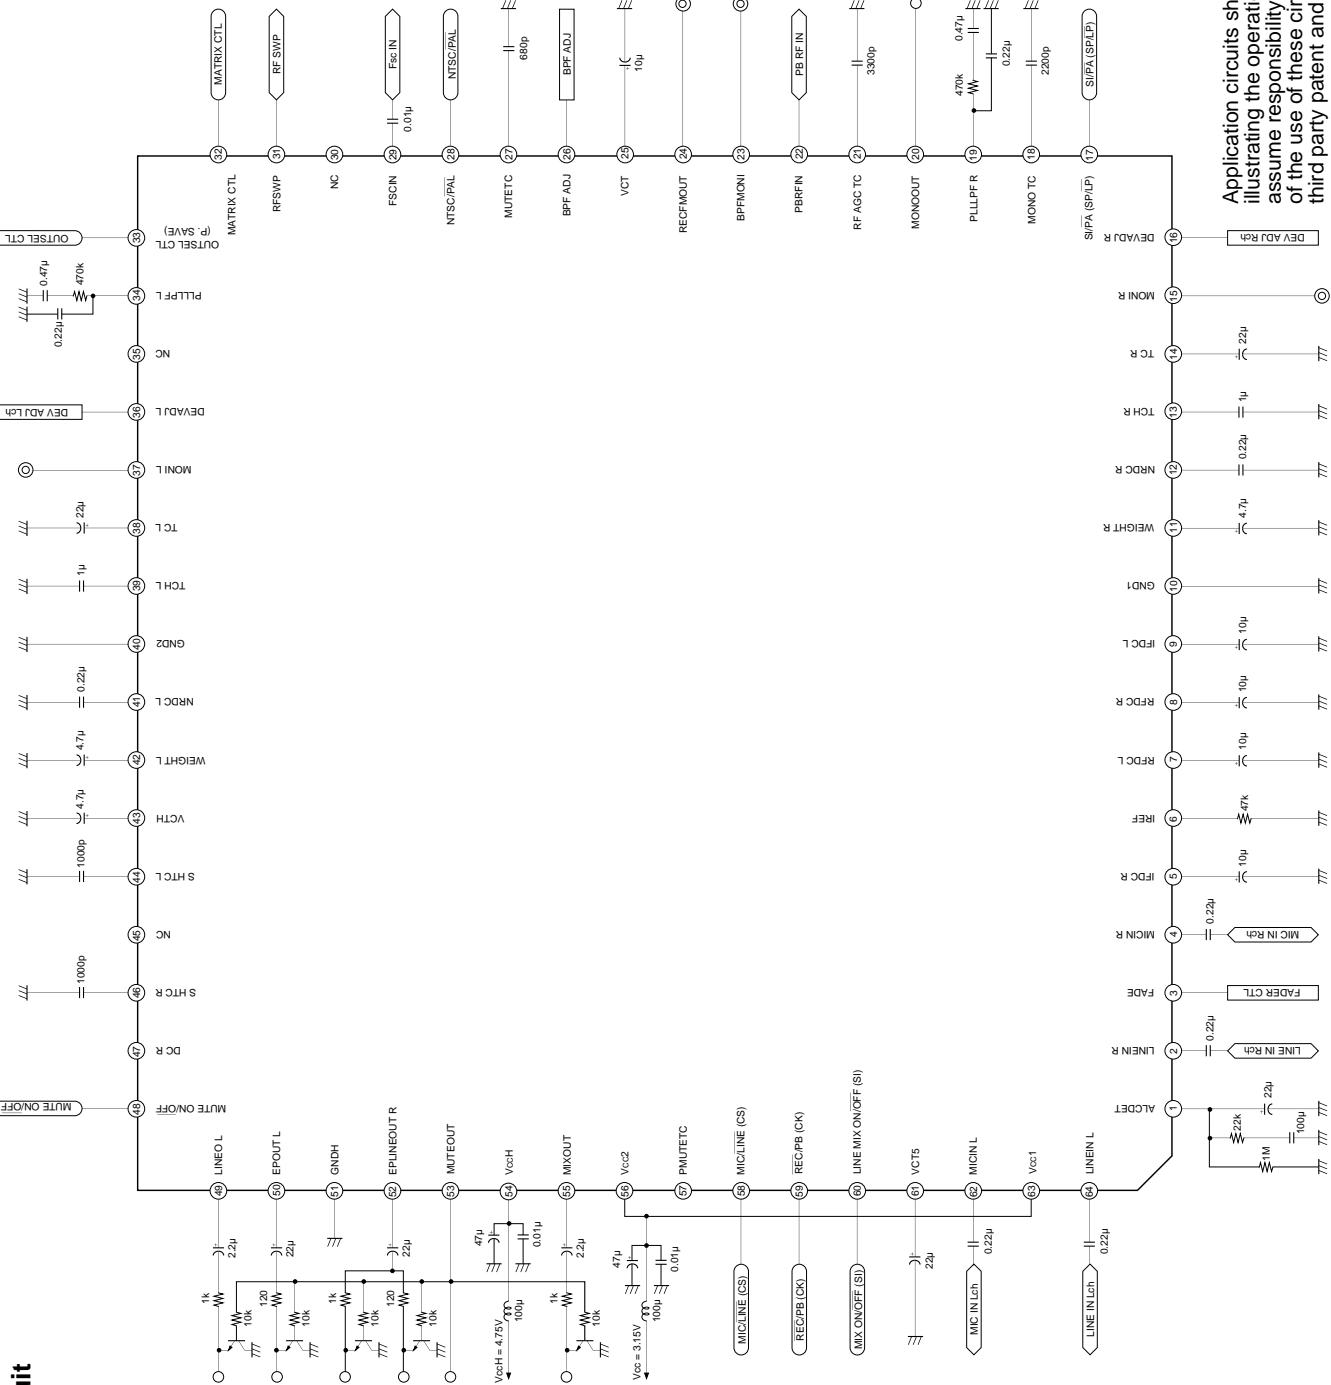

When adjusting BPF, connect a $4.7\text{k}\Omega$ load resistor between Pin 23 and GND as shown in the electrical characteristics measurement circuit.

