# Dual Differential 2:1 Multiplexer

The MC10EP56 is a dual, fully differential 2:1 multiplexer. The differential data path makes the device ideal for multiplexing low skew clock or other skew sensitive signals. Multiple  $V_{BB}$  pins are provided to ease AC coupling of input signals. If used, the  $V_{BB}$  output should be bypassed to ground with a  $0.01\mu F$  capacitor.

The device features both individual and common select inputs to address both data path and random logic applications.
