# **Hex Inverter With Enable**

The MC10189 provides a high-speed Hex Inverter with a common Enable input. The hex inverting function is provided when Enable is in the low state. When Enable is in the high state all outputs are low.

- $P_D = 200 \text{ mW typ/pkg}$  (No Load)
- t<sub>pd</sub> = 2.0 ns (Y–Q) = 2.5 ns (X–Q)

### **DIP PIN ASSIGNMENT**

Pin assignment is for Dual–in–Line Package. For PLCC pin assignment, see the Pin Conversion Tables on page 18 of the ON Semiconductor MECL Data Book (DL122/D).

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50–ohm resistor to –2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