Fader adjustment method

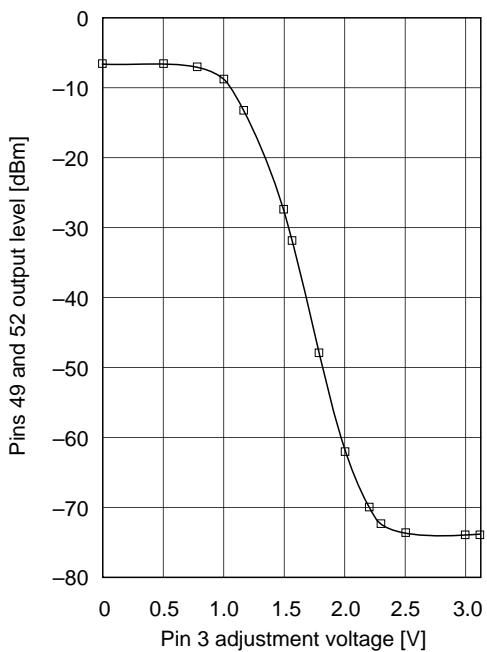

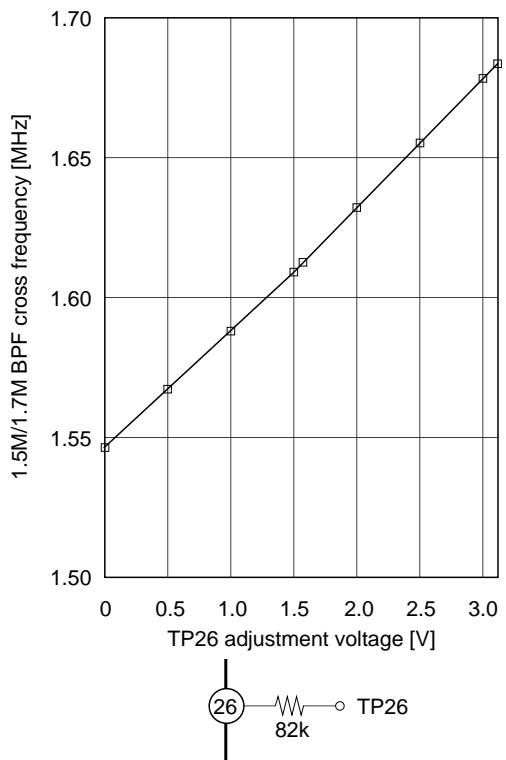

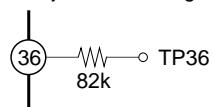

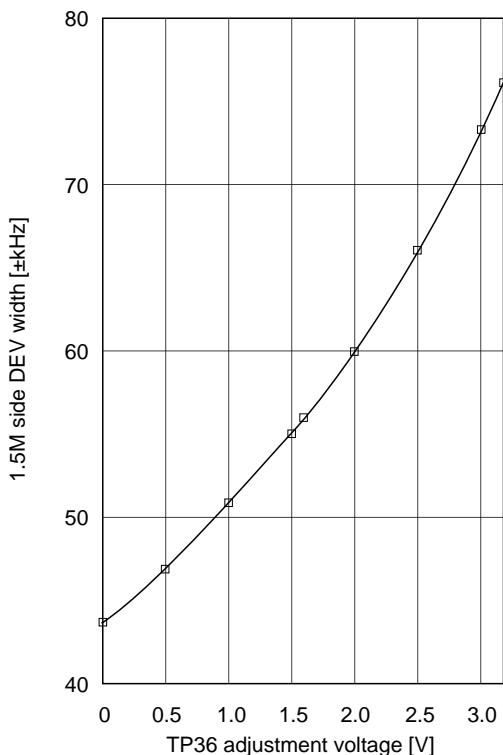

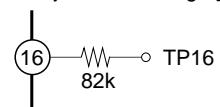

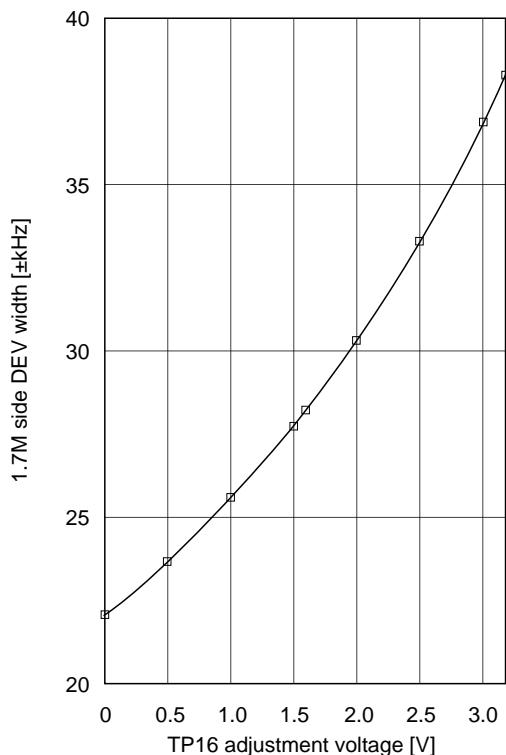

Input the reference input ($-38\text{dBm}/400\text{Hz}$) to the MIC input (Pins 62 and 4) and adjust the output level of Pins 49 and 52 with the voltage applied to Pin 3 (V3).

Electrical Characteristics Measurement Circuit

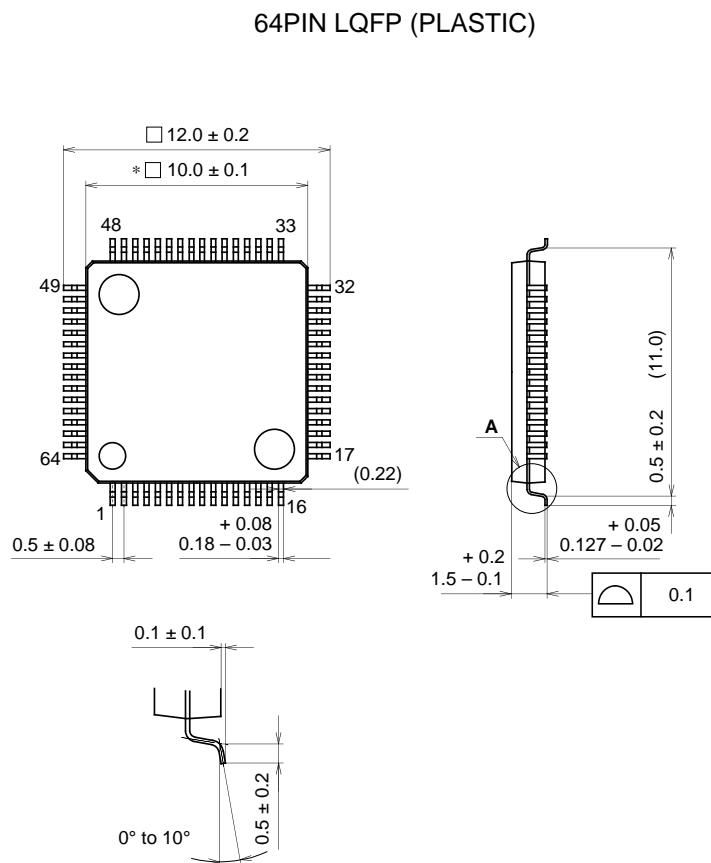

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

Package Outline

Unit: mm

NOTE: Dimension "*" does not include mold protrusion.

DETAIL A

PACKAGE STRUCTURE

SONY CODE	LQFP-64P-L01
EIAJ CODE	LQFP064-P-1010
JEDEC CODE	_____

PACKAGE MATERIAL	EPOXY RESIN
LEAD TREATMENT	SOLDER/PALLADIUM PLATING
LEAD MATERIAL	42/COPPER ALLOY
PACKAGE MASS	0.3g
